It is the secure foundation that adds value to the building, no matter what the material may be with which the body of the house is constructed. If it is of wood, all houses of wood are of the same texture; though they may differ as to size and arrangement, yet all are for the same purpose, having apartments for the same end. A cook room, one to eat in, another to sleep in, and still another where we sit and enjoy the home circle; then the finest one of all is for us to receive our guests in. This not unfrequently is left shut up only on special occasions, though it is furnished with the richest upholstery and shaded, allowing only the most delicate tints of light to come in. Now, if we are careful builders and are preparing a home for the comfort of ourselves and family, instead of mere speculation we will lay the foundation of the best material we are able to procure, and watch the construction with a rigid eye to see that everything is perfect and complete so far as we are capable of in our judgment; and yet after the fabric is done we see something lacking that would have made for our comfort. Just so in the spiritual life and light, the best part of our being is left for occasional thought, that room (so-called) where the Bridegroom should be received, is darkened and only

a ray of light falls upon it. Let us solve the problem experimentally, and remember there is building material given us to use in the arrangement of our habitation for our best Guest, all that is essential at our disposal, with an Architect willing and ready to direct us aright. But of the foundation, which should be the first consideration, we are prone to be lax; a spirit of indifference pervading the life so that in our serious meditation, when we meet the Christ, we ask, as did the young man formerly: "What lack I yet?" We find the great foundation-stone, the Christ principle, left out, and to supply that makes a great work. If it is not left out, it is so little heeded, that we are conscious of a lack. But oh! do not let us still follow this example; that because we have such great possessions in this life, the possession of our will, we cannot give it up for the priceless treasure, the constant presence of the Spirit of the Father. 'Tis the foundation that is at fault. Mark the life of this man. When he came and hailed Jesus as good Master the reply was, "Why callest thou me good?"—"but if thou wilt enter into life keep the commandments." He queried "Which?" Jesus said, "Thou shalt do no murder, Thou shalt not commit adultery, Thou shalt not steal, Thou shalt not bear false witness, Honor thy father and mother, and Thou shalt love thy neighbor as thyself." The answer was, "All these things have I kept from my youth up; what lack I yet?" Jesus said unto him, "If thou wilt be perfect, go sell what thou hast and give to the poor, and thou shalt have treasures in heaven, and come follow me."

Here comes the test; to sell all, give up all for the promotion of the great principle of life, Christ in the soul. It is quite generally conceded that if we live in accordance with the law of the outward commandments as this represents, we are good people, good citizens; and are sometimes lauded for our philanthropy, yet lacking the first principle. It was and is the very foundation that is not according to the pattern, Christ, the Spirit, the chief corner-stone, and all the building fitted together by this light; and the full surrender of all to the Lord. Selling all and giving to the poor, has a deep meaning. Remember Paul said so earnestly, yes emphatically, "Though I speak with the tongue of men and angels and have not charity, I am become as sounding brass or a tinkling cymbal; and though I bestow all my goods to feed the poor, and though I give my body to be burned and have not charity, it profiteth me nothing."

Now this seems strong, yet it is true; and we must watch,—continually watch,—else we miss the foundation stone and build in the air, and so our labor is in vain. 'Tis the welling up of the pure spring; of love direct from the authority of the Father, that we must move by, then we may rest assured that our building will stand. We may be so imbued with the mere law that we can suffer persecution and still lack the vital flow of eternal love, which constitutes the disciple. From various causes the soil becomes sterile and needs breaking up, and this process often brings to view some hindering element, so that we need the repeated injunction of "Watch!"

"Let him that thinketh he standeth, beware lest

he fall." He may feel and think he is secure, by standing in his own light. "Except the Lord build the house, they labor in vain that build it; except the Lord keep the city, the watchman waketh but in vain." It is not the unyielding nature that marks rectitude, but the building on the foundation where we may stand in patience, meekness, and love, evincing that we have indeed been with the Lord through the regeneration, and are known of him by obedience to the operation of the Spirit, which is the Christ.

Let us examine ourselves according to the fruit of the Spirit, which is faith, virtue, knowledge, temperance, patience, godliness, brotherly kindness, and charity. Peter testified that "if these things be in you, and abound, they make you that yeshall neither be barren nor unfruitful in the knowledge of our Lord Jesus Christ. And this knowledge comes by an experimental life, the Christ of love being in us the foundation.

The quickening Spirit was to take the place of the old law, and thus was to be heralded as the notable day of the Lord. "Blessed is he that cometh in the name of the Lord. Hosanna in the highest." It is a work for us to labor to put on the whole armor of God, as Paul exhorted the Ephesians, "Having your loins girt about with truth, and having on the breast-plate of righteousness, and your feet shod with the preparation of the Gospel of peace, and take the helmet of salvation, and the sword of the Spirit, which is the word of God. Praying always with all prayers and supplications in the Spirit."

There are so many incentives and proofs to our lives, that there is no need of our "standing idle all the day long" in the spiritual work. So much to do in us, that we may attain "the higher life," enabling us to enjoy a heavenly condition as we pass along through this state of existence, yet always feeling that God is so much higher in light and love, yet ever willing and ready to dispense to us greater truth and more beautiful revelations, that we can indeed go on from strength to strength, looking steadfastly to higher development of light. Holy thoughts of constant growth in spiritual things! "What lack I yet?" A present Saviour to keep from the spirit of anger, impatience, hatred, envy, malice, and deceit. The foundation by a Power that will be a present helper in every needful time.

Let us be willing to have our deeds brought to the test, and we shall know an overcoming that will enable us to rejoice evermore and in everything give thanks.

MARY G. SMITH.

Hoopston, Ill.

I know not whether we are yet wearied enough in the times of early manhood to realize our childhood and his Fatherhood; but, when some years have passed, and brought with them the daily burden of life, it is a simple yet wonderful comfort to have a second self which is a child, to possess a childhood of feeling in the midst of manhood, and, when the work of the day is passed, to lay our folded hands upon the knees of God as once we did upon our mother's knee, and looking up to say, "Our Father, which art in heaven."—*Stopford A. Brooke.*

SCRIPTURE LESSON, No. 18.

FIFTH MONTH 12, 1889.

THE ANOINTING AT BETHANY.

GOLDEN TEXT.—"She hath done what she could."—Mark 14: 8.

READ Mark 14: 1-9.

FROM the Mount of Olives, as the day drew to an end, Jesus and the disciples that were with him returned to Bethany, where he is believed to have spent the two following days in the quiet of the hospitable home whose doors were ever open to receive him. They were two busy days for his enemies who were planning and plotting how they might get him into their power without arousing the people who had at his entrance into the city, when he came with the multitude from Galilee, accepted and proclaimed him the Messiah, their king and deliverer.

Feast of the Passover. Called also the feast of unleavened bread, because while the feast lasted all the bread that was eaten was made without any leaven or yeast. Ex. 12: 15-27.

Being in Bethany. In John's Gospel, the circumstances here recorded are related as having taken place while Jesus and his disciples tarried at Bethany, on their journey to Jerusalem (John 12: 1, 2.) The discrepancy is one that might easily occur, and does not detract from the interest or value of the narrative.

As he sat at meat, etc. While they were eating—reclining around the table—there came a woman. This was Mary the sister of Martha and Lazarus, of whom Jesus had before said, "She hath chosen the better part."

Alabaster boxes were very costly and beautiful, and were used all through the East for holding fine and precious ointments that were sometimes prepared in a liquid state so as to flow readily when poured upon the person. Ancient peoples were in the habit of using fragrant oils and perfumes to a great extent, and in the East the practice still continues. They are, however, used more or less by all nations. Anointing with sacred oils was a religious rite, administered when any person was set apart for some special work or mission, or when a king was chosen.

She hath done what she could. It was the last loving service to the teacher and friend who had been so closely and tenderly associated with these disciples of Bethany. To have "done what she could" is a record that only fidelity to what we know to be right will bring to any of us. She had before "chosen the better part," and this gave ability to continue in well doing.

The woman referred to in the reading of to-day, perceiving that Jesus taught as a Rabbi, and wishing to show her appreciation of his goodness, with womanly sympathy and love, poured over him the precious ointment.

The rebuke expressed in the words, "Let her alone," is an earnest protest against fault-finding, and a comforting admission that we can have performed for ourselves needed services, and can enjoy rare occasions when it is right to put aside the claims even of the "poor always with you," for brief seasons of loving intercourse, especially those of a religious

nature, when sweet lessons of truth and love can be absorbed and made part of our being.

Another lesson for us to learn from this is to do good as we have the opportunity. That is, when we clearly perceive a duty, that we, to the best of our ability, perform it at once, not hesitating until the proper time for doing it has passed away, nor considering that our effort may be too small to be appreciated; but by acting at once, under the consciousness of our best endeavor, we will realize that nothing is lost in giving of what we have.

NOTES ON THE LESSON.

The time of the Supper at Bethany, where the Anointing of Jesus took place, is given in John 12: 1, as being *six days* before the Passover, or Feast of Unleavened Bread, which is the same. This would seem to conflict with the date in our lesson, but if we regard Mark's account as incidentally introduced there need be no discrepancy, as the whole narrative appears to be simply thrown in without any reference to the "two days" of the verses above.

Luke, in the 7th chapter of his Gospel, introduces a similar incident in the earlier part of the Ministry of Jesus, at the house of one Simon, a Pharisee, where he was an invited guest. Whether both refer to the same circumstance we have no way of finding out, and may be willing to leave the inquiry to those more critical. What most concerns us is the evidence here given of the loving devotion with which Jesus was welcomed and the care taken to extend to him the hospitalities bestowed upon guests who were worthy of honor. It shows, too, that he was eminently social,—a willing guest at the feasts and entertainments given by his friends, and that such occasions were improved by him in leading the conversation into channels of spiritual thought and a better understanding of the relations between the Divine Being and his human children.

There is no greater mistake made as regards the daily life of Jesus than that which classes him with the ascetic,—one who kept himself aloof from participation in the gladness of social and home life. Having in the very outset of his career as a Messenger from God—the "Son sent of the Father,"—wrestled with, and conquered the temptations of "the world, the flesh," and the undue self-confidence in his own power, comparable to the flattery of the evil one, having gained the mastery over himself, and "learned obedience" through what this victory had cost him, he was fortified against all the allurements and weaknesses of his humanity and thus enabled to be a perfect pattern and example to succeeding generations, doing always the things that pleased his Father. This is the lesson for us,—using the world but not abusing it, partaking of the good things that have been bountifully provided to meet the various wants of our three-fold nature, with glad and thankful hearts, but with that temperance and moderation which becomes those who name the name of Jesus as their leader and guide.

The ointment "very costly," that Mary poured upon the head of Jesus, called spikenard, is said to have been brought into Judea by the Arabian mer-

chants, from far-off India, the plant from which it was made being only found in the region watered by the Ganges river. It is customary in the East to present an honored guest with a shallow dish, containing some favorite perfume, and to sprinkle the head also; but anointing with costly oils or ointments is only practiced on great occasions. The value of the box used by Mary is estimated at more than forty dollars in our money.

For Friends' Intelligencer and Journal.

ARTICLES IN THE ENCYCLOPÆDIA BRITANNICA.

THE latest edition of the "Encyclopædia Britannica,"—confessedly the chief work of its kind in our language,—presents the results of modern Biblical information, in many articles, but especially in those on "Canon of the Bible" and "Gospels." The former is by Samuel Davidson, the latter by Edwin A. Abbott, both of them distinguished scholars and writers of the highest standing. In regard to the study of the New Testament, both of them agree with Matthew Arnold that this is a subject of intellectual seriousness, and that when "the Bible is read aright, it will be found to deal, in a way incomparable for effectiveness, with facts of experience most pressing, momentous, and real."

Now some persons are possessed with the idea that because the authorship of the different books of the Bible is not such as they have supposed it to be that therefore the negation of this favorite view operates against the truth therein set forth. But no Friend can surely be troubled herein, as all such must know that truth is the product of no particular age or clime. Take here, for instance, the declaration of the distinguished legate Monsignor Capel who was sent to this country on a mission a few years since by the Church of Rome. "He argued," says the dispatch published in all our public prints, "that Christianity does not depend alone on reading the Bible. During the first three centuries there was no New Testament. The Catholic Church says read the Scriptures, but do not put your own interpretation on them. In conclusion he begged his hearers to look at the matter in the light of history and reason, and not blindly follow the shibboleths of prejudice repeated during four centuries."

The authors above alluded to in the "Encyclopædia," agree with the following summing up of Matthew Arnold: "The upshot of all this for the reader of Literature and Dogma is that our original short sentence about the record of the words and life of Jesus holds good. The record, we said, when we first got it, had passed through at least half a century, or more, of oral tradition, and through more than one written account." ("God and the Bible," p. 225.)

Edwin A. Abbott claims that "the original tradition" as he calls it, of the record, is to be found in the synoptic gospels, and that that of Mark is the earliest of the three. For instance, he compares Mark 1: 32-34, with Matthew 8: 16, and Luke 4: 40, 41, and finds the "Original Gospel," and "Triple Gospel," herein: "They brought unto him all that

were sick. . . . And he healed many," etc., etc. But Matthew says *all* were treated, and Luke has it, "*every one of them.*"

As it may not be in the power of some of the readers of the INTELLIGENCER AND JOURNAL to examine the Encyclopedia, I will state that Samuel Davidson's "Canon of the Bible," which contains the substance of the Encyclopedia article, can be had at the book stores, having passed through several editions; as also can E. A. Abbott's "Common Tradition of the Synoptic Gospels" be obtained in like manner.

In regard to the Fourth Gospel, Dr. Abbott does not believe that Justin Martyr quoted it verbally, though he agrees with Dr. Sanday (Gospels, p. 276) "in an association of ideas." Further, on this subject, Dr. Abbott says: "Evidence has been drawn from the epistle of Barnabas, the 'Shepherd of Hermas,' the Ignatian letters, the epistle of Polycarp, the works of Justin, and the Clementine Homilies, to show that the authors of these writings used the Fourth Gospel; and no candid mind can resist the proof that some of them know and were influenced by the thoughts of the Fourth Gospel, while some even used its language. But it is by no means certain, indeed it is improbable, that they knew of it as a Gospel written by 'the disciple whom Jesus loved.' Else, how comes it that Justin quotes Matthew' about fifty times and the Fourth Gospel once, or not at all.

Upon this subject Matthew Arnold writes thus: "For at least fifty years the Johannine Gospel remained, like our other three gospels, liable to changes, interpretations, additions; until, at last, like them, towards the close of the second century, by ever increasing use and veneration, it passed into the settled state of Holy Scripture."

The earliest tradition, that of the Canon of Musatori, has this fragment: "The fourth of the Gospels is by the disciple John. He was pressed by his fellow disciples and fellow bishops, and he said: 'Fast with me this day, and for three days; and whatsoever shall be revealed to each one of us, let us relate it to the rest.' In the same night it was revealed to the apostle Andrew that John should write the whole in his name, and all the rest should revise it, in like manner is the tradition related by Clement of Alexandria, who died A. D. 220. "John wrote last," says Clement, "aware that in the other Gospels were declared the things of flesh and blood, being moved by his acquaintance, and being inspired by the spirit, composed a spiritual Gospel." To the like effect, Epiphanius, in the latter part of the fourth century, says that "John wrote last, wrote reluctantly, wrote because he was constrained to write, wrote in Asia at the age of ninety." DAVID NEWPORT.

EACH one of us is bound to make the little circle in which he lives better and happier. Each of us is bound to see that out of that small circle the widest good may flow. Each of us may have fixed in his mind the thought that out of a single household may flow influences that shall stimulate the whole commonwealth and the whole civilized world.—Dean Stanley.

¹ Justin does not quote from any of the Evangelists by name; the work which he cites he calls "the Records of the Apostles."

EXTRACTS FROM ELIAS HICKS.

God said, "let us make man in our own image, in our own likeness." And how was he made? As to his animal form and frame, he was made of the dust of the earth, "for dust thou art, and unto dust thou shalt return." Now, this was in relation to his animal body, which is composed of the dust, and to the dust returns, as is self-evident to all of us.

But wherein was he constituted the image of the Holy One? He placed in this animal body a portion of his own spirit, for there is but one self-existing Spirit, eternal and self-existing, comprehending all power, all wisdom, all goodness; and everything must be attributed to him by man. And, therefore, to be in the image of God, we must partake of his own nature; and have a portion of his own blessed spirit, to animate the soul and make it immortal, as God is immortal.

We cannot with all our reasoning powers penetrate into the things of God, or that which concerns the soul of man. When we turn inward we find something which the outward senses cannot comprehend. It is this revealing spirit that gives us a view of the things of God, and our minds can then act upon them. There is no recipient for that revelation but the soul of man; for the things of God are not to be seen by our natural senses, but in our own souls. And here our reason draws conclusions which are comforting and cheering. Therefore we are not to try these things by external matter; for if we should try the operations of our souls by books, we set the letter above the spirit; we turn back to darkness, for the letter killeth, but the spirit only giveth life. O, that we might be more spiritually minded, more gathered inward, to the light of grace in our souls. What can we do without it? Nothing at all. We must stand as blanks on the earth, unless we are turned inward to the teachings of God in our souls.

THE FIRST-DAY SCHOOLS: A MONTHLY RECORD.¹

A LESSON on Faith occupied the "Sowers," Third month 24th, 1889, and their own teacher being absent, I was requested to fill her place for the time. Much silent thinking followed the question, "What is faith?" but at last one girl explained faith as meaning belief, or belief in God. Also the Bible definition was read: "Faith is the substance of things hoped for, the evidence of things not seen;" but this was beyond the scope of the childish mind. "The first in importance is faith in God. What is the effect on human beings of faith in the good in other people?" It was conceded to be always helpful. "What about faith in one's self?" "Apt to make one self-conceited," and "You can do a great deal more with that faith than without it." "How many of you find it possible to believe that there is good in persons in whom you have never seen it?" Two or three out of six. "There is good in everyone, if we will take the pains to find it. If you see some one whom you do not know do a thing you do not like, the natural tendency is to keep away from him or

¹From the Secretary's Minutes of a First-day school.

her; then to dislike the person, and finally to be rude in some way. How far does the Christian religion justify you in this course of conduct?" "Not at all; but it is very natural." "Suppose a new teacher should take a room in the public school, and begin by supposing the children were all bad, should scold them for every little thing, and treat them as though she could not trust them ever to tell the truth; what would be the effect on the scholars?" "But scholars always are worse with a new teacher!" said one, and two or three others chimed in with the statement. "Faith in a future life does not belong to all religions. The Egyptians believed that as long as their earthly bodies could be preserved, so long would their souls exist; but that if these mummies we hear about are destroyed the souls that once lived in them die too." This made them all laugh. "Some of the Jews believed in a future life and some did not. Do you remember the story of the Sadducees who tried to puzzle Jesus with questions about it?" Yes, they remembered, and one gave the account. "The Christian religion above all others gives the hope of a future life. But where is it taught?" "In the Bible." "Where in the Bible?" "New Testament." "Where in the New Testament?" "In *Genesis*, isn't it?" asked one; the class, however, thought not. "Jesus taught the future life when he said that the God of Abraham, Isaac, and Jacob was a God not of the dead but of the living.

Faith is needed in action, and in prayer. "And all things whatsoever ye shall ask in prayer, believing, ye shall receive." The story was then told of the woman who prayed that a hill might be removed from before her windows, and who exclaimed upon seeing it in its accustomed place next morning, "There! I just knew it would be there still!" "What was the matter in her case?" The girls laughingly agreed that she prayed without faith. "Could any of you pray in the midst of a storm that it would be clear weather instantly? Would you have any faith that such a prayer would be answered?" "Now, if you prayed that you might be enabled to spend the time planned for outdoor pleasure as pleasantly in the house, could you have faith that that would be answered?" "Yes." "What was the effect of faith, according to the Gospel account, upon the working of miracles? Did it not make them possible?" "Yes." "He did not many works there because of their unbelief. 'Believest thou that I am able to do this thing?' etc. What is the main point in this lesson?" "Why, faith in God." "Yes, we may put our faith in education or money or society, but we should place it in Him above all, for He alone will never fail us nor deceive us."

The next week the "Buds" (very little children) joined by the "Primrose" class, making five in all, had a lesson on "Hands." "Could we make our own hands?" "No." "Is it hard to do?" "Yes." "Who made them?" "Our Father." "What were they made for?" "Work, play, 'croquet,' and ball, and 'welbar' (wheelbarrow), and to hug papa and mamma, and do kind little things for everybody?"

"Yes." "And to throw stones," laughed one, but he was answered by another "Frow stones! that ain't right." "We should be honest with our hands, shouldn't we? What is it to be honest?" "Not to take things." "Yes, not to take things that are not our own. I am going to read you a story about a little hoy, and we shall see if he did right with his hands." The story was of a child who appropriated a playmate's hoop and stick, telling his mother he had found it. She suspected that all was not right, but said nothing until about bedtime, when she told him a story of a boy who had taken something that was not his, and the listener grew uneasy, asking at last, "Mamma, I ain't a thief, am I?" He went in to tell her a part of the truth, but finally confessed with tears that he had taken it not intending to return it. His mother told him if he would take the hoop back to his little friend's mother and tell her the truth about it she felt sure that his Heavenly Father would forgive him. During the reading the teacher occasionally asked questions to keep the scholars' attention and interest, and to the question "Who can tell me what was the last thing I read?" a five-year old replied by quoting "Mamma, I ain't a thief, am I," with a slight twist, thus: "Mamma, am I a *feth*?" And to another question, "What did this little boy do with his hand that he ought not?" the same child answered: "Stole a *hook* 'at wasn't his!" The story being ended, one little boy who had not been fully attentive, was discovered to have a cork in his hand, and was distracting the attention of a girl in another class, pretending to throw it at her. The teacher drew from him the facts that the girl had chased him down the street and had caught him, and that he was going to throw the cork at her after school. To all the teacher's persuasions and protestations he smiled and "screwed" as she held one arm about him, but kept to his purpose of retaliation with a persistence worthy of a better cause. "I'll catch her, anyway; she oughtn't to have chased me." "Won't thee promise me to let her alone?" "After I've caught her." "Does thee think thee will feel any happier for doing anything unkind to her?" "Yes, I know I will!" His conscience, his fear of grieving the Good Father of all, his fears of accidentally injuring the girl without intending it, as throwing the cork into her eye, or causing her to slip and fall, possibly breaking a limb, all were appealed to without effect; he evidently felt that justice demanded that he should at least "catch her." When the teacher finally resorted to personal influence, reminded him of how willing he always was to do kind little things for her, and asked him if he would not for her sake try not to annoy the little girl, the smiles and twistings gradually subsided, and the words seemed to go deeper. At length the bell tapped and the class was dismissed.

Fourth month 7th, the "Builders" were six in number, four of them girls. After the selection of library books the teacher asked, "Does any one know where we find the ten commandments?" No one knew, so they were referred to the 20th chapter of Exodus. Each commandment in turn was given by

some one of the scholars, and the teacher divided them for easier recalling as follows: The first three have reference to God directly; the fourth, to the Sabbath day; the fifth to the honoring of parents, and the others to our behavior to those about us. The especial thought for the day was upon the ninth. "How do people bear false witness?" "Tell what isn't true." "Yes, and is there not another way? Suppose you should hear some one blamed when you knew he was not guilty, and yet you would not defend him; would not that be bearing false witness by silence?" The scholars admitted that it would. "Gossip," continued the teacher, "is very harmful. Sometimes a little story is started about an innocent person, and is kept fresh and growing by being retold until it seriously injures the one of whom it relates." A story was read from "The Children's Friend," telling how a boy who lost a handsome pocket-knife threw, by a few words, suspicion upon a schoolmate. He would not say his schoolmate actually took it, but it had disappeared the afternoon that boy came to see him. The idea grew until the suspected boy, having had other suspicions added to the first, at length lost the regard of the entire school. When the term closed and there were two equal competitors for a prize, the accused boy being one, the school was asked to vote which should have it. They all spoke for the other boy, and on being requested gave their reasons. The master, much surprised, took pains to thoroughly sift the several accusations, and not one could be proved, while most of them were distinctly disproved. The master took advantage of the occasion to impress upon the boys that an innuendo or indirect accusation—that a half-truth works more harm in the world than absolute falsehood, for it is so much harder to contest. It was explained to the F. D. S. class that detraction is an injury in more ways than one. It actually tends against a child's right behavior to know that others doubt him; and seeds of slander once sown can never be regathered, but must continue to grow and bear their evil fruits. They may prejudice people against an innocent person throughout his life; make it so difficult for him to enter business with a story against him, that he might become utterly discouraged, and sink to a lower and lower level in the community.

Yesterday I had charge of the "Willing Hearts" by request, their teacher being away from home. They numbered seven, including a visitor. The girls were first asked to keep a short silence for the purpose of waiting for a thought, that thought to be the foundation of the day's lesson. One girl, looking ready to speak, was asked for her thought, but replied that she only wanted to ask a question. It was: "Does thee think Christ is our Savior?" "Yes, Christ within, for Christ is not a man, but a spirit, the spirit which dwelt in Jesus; the power and wisdom of God in us. So far as we obey and follow that inward teaching we are saved from sin." The questioner looked well satisfied, but added: "Church people think we don't believe in Christ as a savior; one of them was asking me about it the other day." "No, but it is only because they do not understand; we believe it, but see it in a more spiritual sense;

that is all. Let us take then 'The Character of the Christ' for a lesson subject. Among what people was Jesus born?" "The Jews." "I thought he was a Hebrew!" ventured another girl. "What language did he use?" "Hebrew." "Why?" This puzzled them. "Because that was all he knew" thought one. "In order that his teachings should be perfectly understood by those who heard him, was it not?" "Yes," they agreed. "How did he dress?" "Simply." "Was it according to the custom of his day?" One thought not and one thought he did. "What sort of civilization was that of the people who heard and believed him? simple or complicated?" "Simple." "Yes, the disciples were poor men, fishermen, and others. Jesus was a carpenter, according to the Jewish custom of teaching the eldest son the father's trade. The people lived much out of doors, their wants were few, and simplicity characterized their lives. What is the difference between simplicity and duplicity?" This puzzled them all; only one hazarded a reply and it fell ludicrously wide of the mark, but has slipped my memory. Single mindedness and double mindedness were explained and the derivation of simplicity and duplicity referred to for the sake of helping the hearers to remember. "In a simple, unaffected, truthful mode of life what things are of first necessity?" "Food and clothing." "Yes, food for the body—and for what else?" and the rhyme from Mother Goose was given, "There was an old woman and what do you think?" etc., as also A. D. T. Whitney's version in "Mother Goose for Grown Folks:."

"And were you so foolish as really to think

She could live upon nothing but victuals and
drink?" etc.

"What needs feeding then besides the body?" "The mind" came at length from one scholar. "The body is fed by material substance: animal, vegetable, or mineral; but what feeds the mind?" There was a good deal of hard thinking before the idea was found, and a girl suggested "Thought?" "Yes; and where do we find thought?" "In books" and "in nature." "Yes; if we have not books our minds can still feed upon nature. What feeds the soul?" "Why, thought; I think the mind includes the soul," and "That's what the Christian Scientists say." "I think the soul includes the mind; but if you have been taught differently I do not wish to confuse you." "We haven't been taught it specially, but I think it *does*." "Perhaps they are equal and yet both the same thing, as Truth and Love are both God. I cannot think either truth or love greater than the other, and it is possible that God may be back of them both, still unknown. But they are really one, and so may mind and soul be. Some persons think so, I know. But if we seek too anxiously for light which we do not yet need for daily life, it only blinds us, and rather interferes than otherwise with the proper performance of duty. So suppose we 'lay on the table' all puzzling questions in full trust that whatever knowledge we need will be given us?" They all smilingly consented. "If the Christ were on earth to-day in America how would he dress?" "Just like other men, only plainly."

"How would he differ from other men?" "Not at all." "Not at all? By what should we know him when we saw him?" "By his face, I think," said one scholar, and others "By his actions," and "By his influence." "The face would not be necessarily beautiful?" "No, but I think we could see the Spirit in it." "Does thee ever see the Christ Spirit in a face?" "Yes," replied the girl with a sweet decision that made me feel I could see it in hers at the instant. "In persons of what age do we oftenest find it? very young, middle aged, or elderly?" "Very young," and two thought "more in elderly people." "Does it dwell in all of us?" "Yes, to some extent; not as it did in Jesus." All agreed to this. "Have we any power over it?" "Yes, I think we have." "Yes, just as much as over a plant. We can protect, cherish, cultivate it, and it will grow. It is really like a seed then, is it not? the seed of the Kingdom of Heaven." The hour was done and the lesson was not half finished. We took time however for the question: "What is the chief thing in this lesson?" and its answer, "An analysis of Christ."

PHILADELPHIA, FIFTH MONTH 4, 1889.

OUR APPROACHING YEARLY MEETING.

WITH the opening of the buds, and the unfolding of the leaves in spring-time, comes the thought of the annual assembling of Philadelphia Yearly Meeting. Friends turn to it with varied emotions: some welcoming it as a social feast where friend meets friend, with a keen enjoyment of the hand-shake and the words of greeting; others again, and these are many, feel deeply the responsibility of the various affairs that occupy so fully our business sessions, while there are others whose chief concern is for the religious feeling that should prevail; but underneath all these there is a deep desire that there shall be a renewing of the soul life, a realization of the indwelling of the spirit of God. For has He not created us "in His image" and breathed into each one of us the "breath of life?" As his children we rejoice in his love, and long for a deeper and fuller knowledge of it.

But in order to reap a harvest of love and good feeling there must be a preparation for the work before us. A prayerful desire to be governed by the spirit of love and forbearance towards all the varying minds that come together from different localities, viewing the subjects to be presented from widely separate standpoints, yet all earnest and honest in

their convictions. To bring this wide divergence of thought into harmony, so that united action will be the result, should be the aim of all rightly concerned persons and with the aid of our loving Father, whose Divine presence we must come to know and feel, this can be accomplished.

Coming together as one "household of faith" it is most fitting that our first care shall be to inquire as to our moral and religious health, familiarly known as "the state of Society." This should claim our earnest attention, noting with thankful hearts any advance that may be apparent; and, for the shortcomings of our human natures, bestowing the words of loving counsel in such a manner as to create the desire for improvement along all the lines of departure from the "strait and narrow way."

The Educational Question, always an important one, will at this time assume a marked position, as the disposal of the John M. George bequest is being anxiously watched by many deeply concerned parents and educators. Let us hope for it a most wise consideration, and a judicious action, that our youth may receive the full benefit of that which was so generously designed for their advantage.

The subject of Temperance, too, will be of especial interest, in view of a present impending crisis in the State from which comes our largest membership. In this it might reasonably be supposed Friends would all be of one mind, but there are strong thinkers amongst us and there will be those that think another road is preferable for reaching the desired end than the one proposed; so that here there will be, doubtless, a need for the exercise of Christian liberty of opinion and forbearance in judgment, remembering that it is only "by their fruits shall ye know them." Then there are our feeble efforts in the Mission line that must not be neglected. Our colored schools will need our aid for a long time to come. Watch and ward must still be kept over the unfortunate Indian race. In these things let us not be placed in the position of the ancient "Scribes and Pharisees," lest we too shall hear it sounded, "but these ye ought to have done, and not to have left the other undone." The Visiting Committee must come in for its proper share of attention, for its work is important to both visitors and visited. We cannot too highly regard this form of visiting, as it is calculated to strengthen the religious life and bind still closer together the remote meetings to the one common centre, strengthening the whole body by that intangible influence that springs from personal contact with devoted servants in the cause of truth. Finally, we must wisely improve our time when assembled, by condensing the spoken word, so as not to trespass on each other, or hinder the work of our

overburdened clerks; each one being considerate, the occasion may be one of especial favor individually, and the various concerns for which we are assembled be carried forward so as to produce a growth in righteousness.

MARRIAGES.

BEITLER—PYLE.—On Fifth day, 20th of Tenth mo., 1887, at the home of the bride's parents, West Grove, Chester county, Pa., under the care of New Garden Monthly Meeting of Friends, Luman Beitler, son of John Beitler, and Anna R., daughter of Joseph and Mira M. Pyle.

MANN—GAUNTT.—Fourth month 23d, at the residence of the bride's mother, Philadelphia, under the care of the Monthly Meeting of Friends of Philadelphia, Wm. H. Mann, of Springville, N. Y., son of Phebe L. (now Phebe L. Woodruff) and the late William H. H. Mann, of Buffalo, N. Y., and Maude Haley, daughter of Josephine C. and the late Dr. Benjamin U. Gauntt.

MARIS—HOOPEES.—In West Chester, at the residence of the bride's parents, by Friends' ceremony, Third month 28th, 1889, Richard Maris, son of John and Mary D. Maris, of Wilmington, Del., and Anna M., daughter of Robert F. and Eliza R. Hoopes.

DEATHS.

BENEZET.—Fourth month 24th, 1889, John Benezet, aged 75 years; a member of the Monthly Meeting of Friends held at Green street, Philadelphia. Interment from Mullica Hill Meeting-house, N. J.

BISHOP.—At Cheswold, Del., Fourth month 22d, 1889, Job Bishop, formerly of Camden county, N. J., in his 86th year.

COMLY.—At Byberry, Fourth month 21st, 1889, of typhoid fever, Edward Comly, Jr., only son of Edward and Lavinia W. Comly, members of Byberry Monthly Meeting, in his 11th year.

DUTTON.—On Fourth month 20th, 1889, Nathan C. Dutton, of Media, Pa., in the 70th year of his age.

GRIFFITH.—At Quaker Street, N. Y., Fourth month 11th, 1889, Sarah A. Griffith, wife of David G. Griffith, aged 74 years, three months; a life-long and consistent member of Duaneburgh Monthly Meeting.

HARLAN.—On the 23d of First month, 1889, Abigail A. Harlan, widow of the late Joseph Harlan, in the 6th year of her age. She was a devoted wife, a kind friend, and the ministrations of her sympathy and helping hand extended to the poor is gratefully remembered by them. H.

MORRIS.—At Manasquan, N. J., Fourth month 4th, 1889, Robert L. Morris, in his 85th year; an attendant of Manasquan Friends' Meeting.

REEVES.—At the residence of her son-in-law, Joseph E. Colson, Fourth month 18th, 1889, Martha F., widow of Joshua Reeves.

ROBINSON.—At Wilmington, Del., Third month 19th, 1889, Francis Robinson, in the 79th year of his age; a member of Wilmington Monthly Meeting.

WILSON.—In West Philadelphia, Fourth month 15th, 1889, J. Iredehl, son of Alice S. and the late Oliver Wilson, in his 16th year. Interment at Fair Hill.

WAY.—At Stormstown, Centre county, Pa., Fourth month 19th, 1889, Robert D. P. Way, son of Caleb C. and Sarah R. Way, the former deceased, aged 24 years, 2 months, 27 days; a member of Centre Monthly Meeting.

The death of this beloved young Friend and devoted son, was a severe and sudden blow to the bereaved family and endeared friends, who one week previous beheld him in his usual health.

He was loved by all who were favored to know him. Being of a retired nature, he was fond of home, and therein found happiness in faithfully performing its duties, his fine taste and quiet manner produced an ennobling influence.

In his sickness he manifested the spirit of meekness, knowing his strength could not be restored, he willingly submitted to the Lord's will, his close being peaceful and serene, giving a full assurance of a blissful immortality.

Editorial Correspondence.

FRIENDS AT WASHINGTON, ETC.

I attended the small Friends' meeting on I street, on First-day morning, and whilst sitting with them I thought how grateful would be the crumbs that are scattered among our more favored gatherings. Including myself, the number was but twelve. Of these two were young men—the others would be classed among those in middle life. A woman Friend, named Hall, broke the silence in a few fitting words. I was glad to meet and have a talk with Eliza Heacock, who has charge of the Home for poor colored women and children. She told me that the select day-school connected with this meeting is so large that the meeting-house has to be used for several of the classes; and it had been proposed at their monthly meeting that eighteen feet be taken off the meeting-house and added to the school building in order to accommodate the increasingly popular school, which is patronized largely by non-members, only a few of our Friends sending their children to it. Some members send to the public schools, (which are very good) as they do not feel able to pay both their taxes and for the schooling of their children. There is ample ground around the meeting-house to erect an addition to the school, but the meeting cannot afford to do it, and should they conclude to make the meeting-house smaller the expense would be met by the teacher. The meeting-house is so attractive that I think it would be a great pity to alter it in any way.

Myself and friend have made good use of the fine weather to see the attractions of this beautiful city. Having just finished the first volume of Bryce's "American Commonwealth" I was well prepared to visit the Capitol. His account of the growth of the Supreme Court inspired me with a desire to sit an hour with them one afternoon, and although I could not hear all that the several lawyers addressed to the judges, I could see and hear enough to impress me with admiration for the men who out of the comparative chaos a hundred years ago, laid the foundation for such a tribunal. H. G. L.

"THE innocence of intention abates nothing of the mischief of example."—*Robert Hall.*

PUBLIC BEQUESTS BY ROBERT WILLETS.

The late Robert Willets, of Bayside, L. I., left in his will several charitable bequests, as follows:

The Public School at Whitestone, Long Island, \$2,000; the Flushing Hospital, \$5,000; the Normal School at Hampton, Va., \$5,000; the school conducted by Martha Schofield, at Aiken, South Carolina, for school purposes, \$5,000; to Anna L. Hicks, of Flushing, Long Island, for the benefit of the Flushing Employment Society, \$2,000.

The bequest to the Aiken School will be much appreciated by the friends of that excellent institution. It has now had, including the present sum, bequests and gifts for an endowment, amounting to about \$12,500. It would be very desirable to increase this. An endowment of \$100,000 would provide for its support, without the necessity of calling for private subscriptions from year to year. As it is, the income from \$12,500 will afford aid in meeting the annual expense, but it is, of course, but a small part of the sum required. Perhaps all interested in the excellent work of educating and training the colored people of the South are not aware that the Aiken School is now held by a Board of Trustees, organized under the laws of South Carolina, and that bequests or conveyances to them for the school have all the legal certainty possible in such cases of being permanently cared for, and properly applied. The value of the property which had been gathered and built up by Martha Schofield, and which she has conveyed to the Board of Trustees, amounts to perhaps \$20,000, and the school ought to be utilized perpetually as a centre of Friends' labor and influence,—a result which only an adequate endowment can assure.

For Friends' Intelligencer and Journal.

LETTERS FROM GERMANY: JENA.

To most persons the name Jena is associated with Napoleon's victory here. Comparatively few persons in America are acquainted with the Jena University; fewer still, perhaps, know anything of its historical associations with Goethe and Schiller; and scarcely any have learned that the surroundings of Jena are as beautiful as a Swiss landscape.

The city lies in the famous Saalthal, off the main lines of railways, fourteen miles east of Weimar in Thuringia. It has only 13,000 inhabitants and until the beginning of the present century was a fortified town with city walls and forts surrounded by a ditch. The Saale flows past the city on the east, in a northeasterly direction. In the spring the river overflows its banks and spreads over the meadows for miles around. The railroad runs along an embankment a few feet high, and passengers in the train seeing water on all sides seem to be riding up the middle of the river in the steam-cars. At this season of the year, the river is full of rafts from the forests of Thuringia. On the east rises the Haasberg, 1,000 feet high; to the southwest lies the Forest of Jena with a tower on the summit of the lull at an elevation of 967 feet. The Sun mountains extend on the north and northwest along the valley of the Lentra and form the plateau, 1,100 feet high, where, on the 14th of October, 1806, the French, under Napo-

leon, destroyed in one battle the Prussian army and thereby broke up the coalition formed against France by Russia and Prussia.

The natural beauties of the locality are very much increased by being rendered so pleasantly accessible to foot passengers. The Association for beautifying the neighborhood of Jena, has laid out walks over the hills and promenades along the river bank, leading to the best points of view and through the prettiest scenery.

The Old Town, surrounded by a wide circular street, made by pulling down the walls and filling up the ditch, is built very compactly with narrow streets and with still narrower lanes for pedestrians only. The University was founded in 1558 and for many years, as was the custom then, the Professors read their lectures at their own dwellings and these lanes or alleys were laid out to enable the student to pass from one professor's house to another without loss of time. The present lecture building is, on the outside, in no way distinguished from the dwelling-houses in the same block on both sides of it. It overlooks the Botanical Garden on the north and the University Library, the Laboratories, and Museums are located in other parts of the city to the south.

In 1815, just after Germany had been made to feel so terribly the want of union in the wars with Napoleon, was founded the first Burschenschaft here in Jena, an association of the students having for its object the promotion of union and friendship among the German students, without regard to what part of the Fatherland they were from. The Society spread through all the German Universities and soon, taking on a political form, acquired political influence and, after being officially forbidden by government authority, arose again in 1827, and has since been permitted alongside of the other Societies. In 1833, amid impressive ceremonies by the students from all parts of the country, the members unveiled a fine marble monument in the Oak Square here in Jena, to commemorate the birthplace of the Association.

Jena has always been known for its rough and domineering student life, but no less has it been noted for the long list of illustrious professors and the number of students who have become famous. The houses throughout the city where such men have lodged are denoted by inscriptions on the front walls giving names and dates. We find the names of the philosophers Fichte, Fries, Hegel, Schelling, and Wolf; Otto von Guericke, the inventor of the air-pump; Klopstock, the poet; and, in half a dozen different places, the names of Goethe and Schiller. The latter was professor of history here in 1789, and was married in 1790 to Charlotte von Lengefeld in the neighboring village of Wenigenjena.

Goethe also, although living mostly in Weimar, was frequently in Jena, and composed some of the best known of his shorter pieces here. In 1781, he was stopping at the hotel in Camsdorf on the opposite bank of the Saale. It was a bitter cold night in winter. A peasant on horseback rode hastily into the village from the north, his sick child in his arms. He stopped at the hotel for assistance and they

found the child had died on the way. Goethe was present and heard the peasant's story, and going to his room, he wrote out the ballad of the "Erl-könig." A statue in white marble erected on the north road along which the peasant rode that night, represents Erlkönig, with hoary head and outstretched arms, calling to the poor child:

"My darling boy, come, go with me!
The prettiest games I'll play with thee;
The brightest flowers lie on the shore,
We'll dress thee in gold forevermore."

HERMAN T. LUKENS.

Jena, 14th of Fourth month, 1889.

THE LIBRARY.

PRIMER OF SCIENTIFIC KNOWLEDGE. By Paul Bert. Philadelphia: J. B. Lippincott Co.

This primer was prepared by the author for the primary schools of France, as an introduction to his larger work, "First Steps in Scientific Knowledge" which has met with remarkable success in the French schools and those of our own country. The primer is well adapted to awaken an interest in science in the minds of children, being written in simple language and attractive style, while the author has adhered to a strictly scientific classification. About one-half of it is devoted to the animal kingdom beginning with man, and going with a good degree of completeness through the more familiar forms of vertebrates and invertebrates. The rest of the book is taken up with plants, and many of the simple facts of Physics and Chemistry. The characteristics of the leading families of plants are given in such a way as could scarcely fail to attract an intelligent interest and develop the observation of the young.

The illustrations and experiments are good, and there is much in the little work that would be suggestive to a teacher in preparing object lessons for children.

ORTHODOX FRIENDS.

PHILADELPHIA Yearly Meeting of this body closed on the 19th of last month. Reports in the two journals (*The Friend* and *Friends' Review*) indicate a quiet and uneventful meeting. Answers to the queries showed the death within the year of ten members of the meeting of Ministers and Elders, whose ages ranged from 72 to 100 years. The results of inquiries as to the use of intoxicating drinks as a beverage showed 191 who had so used them, "mostly in the form of cider or other fermented liquors, and many of these but a few times." Reports from the quarterly meetings showed that of the 791 children of school age, 611 had been receiving their school education under the care of the Society. The report of the Indian Committee spoke encouragingly of the progress of civilized habits and manner of life among the Indians under their care, and mentioned that efforts were being made by the Legislature of New York to induce the Congress of the United States to remove the claim of the Ogden Land Company to the right of preëmption of the Seneca Reservations, claimed by it—a claim which has long been an ob-

stacle to the progress of the Indians. The school at Tunesassa had been successfully conducted during the year, with an attendance of 25 girls and 12 boys.

—The report of the Committee in charge of West-town School announced the completion of the new buildings. They form a continuous line on the ground floor of more than 500 feet. With the steam heating and electrical lighting apparatus and separate boiler house and laundry, etc., they had cost a little more than \$330,000, which had been provided for by the contributions or guarantees of interested Friends. The Committee had concluded to make 11 years the lowest limit of age at which pupils should be admitted to the institution; and they had decided to shorten the school year to 40 weeks, and to divide it into two sessions of unequal length—the longer one to commence on the first Third-day of the Ninth month.

—The question of continuing the committee to visit meetings, etc., was decided affirmatively, "and authority was given for it to be incorporated with subordinate meetings in cases where it might deem it advisable." In connection with this subject, *Friends' Review*, (which represents the element in the meeting friendly disposed to the Western "activities"), says: "One Friend objected to the continuance of the Committee. His reason was, that its action seemed 'too much like missionary work, and in this there is danger.' We see but little danger (our word, instead, would be *hope*) of Philadelphia Yearly Meeting entering, as yet, largely into even home missionary work. When it shall throw off all the hindering traditional bonds which prevent this, we rejoice to anticipate for its laborers a large harvest field."

—*The Friend*, in noticing the approval of the proposed religious visits of Samuel Morris to Great Britain, by the meeting of Ministers and Elders, says his minute is to attend the approaching yearly meetings of London and Dublin; to perform such services within their limits as way may open for; and to visit the few meetings of Friends in France, Germany, Denmark, and Norway; and adds: "Some hesitation was felt at first, lest the liberating of this dear Friend for that service might in any measure conflict with the position assumed by Philadelphia Yearly Meeting, which years ago had suspended correspondence with the meetings in question; or might lead any to suppose that Friends here were at all disposed to withdraw from the faithful upholding of the principles of Quakerism for which they had so long contended. But this hesitation seemed to be very much removed by the statement that the minutes granted by the inferior meetings were not directed to any organized body, but simply to Friends and others, where he might go in the course of his travels. . . . We believe the last man Friend who paid a religious visit to Great Britain from Philadelphia Yearly Meeting was Christopher Healy, who went over to England in 1831. Since that time Sarah Enlen in 1844, and Hannah Rhoads in 1850, paid similar visits."

—On Fourth-day afternoon of the Yearly Meet-

ing, a meeting was held at the request of the Yearly Meeting's Visiting Committee, consisting of its members, all the ministers, elders, and overseers of the body, and the members of the quarterly meetings who were appointed to cooperate in the Y. M. Committee's work. Of this gathering, *Friends' Review* says: "Such a meeting, we believe, was never held before in Philadelphia. Its very appointment seems to voice a cry coming from the heart of the body at large, sensible of its obvious tendency to decline:— 'who shall deliver us from the body of this death?'"

—*Friends' Review* has the following in an editorial article: "Not only or chiefly is it the relation of service to payment that is rightly objected to in the recently proposed 'pastoral system' among Friends. More important still is the one-man supremacy, control, and practical responsibility. An astonishing example of this has been now so often described without contradiction, that we may suppose it to be authenticated. As the connection between the pastor of Pasadena Monthly Meeting, California, was recently severed by the pastor taking a 'charge' in another denomination, we may speak of the circumstance as belonging to the past. It has been stated that seven or eight acknowledged ministers belong to that monthly meeting; yet, under the 'pastorate,' not one of these was left at liberty to speak in a First-day meeting, unless by pre-arranged permission of the pastor. This, too, in a Friends' meeting! How different from the apostolic order under which (I. Cor. xiv : 26) 'When ye come together, every one hath a psalm, hath a revelation, hath a tongue, hath an interpretation. Let all things be done unto edifying. . . . Let the prophets speak two or three, and let the others judge. If anything be revealed to another that sitteth by, let the first hold his peace. For ye may all prophesy one by one, that all may learn, and all be comforted. And the spirits of the prophets are subject to the prophets.' Mark, the subjection is to the *prophets*; not to one man, though he were even a prophet or an apostle. It seems strange to have to argue or protest against such a state of things within the denomination which was originated by George Fox and his associates; and we willingly hope, not only that the above is the extreme yet known instance of it, but that Friends everywhere, who are trying the pastoral system at the present time, may soon tire of it, and abandon it as a mistake. A free Gospel ministry must be one which is untrammelled, as well as one whose preaching is not done for hire."

FRIENDS' SCHOOL AT ABINGTON.

It has been decided by Abington Monthly Meeting, (Montgomery Co., Pa.), to make an addition to the present school building, in charge of that meeting, to accommodate fifty more pupils, so that altogether 150 can be received.

THERE is nothing that so refines the face and mind as the presence of great thoughts.

SIN may be clasped so close we cannot see its face.

WHEN WORK IS DONE.

It is as if the world were glad!
Whether in light or darkness clad,
The hour is never dull or sad
When work is done.

The very voices in the street
Are tuned to notes more soft and sweet;
We love all things we chance to meet
When work is done.

The gentle music of the breeze,
The tender whispers of the trees,
And every sound has power to please
When work is done.

Upon each dear, familiar face
Rests some new trait of winsome grace,
And joy lights up the old home-place
When work is done.

Life's tumult suddenly grows still,
And love and gladness and good-will
Come with their peace the heart to fill
When work is done.

But when the hours of labor close,
And earth is wrapped in sweet repose,
And all things sleep—alas for those
With work undone!

Oh, kind Taskmaster, let thy rest
Be to tired workers manifest,
And unto all who do their best,
Say thou, "Well done!"

—*Marianne Farningham.*

PREFERENCES AND TREASURES.

I'd rather drink cold water from the brook,
Than quaff excitement from a golden chalice;
I'd rather sleep on straw in shepherd's hut,
Than lie awake and restless in a palace.

I'd rather earn dry bread in lusty health,
And eat it with a sense of wholesome pleasure,
Than feed without the zest of appetite
Off gorgeous plate and unavailing treasure.

I'd rather have one true unfailing friend,
Than fifty parasites to crave my bounty;
And one poor lass who loved me for myself,
Than one without a heart who owned a county.

Nature is kind if our desires are pure,
And strews rich blessings everywhere around us;
While Fortune, if we pant in her pursuit,
Too often grants her favors to confound us.

Fresh air and sunshine, flowers, and health, and love—

These are endowments if we learn to prize them;
The wise man's treasures better worth than gold,
And none but fools and wicked men despise them.

—*Chas. Mackay, in Chambers's Journal.*

THE happiness of love is in action; its test is what one is willing to do for others.—*Ben-Hur.*

"No man can do much for others who is not much himself."—*Phillips Brooks.*

THE GREATER WORLD.

WHEN you forget the beauty of the scene
Where you draw breath and sleep,
Leave city walls for gleams of sky that lean
To hills where forests creep.

The heights, the fields, the wide-winged air
Make the embracing day ;
Not city streets. That little life of care
Steals our great joys away.

Live with the spaces, wake with bird and cloud,
Spread sentient with the elm ;
Our home is nature, even to the proud
Ares of the sunset's realm.

Then say the scene God made is glorious !
Breathe deep and smile again.
The glow and noble dusks, victorious,
Disperse regrets and pain.

—*Rose Hawthorne Lathrop, in Scribner's Magazine.*

NOT GODLESS PEACE.

[In the *Herald of Peace*, London, William Tallack writes as follows.]

WHILST, from time to time, it is expedient for the friends of Peace to exert their influence actively against panic-cries for increased armaments and against administrative waste and extravagance in connection with the Admiralty, or the War Office, yet it is also desirable ever to maintain the pacific testimony on its primary and strongest basis of Christian principle. It is because war is eminently sinful and hateful to God, and productive of all manner of evils to mankind, that it is to be especially opposed, and also because the spirit of conciliation and harmony is essentially pleasing to the Divine Head of the Church.

Doubtless, economical considerations, in regard to the pecuniary interests of the tax-payer, are of importance. But they should always be regarded as subordinate to the claims of Scriptural principle and religious duty. And if the work of disarmament is urged mainly from motives of financial advantage, this is a plea which may also be used, and constantly is so used, in support of increased or presumptively adequate defenses for the material and commercial interests of nations. If a taxpayer opposes panic-cries exclusively on grounds of economy, he is apt to be met with the reply—"It is precisely as a premium of national insurance that we ask for more ships and soldiers for your own protection. It may be far cheaper in the end for you than if, in consequence of being unprepared for invasion, you lose the bulk, or even the whole of your possessions, both personal and national." Nor is it easy to rebut this plea, whilst regard is chiefly directed to the mere saving of taxation.

But those who oppose the war spirit, and the increase of armament, principally on the ground of their hatefulness to God and of their essential antagonism to the extension of the Spirit and Kingdom of Christ, these occupy a very different and incomparably stronger position.

Nor is peace too habitually to be advocated on account of its pleasantness, its facilities for ease and

profit, for undisturbed trading and money-making on the part of the non-military citizen. Such an advocacy is weak and one-sided. For whenever a condition of national or international peace is taken advantage of, for the most part, to foster habits of luxury and sensuality, the deepest and truest interests of the people are positively injured by such an abuse of pacific blessings. For example, in reference to the conditions of the Slave States of America just before the Civil War, who can reasonably believe that the cruelty, the oppression, and the shocking licentiousness which were then, and for a long period previously, universally rampant in those States, were less displeasing, in the Divine sight, than the evils of the four years of the conflict which resulted in putting an absolute end to the Slave system? It would have been a very weak plea to have opposed that particular war chiefly because it would necessarily break in upon the deadly moral torpor and fetid foulness of the plantation city life of the Southern States, as they then existed. The horrible vices and crimes of such a social condition were probably in the mind of Dr. W. E. Channing, that pre-eminently American friend of peace, when he declared that "there are some evils even worse than war."

Nor, further, must it be forgotten that, even in war, there are at times to be witnessed genuine heroism and noble purposes, at least superior to the careers of such persons as pervert the blessings of peace to the service of a goddess avarice or sensuality. If this is ignored by any, in the propagation of peace, such persons fairly lay themselves open to the indignant sarcasms of speakers like Lord Wolsley, who, at Birmingham, recently denounced such a weak mode of advocacy as "the incarnation of pure and calculated selfishness, as unpatriotic as unwise." In the best interests of the holy cause of peace, it is necessary to rest its highest claims and its strongest defense upon a very different basis, even that of allegiance to the spirit and precepts of Jesus Christ, whose emphatic declaration everlastingly abides: "By this shall all men know that ye are my disciples, if ye have love one to another." Such love and such discipleship meet with deadly antagonism, both in the subtle moral pestilence of a merely godless peace and in the more obvious evils, the awful carnage and terrors of actual warfare. The truest promotion of peace will oppose both forms of evil impartially—because both are fraught with influences hostile to the allegiance due only to God and to Christ.

"WHEN death strikes down the innocent and young, for every fragile form from which he lets the panting spirit free, a hundred virtues rise, in shapes of mercy, charity and love; to walk the world and bless it. Of every tear that sorrowing mortals shed on such great graves some good is born, some gentler nature comes. In the Destroyer's steps there spring up bright creations that defy his power, and his dark path becomes a way of light to heaven."—*Dickens.*

BIOGRAPHY and anecdote are full of proofs that Emerson was right in telling us,—

THE PHILOSOPHY OF TEARS.

I WAS in company the other day with my friend, the professor of chemistry, and, being in a reflective mood, I chanced to say, "Professor, tears are a curious thing."

"By no means," replied he promptly. "Their composition is quite simple: about ninety-eight parts water, and two parts salt, albumen, and mucus."

I did not pursue the conversation, but thought, without saying so, that if tears are not a curious thing, a professor of chemistry certainly is.

I happened, a few days after, to repeat the conversation to our professor of physiology, who, bringing his supercilious muscles into play, said, "Simple as it may appear to Dr. Atom, the genesis of tears is quite a complex process, and they have multiple mechanical functions. They are secreted by the lachrymal gland, and partly by the orbicularis muscle are conveyed into the lachrymal canal, and thence into the eye, which they flood, and thus effectuate detersion, facilitate the movement of the eyeball, and preserve the transparency of the so-called cornea."

I could only respond, "I dare say. All you tell me is very wonderful and very complex, but how on earth do the little babies learn to cry so early and so well?" I did not tell him that I did not comprehend a word he had uttered, and hence the wonder,—*omne ignotum pro magnifico*. Much less did I reveal what was passing in my mind. It seemed to me that science is like a pin,—very useful for sticking things together, and very nicely contrived for this purpose; but one man spends his whole life in coiling the head, another in shaping the shaft, and another in sharpening the point, while each understands nothing but his own part of the pin.

It next occurred to me to find out what the poets say about tears. They travel from earth to heaven very rapidly, in a daring, desultory way, and always through mists and clouds, seeing things and parts of things very indistinctly, and rarely telling the truth about what they do see; yet notwithstanding, they now and then seem to find out some things, of more or less value, which other people do not know.

As we do not at present keep a professor of poetry at our university, I began to rummage among my books. The first lines that met my eye were these:

"Tears, feelings bright, embodied form, are not
More pure than dewdrops, Nature's tears."

Here is a definition of tears that we can accept without aversion,—tears are the bright, bodily form of feeling. The poet does not tell us that when we weep we are doing nothing more than secreting a mucous fluid by means of the lachrymal gland. He feels bound, however, to state the fact that tears are not *more* pure than dewdrops. The whole truth would have been that they are not *as* pure by a good deal. Perhaps Mr. Bailey did not know that they contain mucus, albumen, and salt. We wish we did not possess the uncomfortable information. We shall never again be able to kiss the tears from her cheek with the relish that once we did.—*J. T. L. Preston, in Atlantic Monthly.*

THE AGRICULTURE OF THE FUTURE.

THE average yield of wheat in the United States is about twelve bushels per acre. It is commonly sown with a drill, which deposits the seed in rows eight inches apart; eight rows are commonly planted at each turn; and an average of one and a half bushels of seeds is used per acre; one man with team will plant eight acres per day, and this being done in September, the field has no further attention until the reaper is put in the following July to gather whatever harvest Providence has seen fit to send as a reward for the negligence of the husbandman.

Professor Blount, of the Colorado Agricultural College, having first made an elaborate study of the habits and needs of the wheat plant, conducted a series of experiments in its cultivation with the following results:

First he planted upon an exact square acre seven and one-half pounds of hand-picked wheat in rows of eighteen inches apart, and at harvest threshed out sixty-seven bushels; again, upon one-fourth of an acre he planted thirty-two ounces of selected seed, and the product was eighteen bushels; and again, upon seventy-six square feet he planted seventy-six kernels of extra-fine seed, weighing forty-five grains, and the product was ten and one-half pounds, or nearly at the rate of one hundred bushels per acre.

These results are not more remarkable in the excessive yield from a given area than in regard to the yield from a given portion of seed. Agricultural discussion too often directs attention to a result without sufficiently analyzing the means by which it is obtained. A pertinent feature of these experiments is the saving of an amount of seed which, averaged upon the entire grain acreage, would add annually a vast sum to the wealth of the nation.

If we should throw into the sea annually fifty million bushels of wheat and a proportionate amount of the other cereals, the world would cry out at our improvidence. Yet if Professor Blount's conclusions are correct—and they are supported by much collateral evidence—we bury this amount in the ground where it is not only thrown away, but where it actually decreases the resultant crop.

The economic results that would follow if we should be able to increase our production even approximately to the above ratio are too far-reaching for the scope of this article. Our ability to feed an almost limitless increase of population would be assured. It may be that over-production would recoil upon ourselves, but we have already successfully encountered the lowest wheat markets of the globe, and as increased production would mean decreased cost, we might eventually be able to make good our boast of "feeding the world."

With a population increasing at the rate of twenty-five per cent. with every decade, it is hardly probable that our production (after the final occupation of all the public lands) will at the best more than keep pace with its needs. As before suggested, a most progressive development will be required if we even accomplish that.

Farmers generally will say that the results secured by the above experiments are not attainable upon

any extended scale: probably not, to the average farmer, because, having so much land to till, he must still sow his eight acres per day. It may occasionally occur to one of particular intelligence that it might be economy to produce his hundred bushels by the thorough cultivation of two acres rather than by superficially working upon eight. Such a one will find that exact and scientific methods are practical as well.

It would consequently seem that the pursuit of agriculture can offer inducements to the student who would in turn become the teacher, to the business man who would exert his talents in it as a financial enterprise, to the scientist who would combine a profitable avocation with the investigation of the laws of nature, and to the economist who from his own observations would add to the general knowledge of how best to conserve the forces of production.—James K. Reeve, in *Harper's Magazine*.

FRIENDS' BOARDING HOUSE.

ELEVENTH ANNUAL REPORT OF THE MANAGERS.

The Managers in presenting the eleventh annual report feel that it might almost be a stereotype of former ones, the work being so similar from year, so few changes being made in the general management of the household that it seems but an "off-told tale."

The house is in fairly good repair, very little having been expended thereon; some new carpets and a few other necessary articles have been purchased to replace those worn out; all the rooms have been occupied most of the time, and the receipts from board have been about sufficient to defray the ordinary expenses; but to meet the taxes, interest, repairs, and general wear and tear, we have been obliged to rely, as heretofore, upon contributions from friends to whom our thanks are due, trusting they will not be unmindful of future needs.

The household has been working harmoniously during the past year; the Matron, Sidney Walton, continues to give general satisfaction to the boarders, and is in accord with the Managers in promoting the object for which the house was established.

When we last met together our friend, Deborah F. Wharton was with us, manifesting the same interest she had always done, but on the 16th of 8th month last she departed this life, aged nearly ninety-three years. She was chosen a manager at the first meeting and continued in the board until her death; her faith never waned, and was evinced by punctual attendance and attention to her duties when in health, by her wise counsel, and many gifts.

We are called upon to announce the death of Hannah Antrim, who had boarded in the house for a number of years. She had been for a long time an invalid, was patient and loving, and the influence of her meek, Christian spirit was felt throughout the household. Her death occurred 12th month 14th, 1888. The funeral service was held in the parlor, and was attended by many of her friends.

It is our pleasant duty to acknowledge the interest manifested for the welfare of the Institution by Harriet W. Paist, George Taber, and others for the pecuniary aid rendered by them.

The debt remains the same as last year—mortgage \$5,000 and loan \$1,000.

The Treasurer's report will show the income and expenses for the past year, also a record of the contributions, as follows: One rocking chair from Lydia H. Hall, one

drop light from Mary F. Saunders, a number of articles for use from a Friend, D. F. W., a book from S. Fisher Corlies, estate, \$5.00 for sheeting from A. T. Keyser.

Henry M. Laing, Treasurer, in account with Friends' Boarding House.

HENRY M. LAING, Treasurer.

Philadelphia, Fourth month 24, 1889.

Having examined H. M. Laing's (Treasurer) account and his vouchers, find it correct with a bill of Three Hundred and Seventy-six 82-100 (\$376 82) Dollars in his hands

GEORGE TABER, } Auditors.
THOMPSON SHOURDS, }

At the eleventh annual meeting of Friends' Boarding House Association, held at 1623 Filbert street, Fourth month 24th, 1889, seventeen Friends were present.

The minutes of last meeting read and approved.

The annual report of the Managers was read, also the Treasurer's report, and both were referred to the new Board of Managers.

The following named Friends were elected to serve for the ensuing year:

OFFICERS.

President, Abraham W. Haines.
Treasurer, Henry M. Laing, 30 N. Third street.
Clerk, Edmund Webster.

DIRECTORS.

Joseph Bacon, 823 Marshall, Mahlon K. Paist, 1522 Marshall, Sarah C. Webster, 236 S. Twentieth, Letitia G. Haines, 1513 Marshall, Mary A. Tupman, 1109 Columbia ave., Mary F. Saunders, 453 N. Seventh, Henry M. Laing, 30 N. Third, George Taber, 1617 Sumner, Abraham W. Haines, 1513 Marshall, Joseph M. Truman, Jr., 839 Callowhill, Edmund

Webster, 1156 S. Broad, C. A. Woodnutt, 1215 N. Fifteenth, Martha D. Hough, 1340 Spruce, Thompson Shourds, 2212 Wallace, Anna J. Lippincott, 1713 Green, Sarah James, 2044 Mt. Vernon, Beulah L. Mitchell, 1705 N. Seventeenth.

SWARTHMORE NOTES.

HENRY G. WESTON, D. D., president of the Crozer Theological Seminary, at Chester, accompanied by the professor of Hebrew at Yale University, visited the College on Third-day last.

—President Taylor, of Vassar College, which has just done away with its preparatory department, as Swarthmore hopes to do shortly, in a letter to Dr. Magill says: "We enjoy the absence of the preparatories. The change is a great gain, and we are full without them."

—Elizabeth Powell Bond tendered a reception to the members of the Senior Class, the Faculty, and Officers of the College, with a number of guests from the neighborhood, on Third-day evening last.

—Third-day was a holiday at the College, the authorities having decided to follow the general observance of the day. In the morning appropriate exercises were held in the meeting-house, President Magill making suitable remarks and Professor Appleton reading Washington's Inaugural Address.

—The annual reunion of the Somerville Literary Society attracted a large number of alumnae and former students to the College on Seventh-day last. Among the business transacted was the election of Mary A. Livermore, the distinguished woman lecturer, and Olivia Rodham, late librarian of the College, as honorary members. In the afternoon papers on different topics by Emily Wilson, '82, and Florence Hall, '80, were read and discussed. In the evening the active members recited the "Antigone" of Sophocles in Greek for the entertainment of their guests, and the customary banquet followed.

THE VOW OF WASHINGTON.

BY JOHN GREENLEAF WHITTIER.

[Read in New York, Fourth month 30, 1889, at the Centennial Celebration of the Inauguration of George Washington as the First President of the United States.]

The sword was sheathed: in April's sun
Lay green the fields by Freedom won;
And severed sections, weary of debates,
Joined hands at last and were United States.

O City sitting by the Sea!
How proud the day that dawned on thee,
When the new era, long desired, began,
And, in its need, the hour had found the man!

One thought the cannon salvos spoke;
The resonant bell-tower's vibraat stroke,
The voiceful streets, the plaudits-echoing halls,
And prayer and hymn borne heavenward from
St. Paul's!

How felt the land in every part
The strong throb of a nation's heart,
As its great leader gave, with reverent awe,
His pledge to Union, Liberty, and Law!

That pledge the heavens above him heard,
That vow the sleep of centuries stirred;

In world-wide wonder listening peoples bent
Their gaze on Freedom's great experiment.

Could it succeed? Of honor sold
And hopes deceived all history told.
Above the wrecks that strewed the mournful past,
Was the long dream of ages true at last?

Thank God! the people's choice was just,
The one man equal to his trust,
Wise beyond lore, and without weakness good,
Calm in the strength of flawless rectitude!

His rule of justice, order, peace,
Made possible the world's release;
Taught prince and serf that power is but a trust,
And rule, alone, which serves the ruled, is just;

That Freedom generous is, but ruled
In hate of fraud and selfish wrong,
Pretense that turns her holy truths to lies,
And lawless license masking in her guise.

Land of his love! with one glad voice
Let thy great sisterhood rejoice:
A century's suns o'er thee have risen and set,
And, God be praised, we are one nation yet!

And still, we trust, the years to be
Shall prove his hope was destiny,
Leaving our flag with all its added stars
Urent by faction and unstained by wars!

Lo! where with patient toil he nursed
And trained the new-set plant at first,
The widening branches of a stately tree
Stretch from the sunrise to the sunset sea.

And in its broad and sheltering shade,
Sitting with none to make afraid,
Were we now silent, through each mighty limb,
The winds of heaven would sing the praise of him.

Our first and best!—his ashes lie
Beneath his own Virginian sky.
Forgive, forget, O true and just and brave,
The storm that swept above thy sacred grave!

For, ever in the awful strife
And dark hours of the nation's life,
Through the fierce tumult pierced his waruing word;
Their father's voice his erring children heard!

The change for which he prayed and sought
In that sharp agony was wrought;
No partial interest draws its alien line
'Twixt North and South, the cypress and the pine.

One people now, all doubt beyond,
His name shall be our Union-bond;
We lift our hands to heaven, and here and now,
Take on our lips the old Centennial vow.

For rule and trust must needs be ours;
Chooser and chosen both are powers
Equal in service as in rights; the claim
Of duty rests on each and all the same.

Then let the sovereign millions, where
Our banner floats in sun and air,
From the warm palm-lands to Alaska's cold,
Repeat with us the pledge a century old!

Oak Knoll, Danvers, Mass.

"WORDS are spiritual forces, angels of blessing or of cursing; unuttered, we control them; uttered, they control us."

BIRDS OF LONDON—THE HEDGE-SPARROW.

The hedge-sparrow, or duncock, is not only one of the most familiar, but also one of the most harmless, of British birds. As Bewick remarks, "it has no other relation to the sparrow than in the dinginess of its colors; in every other respect it differs entirely." Indeed, it belongs to the genus *Accentor*, of which it is the only resident British representative, its cousin, the Alpine accentor, being only an occasional visitor to this country. Its slight resemblance in plumage to the sparrow was, doubtless, the cause of the name "hedge sparrow," by which it is most commonly known; an unfortunate name, which has, without doubt, caused the destruction of thousands of its species, as many persons think that as it is called a sparrow, it must be mischievous. Attempts have from time to time been made by different writers to change this name—hedge-accentor, hedge-chanter, and hedge-warbler being among the new names suggested—but always without success; for hedge sparrow it was, as we know, in Shakespeare's time, and hedge-sparrow it will remain—at all events in those parts where it is not known by its other familiar name of duncock. Oddly enough, this bird has two human names, "Dick" and "Molly," being known as Dick Duncock and Molly Hedge-sparrow; in many places the latter name is dropped, and it is known simply as the Molly.

The hedge-sparrow is not uncommon in London, and, like the redbreast, is found in the Parks, and, practically, wherever there are shrubs and gardens of any size; the dinginess of its plumage, which in the smoke and dirt of town becomes almost black, and its habit of never going far from shrubs and bushes, render it, however, less observable than that bird. The fact that it is found in London will not surprise those acquainted with its habits, for it has been well described as "our most domestic bird," and certainly appearances favor the idea that it delights in human society, as it is to be found at all times near houses, in gardens, orchards, and shrubberies. In the spring, no doubt, many retire to the hedges and woods to breed; but, like the redbreast, they, as winter approaches, again draw near to the neighborhood of houses, and at this time may find their way into London.

As we have said, the hedge-sparrow is one of the most harmless of British birds, feeding as it does on insects, worms, and seeds. In hard weather, as Gilbert White tells us, it "frequents sinks and gutters, where it picks up crumbs and other sweepings," and it will always be found among the birds coming to be fed where food is spread for them in the winter-time. Gilbert White also tells us that "in mild weather they procure worms, which are stirring every month of the year, as any one may see that will only be, at the trouble of taking a candle to a grassplot on any mild winter's night." Many persons accuse the hedge-sparrow of taking fruit, and even peas, in the summer-time; but not only is it innocent of the offense so laid to its charge, but in reality it is a friend to the gardener.

These birds are generally seen in pairs, and have been well described as unobtrusive, quiet, and retir-

ing, without being shy. They may generally be seen on lawns, though never far from cover, moving about in search of food with a cheerful, jerky gait, and continually flirting their wings in a way peculiarly their own. This curious motion of the wings is doubtless the origin of "Shufflewing," one of the bird's many names. They are very early breeders, pairing as they do in the beginning of February, at which time the cock may be heard constantly singing his quaint little song, which, though deficient in variety, is very pretty and sweet in tone. Like the redbreast, he continues his song practically the year through, singing as he does at all times, except during his moult and in very hard weather. Bewick said of the hedge-sparrow: "Its song is little varied, but pleasant, especially in a season when all other warblers are silent; its usual strain is a sort of quivering, frequently repeating something like the following tit-tit-titit, from which in some places it is called the Titting." The nest is rather a loose structure of twigs, roots, green moss, and wool, well rounded internally and lined with hair. So neat is this lining that Rennie suggested that the birds must moisten the hair to make them wind, since otherwise it would not be easy to account for the neatness of the work. It is placed in a bush or hedge, usually low down, or—favorite places with these birds—in the heaps of faggots, pea-sticks, brush, and rubbish so often found in gardens and shrubberies. The eggs, from four to six in number, of a uniform light blue color, are laid often early in March, and, therefore, before the bushes and hedges are in leaf, the consequence being that they not infrequently become the prey of bird's-nesting boys. Cuckoos are particularly fond of depositing their eggs in the nests of hedge-sparrows, a circumstance evidently well-known to Shakespeare, as he made the Fool in *King Lear* say

For you trow, nuncle,

The hedge-sparrow fed the cuckoo so long

That it had its head bit off by its young.

The apparent preference is probably accounted for by the fact that the nest is easily found, as little art is used in concealing it. Frank Buckland expressed the opinion that one pair of hedge-sparrows could not feed such a glutton as a young cuckoo, and that other birds, attracted by its peculiar cry, must help the foster-parents. Be this as it may, it is an undoubted fact that many cuckoos are yearly hatched and brought up by these birds. Hedge-sparrows are occasionally kept in captivity; they thrive in averies, and, being of a peaceful disposition, are not given to interfering with the other birds, though some people complain that they are unsociable. When so kept they will eat canary seed, breadcrumbs, paste, etc., but they look upon an occasional meal-worm as their greatest luxury.

In London, hedge-sparrows breed regularly in Kensington Gardens, being particularly fond of the Flower Walk and the private gardens surrounding the Palace, where some of them may always be seen the year through. And, generally, we do not think their numbers are diminishing in the Parks, or, indeed, in any part of London, or the suburbs, where they are not driven out by the builder.—*The Saturday Review*.

NEWS AND OTHER GLEANINGS.

—Miss Knatchbull-Hugessen has published in England some interesting facts, gathered from statistics, of the after-life of Girton and Newnham students. It appears that intellectual training is beneficial to girls, even from a medical standpoint. The average health of the students who have married is better than that of married women who have not been to college, and the health of their children also averages higher. Statistics collected by the Association of Collegiate Alumnae in this country point to a similar result.—*Woman's Journal*.

—Helen Chalmers, the daughter of the noted Scotch divine, lives in one of the lowest parts of Edinburgh. Her home consists of a few rooms in an alley, surrounded by drunkenness, poverty, and suffering. Every night she goes out into the lanes of the city with her lantern, and she never returns to her quarters without one or more girls or women she has taken from the street. The people love her, and she is never molested or insulted.

—In noting the death of Henry Swayne, of Delaware, the *Wilmington Evening* recalls the fact that Henry Swayne and David Eastburn were the two members who voted for woman suffrage in the Legislature in 1881, and then says: "Since then the woman with the ballot has quietly made some headway in Delaware. Women who pay town taxes have been given the right to vote in the new charters of Newark, Clayton, Wyoming, and Milford, and amendments are pending to the charters of Seaford and Frederica, the former of which restores to them a like privilege which they had formerly enjoyed but which had been taken away several years ago, and the latter impliedly grants the ballot in municipal elections to unmarried women who pay town taxes."

—A new Commission has been appointed by President Harrison to negotiate with the Sioux Indians for the division of their great reservation in Dakota into "severally" tracts, and the sale of the unused part to the United States. General George Crook, of the regular army, one of the firm friends of the Indians, is at the head of the Commission. It will be remembered that the effort at negotiations, last year, resulted in failure, the Sioux refusing to sell at the price and under the conditions which the law allowed the Commissioners to propose. Congress has now made some changes in the law, and it is thought there may be a better prospect of success. The President has also appointed John H. Baker, of Indiana, one of the Commissioners, to negotiate with the Cherokees the purchase of their extra lands, (called the "Cherokee Strip," and adjoining "Oklahoma,") in Indian Territory. He takes the place of ex-Governor George D. Robinson, of Massachusetts, who declined.

—Lord Lonsdale, who has just returned from his Arctic expedition, says that on Hay River, which rises about 300 miles north of the American boundary, he saw the most beautiful waterfall in the world. It is horseshoe shape, and has a sheer fall of 200 feet with another fall above it. It is about $\frac{1}{2}$ miles wide at the top and $\frac{1}{4}$ miles wide at the bottom. It is more beautiful than Niagara, although there is not the same weight of water.

—Trees in the Galician forest are now cut by application of electricity.

—The people of Vaca Valley, Cal., have found that peach pits make good fuel, that pound for pound they will burn as long as coal and give more heat, and they are now saving them all. They sell at \$6 per ton, and find an active market. Apricot pits also serve as fuel, though they do not burn so readily.

—French engineers are utilizing the poppy to strengthen railroad embankments. The roots of the plants form a network which cannot be exterminated without great difficulty, and are therefore admirable for the purpose named.—*Our Paper*.

—A manuscript copy of the Gospels for which \$25,000 has been refused is about to be sold at auction in London. It is the copy known as the "evangelarium," written in letters of gold on purple vellum, and was written by a Saxon scribe for Archbishop Wilfrid in 670.

—For several years past fears have been freely expressed that the box-forests of Europe are giving out, and that the engravers would suffer from the decreased supply. A new species has been discovered in South Africa, the wood of which is believed to be equal to its long-known relative, *Buxus sempervirens*. The new species has been named *Buxus Macouani* by Hooker. One forest, covering fifteen square miles, exists in the Buffalo River Valley, and small forests have been found near the coast. It sometimes has a trunk two feet thick.

—At the Columbia Rolling Mill, in Jersey City, taggers' iron is made from old tin cans and other waste sheet metal. The tin cans are first heated in an oven raised to a temperature of about 1,000°, which melts off the tin and lead. The sheet-iron which remains is passed first under rubber-coated rollers, and then chilled iron rollers, which leaves the sheet smooth and flat. After annealing and trimming they are ready for shipment. The tin and lead which is melted from the cans is run into bars and sold. The sheet-iron obtained from the refuse cans, etc., is said to be of good quality, and is used for buttons, tags, and objects of a like nature.—*Scientific American*.

—The N. Y. *Tribune* of the 23d ult. states: "The tide of immigration reached high-water mark so far this season at Castle Garden yesterday, when five great ocean steamships landed 3,293 steerage passengers. The limits of the place and the patience of the officials were taxed to the utmost to manage and dispose of this tremendous rush. The Rhaetia, from Hamburg, brought over 739; the Noordland, from Antwerp, lauded 1,016; the Persian Monarch, from London, had 29; La Bretagne, from Havre, 669; and the Etruria, from Liverpool, swelled the list with 740 souls. Included in this number were 35 Arabs and Greeks who were detained by the Emigration Commissioners as likely to become paupers."

CURRENT EVENTS.

THE Centenary celebration of the inauguration of President Washington took place in New York City, according to programme, on the first three days of the present week. President Harrison and his family, with the members of his Cabinet, Judges of the Supreme Court, and other dignitaries, left Washington early on the evening of the 27th, and were received in New York Bay with a great parade of shipping. There were also public receptions, a ball, processions in the streets of New York, an oration by C. M. Dewey, poem by J. G. Whittier, a public banquet, etc. The city was crowded with many thousands of visitors.

EX-GOVERNOR BROWN, of Tennessee, has accepted an invitation to represent the South in the reunion of Union and Confederate soldiers of Scotch-Irish blood at the congress to be held at Columbia, in that State, from the 8th to the 11th of the present month. Corporal Tanner will represent the North.

THE Chief Signal Officer has directed that on and after the 1st of the present month "the indications official shall make, whenever practicable, a general prediction showing

the condition of the weather two or three days in advance." This class of long-time predictions "will be confined to such occasions and such sections of the country, as from peculiar and persistent meteorological conditions, seem to assume successful forecasts."

CASES of yellow fever are reported to have occurred in Sanford, Florida, but the nature of the disease is disputed.

The limited express on the Grand Trunk Railway was wrecked near Hamilton, Ontario, on the morning of the 25th ult. The cars jumped the track and ran into a water tank. Two cars were telescoped and took fire. Eighteen persons were killed and about twenty injured. Most of the killed were burned beyond recognition.

FREDERICK BARNARD, late President of Columbia College, died, on the 27th ult., at his residence in New York. The cause of his death was paralysis, from which he had suffered for a long time. He was born in Sheffield, Conn., in 1809.

BERLIN, April 29.—The Conference of Representatives of the United States, Germany, and England, to consider Samoan affairs, opened to-day in the Congress Hall of Prince Bismarck's residence. The session lasted an hour and fifteen minutes. On the proposal of Count Herbert Bismarck it was decided that the strictest secrecy should govern the deliberations of the Conference. The sentiments expressed by the Commissioners were of the friendliest character.

It has been decided in France that the elections of members of the Chamber of Deputies, (popular branch of the Parliament), shall take place on the 22d of Ninth month next. This will probably bring to a decision the effort to overthrow the republican form of government.

NOTICES.

. Quarterly Meetings in Fifth month occur as follows:

6. Nine Partners II. Y. M., Poughkeepsie, N. Y.
7. Philadelphia, Race street, 10 a. m.
9. Abington, Horsham, Pa.
9. Shrewsbury and Rahway, Shrewsbury, N. J.
10. Stanford Creek, N. Y.
11. Miami, Waynesville, O.
11. Salem, West, O.
13. Philadelphia Yearly Meeting.
15. Easton and Saratoga Q. M., Saratoga, N. Y.
18. Short Creek, near Mt. Pleasant, O.
20. Fairfax, Hopewell, Va.
22. Stillwater, Somerset, O.
23. Duanesburg, New Baltimore, N. Y.
25. Blue River, Blue River, Ind.
27. Warrington, Pipe Creek, Md.
27. New York Yearly Meeting.
28. Burlington Q. M., Crosswicks, N. J.
29. Southern, Easton, Md.
30. Bucks, Buckingham, Pa.
31. Nottingham, Deer Creek, Md.

. Circular Meetings in Fifth month occur as follows:

5. Chichester, Pa., 3 p. m.
19. Roaring Creek, Pa., 2 p. m.
19. Gunpowder, Md., (old house) 10 a. m.

. First-Day School Unions in Fifth month occur as follows:

25. Blue River, Ind., 8 p. m.

. A meeting of the Yearly Meeting's Committee on Isolated Membership will be held at Room No. 1, 15th and Race streets, Philadelphia, on Seventh-day, Fifth month 4th, at 10 o'clock a. m.

HOWARD M. JENKINS, Clerk.

. A general (and public) meeting of the "Association of Friends for the Promotion of Education among the Col-

ored People of the South" will be held on Fifth-day evening (Yearly Meeting week), Fifth month 16, 1889, at 8 o'clock. Officers for the ensuing year will be chosen.

The attendance of all interested in the work is cordially invited.

HOWARD M. JENKINS, Chairman,
SARAH J. ASH, Secretary.

. A meeting under the care of a Committee of the Pennsylvania Peace Society will be held at Friends' Meeting-house at Gwynedd, Fifth month 5th, at 2.30 p. m. All interested are invited.

. The annual meeting of the stockholders of Friends' Book Association of Philadelphia, will be held at the meeting-house, 15th and Race streets, Philadelphia, on Second-day evening, Fifth month 13th, at 8 o'clock.

S. B. CHAPMAN, Secretary.

. Prof. Sydney B. Frost will lecture before Friends' Society Lyceum, at meeting-house, 17th and Girard Avenue, on Fourth-day evening, Fifth month 8, 1889. Subject: "From Alexandria to Cairo," with illustrations.

PUBLISHERS' NOTICES.

. As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

. Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance may be used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day and must be sent to press at noon of the day preceding.

. We particularly ask that when money is forwarded to renew subscriptions, care be taken to give us the name of the person to whom the paper is now being sent. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a new subscription, please say so, and this will also to help avoid mistakes.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

ADVISORY BOARD OF PHILADELPHIA DIRECTORS

WM. HACKER,
JOHN M. SHRIOLEY,
S. ROBINSON COALE,
CRAIG LIPPINCOTT,
R. W. CLAY,

NOT LOST.

The look of sympathy, the gentle word,
Spoken so low that only angels heard,
The secret act of pure self-sacrifice,
Unseen by men, but marked by angels' eyes,
These are not lost.

The happy dreams that gladdened all our youth,
When dreams had less of self and more of truth,
The childhood's faith, so tranquil and so sweet,
Which sat like Mary at the Master's feet,
These are not lost.

The kindly plan devised for others' good,
So seldom guessed, so little understood,
The quiet, steadfast love that strove to win
Some wanderer from the ways of sin,
These are not lost.

Not lost, O Lord! for in thy city bright
Our eyes shall see the past by clearer light;
And things long hidden from our gaze below
Thou wilt reveal, and we shall surely know
These are not lost.

—Selected.

FRIENDS IN MASSACHUSETTS.¹

“Why drag again into the light of day
The errors of an age long passed away?
I answer: ‘For the lesson that they teach;
The tolerance of opinion and of speech.
Hope, Faith, and Charity remain,—these three;
And greatest of them all is Charity.’”

Thus wrote H. W. Longfellow in his “New England Tragedies.” Perhaps we may be asked why revive the sad story of the persecutions of Friends in Massachusetts, about which abundance has already been written. Is not this a part of our history and as such should we forget it?

The historians of New England usually have represented the Friends as coarse, illiterate, “impudent” men and women, given to wild excesses and contempt of all law and good order, and sometimes even of decency. Even Bancroft, in writing of Friends in New England, says: “Far from introducing charity, their conduct irritated the government to pass the laws of which they were the victims. But for them the country would have been guiltless of blood.” George E. Ellis claims that the Friends who went to Massachusetts “courted persecution, suffering, and death, and as the magistrates affirmed, ‘they rushed upon the sword.’ Those magistrates never intended them harm, except as they believed that

all their successive measures and sharp penalties were positively necessary to secure their jurisdiction from the wildest lawlessness and absolute anarchy.” His conclusion is: “It is to be as frankly and positively affirmed that their Quaker tormentors were the aggressive party; and with a dogged pertinacity persisted in outrages which drove the authorities almost to frenzy.”²

Brooks Adams takes a broader and more comprehensive view of the difficulty between the Friends and Puritans, considering it but a part of the long struggle by which freedom of thought and emancipation from priestcraft have been gained. He says: “The issue between the Quakers and Congregationalists must be left to be decided upon the legal question of their right as English subjects to inhabit Massachusetts; and secondarily upon the opinion which shall be formed of their conduct as citizens, upon the testimony of those witnesses whom the church herself has called.” He also says: “Viewed from the standpoint of comparative history, the policy of theocratic Massachusetts toward the Quakers was the necessary consequence of antecedent causes.

. . . . The power of a dominant priesthood depended on conformity, and the Quakers absolutely refused to conform, nor was this the blackest of their crimes; they believed that the Deity communicated directly with men, and that these revelations were the highest rule of conduct. Manifestly such a doctrine was revolutionary. The influence of all ecclesiastics must ultimately rest upon the popular belief that they are endowed with attributes which are denied to common men. The syllogism of the New England elders was this: that all revelation is contained in the Bible, we alone, from our peculiar education, are capable of interpreting the meaning of the Scriptures; therefore we only can declare the will of God. But it was evident that, were the dogma of the “Inner Light” once accepted, this reasoning must fall to the ground, and the authority of the ministry be overthrown. “Necessarily those who held so subversive a doctrine would be pursued with greater hate than less harmful heretics, and thus contemplating the situation there is no difficulty in understanding why the Rev. John Wilson, pastor of Boston, should have vociferated in his pulpit that “he would carry fire in one hand and faggots in the other, to burn all the Quakers in the world.”²

The persecution began with the imprisonment of

¹Read at the Conference, after meeting, at 15th and Race Sts., Philadelphia, Fifth month 6th, 1889, by Annie Cooper.

²The Emancipation of Massachusetts.

Mary Fisher and Anne Austin and continued for a period of twenty-one years. "During that time Marmaduke Stevenson, William Robinson, Mary Dyer, and William Leddra were hanged, several mutilated, and two, at least, are known to have died of starvation and whipping." The sufferings and death of Mary Dyer have always had a peculiarly painful interest. She was from Rhode Island and in early life had been a follower of Anne Hutchinson. Drawn by sympathy to visit four Friends in prison, she made the second visit to Boston, where she was soon arrested and arraigned with Marmaduke Stevenson and William Robinson before the court. In reply to the question, "Why they came into the jurisdiction after being banished on pain of death;" they answered, "They came in obedience to a divine call." They were then sent back to prison until sentence of death was pronounced upon them. Mary Dyer saw the execution of her two friends, and she herself ascended the scaffold, but a reprieve was brought to her, which had been obtained from the Governor by the intercession of her son. The next year she again returned to Boston and was arrested and condemned to death. She was guarded to the place of execution by a band of soldiers and before and behind her drums beat to prevent the people from hearing her, should she attempt to speak.

Samuel M. Janney says: "Among the manifold sufferings of the Early Friends none produced a more deep and lasting impression than the execution of Mary Dyer. The gravity of her deportment, the purity of her life, the ability and refinement of her mind, as well as the spiritual gifts with which she was endowed, gave her a strong hold on the affections of her friends, and, doubtless, induced many to embrace those Christian principles which shone forth in her example."

The Vagabond Act was passed in 1661, providing that "any person convicted before a country magistrate of being an undomiciled or vagabond Quaker to be stripped naked to the middle, tied to the cart's tail, and flogged from town to town to the border." The whip was a two-handed implement armed with lashes made of twisted and knotted cord and cat-gut, and no limit was put to the number of stripes. There is no doubt but that if the people had permitted the execution of some of the sentences in accordance with this act the result would have been death.

There were excesses and extravagances among the persecuted, but Brooks Adams has shown that three of the women, against whom the severest charges are brought, were insane,—two of them made so by the extreme cruelty practiced upon them by those in authority.

This brief sketch would scarcely be complete without referring to Cassandra Southwick commemorated by Whittier's ballad, who, with her husband, was arrested for harboring Quakers. The husband was released, but as a Quaker tract was found upon the person of Cassandra, she was fined and imprisoned. They were arrested again and ordered to leave Salem, their home. When they asked what wrong they had done, the judges told them they were rebellious in not going as they had been commanded.

The aged people pleaded they had nowhere to go, nor had they done anything to deserve banishment, though £100, all they had in the world, had been taken from them. "They were sent to Shelter Island, where they perished within a few days of each other, tortured to death by flogging and starvation."

With the punishment of Margaret Brewster for her protest against the repression of freedom of thought the long conflict ended, and toleration and quiet came to all religious denominations. To quote again from Brooks Adams:

"Awful as is this Massachusetts tragedy, it is but a little fragment of the sternest struggle of the modern world. The power of the priesthood lies in submission to a creed. In their onslaughts on rebellion they have exhausted human torments; nor in their lust for earthly dominion have they felt any remorse, but rather joy, when slaying Christ's enemies and their own. The horrors of the Inquisition, the Massacre of St. Bartholomew, the atrocities of Laud, the abominations of the Scotch Kirk, the persecution of the Quakers had one object,—the enslavement of the mind.

"Freedom of thought is the greatest triumph over tyranny that brave men have ever won; for this they have fought the wars of the Reformation; for this they have left their bones to whiten upon unnumbered fields of battle; for this they have gone by thousands to the dungeon, the scaffold, and the stake. We owe to their heroic devotion the most priceless of our treasures, our perfect liberty of thought and speech; and all who love our country's freedom may well reverence the memory of those martyred Quakers by whose death and agony the battle in New England has been won."¹

THE SINS OF EXTRAVAGANCE.²

ALL modern energies seem to be concentrated on this one mad folly—to get, to have, to enjoy. No desire, attainable by fair means or foul, is to be left unsatisfied. The luxuries of a past age are regarded as necessary in this. What was an occasional luxury for our fathers has become our daily need. All classes of society are pervaded with this false conception of life. There is the most wanton expenditure of time and money, of energy and ambition, and the most reckless extravagance by poor and rich in the mad pursuit of the world's honors and pleasures.

No thoughtful person can behold this growing extravagance without trembling for our country's future. The downfall of ancient empires can, in many cases, be attributed to the vice and immorality brought on by the extravagant luxuriance of their citizens. Who does not know that when the unbridled appetite for carnal pleasure became the absorbing ambition of the Roman masses that mightiest people of the past became the weakest, and were an easy prey to the hardy Goths and Vandals?

No nation can be greater than the masses of its people. Give to the masses a lofty ideal of purity

¹The Emancipation of Massachusetts.

²Extracts from a sermon, at Plainfield, N. J., by Charles B. Mitchell.

and integrity, of thrift and economy, and the national life will possess the elements of stability. Once let the people become enamored of pleasure, self-indulgence and excessive prodigality, and the nation must fall. The national ideal will be that of its masses. Its stability must be the stability of its people.

I see on every hand such unrest, such haste to be rich, or such folly to appear rich, and such extravagance by rich and poor alike in attempting to get the pleasures and honors of this world alone, that I am alarmed for the soul of the individual and for the permanency of the government. It is high time for the pulpit and the press to cry out against this rapidly growing evil. It is time to protest that wealth may be dishonest; that good clothes may cover leprosy; that brown stone may shelter crime; that liveried equipages may bear adulterers; that art may bedeck vice; that genteel drinking begets idiocy, and that riches may damn the soul. It is high time for the young to learn that wisdom is better than rubies; that character is worth more than reputation; that honesty is the best policy; that truth is better than falsehood; that sham is dishonest; that paste jewels are lies; that poverty with contentment is great gain; that true manhood is worth more than blue blood; that an honest clerk is more to be honored than a rich knave; that a pure woman is a fairer thing in the sight of God and decent men than the half nude creature in fashionable attire.

The world has too long set up a false standard for our youth, and I call on all who love the souls of men to aid me in denouncing vice and extolling virtue; in placing the badge of true royalty where it belongs—on the breast of honest manhood and purest womanhood.

Our jails, work-houses, and prisons are crowded with young men; this class forming the large majority in all places where criminals are confined. Their fall has been due to a false conception of life; they held appearances to be realities; they thought that pleasure was the highest attainable object in life; that they were placed in this world to get fun and have a "good time." They would have pleasure at the cost of conscience, of manhood, of honesty, of character, and of their deathless souls. The mouths of hell stood wide agape to allure them and entrap them. Toil kept them engaged during the sunlight hours, but the shades of evening called them from cheerless homes to pleasure's haunts. The churches' doors were closed and locked, but the saloon was open, the theatre welcomed, the cheap museum enticed, the gaming-table bewitched, the house of the wanton allured, and the soul was ensnared. It is an easy thing for a young man to spend more in a night than he can earn in a day. More characters can be torn down in an evening than can be built up in a lifetime. The night's pleasures produced insatiable appetites, and with the new desires came increased weakness of moral fibre. The thoughts during the hours of labor were on the coming pleasures of the hours of leisure.

He would now have better clothes and more money than his talents could earn. He may have

made the friendship of those who had more money at their command than he, and he must not appear mean among such companionship. His clothes must be as new and fashionable, his "treats" must be as lavish, and his tastes as extravagant as theirs. He must keep up appearances. You can't distinguish the difference between this poor young man and the son of the millionaire by any dissimilarity in attire or ease of manners as you see them on the street, at the opera, or in the ball-room. The tailor can do for the young man what the dressmaker can do for the young woman. Somebody has to pay for that poor young man's clothing and his style; and while debts are accumulating and appetites are growing and the moral nature is weakening, his salary is not increasing, and the final hour comes when dishonesty of appearance and sham blossoms into overt crime of theft or forgery, and his career ends in shame and dishonesty. A life is wrecked and a soul is lost. When it was too late, that young man learned that good clothes are not always honorable, that gold is not always eighteen carats, that pleasure is not always profit, and that society is not always pure.

Possessed with the false notion that it is a disgrace to serve in some honorable household, where good food and good clothes, good shelter and true friends may be found, thousands of girls in all our cities are crowding the places in shops and factories which hardly pay enough to secure a cheap boarding-place, and nothing scarcely left to dress in the fashion required. Is it any wonder that, with the natural desire to appear in becoming dress and have congenial companionship, the homeless girl wanders at nightfall from her fireless and comfortless room to the street, and spends her last dime for an evening's cheap amusement and self-forgetfulness. How easy thus to make acquaintanceship whose touch is pollution and whose whisperings are from hell! How hard for her to find the friendship that will help, how easy to find the friendship that will taint!

Not only are the young women who are dependent upon their own labor liable to the temptations and ills which come from false conceptions of the true aim and end of life, but also the more favored daughters of wealth and refinement. "Give us pleasure," they cry, "and at any cost." Those who move in those so-called higher circles of fashionable life are guilty of the most sinful and tremendous extravagance in their pursuit of pleasure. Young girls gather from the society novel unattainable ideals of life, and they form false conceptions of what constitutes true manhood and womanhood. They grow ambitious to become like the "fair lady" of their dreams, to marry the "knight errant" of the novelist's imagination, and spend their happy days in storied palaces, where their eyes are not kept by any desire, nor their hearts from any joy.

If all this extravagance were confined to only those who could afford it, the waste of money that could lighten so many burdens, cheer so many homes, help so many needy, and save so many souls, is sin enough; but its influence on others less wealthy but

equally ambitious, is pernicious. The trouble is that all classes are straining beyond their real ability. All are wasting God's treasure in the foolish pursuit of gaining pleasure by needless display. We strain ourselves to be as much like the rich as our pocket or credit will allow. And from the poorest working girl, ashamed to carry a lunch-basket, through all society, in all walks of life, there is a desire to appear what we are not; and at the stretch of honesty and the cost of self-respect, and at the risk of our souls, we are dying with the desire to appear "respectable."

THE PRAYER OF AGASSIZ.

ON the Isle of Penikese,
Ringed about by sapphire seas,
Fanned by breezes salt and cool
Stood the master with his school.
Over sails that not in vain
Wooded the west wind's steady strain,
Line of coast that low and far
Stretched its undulating bar,
Wings aslant along the rim
Of the waves they stooped to skim,
Rock and isle and glistening bay,
Fell the beautiful white day.

Said the master to the youth :
" We have come in search of truth,
Trying with uncertain key
Door by door of mystery ;
We are reaching through His laws,
To the garment-hem of Cause,
Him, the endless, unbegun,
The Unnameable, the One
Light of all our light the source,
Life of life, and force of force.
As with fingers of the blind
We are groping here to find
What the hieroglyphics mean
Of the unseen in the seen,
What the thought which underlies
Nature's maskings and disguise,
What it is that hides beneath
Blight and bloom and birth and death,
By past efforts unavailing,
Doubt and error, loss and failing,
Of our weakness made aware,
On the threshold of our task
Let us light and guidance ask,
Let us pause in silent prayer ! "

Then the master in his place
Bowed his head a little space,
And the leaves by soft airs stirred,
Lapse of wave and cry of bird
Left the solemn hush unbroken
Of that wordless prayer unspoken,
While its wish on earth unsaid,
Rose to heaven interpreted.
As in life's best hours we hear
By the spirit's finer ear
His low voice within us, thus
The All-Father heareth us ;
And His holy ear we pain
With our noisy works and vain.
Not for Him our violence
Storming at the gates of sense.
His the primal language, His
The eternal silences !

Even the careless heart was moved,
And the doubting gave assent,
With a gesture reverent,
To the master well-beloved.
As thiu mists are glorified
By the light they cannot hide,
All who gazed upon him saw,
Through its veil of tender awe,
How his face was still uplift
By the old sweet look of it,
Hopeful, trustful, full of cheer,
And the love that casts out fear.
Who the secret may declare
Of that brief, unuttered prayer ?
Did the shade before him come
Of the inevitable doom,
Of the end of earth so near
And Eternity's new year ?

In the lap of sheltering seas
Rests the Isle of Penikese ;
But the lord of the domain
Comes not to his own again ;
Where the eyes that follow fail,
On a vaster sea his sail
Drifts beyond our beck and hail !
Other lips within its bound
Shall the laws of life expound ;
Other eyes from rock and shell
Read the world's old riddles well ;
But when breezes light and bland
Blow from summer's blossomed land,
When the air is glad with wings
And the blithe song-sparrow sings,
Many an eye with his still face
Shall the living ones displace,
Many an ear the word shall seek,
He alone could fitly speak.
And one name forever more
Shall be uttered o'er and o'er
By the waves that kiss the shore,
By the curlew's whistle sent
Down the cool sea-scented air :
In all voices known to her
Nature owns her worshiper,
Half in triumph, half lament.
Thither Love shall tearful turn,
Friendship pause uncovered there,
And the wisest reverence learn
From the master's silent prayer.

—John G. Whittier.

SCRIPTURE LESSON, No. 19.

FIFTH MONTH 19, 1889.

THE LORD'S SUPPER.

GOLDEN TEXT.—" Whether ye eat or drink, or whatsoever ye do,
do all to the glory of God."—1. Cor. 10: 31.

READ Mark 14 : 12-26.

In the interval between the Supper at the house of Simon, in Bethany, and the Feast of the Passover, which, under the head of " The Lord's Supper," forms the subject of our present lesson, Judas Iscariot, having already shown himself to be a false and covetous man, sought the high priest, who, with his associates, were secretly conspiring against Jesus, fearing a popular uprising if their intentions became known before they had secured his person. Having agreed with them to deliver his Master into their

hands, and set his price for the iniquitous transaction, Judas, the traitor, returned to eat the Passover with him and the other eleven disciples.

When they sacrifice the Passover. The lamb that was sacrificed was called sometimes, as here, the Passover. It had to be killed and dressed in time for roasting, so that it could be eaten at the evening meal. It was selected with great care, and must be a yearling without spot or blemish. The offerings made to Jehovah were always the best of the kind. This is a lesson for us: In what we lay upon the altar of sacrifice, let it be the best we have. If it is some service we render the needy or suffering, let it be done cheerfully and with a willing spirit; if it be to give of our substance, or our time, or whatever other ability we may possess, let the same spirit animate us. "God loveth a cheerful giver;" and a sacrifice ceases to be a sacrifice when the offering is made in love which is its own rewarder.

Go into the city. Into Jerusalem. The place designated was doubtless the house of one of Jesus's friends; great hospitality prevailed during these festival seasons.

And in the evening. The evening began at 3 o'clock, and lasted until 9; it was divided into two parts of three hours each. The two disciples who had been sent to make ready the supper, had everything prepared—the lamb roasted, the bitter herbs, the wine, and the unleavened bread—when Jesus and the ten entered the guest chamber.

And as they did eat. This was the first intimation given of the treachery of Judas, though even then the name was withheld. This supper does not appear to have differed from the usual Jewish order. That Jesus should want to be remembered by them whenever they should hereafter eat the Passover was most natural; and that it should be an incentive to them to be followers of their Master, even to the giving up of life, as he was about to do, must have been his desire, so tenderly and earnestly expressed in his prayer to the Father.—*John, 17.*

We learn from Bible history that the Lord's Supper, spoken of in the New Testament, was substantially the same as the Passover, which was instituted by the children of Israel to commemorate their deliverance from Egypt. It was a memorial service which all the Jewish people were to observe throughout all generations. Robert Barclay, in his "Apology" says: If we consider the action of Jesus, it was no "singular thing, neither any solemn institution of a gospel ordinance, because it was a common custom among the Jews, that when they did eat the Passover, the master of the family did take the bread, and bless it, and breaking it, gave of it to the rest; and likewise taking wine, did the same; so that there can nothing further appear in this, than that Jesus Christ, who fulfilled all righteousness, and also observed the Jewish feasts and customs, used this also among his disciples only, that as in most other things he labored to draw their minds to something beyond, so in this he takes occasion to put them in mind of the sufferings and death so soon to come upon him." This being the last time they were

to eat the paschal supper together, it was his desire that in the remembering of the present occasion they might "be the more stirred up to follow him diligently through suffering and death."

The "breaking of bread spoken of in Acts 2: 42," continues Barclay, "cannot be understood of any other than of their ordinary eating," one meal each day being regarded in each Christian family as commemorative. This is in accordance with testimony gathered from the incidental mention of the Lord's supper in other places. Later on it came to be the custom for several families to join together in partaking of this supper. (Acts 20: 7.)

But this service, instituted to be a loving bond of unity and as a memorial of the last supper of Jesus with his disciples, was not long maintained in the simplicity and purity of its first appointment (1 Cor., 11 chap., 17th verse to the end), yet for seven or eight centuries it was observed as a memorial service only.

Friends regard the supper as a figure and symbol of the spiritual union that each individual must know if he become one with Christ, the partaking of the body and blood of Jesus being typical of the feeding of the soul upon the lessons of wisdom and duty which he gave forth as the true knowledge of God, who, by his Holy Spirit, will lead into all truth.

NOTES ON THE LESSON.

The directions given in the 12th chapter of Exodus for the observance of the Passover feast were very simple, but in the time of Jesus it had become an elaborate ceremonial, as is gathered from incidental mention of it in the New Testament. The Mishna, which is a collection of Jewish traditions, and explanations of the written law, gives a minute detail of the order to be observed; it forms the first part of the Talmud.

All the ceremonials, even to the arrangement of the dishes on the table, were fixed by rule. In the first celebration of the feast, only the lamb, unleavened bread, and a salad of bitter herbs were partaken of; the wine cup was added at a later date. The routine of procedure will doubtless be interesting to some; it is as follows. The evening having arrived, all the necessary arrangements being perfected, the head of the household gathered his family together, and taking the filled wine cup in his hand gave thanks to Israel's God for all his mercies to his people, then passed it to each one who was present; after the drinking, washing of the hands followed. Then prayers were offered in which some latitude of expression was allowed: this was succeeded by the salad of bitter herbs and salt, of which all partook; then the dishes were removed and the second cup was filled. At this point the head of the house explains the origin of the feast, enters into an account of the bondage of the Hebrews in Egypt, and their wonderful deliverance, which it celebrates; the dishes are then brought back and the cup passed around; prayers and thanksgiving follow the drinking. Then the unleavened bread is broken, the pieces dipped in the sop, with the bitter herbs, are distributed. The sop was a mixture of sweets, dates,

and raisins, etc. The eating of the paschal lamb followed immediately, the cup was again filled, blessed, and passed the third time, but just before this a piece of unleavened cake, called the "after dish," was eaten. With the passing around of the fourth cup of wine psalms were chanted, two short hymns of praise sung and the service concluded.

From the account given in John's gospel (13: 26-30) it is thought that Judas, the traitor, left before the eating of the paschal lamb, as is there intimated. The washing of the disciples' feet, recorded only by John, was performed after the drinking of the first cup.

The Passover was eminently a family observance. It gathered to the home circle and around the family altar the scattered members of the household who in thus coming together at the yearly feast strengthened the ties of love, and renewed their interest in each other's welfare. Without some such bond, we can scarcely see how the Hebrew people could have preserved their identity through all the centuries that have elapsed since they became a dismembered nation.

The Paschal feast is still observed by the Jewish people wherever they have found a home, though they have no longer a Temple or a sacrificial altar, nor is "the lamb without blemish" a part of the service. May we not look forward with a great hope, to the time when all the forms and ceremonies which have in them no saving power, shall give place to the offering of *ourselves* on the altar of service, thus following the Great Teacher who came not to do his own will, but the will of his Heavenly Father?

THE NEW YORK CENTENARY.

EXTRACTS FROM THE ADDRESS OF BISHOP POTTER.¹

A GENERATION which vaunts its descent from the founders of the Republic seems largely to be in danger of forgetting their preëminent distinction. They were few in numbers, they were poor in worldly possessions—the sum of the fortune of the richest of them would afford a fine theme for the scorn of the plutocrat of to-day; but they had an invincible confidence in the truth of those principles in which the foundations of the Republic had been laid, and they had an unselfish purpose to maintain them. The conception of the National Government as a huge machine, existing mainly for the purpose of rewarding partisan service—this was a conception so alien to the character and conduct of Washington and his associates that it seems grotesque even to speak of it. It would be interesting to imagine the first President of the United States confronted with some one who had ventured to approach him upon the basis of what is now commonly called "practical politics."

But the conception is impossible. The loathing, the outraged majesty with which he would have bidden such a creature to begone is foreshadowed by the gentle dignity with which, just before his inauguration, replying to one who had the strongest claims upon his friendship, and who had applied to him

¹At St. Paul's Church, (which Washington attended, during his residence in New York), Fourth month 30th.

during the progress of the "Presidential campaign," as we should say, for the promise of an appointment to office, he wrote: "In touching upon the more delicate part of your letter, the communication of which fills me with real concern, I will deal with you with all that frankness which is due to friendship, and which, I trust, will be a characteristic feature of my conduct through life. . . . Should it be my fate to administer the Government, I will go to the Chair under no preëngagement of any kind or nature whatever. And when in it, I will, to the best of my judgment, discharge the duties of the office with that impartiality and zeal for the public good which ought never to suffer connections of blood or friendship to have the least sway on decisions of a public nature."

On this high level moved the first President of the Republic. To it must we who are the heirs of her sacred interests be not unwilling to ascend, if we are to guard our glorious heritage! . . .

Another difference between this day and that of which it is the anniversary, is to be seen in the enormous difference in the nature and influence of the forces that determine our national and political destiny. Then, ideas ruled the hour. To-day, there are indeed ideas that rule our hour, but they must be merchantable ideas. The growth of wealth, the prevalence of luxury, the massing of large material forces, which by their very existence are a standing menace to the freedom and integrity of the individual, the infinite swaggering of our American speech and manners, mistaking bigness for greatness, and sadly confounding gain and godliness—all this is a contrast to the austere simplicity, the unpurchasable integrity of the first days and the first men of our Republic, which makes it impossible to reproduce to-day either the temper or the conduct of our fathers. . . . If there be not titular royalty, all the more need is there for personal royalty. If there be no nobility of descent, all the more indispensable is it that there should be nobility of ascent—a character in them that bear rule, so fine and high and pure, that as men come within the circle of its influence, they involuntarily pay homage to that which is the one preëminent distinction, the Royalty of Virtue!

And it was that, men and brethren, which, as we turn to-day and look at him who as on this morning just an hundred years ago, became the servant of the Republic in becoming the Chief Ruler of its people, we must needs own, conferred upon him his divine right to rule. All the more, therefore, because the circumstances of his era were so little like our own, we need to recall his image and, if we may, not only to commemorate, but to reproduce his virtues. The traits which in him shone preëminent as our own Irving has described them, "Firmness, sagacity, an immovable justice, a courage that never faltered, and most of all a truth that disdained all artifice," these are characteristics in her leaders of which the Nation was never in more dire need than now.

And so we come and kneel at this ancient and hallowed shrine where once he knelt, and ask that God would graciously vouchsafe them. Here we find the witness of that once invisible force which,

because it alone can rule the conscience, is destined one day to rule the world. Out of airs dense and foul with the coarse passions and the coarser rivalries of self-seeking men, we turn aside as from the crowd and glare of some vulgar high way, swarming with pushing and ill-bred throngs, and tawdry and clamorous with bedizened booths and noisy speech, into some cool and shaded wood, where, straight to heaven, some majestic oak lifts its tall form, its roots imbedded deep among the unchanging rocks, its upper branches sweeping the upper airs and holding high commune with the stars; and as we think of him for whom we are here to thank God we say, "Such an one, in native majesty he was a ruler, wise and strong and fearless in the sight of God and men, because by the ennobling grace of God he had learned first of all to conquer every mean and selfish and self-seeking aim, and so to rule himself!" For

"—What are numbers knit

By force or custom? Man who man would be

Must rule the empire of himself—in it

Must be supreme, establishing his throne

Of vanquished will, quelling the anarchy

Of hopes and fears, being himself alone."

Such was the hero, the leader, the ruler, the patriot, whom we gratefully remember on this happy day. We may not reproduce his age, his young environment, nor him. But none the less we may rejoice that once he lived and led this people, "led them and ruled them prudently" like Him, that Kingly Ruler and Shepherd of whom the Psalmist sang "with all his power." God give us grace to prize his grand example, and, as we may in our more modest measure, to reproduce his virtues.

THE HERITAGE OF CHARACTER.

When, a hundred years ago to-day, Washington took the oath of office as President of the United States, he had already rendered to his country such service that it may be fairly said that what came after was subordinate, and precious as it was, was of less value. And, though there are no terms in which the relative value can be clearly stated, we should be strongly inclined to say that the greatest service was not in his consummate military skill, nor in that splendid courage which, at moments like those of Trenton and Germantown, could risk much to gain much, but in what may be summed up in the single word, character. Washington made the Republic of the United States possible by the absolute demonstration to his own people and to the peoples of other lands that here in the rudimentary conditions of national life, in the obscurity of a colonial existence, with no guidance or sanction of tradition, with none of the inherited obligation of a privileged class, in the natural development of substantially free institutions, there had been produced and matured a character proof by all tests against the vices and weaknesses attributed to the people, possessed in all regards of the purity, firmness, justice, respect for the rights of others necessary to the government of men under such free institutions. That he was rarely gifted by nature men of our time have come rather slowly to recognize. The more closely his career is

studied, the more clear it is that, given the means and the conditions, he showed far more than any man of his time the native force that cannot be analyzed, but that makes man great. But this force, which other men had, if in less degree, would never have enabled him to become the indispensable man he was had it not been coupled with the possession of that rarest of gifts—complex and simple at once—the character that holds action true in great things and in small and makes a man trusted and trustworthy among his fellowmen.

In the long trial of the Revolutionary struggle, from the siege of Boston to that of Yorktown, the trait that gave him distinction, that impressed those immediately about him, and those whose destinies he held in his strong hand, that grew with the growth of men's knowledge of him and struck the roots of his countrymen's affection for him and faith in him deeper and deeper in their hearts with every year, was his rectitude. At every juncture, in counsel and in action, in success and in defeat, amid the enthusiasm of progress and amid the accumulating evidences of intrigue, infidelity, coldness, and treachery, he did and he was known to do what he believed to be right. And in the long intervals when the fortunes of the cause he fought for drooped, when his armies dwindled to a handful of ill-fed, ill-clad, half-armed, disheartened men, when for himself the future held no promise of honor and hardly the hope that his faithfulness would be acknowledged, still steadfastly and simply he did his duty as if nothing else was possible to him. He was not unambitious. He valued the good opinion of men, he frankly desired their praise, he believed in the substance and the form of official distinction, fame to him was a real object of intense aspiration, but above all other things, with a sway in which he was only half-conscious, by a necessity of his nature, duty dominated him. It was this more than his rare intellect, beautiful in its clearness and sublime in its elevation, that made him great as no other man in the history of the English-speaking race has been great.

Since it was this that had been demonstrated to his country long before he was called to be its first President, it is not unfair to say that his greatest service had already been rendered. But when that call came, and with infinite solicitude and anxiety, with unfeigned self-distrust and but a meagre hope for the future, he obeyed the call, the service went on. As he had shown the virtue and the capacity of the statesman in his post as commander of the armies, so now as the Chief Magistrate he showed these same virtues united with those of the soldier. He was often in doubt; he was sometimes near to despair. There are passages in his private correspondence, when he was beleaguered by the difficulties, the perplexities of civil rule, and especially by the ambition and greed and meanness of his fellow-citizens, that are full of agony. But he never wavered. When the time came for him to act, taking counsel of those he trusted most, listening to all whom he believed to have a right to speak, then deciding as nearly he could for the best, he acted and faced the consequences as he had been wont to face

his foes. The secret of his immense and enduring influence, we think, lay in this. It was this that makes the story of his life to-day so deeply interesting, so profoundly instructive. At all times he was ready, not to efface himself, but to bear whatever came to himself. Fear and temptation alike had, therefore, no hold upon him. The gloomiest forebodings—and he was not by temperament hopeful—could not daunt him, because he was ready for the worst. The brightest allurements could not swerve him, for he was armed against them by an invulnerable self-respect. It is the priceless heritage of his countrymen that everyone of them in his own life can emulate that in which Washington was the greatest.—*N. Y. Times, Fourth month 30.*

PHILADELPHIA, FIFTH MONTH II, 1889.

TEMPERANCE IN DISCUSSION.

We have printed within a few weeks several communications, contributed articles, etc., relating to the vote which is to be taken in Pennsylvania, a few weeks hence, on the question of adopting or rejecting the proposed Prohibitory Amendment to the State Constitution. All of these have favored the affirmative side of the question, and we have little doubt that this is the view held by a majority of our readers. We have printed nothing upon the other side: two articles have been offered us by Friends, stating their objections, (in the interest of Temperance), to the particular measure now proposed in Pennsylvania, but discussing likewise many other points which are more or less in dispute. In the form in which these were submitted, we thought them almost certain to call out replies, and to lead to extended controversy.

Our readers will no doubt agree with us that there is need of caution as to debates upon matters which are not included in the fundamental list of Friends. The duty of our members in their capacity as citizens must be regarded as a subject largely to be left to their own judgment and conscience. It is the mission of the INTELLIGENCER AND JOURNAL to help build up the strength of the Society which furnishes the great majority of its readers, and in whose interests it is published. The need of this body is a conservation and renewal of its forces, and the avoidance of distraction over questions not fundamental.

In avoiding mere disputation and unprofitably extended argument, we have no desire to suppress a

reasonable expression, temperate, and tolerant, and kindly in manner, of views on current questions of interest. If the presentation of such views is pertinent, and characterized by the "sweet reasonableness" which those professing the faith and practice of Friends should manifest, there can be no unfitness in the proceeding. The discussion of the proposed Amendment is capable, no doubt, of such treatment, and out of it there should come a clearer view and sounder understanding. But it must all be in the right spirit, and likewise in a right manner. Friends must remember that the body of which they are members is a religious organization. It is their agreement concerning religion which has gathered them together in one fold, and which holds them in the bond of unity. They must make any debates which they hold with each other subordinate to this essential and vital condition.

As no charge is made for the insertion of notices of deaths and marriages, we request that they may be punctually sent us, both as matters of record, which may be serviceable to refer to, hereafter, and as information in which friends and acquaintances are interested. Where deceased persons have been members of our Society, or attenders of its meetings, or have occupied stations of service in it, these facts are appropriate for mention; beyond that, as we have so often mentioned, we desire a caution in making extended "obituary articles," being careful not to present matter which has not a real and worthy bearing, both as regards the person deceased, and those who survive.

THE proceedings of next week in Philadelphia will be of great interest to Friends. The subjects to come before the Yearly Meeting are of more than average importance, and there are meetings in the evenings of the first four days which will receive interested attention. It is to be hoped that all may pass off well: that the one underlying purpose of those who attend may be the service of the cause of Truth, as that has been conceived of and upheld amongst us. The work is all serious and weighty, and deserves the best efforts of all concerned.

MARRIAGES.

GARRETT—PRICE.—At the residence of the bride's mother, by Friends' ceremony, Fifth month 2d, 1889, Eli L. Garrett, of Philadelphia, son of Phebe Ann and the late Lewis Garrett, of Willistown, Chester county, Pa., and Martha S., daughter of Margaretta and the late Samuel Price, of Lansdowne, Delaware county, Pa.

ELLIOTT—SMITH.—On Third month 14th, 1889, at the home of the bride's parents, under the care of Goose Creek Monthly Meeting, Va., Eli Elliott, of West Liberty, Iowa, son of George and Anna Elliott, and Anna T., daughter of Thomas R. and Ellen H. Smith.

DEATHS.

COLFLESH.—Suddenly, Fourth month 29th, 1889, Henry S. Colflesh, Sr., of West Philadelphia, aged 65. Interment at Friends' ground, Darby, Pa.

CORKRAN.—On the 22d of Fourth month, 1889, of consumption, at the residence of his uncle, Silas Lane, of Easton, Talbot county, Md., Ernest, eldest son of Nathan and Annie Corkran, and grandson of Willis Corkran, of Federalsburg, Md., in his 21st year. He was a member of Third Haven Meeting, and was interred at that place.

He was a bright and promising young man, occupying a responsible position in business, where he gave great satisfaction. His testimony was that he had been preserved from strong drink and the use of profane language. He bore his illness, which was of short duration, with remarkable patience and resignation, and passed quietly away without a struggle, leaving us the assurance that he had entered the rest that awaits all the righteous. W. C.

COX.—At his residence, Marlborough township, Chester county, Pa., Fourth month 11th, 1889, Mark J. Cox, aged 62; a valued member of Kennett Monthly Meeting, Pa.

DUNGAN.—At her home in Coleraia, Belmont county, Ohio, Fourth month 25th, 1889, Sarah S., widow of the late B. Ellis Dungan, aged 80 years, 9 months, and 13 days; a member of Concord Monthly and Short Creek Quarterly Meetings of Friends.

Her funeral was largely attended on First-day, the 28th, when appropriate words were spoken by Ezekiel Roberts, and Rebecca Pickering, a member of the other branch of Friends.

HAINES.—Eleventh month 1st, 1886, Anna R., widow of Thomas B. Haines; a member of the Monthly Meeting of Philadelphia.

HIBBERD.—At her home in Willistown, on the evening of First month 24th, 1889, Eliza E. Hibberd, widow of Enos Hibberd, in the 89th year of her age; a member of Goshen Monthly Meeting.

How beautiful to see in the gradual giving up of earth and earthly things, the Spirit made perfect in the assurance of a "Rest for the people of God." This dear friend, who was afflicted and unable to go out for many years, retained that vivacity and cheerfulness of spirit and interest in her surroundings which endeared her to the hearts of all. So gradually was the cord loosened that bound her to earth, that it was hard for her family to realize the change had come; but with the receding things of time, the desire for the Heavenly rest grew strong within her, and she waited patiently for the summons to "come up higher."

NIGHT.—At Byberry, Fourth month 26th, 1889, Sarah R., wife of Ross M. Knight, in her 53d year.

ROWLAND.—At Olathe, Kansas, Fifth month 1st, 1889, Joseph G. Rowland, son of Samuel J. and Mary L. Rowland, in the 53d year of his age.

SHARPLES.—At Summerville, S. C., on Seventh-day, Fifth month 4th, 1889, of hemorrhage of the lungs, Emilen A., son of Philip M. and Helen E. Sharples, of West Chester, Pa., aged 2 years and 3 months.

WALTON.—Fourth month 27th, 1889, Beulah Walton, aged 84 years. Interment from Horsham Meeting-house, Pennsylvania.

MARY RATLIFF.

DIED at Richmond, Indiana, Fourth month 23d, Mary Ratliff, wife of Cornelius Ratliff, in the 88th year of her age; a beloved elder of Whitewater Monthly Meeting.

Mary Kirnley was born near Waynesville, Ohio, in 1802, and in 1822 was married to Cornelius Ratliff. They

settled on a farm near Richmond, where they have lived ever since, sixty-seven years of happy wedded life. Ten children were born to them, five of whom are now living,—our most honored and respected citizens. Their eldest son, Joseph, being now an elder of Whitewater Monthly Meeting, worthily following in the footsteps of his honored parents, both of whom have served in that station many years. They were both faithful attenders of meeting, (Cornelius in younger life not having missed but three meetings during a period of forty years), earnest burden-bearers, and true elders, tender, and quick to recognize the babes in the ministry, and give them the upholding hand. They traveled as companions to three different ministers, Rachel Hicks, Mary Caley, and Ann Weaver, and with Mary Caley visited the penitentiaries of Illinois and Indiana, and many county jails. Their house for forty years was headquarters for Friends during yearly meeting week, and Aunt Mary's bright, cheery spirit, and Uncle Neely's whole-souled welcome, made every one feel at home. Mary was a remarkably energetic, industrious woman, whose sterling virtue, strict integrity, and wise economy, made her a true helpmeet "in whom the heart of her husband did safely confide." Eight years ago, Uncle Neely (as familiarly known) became blind, and Aunt Mary grew so feeble that she could only move about by rolling herself in a wheel chair. Two years ago her eyes also began to fail, and a year ago she too became blind, and the dear aged sightless couple could only sit and talk with each other; but they were comfortably and kindly cared for in their own home, one of their sons and wife living with them. Mary was unconscious near the close of life, but among her last utterances while her mind was yet clear, was "Oh, I am so happy! so happy!" a most beautiful and fitting finale to a well-spent life, whose treasures had been laid up in Heaven.

And now in his 81st year the bereaved and lonely husband must tarry yet a little longer, ere he joins his loved companion on that other shore, whose heavenly radiance already illumines his pathway, causing him to feel "that although alone, he is not alone," for the Lord his God is with him. A. M. S.

FANNY BUTTERWORTH.

DIED, aged 88 years and 20 days, at Waynesville, Ohio, Fourth month 16th, 1889, Fanny Butterworth, a member and elder of Miami Monthly Meeting.

She was born in Bucks county, Pennsylvania, on the 26th of Third month, 1801, was the daughter of Joseph and Rachel (Hayhurst) Smith. Her four pairs of great-grandparents were Thomas and Elizabeth Smith, Thomas and Kezia (Wilkinson) Ross, Cuthbert and Elizabeth Hayhurst, and Bezaleel and Rachel Wiggins. This Cuthbert Hayhurst was the son of an older Cuthbert Hayhurst, who was a recognized minister among Friends, and died about the year 1683. A memorial of him, written by the eminent Nicholas Waln, was published more than one hundred years ago in a volume of memorials of Friends. Thomas Ross was also a gifted minister, and traveled much abroad in obedience to his calling.

Joseph and Rachel Smith were in humble circumstances. They had a little farm of twenty-seven acres, ten of which were too broken for tillage. With this and his trade of weaving, an independent, honest living was made. The children, of whom two sons and seven daughters grew up, helped with a right good will. It was no uncommon thing for five wheels of one sort or another, and two looms, to be operating all at once in the same room.

In a one-horse wagon, in company with Ezra Adams, a relative of the family, Fanny Smith came to Waynesville,

Ohio, in 1823, and thence till her death resided in Warren county. She married Moorman Butterworth in 1825, and in 1841 was left a widow with five children, ranging in age from seven months to less than thirteen years. All these she was favored to raise, and during all her subsequent years she gave them loving care and service, being wonderfully preserved in physical and mental capacity, almost to the very close of life. She walked to meeting and back on the 13th of the month before her death. Two sisters, Elizabeth Bushman and Martha Anderson, aged 93 and 83, are still living.

In her last sickness all her children were with her, ministering such comfort as loving hearts could prompt, and it was refreshing to their spirits to contemplate her meek, humble, and blameless life. They could not recall a deed of hers in more than forty years of their common remembrance of her, of which she had had any need to repent. She taught us nothing which we had to unlearn, she carried no points by deception, she practiced no pious frauds. Farewell, dear, blessed mother! C. B.

For Friends' Intelligencer and Journal
PROVIDING FOR THE FUTURE.

AMONG the economic virtues there is none that is more worthy of attention than making provision for the casualties of sickness, and the possible decrepitude of age. No phase of our social life calls forth greater commiseration than the dependence and absolute want which result from the neglect of this effort. Various plans have been devised by the thoughtful and prudent to help people help themselves in this direction; so that even the very poor who are steady and industrious may, if so inclined, deposit the small savings where a little increase on the net sum through profitable investments adds thereto from year to year.

The Mutual Aid is one of these helpful associations, that renders most timely assistance to the members when by sickness they are cut off from the usual employment, and who but for what is thus saved, might become dependent upon others who are scarcely able to bear the added burden, however willing to extend the helping hand to the utmost of their ability. And this consideration should lead every one who depends upon the earnings of labor for subsistence to place himself, through some such wise economy in a position to be beyond the need of pecuniary assistance from any one.

Besides the weekly benefits which are paid during sickness or other disability, the members of the Mutual Aid Association look after one another and have a care and oversight which promotes good fellowship and social intercourse within the organization, meeting the contingencies of everyday life, and supplying the more emotional nature with that companionship of feeling which is quite as essential to the mind and heart as is food to the body.

We have been led into these considerations from reading the last annual Report of the Friends Mutual Aid Association, to which we call attention in another part of our paper, speaking a good word for the Association the while, believing it to be worthy the encouragement of all who are desirous of helping forward such undertakings either for the benefit of themselves or of their less fortunate fellow members of our Religious Society.

TEMPERANCE AND LONGEVITY.

EDITORS INTELLIGENCER AND JOURNAL:

IN perusing a recent number of your journal I noticed the article headed "Oldest Twins in the World," in which one of your papers corrects the assumptive statement made by a contemporary as to the palm of longevity of living twins.

The outcome of the later statement appeared to be that the oldest of those known to the writer in this distinguished relationship would reach the advanced age of eighty-six years on the 22d of this present (Fourth) month. As I was returning subsequently with an old schoolfellow from the funeral of a mutual acquaintance, who had attained this same age of eighty-six, and who leaves a surviving sister of ninety, we were conversing on this likely topic. Knowing him to be the son-in-law of an aged twin of two sisters, it resulted in my obtaining the following, which I received in writing by this morning's mail and can vouch for as authentic, knowing the parties myself, personally.

"Twin Sisters. Sarah Hilton, widow, resident at Brighton, in the county of Sussex, England, born a member and so continuing of the Society of Friends, twin sister to Susannah Deane, spinster, resident at Amphill, in the county of Bedford, England; consequently, like her sister, born a member of our Society, but for many years has been a member of the Church of England. They were born 16th of First month, 1800. (Communicated by John Rawlings, son-in-law of the former friend, by marriage to her daughter, Susannah, now deceased, of Clapham Road, London, S. W.?)

If not trespassing on your space, a few more particulars may interest thy readers. J. R. goes on to say: "My mother-in-law, Sarah Hilton, as long as I have known her, (about thirty-five years), has been 'a total abstainer,' and even medicinally, I believe, has refrained from the use of intoxicants. She has had twelve children; nine are now living, and at the present time her sight and hearing are good."

As an illustration of the tenacity of her independent spirit as well as of physical ability, whilst at her home a few days ago, Sarah Hilton had risen from her chair and put a fresh supply of coals on the fire. My informant immediately arose to relieve her of the coal-scuttle on its return journey. "No, thank thee," was her ready reply, "I can do it very well myself."

One of her sons, John Hilton, has been for many years an active agent for the "United Kingdom Alliance," and a loyal supporter of the well known Sir Wilfred Lawson, the leader of the Local Option movement in our country.

In giving this notable illustration of the safety and superiority of abstinence from intoxicants, which I gladly set my seal to, in testimony thereunto—after fifty years' personal experience,—I am rejoiced to hear of that old veteran in the cold water army, Neal Dow, now, I believe, in his eighty-sixth year, contemplating a third visit to this land in the coming summer. He will assuredly find many "vacant places" since his first visit in 1857 amongst those whose memory is cherished as the pioneers with

him in this noble enterprise to restrain and lessen, if not exterminate, the great curse of the human race in this potent power for evil, strong drink, but he will get a cordial welcome from those who have entered into this labor. I felt it a distinguished gratification in that memorable year to me, of his first visit in 1857, when I decided to risk my outward substance and future prospects as one means of promoting sobriety, to enter on the proprietorship of a Temperance Hotel (as few then, even of temperance men, were prepared to do, commensurate with the requirements of a complete undertaking), to entertain Neal Dow as a guest at the invitation of that honored, world-wide philanthropist, and at the same time self-denying, humble follower of the lowly Redeemer, Joseph Sturge, during the session of London Yearly Meeting. In that congenial company, also, were Harriet Beecher Stowe, then in the height of her popularity as the author of "Uncle Tom's Cabin," with her brother, Henry Ward Beecher. John Bright, also an early advocate of Temperance, on which platform his first speech is said to have been made, with many English celebrities, including Josiah Forster, Samuel Bowly, Edward Smith, and others forming a company of seventy; so many of whom now rest from their labors and whose works follow them.

At that time the Temperance Reform was only beginning to be tolerated with public recognition by London Yearly Meeting; now, happily, those surviving have lived to witness it as one foremost in its promotion; whilst Temperance Hotels, when rightly conducted, are no longer amongst doubtful enterprises.

Apologizing for the length of these remarks, I remain an interested English reader of your periodical.

JOSEPH ARMPFIELD.

For Friends' Intelligencer and Journal.

LICHENS.

THE student's first glimpses of cryptogamic botany are almost sure to be a series of pleasant surprises. Though familiar from childhood with many of the lower forms of vegetable life, he has probably but dimly grasped the notion that there is any connection between these and the more complex organisms of which he has, without giving much thought to the matter, supposed the vegetable world to be composed. But now the idea flashes upon him that below the vast array of true flowering plants there lies a world of vegetation of the existence of which he has scarcely been conscious, and of whose structure and life history he is almost totally ignorant. Slowly, from the chaos into which this discovery has plunged him, order begins to appear. The symmetry and unity of botanical science become apparent. The most common things acquire a new interest and significance, while the microscope reveals wonders and beauties never dreamed of before.

Beginning with the tiny sexless cells of the green slime and its near relative, the yeast plant, he passes on to the pond scum with its slender green filaments and the black mould with its thousand tiny spores

ready to fasten upon any object where it can obtain the two necessities to its growth—starch and moisture.

The grape mildew, thrusting its long thread-like branches between the cells of the grape leaf and sucking up the starch which, owing to its lack of chlorophyll, it cannot manufacture for itself, represents the third great division of plant life, the egg-spore plants which differ from those below in being distinctly sexual.

In the fourth division he finds the lichens, the toad-stools, the puff balls, and many others.

Next come the mosses and their relatives, as beautiful as they are interesting, and with one more step—the ferns—he reaches the flowering plants and the seven-linked chain is complete.

It was perhaps the recollection of the pleasure which I derived during my school life from a brief study of some of the lower forms of plant life that drew my attention recently to the soft gray growth on the bark of an elm tree by the roadside and caused me to attempt a renewal of my acquaintance with the lichen family.

Regardless alike of latitude and altitude the lichen extends its home from equator to pole and from seashore to mountain top. Finding a foothold where other plants would starve, it grows, reproduces, and decays, thus forming a soil for more advanced vegetation.

The silvery-white reindeer moss, so abundant in the north and extending in the damp woods far southward, is one of the best known lichens; another, important to the Arctic inhabitants of both continents as an article of food, is the Iceland moss which was first brought to notice by Linnæus in his famous description of his botanical journey through the northern lands of Europe.

The "father of lichenography," however, was not Linnæus but a pupil of his, Acharius, whose description of all the lichens then known to the scientific world appeared in the first decade of the present century. Many noted botanists have, since that time, turned their attention to these curious plants, but their life history is as yet by no means clear, and many of the problems of their existence still remain to be solved by the scientists of the future.

The lichen which I found growing on the bark of the elm consists of a plant body somewhat branched and composed of colorless jointed filaments. Upon the upper surface are numerous small cup-like bodies. These bodies are the fruit and contains tiny sacs (asci) which enclose the spores. Beside these cup-like bodies (apothecia) there are other organs (spermatogonia) containing small bodies, which, though their function has not been definitely ascertained, are supposed to be reproductive in their nature and to correspond to the male element in higher plants.

But still more puzzling to the student of lichenography than the spermatogonia, are certain small green cells called gonidia which are distributed through the plant either irregularly or arranged in definite layers or regions. Numerous theories have been proposed to explain the origin and function of

these bodies. It was for a long time supposed that they were produced by the lichen as accessory reproductive organs but this notion seems to have been founded upon imagination rather than upon observation.

A later and more probable theory is that of Schwendener which is stated by Prof. Bessey as follows:

"Every lichen is a colony composed of a parasitic fungus on the one hand, and a number of low algae on the other; the former, which produces the asci, spermatia, and other reproductive bodies, is nourished by the latter which constitute the gonidia of the lichen."

Whether or not this view will be finally accepted by the botanical world remains to be seen. At least it has the advantage of "looking reasonable" and the whole question furnishes a good illustration of the vast amount of work which remains to be done before botany and the kindred sciences can be considered even approximately complete.

ANNA L. NICHOLS.

State Centre, Iowa.

THE UNIVERSAL PEACE UNION.

THE twenty-third anniversary of the Universal Peace Union will be held at Friends' meeting-house, 15th St. and Rutherford Place, New York City, on the 13th and 14th of the present month,—next Second- and Third-days. The sessions on the 13th will begin at 2.30 and 8 p. m.; and on the following day at 10.30, 3, and 8. A circular sent out says:

"Let us have peace.' How to have it—through equal rights, even-handed justice, freedom, temperance, a world-wide philanthropy, and a recognition of all our duties to God or man. Arbitration in place of war. Disarmament and international comity.

"This will be a farewell meeting to the Delegates of the Peace Union to the Paris Exposition and to the Peace Congress—Belva A. Lockwood and Amanda Deyo—who will be present.

"Invited and expected: Aaron M. Powell, M. M. Mangasarian, Rev. Robert Collyer, Marguerite Moore, Rev. R. Heber Newton, Francisco De P. Suarez, of Venezuela, and other representatives of the South American States; Delegates of the Arbitration Department of the Women's Christian Temperance Union and other Associations having kindred objects.

"The Branch Societies of the Universal Peace Union will send Delegates. Members and friends of the cause will send their contributions to the Treasurer, A. T. Zeising, 406 Race Street, Philadelphia."

The officers of the Union are: President, Alfred H. Love; Secretaries, John J. Lytle, Elizabeth H. Webster, Henry Janney, Elizabeth Underhill.

ALL free governments, whatever their name, are in reality governments by public opinion, and it is on the equality of this public opinion that their prosperity depends. It is, therefore, their first duty to purify the element from which they draw the breath of life.—*Democracy.*

SWARTHMORE NOTES.

—The Sophomore engineers have begun field practice instead of the manual training. The latter is one of the features of Swarthmore's engineering course, the hand being educated as well as the brain.

—Curtis Lewis, of the Friends' Deptford School, Woodbury, New Jersey, visited the college last week.

—Samuel Swain, of Bristol, attended the religious meeting on Fourth-day and made an address.

—The Spring athletic exercises will be held on Whittierfield, on Seventh-day next. The prospects for interesting contests are excellent, as is the prospect of Swarthmore winning the Pennsylvania intercollegiate cup.

—President Magill went to Johns Hopkins University, Baltimore, on Second-day.

—Two of the engineering seniors leave this week to accept positions in their profession in the South.

—Dr. Trotter, Professor of Natural History, lectured before the students on "The Significance of Animal Migration," on Sixth-day evening last, under the auspices of the Scientific Society.

—The Greek play presented here last week is said to have been the first ever rendered by American College girls, and competent judges, as Professor Appleton and Professor Rolfe, said that it compared favorably with similar work presented at Harvard and others of the greater colleges.

—Professor Smith will continue his First-day afternoon study of the principles of Friends throughout the year. The attendance has been very encouraging to him.

—Arrangements are being made for a public debate between chosen speakers from the Sophomore and Freshman members of the Eunomian and Delphic societies.

DAILY B READ.

"Give us this day our daily bread."

WHAT is this bread
Wherewith we're daily fed?
One time in thoughtful mood I questioning
said.

Is't wheaten loaves?
Or bread-fruit from the groves?
Or crust unleavened such as Jewry loves?

Were such the feast?
How better than the beast
In yonder field, were man's life in the least?

"By bread alone
Man shall not live," said One
Unto the tempter in rebuking tone.

"By earthly bread
Alone, man is not fed;
But by each word that comes from the God-
head."

Each word?—each thought
Which hitherto hath brought
The soul more near the virtue which it sought;

Each earnest hope
Which gives to Faith new scope,
Each gleam that lights this darkness where
we grope;

And each desire
Which lifts the mortal higher
Toward that immortal whereto we aspire;

This is that bread
Wherewith our souls are fed,
Without which man, indeed, in sin were dead.

Then day by day,
Give me, dear Lord, I pray
That bread which shall my fasting spirit stay!
—*Alice Williams Brotherton.*

HUM-UM-UM.

SAID little brown Bee to big brown Bee :

"Oh! hurry here and see, and see,
The loveliest rose—the loveliest rose
That in the garden grows, grows, grows.
Hum-um-um—hum-um-um,"
Said little brown Bee to big brown Bee.

Said little brown Bee to big brown Bee :
"Much honey must be here, and we
Should beg a portion while we may.
For soon more bees will come this way.
Hum-um-um—hum-um-um,"
Said little brown Bee to big brown Bee.

Said big brown Bee to little brown Bee :
"The rose is not for me, for me,
Though she is lovelier by far
Than many other flowers are.
Hum-um-um—hum-um-um,"
Said big brown Bee to little brown Bee.

Said big brown Bee to little brown Bee :
"No honey-cup has she, has she,
But many cups, all brimming over,
Has yonder little purple clover,
And that's the flower for me, for me,
Hum-um-um—hum-um-um,"
Said big brown Bee to little brown Bee.

—*Margaret Eyttinge, in St. Nicholas.*

UNDER THE LEAVES.

A CARPET all of faded brown,

On the gray bough a dove that grieves :
Death seemeth here to have his own,
But the Spring violets nestle down
Under the leaves.

A brow austere and sad gray eyes,
Locks in which care her silver weaves ;
Hope seemeth tumbled no more to rise,
But God he knoweth on what wise
Love for Love's sunshine waiting lies
Under the leaves.

—*William Herbert Carruth, in Scribner's Magazine.*

THE NEW JOHNS HOPKINS HOSPITAL.

THE new Johns Hopkins Hospital, at Baltimore, was formally opened on the 7th instant. A description of it in a current dispatch says: The dispensary for the treatment of out-door patients will be opened on the 13th inst., and the hospital will be opened with 150 beds for the reception of patients as soon thereafter as practicable.

Dr. William L. Halstead will be in charge of the dispensary and acting surgeon of the hospital. The resident physician is Dr. Lefleur of Canada. Dr. William Osler, formerly of the University of Pennsylvania, is professor of the practice of medicine; L. Win-der Emory, purveyor; Miss Hampton, superintendent of nurses.

On the 8th instant, the buildings were opened to members of the medical profession, students, managers of benevolent institutions, and others whose pursuits lead them to take special interest in hospital work. On the following day the public generally may inspect the premises. The 11th is reserved for the faculties of various institutions in Baltimore and teachers of public and private schools of every kind.

The new hospital comprises seventeen buildings, covers under one roof over four acres of ground and stands conspicuously in a large square 115 feet above tide-water. The buildings are arranged in the shape of an E. The architecture is Queen Anne, severely plain. The interior finishings are perfect in their good taste and excellence, but are not elaborate. The Administration Building stands in the front centre of the group. Its dome rises 315 feet above tide-water. In it will be the executive offices, the reception rooms and several lecture halls. Seven of the buildings contain the various wards. They may be generally described as the perfection of comfort and sanitation. It was the expressed wish of the founder that not more than 400 persons be accommodated at any one time, and it is for this reason that in the wards thus far constructed there are but 224 beds. These figures, however, do not include the accident wards, the isolated ward for contagious diseases, and the wards for paying patients.

The sanitary features of the hospital are the pride of Dr. Billings and the delight of every one who has examined them. Nothing has been omitted to make them the most thorough that science and money could provide. An abundance of light pours in through 2,000 windows. A feature of the hospital that will attract general interest is the nurses home. It is a four-story building, admirably equipped, and as an institution is entirely unique. It will be a training school for giving the nurses a thorough education in the art of properly tending the sick and preparing food for invalids. Another interesting building is the amphitheatre, in which the students of the medical school, to be erected on a neighboring square, will gather for lectures and clinics. Near it are the dead-rooms, the pathological laboratory, and the crematory for consuming the dissected fragments of bodies. The bath-house contains all the latest inventions for every kind of bath. There are handsome quarters for his-

SOME things flower invisibly and hide away their fruit under thick foliage. It is often only when the winds shake their leaves down and strip the branches bare that we find the best that has been growing.—*A. D. T. Whitney.*

tological research and photomicrography. The free dispensary is as large as an ordinary hospital.

Johns Hopkins in his will directed that the hospital should be for the "indigent sick of the city [Baltimore] and its environs, without regard to sex, age or color." A home for convalescents will be built in the country, and an orphan asylum of 300 capacity for colored children will also be established, both being in connection with the same trust. The work on the hospital was begun ten years ago, and there are two buildings yet to be erected, but these will not be begun until the hospital is in full operation and there is a demand for more room. On the buildings, including heating and ventilation, \$1,570,000 have so far been spent, and the total expenditures upon buildings and grounds reach \$2,050,000—or an average of \$9,150 for each free bed.

THE PRESENT STATUS OF DARWINISM.

THERE have recently been some notable articles in prominent periodicals, criticising the work and conclusions of Darwin. Some of these have been published in *The Forum*, (New York), by St. George Mivart, and W. S. Lilly, both English writers of prominence, Mivart being a naturalist of high repute, who, from the first has been an opponent of the theories of Darwin. Both he and Lilly, we believe, are Roman Catholics. In a recent number of *The Student*, (Philadelphia), representing the educational work among Orthodox Friends, two contributors, T. Chalkley Palmer, and D. W. Dennis, protest against the idea drawn from the *Forum* articles, that there is any "reaction against Darwinism," and the former, in the course of his remarks, says:

"It may be stated with the utmost confidence that there is to-day no such retrograde movement under way with respect to Darwinism (evolution.) Two great scientists, Dawson, of Canada, and Mivart, of Great Britain, are still objecting to certain phases of Darwin's partial argument; but they are in no sense leading a reaction. They have been objectors uniformly since the appearance of the 'Origin of Species,' and their influence on their fellow-scientists, instead of growing and gathering momentum, is getting less and less on this question, however honored they may be as investigators. These and others may show limits and bounds to natural law, and so check the too-enthusiastic, but this is only salutary, and promotes healthy growth of the main argument. Meantime the great consensus of opinion (capable and well-informed opinion) looks inevitably in one direction. It must do so. Facts are facts, and they have certain inevitable implications. Some of these latter are considered very much fraught with danger by some of my acquaintances and friends.

"It is not possible to show in this place, even shortly, how on general principles religious belief, which deals with the supernatural, is totally unaffected by what we find to be the constitution and laws of the natural world. It is very strange to the writer that it has not long ago dawned in the mind of every educated and thinking person that there is room for Evolution and Christianity in the same mind. It is a weary while since first the people of

exclusively theological habit of mind began to object on moral grounds to every explanation of the course of Nature, and it bids fair to be a weary while before they cease from objecting. I knew a man who was in all points admirably fitted to judge of this matter. He was one of the most learned of scientists; he had vast attainments in the study of languages; he had that rare mental balance which enables the possessor to look every fact squarely in the face, and to see it, as Arnold says, *as it really is*. With these attainments he had a faith in the essential truths of Christianity that had never been shaken during a long life of study and investigation. He was, in truth, the nearest approach to the ideal of a great, wise, and good man I have ever known. This man used to assure me, in the quiet and gentle manner that was characteristic of him, that he had long ago perceived that no explanation of natural phenomena could have any effect toward the building up or the tearing down of our spiritual beliefs, if the latter were of the proper kind, and properly grounded. His belief as thus expressed brought him peace. It was his secret, the explanation of the fact that his faith had never wavered. Such peace I choose, rather than the wild unrest produced by the apprehension of evil about to overtake my religious beliefs at the hands of any theory or doctrine of science."

T. C. P.

THE GIFT OF SMELL.

A CURIOUS and interesting illustration of the harm done the human system by the use of tobacco is given in the *Golden Rule* by one who thus describes an interview with an old trapper, whose reasons for not using the weed are as convincing as they are quaint in expression. Murray, the writer, says:

Taking a pipe from my pocket, I filled it with a choice brand of tobacco I had in my pouch, and proffered it to the old trapper who was acting as my guide.

"Thank ye, thank ye, Henry," said he, as he made a motion of rejection of the offer with his hand; "I thank ye for the kindness ye mean in your heart, but if it be all the same to ye, I won't take it. I know it is a comfort to ye, and I am glad to see ye enjoy it, but I never used the weed; not for the reason that I had a conscience in the matter, but because the Lord gave me a nose like a hound's and better, too, I dare say, for I doubt if a hound knows the sweetness of things, or can take pleasure from the scent that goes into his nostrils. But He has been merciful to man—as it was proper he should be—and gave him the power to know good and evil in the air; and smellin' has always been one of my gifts, and I couldn't make you understand, I dare say, the pleasure I have had in the right exercise of it. For you know that natur' is no more bright to the eye than it is sweet to the nose; and I have never found a root or shrub or leaf that hadn't its own scent. Even the dry moss on the rocks, dead and juncless as it seems, has a smell to it, and as for the earth I love to put my nose into a fresh sile, as for a city woman loves the nozzle of her smellin' bottle. Many and many a time when alone here in the woods

have I taken my boat and gone up into the inlet when the wild roses was in blossom, or down into some bay where the white lily cups was all open, and sot in my boat and smelt them by the hour, and wondered if heaven smelt so. Yes, I have been sartainly gifted in my nose, for I have always noted that I smelt things that the men and women I was guidin' didn't, and found things in the air that they never suspicioned of, and I feared that smokin' might take away my gift, and that if I got the strong smell of tobacco in my nose once I should never scent any other smell that was lesser and finer than it. So I have never used the weed, bein' sort of naterally feered of it; but what is medicine for one may be pizen for another, as I have noticed in animals, for the bark that fattens the beaver will kill the rat; and so you must take no offense at what I have said, but smoke as much as you feel moved to, and I will scent the edges of the smell as it comes over my side of the fire, and so we'll sort of jine works—as they do in the settlements—you do the smokin' and I'll do the smellin', and I think I've got the lightest end of the stick at that." And the old man laughed in every line of his time-wrinkled face at the smartness of his saying.

THE LOTUS IN AMERICA.

SEEING how forcibly this wonderful flower of the lotus impressed itself upon the minds of the ancient Egyptians and the East generally, how prominently it figures in Eastern religions—"all idols of Buddha are made to rest upon opened lotus flowers"—it is safe to conclude that when familiar to all, even in this utilitarian age, it will not be merely ranked as one of many flowering plants; it is of too commanding an appearance for this, and to literature will prove a boon. Asters, golden-rods, and buttercups can have a well-earned rest.

Years ago the cultivation of the American species proved a failure, and those who are now best capable of judging still record the curious fact that the native lotus is much more difficult to establish in our waters than the Eastern, and does not grow with quite the same luxuriance. Its introduction by the aborigines along our Eastern seaboard has been mentioned; perhaps it has lost vigor since it lost their care, and has disappeared excepting where its environment was peculiarly favorable. And the question arises, after all, is it in the strict sense a native? May it not, indeed, have been brought hither in pre-historic times? The question of a superlatively ancient communication between the continents is a tempting subject for study, and how appropriate when resting in the shade of the Eastern lotus! Such a train of thought need not stir up any ghost of a mythical lost Atlantis. Still the American form has certain marked peculiarities. The mature torus has a decided constriction some distance from the insertion of the stem, wanting in the foreign species, and the seeds of the former are globular instead of distinctly oval. Whatever the history of the American form, that of the Eastern, or Egyptian, as it is usually called, is too well known to need repeating, however briefly, and yet the plant is still wrapt in

mystery. A word, however, concerning the term Egyptian in connection with it. At present it is a plant of India, of China and Japan, Australia, the Malay Archipelago, and the Caspian Sea—an enormous range; but it is no longer found in the valley of the Nile. The use of the name rests upon the fact that it was once there, not only a cultivated plant, but held sacred by the people of that country, as it is by the Hindoos. Egyptologists, however, are not of one mind as to the relation of the lotus to the antiquities of the Nile region, some questioning the matter altogether, and considering the sculpturing to represent the lily of the Nile, one of the grandest of the white nymphæas. Quite recently, too, it has been ably argued to be the renowned rose of Sharon. "Of such a kingly flower Solomon might well have said, 'I am the rose of Sharon.'"—*Dr. Charles C. Abbott, in Harper's Magazine.*

THE EXHIBITION AT PARIS.

THE great international exhibition at Paris was finally opened on the 6th instant. It was not fully ready, many exhibits being still in disorder, but it will be arranged, it is expected, in two or three weeks. The French display has by far the largest part of the space. France will have about nine-tenths of the exhibiting space, and the exhibits from the United States will fill a space of about 100,000 square feet. They are about 1,400 in number. Congress appropriated \$250,000 for the American exhibit, this money to be expended under the direction of the Secretary of State. William B. Franklin was appointed Commissioner-General and Somerville P. Tuck Assistant Commissioner-General. The experts and their departments are: C. V. Riley, of the Agricultural Department at Washington, agriculture; Rush C. Hawkins, of New York city, art; Arthur J. Stace, of Notre Dame University, Ind., education; David Urquhart, of New Orleans, furniture; Professor William B. Chandler, of Lehigh University, textile fabrics; Professor Spencer E. Newberry, of Cornell University, mining and forestry; Professor C. B. Richards, Yale College, mechanical industries; Professor A. Howard Clark, of the National Museum at Washington, food products; and David King, of Rhode Island, horticulture. American agricultural exhibits will, of course, make a fine showing, but American machinery and inventions are expected to attract much attention.

MORAL INDEPENDENCE.

The Boston *Herald*, in an article on "Social Tyranny," says that "we live in a free country, but where the individual is not allowed to do as he pleases in his own 'set,'" and then goes on to say:

"The social demand is that each one shall suppress his individual will or opinion, and conform to the social usage of his set. If they drink, he must drink; if they gamble, he must gamble; if they smoke, he must smoke; if they eat late suppers, he must eat late suppers. Whatever the vices of society are, he must indulge in his full share of them, or be ostracised and called a fool. This sort of tyranny is written large all over American society. The Prohi-

bitionists exercise it; the social clubs exercise it; it prevails in the people's dramshop; it is a prime characteristic of our best society. Our social vices are maintained because it costs the individual, who protests inwardly against them, too much to assert his freedom. The greater number of the vices of the community grow out of the tyranny of the social custom. People insist that you shall not have a will of your own, and they put you out of their set if you insist on asserting it. The strong foothold of the liquor traffic is rooted in this social tyranny. Drinking habits are begun, and are constantly fostered, in social life, because the individual is not allowed to say no. This tyrannical spirit is almost universal."

(We have not struck out the allusion to "the Prohibitionists," because the *Herald's* criticism, if quoted at all, is entitled to be quoted as written, and the other specifications are not affected by the truth or falsity of this one.)

Commenting on the *Herald's* remarks, the Boston *Watchman*, a religious journal, says: "There is, it will be allowed, much force in this strain of comment, as every careful observer of our American social life must perceive. The New Testament injunction is, 'Let your communications be, Yea, yea; and Nay, nay.' In other words this teaching enjoins independent moral decision, which is one of the surest safeguards of virtue and of character."

OVERLOOKING THE WRONG.

BUT what of the wounds deeper than surface-smart, — the real wrongs and sorrows that we do sometimes suffer at the hands of our fellow-men?

One summer day we climbed to the top of that hazy blue mountain in the north. It was a long and laborious day. We trod the crisp, ripe grass of the fields along its base, we lingered in the shadows of tall pines, we came out into the open, sunny pastures above, climbed the steep and broken ledges about the summit, and then our grateful eyes were given as it were all earth's kingdoms for their own. We saw the whole course of the little river whose banks we knew by heart; the foot-hills were only low waves of green; farm-houses and winding roads were but tiny lines and dots in the great expanse of living earth. Our mind's eye was somehow opened. We had been often told that the world was wide, but now we saw for ourselves that it was so; and while the mountain wind blew sweet and strong, it seemed to carry us higher and farther out from the commonplace detail of things until we dreamed we saw the whole round earth poised and perfect in ethereal space. And, behold, it was very good!

So, sometimes, perhaps, only once in a lifetime, — once is enough if we but faithfully hold the memory of it, — we may stand on heights whence the world of struggling, loving, tempted, toiling men is seen in such a vision; not as a mere series of implied duties and emergencies of contact, not just as a multitude of human items that when added up make a mathematical total, but in very truth a living, breathing whole, — an organic One. And when that vision has once dawned upon us, we can no longer resentfully remember that we have been injured, and that it is

our neighbor who has done us wrong. — From "Our Legacy."

A JEWISH SABBATH.

MORE than half of the population of Safed are Jews. They are intensely fanatical, and their social and domestic institutions and manners comprise a mingling of self-righteousness and license.

A Jew must not carry on the Sabbath even so much as a pocket-handkerchief, except within the walls of the city. If there are no walls, it follows, according to their logic, that he must not carry it at all. To avoid this difficulty, in Safed poles were set up at the ends of the streets, and strings stretched from one to another. These strings represented a wall, and a conscientious Jew could carry his handkerchief anywhere within their limits. I was once amused by a devout Israelite, who was walking with me, on his Sabbath, toward a grove of olive-trees where my tent was pitched. When we came to the end of the street, the string was gone, and so he supposed he was at liberty to go on without reference to what he had in his pocket, because he had not passed the wall. The last time I was here they had abandoned that absurdity, probably to avoid the constant ridicule it brought upon them.

A profane and most quarrelsome Jew once handed me his watch to wind, just after sunset on Friday evening. It was then his Sabbath, and he could not work. Thus they "pay tithes of mint, and anise and cummin;" "teaching for doctrines the commandments of men," making void the law of God by their traditions. Such traditions our Lord rebuked when He declared that "the Sabbath was made for man, and not man for the Sabbath." — *Wm. H. Thomson's, The Land and the Book.*

MINERAL WAX.

A CARLOAD of a peculiar mineral arrived in this city a few days ago. It was ozocerite, or mineral wax, and it came from Utah. Until recently, this substance has not been known to exist in any quantity except in Moldavia and in Galicia, Austria. Three years ago, however, a deposit of the queer substance was discovered on the line of the Denver and Rio Grande Railroad, about 114 miles east of Salt Lake City. The mine is known to cover at least 150 acres, and over 1,000 tons per year can now be produced. Ozocerite resembles crude beeswax in appearance, and can be used for nearly all purposes for which wax is employed. It is now largely used in manufacture of waxed paper. It enters into the composition of several brands of shoe polish. Mixed with paraffine, it produces an excellent grade of candles. One of the largest fields for the new material is the insulation of electric wires. It is claimed that ozocerite is preferable to any substance previously employed for this purpose. As the mineral wax comes out of the ground in condition to be used without refining, unless it is required for some especial purpose, it is much cheaper than the product of the honey-bee, and is evidently destined to be extensively used in the future. — *New York Mail.*

MUTUAL AID ASSOCIATION OF FRIENDS.

WE desire to call attention to the advantages of "The Mutual Aid Association of Friends," the meetings of which are held at Race Street Meeting-House, on the first and third Sixth-day evenings of each month. We believe it is the only organization of the kind amongst Friends, and that its plan of operation is not generally understood.

In this association, by the payment of an entrance fee (proportioned to the age) and fifteen cents weekly, (\$7.80 in the course of the year), a person secures Five Dollars per week in case of sickness (unless it should continue fifty-two weeks, after which it will be Three Dollars per week) and in the event of death Fifty Dollars is paid towards the funeral expenses. This payment is not alone due to those who may require such assistance, but it is the *right of all*, thus making no unjust discrimination.

We would urge that this is as its name indicates, a *mutual aid*, and that every member is aiding every other member in providing for possible contingencies, and it is far better to assist persons to help themselves than to encourage a dependence on others.

The larger the membership of organizations of this kind, and the greater their accumulated funds, the more effectual they are; we, therefore, call on our young Friends especially to come forward and join our ranks whilst their entrance fee is less than it will be later in life. Youth has no sure guarantee against sickness and death.

Fire Insurance is now considered most prudent for all business men, and Life Insurance is likewise wisely participated in by large numbers, rich and poor, young and middle aged, and why, therefore, should there not be in the "Mutual Aid" a partial insurance against the pecuniary privations consequent on confinement to a sick-room. Let each seriously consider this matter, and be disposed to aid others whilst benefiting themselves.

Copies of the Constitution and Rules can be had of the Secretary, or at the Store of Friends' Book Association, 1500 Race street.

FINANCIAL STATEMENT.

Total Receipts since organization, (1871.)	\$16,637.48
" expenditures, { Sick benefits, \$6,137.50	
{ Death " 950.00	
{ Working expenses, 1,673.57	
	8,761.07

Assets of the Association, \$7,876.41

From the above statement it is shown that the working expenses of the Association have averaged less than \$100 per year.

ELLWOOD HEACOCK, Secretary, 1508 Brown street, Philadelphia.

BOARD OF TRUSTEES. Samuel S. Ash, Richard Moore, Charles E. Thomas.

THE SIZE OF THE SPIDER'S THREAD.

I HAVE often compared the size of the thread spun by full grown spiders with a hair of my beard. For this purpose I placed the thickest part of the hair before the microscope; and, from the most accurate judgment I could form, more than a hundred of such threads placed side by side could not equal the diameter of one such hair. If, then, we suppose such a hair to be of a round form, it follows that ten thousand of the threads spun by the full-grown spider, when taken together, will not be equal in substance to the size of a single hair.—*Leewardshoek.*

NEWS AND OTHER GLEANINGS.

—A medical journal says there is talk of applying telephones to the infectious wards of the French hospitals, so as to enable the sick people who are isolated to have the comfort of hearing their relatives' voices without any risk of conveying infection by an interview.

—The Philadelphia *Telegraph* says that the Centennial Commissioner from Texas undoubtedly is quite right when he declares that thousands of the Oklahoma "boomers" would have done vastly better had they emigrated farther South. For many years there has been a seemingly in-radical prejudice in the public mind of the North and West against Texas, but this is rapidly giving away before the advancing light, as is abundantly evidenced by the wonderful fact that the State doubled its population between 1870 and '80, and which now contains over two million people, nearly all of whom are prosperous and happy. It is now well known, too, that the climate of the upper plains is one of the most healthful in the world, quite the equal of the boasted Indian Territory. With the extension of railways, the taking up of vast tracts of lands, and building up of towns, Texas must grow amazingly during the next twenty years.

—Albert S. Paxson, of Hollicong, Buckingham, is in receipt of a letter from his grandson, T. Howell Brown, dated Casselton, Dakota, April 24th, 1889. In it he says: "The season is much earlier than usual, and I commenced seeding the latter part of March and have now finished Uncle's (Judge Paxson's) farm at Arthur for Mr. Dalrymple. The first sowing is up and green and the last put in is coming up, and all looks well. It took over two thousand bushels to seed the 'Arthur Farm.' The plowing was all done between last harvest and early part of winter."—*Doylston, (Pa.) Intelligencer.*

—A dispatch from Wilmington, Del., on the 4th inst., says: "For the first time in the history of this city women were allowed to vote at the school election here today. They did not take kindly to their newly acquired privilege, however, for while there are nearly 2,000 women in the city qualified to vote at school elections, only twenty went to the polls and voted this afternoon. In most instances they were cheered by the men as they deposited their ballots."

—The finest botanical gardens in the world are in Ceylon; they comprise 150 acres. Among the curiosities are bamboos 100 feet high and nine inches in diameter, which in the month of July grow between one and two feet a day; also India rubber trees, with immense roots three and four feet in width above ground.

—There are twelve counties in Kansas each of which has an area nearly as large as the State of Rhode Island, and the area of one, Butler county, exceeds that State nearly 200 square miles.

—President Harrison has appointed Dr. Daniel Dorchester, of Boston, Superintendent of Indian Schools. The *Congregationalist* of that city says; "Dr. Dorchester's fitness for the position is unquestionable, and the appointment is one of the most creditable made by the present administration."

—Archdeacon Farrar writes in the *Christian World* very strongly against the ritualistic tendencies of the "High Church" party in the English Church. "Will England be saved by becoming Popish in all but name," he asks, "when France, which is Popish in name also, has sunk into her present depths with her shiftlessness, her incessant revolutions, her flagrant infidelity, her diminishing population, her permeating immorality, and her leprous literature? No! nations are saved by righteousness, and

by manliness, and by self-denial, and by the preaching of simple Christ to simple men; not by mitres and caudles and chasubles, and such gewgaws fetched from Aaron's wardrobe or the Flamens' vestry."

—The Boston *Watchman* having said (in substance) that Easter testified not only to everlasting life but to everlasting damnation, the *Christian Register* remarks: "Our contemporary does not show just how the eternal loss of those who are not in fellowship with Jesus is demonstrated by his resurrection, but, if it could prove this fact, it would turn Easter day into the blackest in the Christian calendar."

—Henry W. Hayes, of Bristol, in his address before the Rhode Island Legislature, advocating the resubmission of Prohibition, said that "the six thousand names of men, for resubmission, were equal or more than equal to twenty thousand names of women and children." A correspondent of the Providence *Outlook* says: "Why are 6,000 men more worthy of consideration than 20,000 women? Simply because men can vote and women cannot." That is the case in a nutshell.—*Woman's Journal*.

—Mary Whately, Archbishop Whately's daughter, who has lately died in Cairo, went to Egypt in 1861 for her health. She saw thousands of Moslem girls growing up in the streets and lanes without any education, and opened a school for them at her own expense. Afterwards she added a department for boys. In 1869 Ismail Pacha gave her land for a building. The schools were very successful, and the average number of pupils in attendance was six hundred. In addition to this good work she wrote several books—"Ragged Life in Egypt," "Among the Huts," and "Scenes of Life in Cairo." She was sixty-five when she died.

CURRENT EVENTS.

The cold weather last week occasioned sharp frosts in some parts of the West. Among the places reported, on the nights of the 1st and 2d inst., were Decatur, Galesburg, Montecello, and Tuscola, Illinois, and Wabash, Crawfordsville, and Covington, Indiana. In places small fruits were killed and vegetables were frozen in the ground. At Crawfordsville ice formed a quarter of an inch thick. In some parts snow fell.

A DISPATCH from St. Paul, Minn., on the 6th inst., says that furious forest fires are raging in Northern Minnesota and Northern Wisconsin and that a large amount of damage has been done. In the neighborhood of Duluth, houses have been burned, and it is feared some lives have been lost. On the Fond-du-Lac Indian Reservation over \$20,000 worth of skidded logs are lost. Other losses, aggregating \$10,000, also occurred on the reservation. Near Hinckley, Minn., Thomas Campbell and Ernest Lowell were surrounded by fire, and finally their camp outfit was burned about them. They took refuge on half an acre of ploughed ground, but were terribly burned and will die.

The passengers, (all men), of the wrecked steamer *Danmark*, who were left at the Azores Islands by the *Missouri*, which rescued them, all reached New York on the 4th inst., on board a steamship from Hamburg which called at the Azores.

At Manistee, Michigan, on the 4th inst., a Catholic priest was assaulted on the street by one faction of his church followers, and a general riot resulted, in which both men and women participated. The militia was called out to quell the riot, and the Fire Department was also called out and turned the hose upon the mob. After nearly drowning several of the rioters, peace was restored.

THE Samoan Commission, (which includes representatives of Germany, England, and the United States), is in session at Berlin, but the proceedings are not made public. It is said, however, that the matters which have been in dispute seem likely to be adjusted satisfactorily.

A PARIS newspaper, *La France*, says that the Government intends to postpone the general elections for members of the Chambers of Deputies until the spring of 1890.

NOTICES.

* * * The Religious Meeting at "Friends' Home for Children" will be deferred one week on account of Philadelphia Yearly Meeting. R.

* * * Friends desiring accommodations during the time of New York Yearly Meeting will please communicate as early as possible with the undersigned, in order that the Committee having charge of same may be enabled to properly arrange for their comfort and entertainment. JOSEPH A. BOGARDUS, 177 West St., New York City.

* * * The Yearly Meeting's Committee to Promote the Education of the Colored People of the South will meet in the Lecture Room, (Friends' Central School), 15th and Race streets, on Second-day, Fifth month 13th, at 2 p. m. LYDIA A. SCHOFIELD, Secretary.

* * * Quarterly Meetings in Fifth month occur as follows:

13. *Philadelphia Yearly Meeting*.
15. Easton and Saratoga Q. M., Saratoga, N. Y.
18. Short Creek, near Mt. Pleasant, O.
20. Fairfax, Hopewell, Va.
22. Stillwater, Somerset, O.
23. Duaneburg, New Baltimore, N. Y.
25. Blue River, Blue River, Ind.
27. Warrington, Pipe Creek, Md.
27. *New York Yearly Meeting*.
28. Burlington Q. M., Crosswicks, N. J.
29. Southern, Easton, Md.
30. Bucks, Buckingham, Pa.
31. Nottingham, Deer Creek, Md.

* * * Circular Meetings in Fifth month occur as follows:

19. Roaring Creek, Pa., 2 p. m.
19. Gunpowder, Md., (old house) 10 a. m.

* * * First-Day School Unions in Fifth month occur as follows:

25. Blue River, Ind., 8 p. m.

* * * A general (and public) meeting of the "Association of Friends for the Promotion of Education among the Colored People of the South" will be held on Fifth-day evening (Yearly Meeting week), Fifth month 16, 1889, at 8 o'clock. Officers for the ensuing year will be chosen.

The attendance of all interested in the work is cordially invited.

Martha Schofield, of the Aiken, S. C. School, will be present, to speak of the work under her charge, and of the general situation of the colored people; and others will also address the meeting.

HOWARD M. JENKINS, Chairman,
SARAH J. ASH, Secretary.

* * * The annual meeting of the stockholders of Friends' Book Association of Philadelphia, will be held at the meeting-house, 15th and Race streets, Philadelphia, on Second-day evening, Fifth month 13th, at 8 o'clock.

S. B. CHAPMAN, Secretary.

* * * A meeting of the Philadelphia Association for the promotion of First-day schools will be held at Race street meeting-house, on Fourth-day evening, Fifth month 15th, at 8 o'clock p. m. Interesting questions will be discussed, and Friends are cordially invited.

THE BRIGHT SIDE.

I SEE more light
Than darkness in the world; mine eyes are quick
To catch the first dim radiance of the dawn,
And slow to note the cloud that threatens storm.
The fragrance and beauty of the rose
Delight me so, slight thought I give the thorn;
And the sweet music of the lark's clear song
Stays longer with me than the night hawk's cry.
And even in this great throe of pain called life,
I find a rapture, linked with each despair,
Well worth the price of anguish.

I detect

More good than evil in humanity.
Love lights more fires than hate extinguishes,
And men grow better as the world grows old.

PHILADELPHIA YEARLY MEETING, 1889.

THE meeting of Ministers and Elders of this body held two sessions on Seventh-day, the 11th inst. The attendance was large, all the Friends appointed to serve as Representatives being present except 15; for 6 of these excuses were given. The opening minute being read, Wm. M. Way in a few touching words, gathered the meeting into waiting for the voice of supplication to which Elizabeth H. Plummer gave utterance. Minutes from visiting Friends were read as follows: One for Isaac Wilson, a minister from West Lake Monthly Meeting, held at Bloomfield, Ontario; for Wm. M. Way, a minister from Little Britain Monthly Meeting, Pa.; for Robert and Esther H. Barnes, Elders from Purchase Monthly Meeting, N. Y.; and for Rebecca M. Thomas, a minister from Sandy Spring Monthly Meeting, Maryland. Expressions of satisfaction arose that we were favored with the company of these Friends and words of welcome were extended also to many who were present without minutes.

On the different reports being read from the constituent meetings, there was given much earnest counsel. A concern for the encouraging of the young to attend our business meetings and their experience the training needful for service when the present burden-bearers were released from work, was most feelingly presented, and met with a cordial response. Parents and grandparents were urged to make the way easy for the children to attend meeting, by being less anxious for worldly prosperity and to manifest more trust in Divine protection. The Query relative to Ministers and Elders leading pure and blameless lives called forth much earnest testimony both from the strangers with us and those of our own membership. It was said no more import-

ant Query would claim our attention than this, and necessitates in each a close self-examination, for the eyes even of the little ones are upon us, our example should be indeed correct, and in the home was the beginning place.

At the opening of the afternoon session the Representatives reported the names of Wm. Wade Griscom and Abigail R. Paul for reappointment as clerks. They were united with and the answering of the Queries again resumed. This session also was one of deep feeling and much wise admonition. The Elders were most tenderly appealed to in regard to accepting their positions as guardians of the ministers. That this be done weightily and with desire to use every talent committed to their care in this service, not deeming any talent too small for use. That a wise eldership adds greatly to the efficiency of the work of a gifted ministry and should be exercised in loving encouragement as well as tender caution. The simple eloquence of the speaker impressed all the hearers, and hearts were bowed in thankfulness for her faithfulness to Divine command.

This concern was supplemented by other ministers who felt its application and force.

The necessity of observing good order during the interesting sessions of the coming week by keeping free from excitement and giving the messages committed to us calmly and in the spirit of true submission, was ably presented. The reading of the minutes of last year closed the exercises of the day and produced deep feeling and tender sympathy with exercised minds, who carry burdens that only the wisdom of the Highest can relieve.

MEETINGS FOR WORSHIP ON FIRST-DAY.

The attendance at the meetings for worship held at 15th and Race streets, on First-day morning, was very large. In the north room, (Race street end), the doors were closed some time before the hour for assembling, 10.30, the entire available space, including the aisles and stairways, being filled. There was service in the ministry by several Friends, including Allen Flitcraft, Lydia H. Price, and Isaac Wilson, of Canada. The last named spoke at length with much force and earnestness. In the Cherry street room, all available space was also occupied. The speakers were Margaretta Walton, Elision Newport, Samuel S. Ash, Edwin L. Pierce, Matilda E. Janney, and others.

In the afternoon, at 3 o'clock, the general exercises by classes from First-day schools took place. The house was again crowded. William W. Birdsall,

Superintendent of the schools at 15th and Race streets, was in charge. The programme was as follows: Reading from the Scriptures, Superintendent; opening exercises, "New Every Morning," all schools; Fairhill School, Philadelphia, "The Book of Life"; Horsham School, Pa., "Christ's Teaching"; West Grove School, Pa., "The Golden Side;" responsive exercise from Revelation; Moorestown School, N. J., selected poems; West Chester School, Pa., selections; Darby School, Pa., "Our Character Monument;" Plymouth School, Pa., "Trust;" Goshen School, Pa., "Praise;" Gwynedd School, Pa., selections; Centre School, Pa., "What are we going to do?" Girard Avenue School, Philadelphia, Scripture reading and response; closing exercise, 8th and 9th Psalms, all schools.

The other meetings were generally well attended. Isaac Wilson, in the afternoon, spoke at the venerable meeting-house at Merion, where a meeting had been appointed, and in the evening he spoke at Girard Avenue.

BUSINESS SESSIONS OF THE YEARLY MEETING.

The business sessions of the Yearly Meeting began at 10 a. m., on Second-day, the 13th. In men's meeting, the minutes of visiting Friends, being those named in the meeting of Ministers and Elders were read, and expressions of satisfaction at their presence were given. The roll of representatives being called, (and repeated in the afternoon), all were found present except ten. The most of the morning session was occupied by the reading of the epistles from the other yearly meetings, in the following order: New York, Baltimore, Ohio, Indiana, Illinois, Genesee. To prepare the essay of an epistle in response, the usual committee was appointed, and the meeting adjourned to 3 p. m.

In men's meeting, in the afternoon, a committee was appointed to assist the Clerks in collecting the exercises of the meeting, and in preparing the Extracts for publication; also a committee to examine and audit the treasurer's account, fix the sum to be raised next year, and nominate a treasurer and correspondents. The report of the Committee on the John M. George Bequest was then read. (It is printed at length elsewhere.) The Plan of the Trusteeship submitted in connection with it was first taken up, and after two readings, and some explanation, it was adopted. It provides for the appointment of seven Trustees, residents of Pennsylvania, who shall have the care of the funds derived from the Bequest, and hold the title to the real estate that may be acquired for and in connection with the School. These Trustees will provide funds, as directed by the Yearly Meeting, for the establishment and conduct of the school, and they will transfer their trust to new trustees, and make title for real-estate, upon the order of the Yearly Meeting.

The consideration of the recommendations of the Report occupied the remainder of the session, and at closing the Clerk had prepared a minute continuing the Committee on this subject, and giving it the authority suggested in the closing of the Report, to acquire property, erect buildings, open and man-

age the school; and appropriating to its use for this purpose an amount not exceeding \$100,000.

The women's meeting opened with a well-filled house, and as our sisters took their accustomed seats many hearts overflowed with gratitude that we were again permitted to assemble on this most interesting occasion. The voice of supplication was lifted up, petitioning our Heavenly Father for the blessing of His overshadowing love, and for the gift of wisdom to guide us in the transaction of the business before us. Margaretta Walton and Annie C. Dorland were at the clerk's table. Reports from all the quarterly meetings were read and all the representatives answered to their names except thirteen. Minutes for visiting Friends, as above reported, were read and a most cordial welcome extended to them, thankfulness being expressed that they had felt themselves drawn to visit us. Three epistles from other yearly meetings were read, and the various subjects therein contained briefly commented upon. The representatives were requested to meet at the rise of the meeting and propose the names of Friends to serve as clerk and assistant clerk for the coming year. Then adjourned to 3 o'clock. In the afternoon Elizabeth M. Cooper reported that the representatives were united in proposing the reappointment of the present clerks. The remaining epistles were read and a committee appointed to reply thereto. Interesting reports of the Committee on Education and the Visiting Committee were then presented; they will be printed hereafter. Then adjourned to 10 o'clock Third-day morning.

In the women's branch, on Third-day morning, after reading the minutes of yesterday, the meeting proceeded to read the report of the Committee on the John M. George school. This report was approved, also the plan for trusts, and a nominating committee to unite with a similar one of men's meeting, appointed to bring forward the names of the Trustees. A concern that this meeting should unite with the Philanthropic Union of the other yearly meetings was presented and called forth considerable expression, but as it was near the time for adjournment the matter was left for further consideration in the afternoon session.

THE MINISTRY OF JESUS IN GALILEE.¹

WE have seen a few young Galileans attaching themselves to Jesus, from the commencement of his ministry, accompanying him in his journeys to Jerusalem, and living in intimate association with him. They were already known as his disciples, and were indeed such, in the affection and respect with which they regarded him, but there was as yet nothing definite in the relation which bound them to the Master, although their hearts were his. The first whom he definitely called were James and John, the sons of Zebedee. They were simple fishermen, living on the shores of Lake Gennesaret, and maintaining themselves by their craft. Jesus joined them one day at dawn, just as they were drawing up their net on the strand, having toiled all night, and taken nothing. He

¹By E. de Pressensé, Paris. Translation by Annie Harwood.

entered into one of the boats, which was Simon's, and addressed the people who crowded upon the shore. When his discourse was finished, he bade Simon throw his net again; and it could hardly be drawn in, for the multitude of fishes. The miracle touched the ardent and impressible soul of Simon to its depths. This manifestation of supernatural power, flashed a new light on all that he had already seen and heard; he felt himself in the presence of a holy being, and fell at his feet, exclaiming "Depart from me for I am a sinful man, O Lord." No moment is more favorable for the great call, than the moment of humiliation, for a heavenly vocation is best received on the knees. "Fear not," said Jesus, "from henceforth thou shalt catch men." The four disciples hesitated not a moment; they left their boats and their nets. (The words of Peter implied a previous relation with Jesus, for the miraculous draught would not have in itself sufficed to reveal to him the holiness of the Master.) The narrative of John is implied in that of Luke. Galilee is distinguished from Judea by its fertility and the softness of its landscapes. The most striking feature of that part of Galilee, which was the principal scene of the ministration of Jesus, is an air of quietness and serenity not to be met with elsewhere. Such was the land in which Jesus led the itinerant life of a missionary.

He had no fixed abode, and except occasional sojourns in Capernaum, he passed his days in going about doing good. Endowed with a heart preciously tender, a Son so tender, that in a dying hour his thoughts were of ministering consolation to his mother, Jesus yet allows himself to be restrained by none of the ties of natural affection. In order to accomplish his especial work, he must needs live aloof from all the social conditions of ordinary life. Jesus lived chiefly with his *spiritual* family, freely using their hospitality, as did the Rabbis of the time. He voluntarily remained the poorest of them all. He sought out the feeble, the forsaken, all who needed succor and pity, the beggar by the highway, the leper by the city gates, and the little child in its mother's arms. Then at evening, after so many labors, and often such painful conflicts, he ascended the nearest hill, and there renewed his strength from its eternal source, by solitary prayer. It was from these sacred heights to which his soul fled for refuge, that his word came down like a living stream, to spread its full floods over the thirsty land of Israel. The question of Sabbath observance could not fail to present itself in Galilee as in Judea. The disciples are denounced with much indignation, as violators of the law of God, because they plucked some ears of corn to appease their hunger on the day of rest. Jesus does more than offer an apology for his disciples: he boldly asserts his right as Master of the Sabbath. In a full synagogue, at the very hour of the reading of the sacred books, a palsied man is placed in the middle of the assembly, and Jesus heals him publicly. That his meaning may not be mistaken, he affirms his right with energy not unmixed with indignation. Surely if it is permitted to draw an ass out of a pit on the Sabbath day, it cannot be unlawful to heal a man, made in the im-

age of God. He was indeed right; such an argument was irrefragable. The Pharisees could not evade it; so, leaving the ground of open discussion, they had recourse to artifice and plots. From this moment Jesus could see the approaching end of his popularity. Without abandoning his public work among his countrymen, he devoted himself increasingly to his disciples. The further the old theocracy is estranged from him, the closer he draws to that new religious body which he has instituted. To this period belong the choice of the Apostles and the Sermon on the Mount.

An Apostle was not called simply to be the disseminator of a doctrine; his mission was to lay the foundations of a religion. It needed that an apostle should have the very mind of Jesus, that absolute disinterestedness which makes the life one great self-sacrifice. The office of an apostle was in its very essence martyrdom. Nothing can excel the beautiful simplicity of its appointments. Its grandeur was purely spiritual; and yet what can surpass the solemnity of that sacred hour, when Jesus, after passing the night in prayer on one of the hills which surround Capernaum, called his twelve apostles? He took them from the common people—rough, ignorant men, more accustomed to work with their hands than to use their intellects, but characterized by the childlike freshness and uprightness of simple souls.

Simon, surnamed Peter, and Andrew had been twice called by the Master, before this august day. If the figure of Andrew fades into dimness beside that of his brother, he retains the honor of having been the first to hail Jesus. Peter's is an ardent, impressible nature, capable of passing from enthusiasm to depression; in him is found that bold spirit of the pioneer, which when purified in the crucible of trial and repentance, will make him the man of action and influence in the first period of the apostolic age. The sons of Zebedee come to Jesus in the same way. They have yet much to learn; they are very far from that charity which can pardon all things, even insult offered to the Master. James will be the first to shed his blood for the Gospel, and John will be the beloved disciple. Philip and Nathanael, surnamed Bartholomew, are also disciples from the first. Matthew, called only a few days before from the receipt of custom, is still imbued with the piety of a Jew of the old dispensation, and his great concern will be to find out the relation between the two covenants. Thomas bears some resemblance to Peter; we mark in him the same impetuosity, the same devoted affection, but he is often at fault, and only recovers himself by his ardent impulses. We know nothing definite about Judas, who appears to be the same as Thaddæus, and who was probably the brother of James. Neither of these takes any marked position in the church of the first century. The surname of Zelotes, given to Simon, leads to the supposition that he had already shown the ardent zeal, which some years later was to give birth to a new party in Galilee. He was a native of Cana. The name of Judas Iscariot stands out with lurid distinctness in this catalogue of the apostles. The twelfth apostle appears to have been of a strong and passionate na-

ture, as is proved by his tragical end. In the heart of every man a demoniacal force lies dormant: it is for him to quell or unloose it. He who is not transformed by contact with perfect holiness, sinks, and no one lower than a perverted apostle.

There must be no misconception as to the spiritual state of these young men at the time they were chosen; they were still very ignorant, infected with Jewish prejudices, incapable of rising to the sublime thought of the Master. They were "fools and slow of heart to believe;" thus they often saddened the heart of Jesus, though they could not exhaust his patience in the work of their religious education. This work was not to be fully accomplished, till He should have gone away from them, and the Holy Spirit should have come, to guide them into all truth.

BENJAMIN LUNDY.¹

THERE is something in Quakerism exceedingly valuable to philanthropy, and the New Jersey Quakers appear to have been the most persistent anti-slavery men in America. John Woolman, sallying forth from his humble home at Mount Holly, before 1750, traveled south and north, showing kindness to the negroes, and bearing testimony against slavery. Even earlier than he, an eccentric English Quaker, Benjamin Say, tormented the meetings in New Jersey and Pennsylvania by violent and theatrical declamations against negro slavery. It was the Quakers of Philadelphia who stood with Franklin as members of an abolition society there in 1775, or earlier; but neither this society nor others of the same sort accomplished much for emancipation until another New Jersey Quaker, Benjamin Lundy, took the field about 1818, as a missionary of emancipation, and planted the seeds of that great movement which, under Garrison, Phillips, John Brown, Gerrit Smith, and other courageous leaders, finally achieved, in war, the downfall of American slavery. The name of Lundy is remembered, but that is almost all that the public generally know of him. He deserves a better biography than he has found, for his life was romantic, adventurous, and full of danger and hardship. The road taken by Garrison before 1830 was, in fact, "Lundy's Lane," for into that strait and narrow path did it turn aside from the time that Benjamin Lundy, in 1827-8-9, visited Boston and addressed himself to the heart and conscience of his young disciple. In *The Liberator* of September 20, 1839, Garrison noticed the death of Lundy, and said:

"To BENJAMIN LUNDY, more than to any other human being, am I indebted for having my attention called to the wretched condition of the slaves in this liberty-worshipping, slavery-idolizing country. He it was who first informed, quickened, inflamed my mind on the subject of American slavery, and by whom I was induced to consecrate my life to the overthrow of that dreadful system of iniquity. If, therefore, anything has been achieved in the cause of liberty through my instrumentality, let him have all due credit. But I am not the only person who

¹ From an article in *The Cosmopolitan* magazine, New York, by Frank B. Sanborn, of Concord, Mass., (author of a Life of John Brown.)

has to acknowledge the personal impulse that was given by his benevolent example and earnest entreaty. Thousands stand ready to testify how much they are indebted to him, under God, for their conversion to the side of emancipation, from a state of total apathy to its success."

That this was no mere obituary compliment, but literally and exactly true, will appear when we see who Lundy was, and what he had accomplished before he ever saw Garrison, as well as what they did together, and what share Lundy had in directing the attention of the world to the true character of the Texan revolt from Mexico, and the annexation of Texas to the United States. Benjamin Lundy was born January 4, 1789, at Hardwick, Sussex county, in New Jersey—now a township of six hundred people in Warren county, which, about 1820, was set off from the old county of Sussex. At the time of his birth there were but twenty thousand people in the whole two counties—mostly farmers, mechanics, and small traders, and with many Quakers among them. Sussex is the extreme northwestern county of New Jersey, extending along the Delaware river from Orange county in New York to Northampton county in Pennsylvania; and Hardwick is not far from the romantic scenery of the Delaware Water Gap. Lundy's English and Welsh ancestors came early to America, and branches of the family have been found in North Carolina, Pennsylvania, and wherever the Quakers settled. Richard Lundy was living at Burlington, N. J., in 1823; Thomas Lundy at Rockford, N. C., the same year, and at Huntsville, N. C., in 1833,—no doubt brothers or cousins of Benjamin Lundy. His own family were not rich, and he received but little education, though he afterward taught himself a good English style, with some smattering of Latin, French, and Spanish. At the age of nineteen he emigrated to Wheeling on the upper Ohio River, then a town of but a thousand or two inhabitants, where he learned the trade of a saddler, and about 1810 set up in business for himself, accumulating a small property by industry and thrift. Wheeling was then one of the great thoroughfares of the domestic slave trade; the breeders of Maryland and Virginia, and the kidnappers of Delaware, New Jersey, and Pennsylvania, sending their chained coffles of negroes and mulattoes down the river from that point. During Lundy's four years' residence in Wheeling he was a constant witness of the horrors of the traffic. Twenty years later, in November, 1832, he said of Wheeling:

"That was the place where his youthful eye first caught a view of the 'cursed whip' and the 'hellish manacle,' where he first saw the slaves in chains forced along like brutes to the Southern markets for human flesh and blood! Then did his young heart bound within his bosom, and his heated blood boil

² A singular error, due at first to a misprint, has been perpetuated in all the biographies of Lundy that I have seen, that he was born in *Handwick*, N. J. There is not, and never was, so far as I can learn, any place of that name in New Jersey; but *Hardwick* being in Warren county, and his biographers not noticing that Warren was taken from Sussex, either supposed the name had been changed from *Handwick*, as they found it, or else thought nothing about it.

in his veins, on seeing droves of a dozen or twenty ragged men, chained together and driven through the streets, bare-headed and bare footed, in mud and snow, by the remorseless 'SOUL SELLERS,' with horse-whips and bludgeons in their hands!! It was the frequent repetition of such scenes as these, in the town of WHEELING, Virginia, that made those durable impressions on his mind relative to the horrors of the slave system which have induced him to devote himself to the cause of *Universal Emancipation*. During an apprenticeship with a respectable mechanic of that place, he was, by these and other means, made acquainted with the cruelties and the despotism of slavery, as tolerated in this land; and he made a solemn vow to *Almighty God*, that, if favored with health and strength, he would break at least one link of that ponderous chain of oppression when he should become a man.¹

Lundy was eleven years older than John Brown (who was born May 9, 1800), and therefore his vow against American slavery was naturally registered earlier than Brown's, say in 1809. But it was not long after this same period (during the war with England, 1812-15) that Brown, then a mere boy, was led, as he says in his autobiography,² to "declare or swear eternal war with slavery." A friend of John's, a slave boy, "very active, intelligent, and good feeling," was beaten before the lad's eyes "with iron shovels, or anything that first came to hand." This brought John to reflect, he says, "on the wretched, hopeless condition of fatherless and motherless slave children. He sometimes would raise the question, *Is God their father?*" A like question rose in the heart of Lundy, and the principles of his humane and devout religion soon taught him how it should be answered. He left slaveholding Virginia, moved, and settled at St. Clairsville, Belmont county, Ohio, still pursuing his saddler trade, and there, in 1815, he organized an emancipation society, which, beginning with himself and a few other members, soon grew to five hundred. This was the first anti-slavery association organized in the United States during the present century. It was called the "Union Humane Society," and became the parent of many others. The older abolition societies founded by Franklin and other Philadelphia Quakers (1775), by Jay and the colonists of New York (in 1785), and by the Quakers of New Jersey, Delaware, Maryland, Virginia, Rhode Island, etc., from 1788 to 1795, had gone to sleep with their fathers. Lundy's relatives in New Jersey had, no doubt, belonged to some of these organizations; and he notices with satisfaction, in 1833, that "the patriarch, Benjamin Lay, lived to witness the abolition of slavery by that very society (the Quakers) which almost unanimously condemned him for advocating abolition."³ But with

the spread of slavery and of cotton-planting, the early enthusiasm of the eighteenth century abolitionists died out. Franklin was in his grave; Jefferson had just written to Edward Coles (Aug. 25, 1814),—"I have overlived the generation with which mutual labors and perils begot mutual confidence and influence. The hour of emancipation is advancing. This enterprise is for the young; for those who can follow it up and bear it through to its consummation; it shall have all my prayers, and these are the only weapons of an old man." Jefferson was then seventy-one. His young friend did check the spread of slavery over Illinois, and those other young men and boys, Benjamin Lundy, John Brown, Garrison, and Gerrit Smith, Wendell Phillips, Charles Sumner, Abraham Lincoln, Whittier, and Theodore Parker—all living when Jefferson wrote—did in their turn "follow up and bear through to its consummation" the cause of liberty. It was less than a year after Jefferson's letter was written when Lundy organized his emancipation society on the Ohio river, and began to dispel the apathy which had caused even the sanguine temper of the great Virginia democrat to despair.⁴

A few years of domestic quiet on the banks of the Beautiful river alone remained to Benjamin Lundy. In 1818 he came to the resolution to sell all he had and follow his Master. He joined with Charles Osborn at Mount Pleasant, near St. Clairsville, in the management of a journal called *The Philanthropist*, and to qualify him for this he went to St. Louis in 1819 to dispose of his stock in the saddler's trade, and put himself in funds. It took him a year or two to do this, and to struggle as he could against the admission of Missouri as a slave state, which was carried by Henry Clay in 1820. His property was sold at a ruinous sacrifice, and he returned to Ohio to find that *The Philanthropist* had also been sold. Meanwhile Elihu Embree, a Tennessee Quaker, who in 1820 had begun a monthly publication against slavery (*The Emancipator*), at Jonesborough, Tenn., had died, just as Lundy was planning to aid him. He, therefore, established a paper of his own, with an absurd but memorable title (*The Genius of Universal Emancipation*), at Mount Pleasant, and issued his first number July 4, 1821. It was begun without a dollar of capital, with only six subscribers, and with a hired printer, for in 1821 Lundy had not learned the "art preservative of arts." For a time he walked each month twenty miles to Steubenville (where young Edwin Stanton, then seven years old, was growing up to torment the slave oligarchy) and brought back

Presbyterian, who was living in 1833. A Presbyterian clergyman in Ohio had lately informed Lundy "that he once stood alone in Bourne's favor, when he was called before a council under a charge of heresy, in combating the sin of slave-holding. He was condemned—as was the apostle of emancipation, Benjamin Lay, at an early period, by the Quakers." Then follows the passage above.

⁴ "Your solitary but welcome voice, is the first which has brought this sound to my ear," wrote Jefferson to Coles in the same letter; "and I have considered the general silence which prevails on the subject as indicating an apathy unfavorable to every hope. I had always hoped that the generous temperament of youth, analogous to the motion of their blood, and above the suggestion of avarice, would have sympathized with the oppressed wherever found, and proved their love of liberty beyond their own share of it."

¹ This passage from *The Genius of Universal Emancipation*, then printed in Washington, is given with the Italics, capitals, and exclamation points of the writer, and is a good example of his style, both of writing and printing, at the age of forty-three.

² "Life and Letters of John Brown" (Roberts Brothers, Boston), page 14. The incident narrated must have happened not very far from Wheeling.

³ *Genius of Universal Emancipation*. Vol. XII. p. 201. The passage occurs in a notice by Lundy of Rev. George Bourne, a

to Mount Pleasant the whole edition of his monthly on his back, from the printing office where it was put in type. Stanton told Henry Wilson¹ that Lundy was a frequent visitor at his father's house, and that he "had often sat on his knee when a child and listened to his words." Before July, 1822, Lundy removed his journal to Greenville, Tennessee, where it was printed for some years on the press of Elihu Embree's deceased *Emancipator*, and where he learned to set type himself and became a reasonably good printer. He traveled the five hundred miles from Mount Pleasant to the East Tennessee mountains on foot, leaving his wife and children to follow him later in the year 1822. He remained in Greenville for two or three years, and then removed his journal to Baltimore, where he was living in 1827, when he made his first visit to New England and found young Garrison ready to receive his instruction at Boston.

A THOUGHT ON RELIGION.

WHAT is there amiss in our life here, that we cannot bring the standard of excellence to its highest attainments? Surely we progress in all the finer arts and sciences, but ultimately fail in the great problem of how to live righteously, industriously, and peacefully. Every individual is granted powers of reasoning, whose scope should expand the better nature, while each has the absolute right to individual thoughts and feelings, and yet the opinions of a mass sway the beliefs of the multitude.

Are we indeed so incompetent to learn the great truths that for centuries have lain peacefully within the immediate reach of every man and woman of understanding? Is it right that all these divers religions should feel hatred toward each other? Did not Christ teach the beautiful lessons that should govern all humanity? Unfortunately, the example of his life has been the stumbling block which has overpowered the most masterful minds of every era. That teaching touches all that is beautiful in life, and each individual should have sufficient individuality himself, to think out these glorious problems, instead of leaving them so entirely for the ordained of earth to solve—the latter governed by formulas that have existed so long their very breath is tinged with the mediæval. If these teachings are the fundamental principles by which our lives are governed, then we are to analyze for ourselves and not be guided by any set formula.

It hardly seems accordant with a practical mind, capable of shrewd reasoning, to be so materially biased by a custom, unmistakably adopted by the profound thinkers of the Christian era, and allowed to drift to the present time. Does it seem right for a man or woman to become so steeped in an opinion that conducive evidence fails to turn their channel of thoughts to the deeper waters? Ah, no! neither is it consistent with a pure, unblemished religion, that there should be contention. Christ taught his

¹ *Atlantic Monthly*, Vol. XXV., p. 243. This article has been ascribed erroneously to J. G. Wilson, and not to the Massachusetts senator.

disciples of things they knew not of, but would it be possible for a minister of the Gospel to teach humanity of any truths they know not of? They can simply declare what the still small voice reveals to them of the Sacred Teachings, enlarging and broadening the ideas of immature minds, but it would be impossible for them to assert truths that are not already before mankind and free to all. So would it not be well for each individual to become his own minister; study and expound all those doctrines that are so freely placed within his reach, and from his own conclusions without adhering to a creed that perhaps has been a family heirloom, and sacred from the fact only that their ancestors had lived peaceful lives in that faith? All are not so, but the majority are of that unstable decision, which allows them to easily drift where thinking is done for them, and they are to believe as the ordained saith.

It hardly seems consistent that this was the religion Christ meant his apostles to teach, for he claims it to be freely received and freely given, which means that each and all shall have that share for himself, and impart to others only his version. This must eventually strengthen us, for we know if our minds become puzzled over a material problem we ask for help; and why not solve the spiritual problems with a view to enlarging other minds, and not rely upon one superior mind to do the work for us?

Christian living is not a hard life, and if each conscientiously follows out those innate principles in every human breast, they cannot fail to become more noble, and will impart—if nothing more—a congeniality to those around them, which is refining. There seems to be nothing that overpowers good resolutions as quickly as the sarcasm dealt out to a youthful mind in its transmigrant state, by those of maturer thoughts. It embitters those little sparks of righteous seeking, until the trifles have penetrated every feeling, and left it a crabbed mass. Congeniality is certainly one of the most essential things of life, and always the sweet possession of a truly religious mind. In the home circle, it becomes the basis upon which to found the rock of everlasting peace, and bespeaks more of the sacred than hours of earnest preaching. To accomplish it, the strong must deal gently with the weak, while the forbearance necessary in each, eventually balances to an equality.—

"A sacred burden is the life ye bear;
Look on it, lift it, bear it solemnly;
Stand up and walk beneath it steadfastly;
Fail not for sorrow, alter not for sin;
But onward, upward, 'til the goal ye win;
God guard ye, and God guide ye on your way;
Young pilgrim warriors, who set forth to-day."

S. ANNETA.

Thy friend has a friend, and thy friend's friend
has a friend; be discreet.

No longer forward nor behind
I look in hope or fear;
But, grateful, take the good I find,
The best of now and here.

—J. G. Whittier.

THE DIFFUSION OF RELIGIOUS TRUTH.

WHEN Peter, in the house of Cornelius, gave utterance to the fresh revelation that it had required a vision to make clear to his understanding, he voiced a profound truth which the wisdom of the ages had been slow in recognizing. It remained for him—a simple fisherman of Galilee—to declare that “God is no respecter of persons, but in every nation he that feareth him and worketh righteousness is accepted with him.” The faith of his fathers had taught that “Salvation is of the Jews,” and they were God’s chosen people to whom all the nations of the earth must ultimately come for the true knowledge of God.

That this hope and promise of the prophets of Israel has been and continues to be fulfilled is beyond denial, but the manner of its accomplishment is not in accord with the prophecy of its beginning as interpreted by the wise men and seers of the nation. The glorious vision that saw the peoples of all lands flocking to their holy city, Jerusalem, “as doves to their windows,” was never to be realized.

It was their own intolerance and short-sightedness which, overruled by divine wisdom, brought about the extension of the knowledge of the true God. The dismemberment of the nation and the dispersion of its people into distant lands, taught them the value of their birthright as the descendants of faithful Abraham, and in their exile the worship of God as the Invisible Head of their nation, became known to those among whom they found a home, and thus the vital truths of the Hebrew religion were spread abroad.

It was a sad calamity to them, but only in some such way could the truth of which they had been made the custodians find access among other nations; and the sorrow which was thus brought upon them deepened and strengthened in themselves these truths of Divine revelation, and fitted them to become the messengers of Jehovah to their oppressors. It is in this way that the wars and oppressions of the world have been made to subserve the highest purposes of man’s advancement. Until the principles that Jesus proclaimed as the rule of life, both as regards our duty to God as the Father of all, and to one another as children of the same divine Father,—until these principles permeate the social fabric of every nation, the changes brought about by the strife of arms, and through avarice and the greed of power must continue; yet as it was in the experience of the Hebrews, these changes and upheavals of nations are overruled for ultimate good to the human family, making true the words, “The wrath of man shall praise him.”

L. J. R.

THE freshness of the blooming fields,
The splendor of the sky,
Are prophecies which summer yields
That God is ever nigh;
They tell us that in joyful mood
He made both land and sea
That in such mood His children should
His fellow-workers be.

SCRIPTURE LESSON, No. 20.

FIFTH MONTH 26, 1889.

JESUS BETRAYED.

GOLDEN TEXT.—“Betrayest thou the Son of Man with a kiss?”—Luke 22: 48.

READ Mark 14: 43-54.

WE pass over the tender and beautiful lessons that followed upon the departure of Judas on his errand of crime and treason against his Master who, with the eleven, left soon after the supper was ended, and went again to the Mount of Olives. These lessons must ever stand among the most precious legacies given by Jesus to comfort and encourage the loving disciple who now, as in the days in which they were handed forth, accepts him as his teacher and helper in the way of righteousness. It was far into the night when they started to return from Olivet.

“Cometh Judas.” He had gathered his associates in crime, and a band of soldiers, and knowing that Jesus resorted often to the Mount of Olives, had gone there expecting to find him.

He said *Rabbi*; and *kissed him*. The kiss was the usual salutation between friends.

And *they all left him and fled*. This is a sad ending to the friendship and fellowship that existed between Jesus and his chosen ones, who had been very anxious to share in his triumph, but now, on the first approach of real danger, were ready to forsake him, one only following afar off,—he who had so lately declared that he would go with him to prison and to death, and even he, when questioned, denying that he ever knew him. It is only as we are tried that we can be sure of our fidelity. It is easy when there is no danger for us to say what we would do under a great trial. We may, like Peter, assure ourselves that though every other disciple should forsake and deny the truth almost as precious as life, yet will we not. It is only as we keep close to that which is precious that we are helped, because of its preciousness and its nearness to us, to be true, and to hold with steadfastness to our purpose.

After studying the life of Jesus up to this time, it seems almost impossible that such a scene as this, described in our reading to-day, could have occurred. So many still within reach whom he had healed of their maladies,—bodily and spiritual,—had taught them the ennobling words, “Love your enemies,” and yet, here, he, the devoted one, was deserted in his time of greatest sorrow. We shrink from the thought that we too may often be betraying the principle of truth, if not with “swords and staves,” yet just as effectually by our careless manner, when our testimonies as Friends are involved.

We should close this lesson with sorrowful feelings about Peter, as we see him following his Master “afar off,” then sitting with the officers, by the fire in the court of the high priest. But let us not blame him too much. Have we not sometimes tried to make ourselves comfortable and agreeable by yielding to those who would crucify, rather than obey, the meek and lowly spirit?

We see about us now the influence of that just and unselfish life, yielded up that we might learn a

lesson of entire consecration to the Father's will. Slowly but surely, in the two thousand years that have rolled by since that awful moment when human hearts were taught to feel, "Thy will be done," has there been an uplifting of our race. And what an irresistible force might be devoted to this heavenly purpose by our First-day schools! From this hour let us all, every scholar and every teacher, try more and more to serve our Father.

NOTES ON THE LESSON.

The garden of Gethsemane, to which Jesus with the eleven disciples retired after the passover supper, was on the Mount of Olives, and is one of the very few places that are mentioned in connection with the life and ministry of Jesus that can be identified.

The gnarled olive trees are still there, and the quiet, secluded spot across the brook Kedron and away from the hum of the great city is just such a place as accords with all that we know of Jesus in his hours of retirement from the throngs that crowded about him. Here, doubtless, he was often found in communion with his Heavenly Father, seeking that strength and courage which he so much needed in the carrying out of the great purpose of his life. And now that treason in his own little band, and the hatred to which it had lent itself, were about to culminate in his arrest and delivery to his enemies, what holier spot could be found in which to pour out the anguish of his soul, than this garden where so often he had met with divine consolation! And how signally was manifested the favor of his Father as he prayed that the cup might pass from him, in that he was enabled to add, "nevertheless not my will but thine be done." We marvel not at the firmness and courage with which he met the kiss of the traitor and suffered himself to be bound and led away to the tribunal from which he had nothing to expect but denunciation and the cross.

"THERE lives more faith in honest doubt,
Believe me, than in half the creeds."

In these lines Tennyson spoke only the truth, but the man who stops on it makes a fatal mistake. Tennyson's doubter "fought his doubts and gathered strength;" he did not stay with them, and cultivate them, and preach them; "he faced the spectres of the mind and laid them," and so "came at length to find a stronger faith in his own." This "stronger faith" should immensely outweigh the doubt, unless religion is to perish.—*Boston Transcript.*

Be merciful in your judgment of one another. Do not encourage in yourself the habit of criticising and commenting upon the foibles and faults of any members of your own family. There is nothing gained by it, and a great deal is lost. Love itself is often choked back and hindered in its growth by the rank sturdiness of weeds which spring up against it, unchecked, in houses where people say all manner of ungentle things to each other.—*Selected.*

There is nothing which more denotes a great mind than the abhorrence of envy and detraction.

A PLEA FOR ORIGINALITY.

ENFORCED uniformity of thought and action ever tends to loss in strength of character. Nature delights in variety, creating no two persons exactly alike, either in form or temperament; then why do we so persistently try to mould all to one idea? On account of economy in instruction we must largely submit to much classification during the school period of life; yet even here the continuous aim should be to evolve from this systematic training as much of originality as possible, and that educator should be considered a success in his calling who can accomplish this.

In our own favored country there is much freedom allowed to both men and women in their choice of pursuits and recreations, but still public opinion coupled with necessity, a necessity created because of conformity, drives the majority into the same avenues of trade and gravitates the masses towards the same recreations. The multitudes flock to the same summer resorts, adopting the same modes of life, and conforming to the same artificial requirements. When, occasionally, a few original minds resolve upon a departure from the customary thoughtless expenditures they are classed as "oddities," no matter how firm in integrity of purpose and action. Unless, indeed, they are gifted with genius, when sometimes more freedom from censure is permitted than is compatible with a true regard for the rights and privileges of others.

That for which we plead is freedom to cultivate original ideas and permission to carry them into action in honest, independent modes of living, that will make manly men and womanly women. We would not ignore any of the amenities of life that spring from kindness and true courtesy, and would always keep actively alive the bonds of parental and fraternal love, but would so respect the individuality of each member of a family as to permit freedom of action without reproach in any direction that is productive of happiness to the actor and devoid of harm to society at large. The restraints imposed by public opinion on mature members of a household, though in a degree beneficial, occasionally cause great loss on the principle that "necessity is the mother of invention;" so freedom to carry out the

infinite resources that spring up in response to some demand in many a gifted child of God brings help, comfort, and joy to homes stolidly settled in grooves well nigh worn to the edge of mental poverty and loss of earthly enjoyments.

In the realm of religion, while there is great necessity for a firm and reverential directing of thought in the tender minds of the young, a restrictive and enforced bondage to tradition still tends to narrowness or bigotry and is yet a fruitful source of unrest. A perfect trust in the revealings of the indwelling God would set the spirit free to revel in new creations. The Infinite One delights here also in diversity. Claiming a first allegiance, the spirit is left free to search for its kinship with the Divine, in all the wonderful manifestations of his greatness constantly unfolding to the mind of man when at liberty to investigate. Only let this allegiance be fast and firm with a full recognition of Divine force, and we can trust for the variety of character to be of such a quality as will "think God's thoughts after him," and put them to such practical use as will lift humanity to greater heights, resulting in better lives and hastening the day revealed in ancient prophesy, when "the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

MARRIAGES.

PEIRCE—LIPPINCOTT.—At the residence of the bride's parents, on Fourth-day, Fourth month 24th, 1889, under the care of Chester, N. J., Monthly Meeting of Friends, Edwin L. Peirce, of Philadelphia, son of Maurice K. and Elizabeth L. Peirce, and Sarah D. Lippincott, daughter of Jesse and Elizabeth H. Lippincott, of Moorestown, N. J.

DEATHS.

CHAMBERS.—Fifth month 4th, 1889, Mark Penn, son of Richard and Catharine C. Chambers; funeral from his uncle's, David M. Chambers, Camden, N. J.

HAINES.—At his home, West Goshen township, Chester county, Pa., Fifth month 7th, 1889, Clayton E. Haines, in his 61st year, son-in-law of the late Eunor Comly; a member of Birmingham Monthly Meeting, Pa.

HOLLINSHEAD.—Near Hartford, N. J., on Fifth month 4th, 1889, Martha D., daughter of B. Frank and Caroline Hollinshead, aged 29.

JENKINSON.—At Massillon, Ohio, on the 13th of Fourth month, 1889, Eliza A. Jenkinson, in the 88th year of her age; a member of Race street Monthly Meeting, Philadelphia. She was a daughter of James and Rachel C. Neall, and was born at Easton, Talbot county, Md. A local paper says of her: "She was of the old Maryland Quakers, who settled at an early day on the Eastern Shore, her remote ancestry deriving title to their possessions there from the British crown, and which bears the family name, Neall, to the present time. She was faithful during her long life to the principles of the Society of Friends, she believed fully that there is an immediate revelation of the spirit of God to each individual soul, and that this light is universal and comes both to the heathen, and the Christian, and thereby the love and grace of God toward

unkind are universal. No member of the Society had a clearer conception of Friends' principles, in the belief of which her life had been spent, sixty-five years of which was in widowhood. In a quiet, unostentatious manner her life has been spent, commanding the respect and esteem of all who knew her. 'The path of the just is as a shining light that shineth more and more unto the perfect day.'"

NEALL.—At the residence of her brother, James Neall, Massillon, O., Fifth month 11th, 1889, Rachel C. Neall, aged 72; a member of the Monthly Meeting of Friends held at Green street. Interment at Fair Hill, Philadelphia.

PAXON.—At Hammonton, N. J., Fifth month 9th, 1889, Jacob L. Paxon, in his 77th year. Interment at Fair Hill, from the residence of his son-in-law, George F. North, Philadelphia.

SERRILL.—In West Philadelphia, on the morning of Fifth month 4th, 1889, Henry Serrill, in his 74th year.

THOMAS.—Fifth month 7th, 1889, Martha, widow of Marshall Thomas, in her 79th year. Interment at Plymouth meeting ground, from the residence of her son, Nathan H. Thomas, Conshohocken, Pa.

WILLITS.—In Philadelphia, Fifth month 8th, 1889, James Willits, aged 68 years.

REPORT OF THE COMMITTEE ON THE JOHN M. GEORGE BEQUEST.

To the Yearly Meeting:

THE Committee appointed "to take into consideration the whole subject of the provisions of the will of John M. George, relative to a boarding-school," and to "report a plan for the organization and government of the school to be established, the manner in which the trust estate shall be held and managed, and if way opens suggest a location and plans for suitable buildings with an estimate of the probable cost thereof," offer the following report of their attention to the duties thus imposed:

They have held five general meetings. At one of the first of these they organized by appointing a Clerk and Assistant Clerk, and four sub-committees, as follows: (1) A sub-committee of five members upon the manner in which the Trust Estate shall be held; (2) a sub-committee of fifteen members on Location; (3) a sub-committee of thirty members to consider the Scope and Character of the proposed school, with plans of buildings and estimates of cost; and (4) a sub-committee of three members on Finance.

These sub-committees have given attention during the year to the subjects assigned them, and have made reports of their progress to the general committee.

The Finance Committee reports that no money has been drawn from the John M. George Fund. Expenses of the general committee, amounting to \$66.83, have been drawn from the Treasury of the Yearly Meeting.

The Sub-committee on the Scope and Character of the School, etc., has not completed its work, though it has given earnest attention to the subject assigned it, has obtained valuable information, and has submitted to the general committee reports of its work, which will be of use hereafter. It has not yet

prepared building plans or estimates, nor has it matured a plan of organization, government, etc. It has submitted some suggestions as to the general character of the proposed school, which have been approved by this Committee, and are in substance, as follows:

"It should be distinctly a Friends' School, in which the principles of our Religious Society should be consistently presented and maintained, so that the school may be a support to the Society; plainness and simplicity should be rules of the institution; the teachers, wherever not impracticable, should be concerned members of our Society; pupils and teachers should regularly attend religious meetings of Friends in or near the school. The character of the instruction should be useful and thorough. The charges should be moderate, in order to bring the advantages of the school within reach of our members generally. Some form of elementary hand training, or industrial training should be made a feature of the instruction, to supplement the customary intellectual studies."

Further than this our labors have not yet developed plans "for the organization and government of the school." The subject itself calls for careful consideration and matured judgment, and as the greater part of the bequest of John M. George remains in the real estate at Overbrook, not yet sold, we have proceeded with deliberation while the total sum likely to be received from the bequest remained undetermined. We have, however, not been unmindful of the importance of establishing the school as soon as the funds actually in the possession of the Yearly Meeting will warrant it, and it is the judgment of this Committee that there should then be no delay beyond that needful to develop a judicious plan, secure a satisfactory location, and arrange other necessary details.

The sub-committee on Location has given much attention to the delicate and difficult subject in its charge. A large number of properties have been offered and members of the sub-committee have visited and examined most of those which, from the descriptions, seem likely to be suitable. Under the limited power given them, they have not been able to enter into such definite negotiations as in their judgment would be for the best interests of the Trust, and they have made no definite selection.

After a careful consideration of the subject we recommend that the Yearly Meeting give its committee on the John M. George Bequest full power to select and acquire the land necessary for the use of the school, if in the judgment of the committee it shall be advisable to act before the next session of the Yearly Meeting.

The sub-committee on the Trust has reported a Plan under which the funds derived from John M. George's Bequest, and real estate which may hereafter be acquired in connection with the school, shall be held for the Yearly Meeting. This plan, having been considered in this Committee, has been approved, and is herewith presented to the Yearly Meeting for its action.

Regarding it as necessary, in order to carry out the object of the Bequest, that the whole subject

should continue to have the labor of a committee of the Yearly Meeting, we recommend that the meeting so continue the subject, under a minute giving the committee power, if way open, to acquire property, erect buildings, and organize, open, and manage the school; and that the Yearly Meeting, also, should it approve the plan of the Trusteeship herewith submitted, appropriate to the use of the said committee, for these purposes, out of the funds of the Bequest, an amount not exceeding \$100,000, (one hundred thousand dollars).

Signed on behalf, and by direction, of the Committee.

THE LIBRARY.

DAVID LIVINGSTONE. By Thomas Hughes. ("English Men of Action" Series.) London and New York: Macmillan & Co.

A SERIES of compact biographies of distinguished English "men of action" is now issuing by the publishers named above, (at the low price of 60 cents). Most of them will relate, probably, to soldiers, but the second in the list is a very interesting account of the career of David Livingstone, the great explorer and missionary in Africa, by Thomas Hughes, well known as the author of "Tom Brown at Rugby," and other books. Livingstone was a Scotch boy, born near Glasgow, in 1817: he died, alone, among the negro tribes in Tropical Africa, of a wasting disease, on the 4th of Fifth month, 1873. He was a very remarkable man, and the narrative of his life is full of the deepest interest. We give below a *resumé* of the contents of Thomas Hughes's little book, extracted from a review in another journal. It says:

Mr. Hughes shows us the future explorer of Africa as he appeared in youth; a stout young Highlander, reared in the sturdy old Scotch school of fervent piety and devotion to duty, well drilled to hard work and vigorous exercise from infancy, full of that strong vitality and indomitable industry which utilize the few leisure hours after each hard day's work for educational progress; the type of Scotch virility, sobriety, and conscientiousness, in short, which has produced so splendid a line of celebrities and so noble an array of workers for the race. David Livingstone was at an early age resolved to know as much as possible, and while earning his living, first as apprentice and then as full workman in a mill, he made time to study Latin and Greek, botany, physiology, geography, and many other useful branches. He qualified himself for the practice of medicine, and passed a surgeon's examination, walked the hospitals, and determined to become a missionary. At first he thought of going to China, but having been persuaded to take service with the London Missionary Society he was sent to Africa, leaving for Algoa Bay in December, 1840.

After a somewhat disappointing stay at the Cape he started for Dr. Moffat's station at Kuruman, seven hundred miles in the interior, and then "the fascination of African travel came upon him." He enjoyed the independent life on the veldt, but he had come

to work, and no time was to be lost. Arriving at Kuruman he set himself to learn the native language, and in a few months mastered several dialects. For a time his medical knowledge entailed so many calls upon him that his missionary work fell into abeyance. He, himself, too, discovered that his vocation toward medicine was strong. He liked the profession, and at one time he was tempted to adopt it as his life-work. But he resolutely fought his inclination, and so far as was possible abandoned his practice and devoted himself to the uphill task of evangelizing the natives. The tribes were always at war with one another, or were menaced by the Boers, who, with the Bible in one hand and the rifle in the other, practiced oppression and cruelty such as were common in the Middle Ages, and plumed themselves upon their superiority and their Christianity. Densely ignorant and as densely prejudiced, accustomed to slavery and treating the Hottentots as mere beasts without souls, worse neighbors than these people to a missionary station could not be imagined.

They hated Livingstone almost instinctively, and were continually threatening him and the chiefs whose close friend he was. But the brave Scotchman took no heed of menaces. He followed the line of duty as he saw it, and he soon cemented firm alliances even with the chiefs who had been most hostile at the beginning. It was here he made friends with the Makololo tribe, a fine race, which supplied him the loyal and gallant men who afterward accompanied him on so many of his journeys, and to whom he showed himself no less faithful and true. It was while pushing forward into the wilderness to found a new station—a long drouth having at once rendered the tribes at Kuruman discontented and compelled a change of base—that he had that adventure with a lion which has been told so often. It will be remembered that the beast sprang upon and seized him by the arm, shaking him as a terrier shakes a rat. "The shock," he said, "produced a stupor similar to that which seems to be felt by a mouse after the first grip of the cat. It caused a sort of dreaminess, in which there was no sense of pain or feeling of terror, though I was quite conscious of all that was happening. It was like what patients partially under the influence of chloroform describe—they see the operation, but do not feel the knife." He suggested that "this placidity is probably produced in all animals killed by the carnivora; and if so, is a merciful provision of the Creator for lessening the pain of death." This theory has been much discussed, but as yet it cannot be regarded as demonstrated, though not inherently improbable and supported by considerable indirect evidence.

In 1844 Livingstone married Mary, the eldest daughter of Dr. Moffat, and the young couple spent the first year at Mabotsa, the new mission, removing then forty miles further to a Bakwain village. He describes their life vividly in his letters. "Building, gardening, cobbling, doctoring, tinkering, carpentering, gun-mending, farriering, wagon-men-ling, preaching, schooling, lecturing on physics according to my means, besides a chair in divinity to a class of three, fill up my time. My wife made candles, soap, and

clothes, and thus we had nearly attained to the indispensable accomplishments of a missionary family in Central Africa—the husband a jack-of-all-trades without doors, and the wife a maid-of-all-work within." But the drouth continued, and the Boers became more threatening. Livingstone had heard of a great lake on the other side of the Kalahari Desert, and he determined to go in search of it. Lechele, chief of the Bakwains, was a vassel of Sebituane, head of the Makololo, and the latter was prepared to welcome the white man heartily. The explorer never saw his home at Kolobeng again. He found Sebituane and became the friend of him and his people. He visited the Cape, and while on his return received intelligence that the long-threatened invasion of the Boers had taken place. They had attacked the Bakwains, burned their village, plundered and destroyed the Mission and carried off all Livingstone's private property.

Twice he returned to England, each to receive a hearty welcome. But it is not possible here to dwell on the remaining events of his life. The great success of his books, which relieved his poverty, and gave him comparative independence; the sad and lonely death of his faithful wife at a station in Africa, (recently visited by Professor Drummond) leaving him a sorrowing and desolate man; the enthusiasm of the English people, which compelled the Government to put him at the head of a new expedition; the appearance of a swarm of new obstacles to exploration, and the comparatively disappointing results of the expedition are all referred to, though not in detail, in this volume. It was part of what we call the irony of Fate that Livingstone, whose dominant motive was the evangelization of Africa, was the means of opening up the country to the deadliest enemies of his work—the slave-traders. The Portuguese followed on the trail he had broken. They availed themselves of the peace he had made with the tribes to throw the natives off their guard. They utilized his labors for the establishment of their infernal traffic; and they and the Arabs between them devastated the country. The explorer was compelled to put up with terrible associations, to control his indignation, to meet the Arab traders on friendly terms; and even, when a hideous wanton butchery of inoffensive natives was perpetrated under his eyes, he felt it impossible to interfere. Then came the anxiety at home, the apprehensions, the talk of relief expeditions, and finally the successful expedition of Stanley, with its picturesque and dramatic culmination at Ujiji, in 1871. The last days of Livingstone must always appeal alluringly to the imagination. There is reason to believe that the wasting disease from which he had been suffering for weeks had toward the end weakened his mind so that though nothing could keep him from going on, it is doubtful whether he understood any longer what he was doing. His whole soul was strung up to the accomplishment of his purpose, and he felt that he was running a race with death. He lost it, and the solemn scene closes with the spectacle of the gray, emaciated figure kneeling by his bedside in the lonely native hut, dead, in the attitude of devotion.

NEWS OF FRIENDS.

—A note from Albany, N. Y., Fifth month 10, says: "Our esteemed friend Isaac Wilson of Bloomfield, Canada, passed through Albany this morning on his way to attend Philadelphia Yearly Meeting. He informed us that he would attend Duaneburgh Quarterly Meeting, to be held at New Baltimore, on the 22d, 23d, and 24th inst., if nothing prevented on his return home.—S. C."

THE SHADOWY HANDS.

I WATCHED him from afar, with eyes
That ached to see what perils lay
Close-set along the jagged way—
What unsuspected ills might rise
To lure his ambushed feet astray.

I knew that he must press the path
Marked for each human soul, alone:
That he must meet the dangers strewn
Unhelped—that love the utmost hath
No charm against the tripping stone.

My lids were wet with anxious tears;
He dreamed not of the pitfalls spread
To trap his all too careless tread,
His thought was on the buoyant years
So flushed with sunshine overhead.

I could but fold my hands, and plead
That heavenly prescience, tender, sweet,
Would choose safe passage for his feet,
And, in his hour of straitest need,
Guide where the devious crossways meet.

But as I gazed athwart the night,
Whose doubt, like mists, around me clung,
The prayer was hushed upon my tongue:
Just where the way was flintiest, light,
Star-like, was on a sudden flung.

And for a moment, circling round,
I felt the sweep of winged hands,
I saw the stretch of shadowy hands,
I heard a voice whose mystic sound
The rapt soul only understands:

"I charge you, bear him safely, lest
He dash his foot against a stone."
The light was gone—the vision fad;
Comfort unearthly calmed my breast,
My darling did not walk alone!
—Margaret J. Preston, in *S. S. Times*.

ANISE AND CUMMIN.

WEARILY with homely duties done,
Tired through treading day by day
Over and over from sun to sun,
One and the same small round always,
Under her breath I heard her say:

"Oh! for the sweep of the keen-edged scythe,
Oh! for the swaths, when the reaping's o'er
Proof of the toil's success. I tithed
Anise and cummin—such petty store!
Cummin and anise—nothing more!

"Only a meagre garden-space,
Out of the world so rich and broad—
Only a strip of standing place!
Only a patch of herb-strown sod
Given, in which to work for God!

"Yet is my hand as full of care
Under the shine and frost and rain,
Tending and weeding and watching there,
Even as though I deemed a wain
Were to be piled with sheaves of grain.

"Then when the work is done, what cheer
Have I to greet me, great or small?
What that shall show how year by year,
Patient I've wrought at duty's call?
Anise and cummin—that is all!"

Turning, I raised the drooping head,
Just as I heard a sob arise:
"Anise and cummin and mint," I said
(Kissing her over her aching eyes),
"Even our Lord doth not despise.

"Think you He looks for headed wheat
Out of your plot of garden-ground?
Think you He counts as incomplete
Service that from such scanty bound
Yields Him the tithing He has found?"

"What are to Him the world's wide plains?
Him who hath never a need to fill
Even one garner with our small grains?
Yet, if the plot is yours to till,
Tithe Him the anise and cummin still!"

—Margaret J. Preston, in *Independent*.

HOME AND REST.

AT last, at last, the evening shadows fall,
And wearily, but happily I bid me home,
While in my heart I hear the welcome call
That bids me from the hillside to the hearthside
come.

O parting day, that brings the parted near!
O dusky shades, when higher lights appear!
I welcome thee, with heart and carol free,
I welcome thee, blest hour, when fond hearts welcome me!

How loiteringly the burning day goes by,
How heavily the hours impose their meed of pain!

But comes at length the lenient evening sky,
To bend with rest and coolness o'er the throbbing brain.

O tender eve, that bring'st from toil release!
O holy night, with brooding wings of peace!
I hail thy shade, that homeward beckons me,
I welcome thee, blest hour, when fond hearts welcome me!

—E. Ch. Browne, in *Boston Transcript*.

"Thou knowest not what argument
Thy life to thy neighbor's creed has lent."

One day, fifty years ago, he who wrote that very couplet, kept on picking up a hat that a little child kept dropping, his wee fellow-passenger in a stage-coach. Little knew Emerson that his gentle, patient humor in the act sank into the mind of a woman who rode at his side, and who probably never would have read his books for horror at their heresy,—sank so deeply in her that it sweetened all her creed and made his hat-feat to be still reported in a Boston parlor.

THE INDIAN LADS AT FARM WORK.

W. W. WOODRUFF, formerly County Superintendent of Public Schools, in Bucks county, Pa., but now associated with the work of the Indian School at Carlisle, recently made a report to Captain R. H. Pratt, in charge of that institution, of his observations on a tour of inspection among the boys and young men who were placed on farms during the winter. His report is dated Third month 20, and we make the following extracts:

"I visited all the pupils from the schools out on farms, either at their homes or at the schools which they were attending, and went to the house of every patron, meeting the patron personally in one hundred and eight (108) cases, and obtaining reports from wife or adult members of the family in nine (9) cases. In one case I did not see patron or wife, although I went twice to the house, and then traveled several miles in pursuit of them.

"The pupils were all found in apparently good health, except one, who had swelling in the ear. Two, however, were reported as not in good health, and ten as occasionally having headache or cold. Without a single exception the appearance of the pupils indicated the enjoyment of good health. In nearly all the families our pupils enjoy all the external privileges of the children of the family: eating at the same table, studying around the same lamp, engaging in the same tasks, and reciting in the same classes. In most instances there is a special interest felt in them because they are Indians, and any special talents, agreeable traits, or striking virtues are appreciated and set forth at their full value.

"There has been something of sentiment on the part of some in the employment of Indian help, and on the part of others something of fear; while to a degree, the whole plan has been tried by farmers as an experiment. But sentiment and fear are now hardly factors in the question, and farmers are deciding the question on the value of our pupils as laborers.

"The principal objections to the employment of our pupils, as compared with the employment of other help, are (1) that our boys must be *shown* how to do things where others could be told; (2) that they will do *precisely as shown*, making no allowance for differentiating conditions; (3) that they are not responsive, will not answer, will not indicate whether they hear or not when told to do anything, and thus leave the patron in provoking suspense, and the way opened for an unanswerable excuse if the duty required is not performed. Indeed the almost universal complaint was, 'The boy won't talk; can't get anything out of him.'

"In visiting our pupils I took pains, as far as practicable, to see them in the schools which they attend. I visited thirty-six (36) schools while in session, and called at two others, seeing teacher and pupil when the school was not in actual session. I examined the school register in nearly every school and found that the attendance had been very good, many of them not having missed a day since they entered. The behavior of our pupils in school is generally highly commended by the teacher. In regard to their character

as students, they were generally reported as backward, diffident, and slow, though they excelled their other pupils in writing. The teachers were reluctant to report any misconduct on the part of our pupils, and in one or two cases I learned from outside parties of misconduct, no mention of which had been made by the teacher. Where there are a number of our pupils in a school I think that the teachers often fear to offend them.

"From all that I saw and learned my conviction is, that upon the whole, our pupils are not afforded very good school advantages. Teachers find them slow, and they have not time to give them requisite attention, and so they pass along, learning but little from the books. Their chief gain is in learning the customs of country schools, the common use of the English language by children, and the liberties, restraints, and customs of social and civilized life. Where I found but one or two of our pupils in a school, the general report of the teachers was very satisfactory; often saying 'He is the best boy I have in school.'

"Places on farms secured for our pupils are, upon the whole, good, and the care and attention bestowed upon them, while not in every case all that we could desire, all that we could rationally expect. Patrons generally endeavor to live up to the rules given for the management of the boys, though in some instances they acknowledged that they had found it so difficult that they had fallen short in some respects.

"The religious instruction and privileges enjoyed by our pupils out on farms are not as good in the winter as in the summer. In winter most of the Sunday schools in the rural districts are closed, and the weather and conditions of the roads discourage attendance on religious services. So far as I could learn our patrons make reasonable efforts to induce our pupils to attend religious meetings held in the vicinity. While not undervaluing the efficacy and desirableness of positive religious instruction, it is very desirable that we secure homes for our pupils where the tone of everyday life will exemplify the principles of the Gospel; as their home life will make upon them the deepest and most permanent impressions."

God is with me in my trouble, to be an infinitely greater joy. He is with me in my losses, to be a gain beyond all calculation. He is with me in my longings for good and for peace, for large measure of truth and love, to answer them; for he has inspired me with these longings. He is with us when we go wrong to show us the error of our ways, when we go right to give us the satisfaction and the reward, to visit with encouragement and to show still larger openings in the same direction. God is with us when we wake, to be ready in due time to give his beloved sleep; with his own when they sleep, to be ready in due time to stir in them their waking, working powers. Nothing can happen to a man so bad, come to him when he wakes or when he sleeps, in a way to leave him otherwise than on the bosom of the Father.—W. M. Bicknell.

INFLUENCE OF WILL POWER ON HEALTH.

THE right exercise of will-power and of self-control is far more an element in health than is generally supposed. We are all conscious of states of mental feeling which have to do with physical health. It is equally true that there are conditions of physical feeling which are quite dependent on the state of resistance or submission which the will exercises. Whatever there is of good result from "faith cure" as a system of practice comes from the fact that it puts in suspension the wayward will of the person concerned, and allows the strong will-power of some decided character to act as a substitute. The same is true as to "Christian Science," in which it is distinctly averred that the faith of the operator, if used with energy and with submission thereto will be effective. There are many cases of relief in which some strong will has simply moved in, taken possession, and asserted itself. This is a very valuable aid to health, where by reason of sickness or of chronic nervous conditions, there is need that there should be this form of substitution or strong assistance. But even this should be a system of training. The design is so to assist the person that there may be a return to self-control and to normal conditions. In many of the best class of institutions for nervous ailments the success of treatment depends upon the full conception of this idea on the part of attendants as much as it does upon the usual routine of hygienic methods. There are many sick persons who could greatly benefit themselves, not by regarding their ailments as visionary, but by knowing them as functional and partly the result of habit, and so realizing that they are curable by discipline rather than by food or medicine.

But a still greater difficulty is that so many have this imperfect organization in childhood, or have it forced upon them by school life, or by errors of dress, of precociousness, of too early reception in society, or too early marriage. From this standpoint far greater attention should be given to such exercises as tend to put the child fully in possession of self. The boy or girl who runs with terror at some little fright, should be unconsciously trained in the art of coolness. The emotional giving way to excitements should lead to a distinct effort to make stronger bodies, to regulate the exercise of functions, and to those details of physical training which will leave quite out of sight history, science, and the fine arts. It is better to be thoroughly healthy and good than to be smart. The first two largely depend upon the education of the will, so that it shall know how to give commands to the person, what commands to give, and how to enforce them.

There are numbers of people in the world at present who have too much of mere acquisition in its mental sense. Themselves and the world would have been far better off if they had had less education in its usual sense and more freedom of the will—such freedom as would enable them to control it and to use it for physical as well as mental health and vigor. The physician sees a great amount of willfulness as a cause of ill-health. It is deliberate on the part of the individual only when it comes to

be enjoyed as an indulgence. It is oftener an unconscious condition brought about by heredity, by ill direction in childhood, or by yielding to the various forms of abnormal habit. It is to be found in all degrees, from that of simple willfulness of temper to such as begets a desire for stimulants, narcotics, nervines, or, going still further, unbalances the mental life. It is thus that public and private institutions are multiplying, and especially those for so-called nervous diseases.

We plead for a hygiene of the will which shall early seek to give, with muscle and brawn, the training of self-control, and which shall secure for the life a poise and a mastery that will make the person resistful of all indulgences that jeopardize health or vigor, and energetic and ambitious for all that effort which secures fixedness of purpose, and resolve to execute what it rightly undertakes. Thus we place the study and the training of the human will as a sanitary measure in its close relation to physical and mental hygiene, and claim for it more specific thought and attention than it has generally received.—*N. Y. Independent.*

DEATH OF HENRY FRANKLIN.

THE Philadelphia *Ledger* of the 11th instant has the following: Henry Franklin, a colored man, who for years has been a familiar character to visitors of the Academy of the Fine Arts, and who will be remembered by many of the students of that institution as an interesting model in the sketch classes, died yesterday, aged 86 years.

The deceased, whose slave name was "Bill Budd," was born in bondage on the plantation of J. Ross Key, the father of the author of the "Star Spangled Banner," in Frederick county, Md. When he was 9 years old he was sold to a planter at Little Pine Creek, Md., who promised Henry his freedom when he had attained the age of 35 years. After living faithfully with his owner for 24 years, and, believing he had attained that age, he escaped, while being allowed a holiday to visit his father on another plantation. He continued his way northward, and, arriving at Quakertown, Pa., entered the service of Richard Moore, a member of the Society of Friends.

A year after his escape he married Ann Brooks, a free woman, who died the following year, just as they had become the possessors of a home. He subsequently married again and had several children. One season he visited various parts of Canada to ascertain the condition of the fugitives from slavery there. He also called on a number of noted abolitionists and was kindly received.

In 1864 Henry came to this city and, his second wife having died, he married again, and the next year he was employed at the Academy of the Fine Arts as janitor and messenger, with which institution he has since remained, gaining the confidence of the directors. He was much esteemed by the late James L. Claghorn, who, it is said, on sending his valuable collection of engravings to the expositions of New York and Cincinnati, in 1874, consented to their going only on condition that Henry should ac-

company them. He was a member of the Cherry Street Baptist Church, at Eleventh and Cherry streets, and had been its treasurer for 11 years.

About six years ago he was taken ill with gastric catarrh, which, with old age, resulted in his death. Two years ago Henry, or "Uncle" Henry, as he was familiarly called, published a sketch of his eventful career, which had been written for him by Mrs. Hannah M. Levick, who had always taken an interest in the old man's career.

THE WOMEN'S VOTE IN KANSAS.

TOPEKA, Kan., May 8.—Recently the Hon. George Morse, of Hartford, Conn., wrote to Mrs. Humphrey, wife of Gov. Lyman U. Humphrey of this State, requesting her views upon the Woman Suffrage question. Mrs. Humphrey made public to-day her reply, as follows:

STR: Yours of the 10th ult. in which you ask for an opinion on the subject of Woman Suffrage, etc., has been received.

In reply I would say that personally I have not been counted among the enthusiastic advocates, much less as an agitator in behalf of woman suffrage, and hence my opinion on the subject is from a conservative standpoint. Not to discuss the question generally, I have always felt that the natural justice of equal suffrage, based on intelligence alone, was too apparent to admit of argument, and the injustice of basing the right to vote upon the matter of sex, regardless of intelligence, was too palpable to admit of honest defense. The practical effect of permitting women to vote as regards themselves and their interests, and as it might affect public affairs generally, seems to be the much-mooted question. How the exercise of the right can possibly detract from woman's usefulness, as woman and mother and wife, or lessen her influence for good, as under present conditions, I never could understand. On the contrary, I think a woman may go to the polls and deposit a ballot and go home to her household duties, loving her husband and children none the less, but her country a little more, for having thus yielded a long-delayed tribute to her intelligence and patriotism.

In Kansas, which I am proud to say usually leads all her sisters in political reforms, as well as in building railroads and growing corn and cattle, the Legislature some three years ago granted women the right to vote at all municipal elections for city and school officers, a right they have long enjoyed in the country in school district elections. The result, I think, has amply vindicated the action of our Kansas law-makers, and as reforms in the right direction seldom go backward, I doubt if any serious attempt will ever be made to repeal the action thus granting municipal suffrage to women in Kansas. True, they do not always vote, but when occasion seems to require it, they do, and vote truthfully and conscientiously. The "woman vote" in the city elections operates as a sort of reserved power, liable to come out and "smash things" that don't suit them.

This influence, from the fact that they may vote, whether they do or not, is a power for good. Men make nominations for the various city offices with

respect to this vote, knowing what it can do if it will. If the question presented involves the public morals, temperance, good schools, the women vote largely on the right side. If it is simply a matter of choice between various candidates, they divide up and vote as they please, according to their personal preferences. After these years of experience, I believe that woman suffrage, so far as it has been tried in Kansas, is a success. Women are eligible to hold office in many cases in this State, such, for instance, as city officers, except, of course, Justices of the Peace and several of the county offices. I do not know that there is any county office to which she is not eligible, although she may be excluded from the office of Sheriff or something of that character. There are in this State 14 woman county superintendents of public instruction out of a total of 106, and there are several women holding the office of Receiver of Deeds, etc., and, so far as I know, wherever a woman has held an office of any character she has performed the duties of such office honestly and efficiently.

Yours very respectfully,

MRS. L. M. HUMPHREY.

THE GRIZZLY AND BLACK BEARS.

In Western America there are two bears that claim the sportsman's attention—the grizzly and the black. The former, hunters have endowed with many aliases, such as "silver-tip," "brown," "cinnamon," "bald-face," and "range" bear. These names do not mean anything, for the grizzly, like the dog, is of many colors. These two varieties of bears can, among other things, be distinguished by the formation of their claws. Those of the grizzly are longer on the fore than on the hind feet. The claws of the black bear are short, and are of the same length on all four feet. It is difficult to persuade the hunters of different sections that the "silver-tip," "cinnamon," "brown," "bald-face," and "range" bears are all from the same ancestry, and that the same animal is called by different names in different localities. But while hunters may vary in their nomenclature, they one and all agree that the full-grown grizzly is the gamest animal in the world, and the one to be most dreaded.

Never do these bears stand on their hind legs and pursue the hunter with terrible howls and roars, as is the way of describing their conflicts with human beings in the ghastly literature of the country. When not bit in the brain or spine, they put their head down, and with a swinging gallop rush upon the hunter. They usually receive their death wound without demonstration, sinking down and dying mute. The majority of grizzlies shot by Eastern sportsmen are those that have first been trapped. They are killed when in this crippled condition, after dragging often for miles a large steel-trap with a huge trailing log attached.

The grizzly is found west of the Missouri river, and very rarely, if ever, east of it. They inhabit both the plains and mountains. A dozen years ago they could be seen almost anywhere in the mountain ranges, but since their destruction has been compassed by baiting and traps they have become

shy, and difficult to approach near enough for a certain killing shot. Bears are the most wary animals of all the big game in America. They go singly, and usually see the hunter before he catches a glimpse of them. They then cunningly slip away, and are difficult to trail. At this time they are fairly abundant in the mountains of Montana, a sure find being in Crazy Women's Mountain, north of the Northern Pacific Railroad. There is also a goodly number of bears distributed over the mountains of Idaho and Wyoming, some in southern California, scattered in the Sierra Madres and on the junction waters of the Santa Maria river in San Luis Obispo County. They are also numerous in the Rocky Mountains and Sierra Nevadas.

The black bear has a far wider range than the grizzly, but in the West it is confined mostly to the mountains, and rarely comes out on the prairies. It is well distributed, however, and is especially abundant in the timbered country, moving about to where the mast and berries are most plentiful. Black bears are very numerous in northern Montana. On the Pacific coast they outnumber the grizzlies, where both species feed on the salmon. The destruction of the grizzlies has been much greater than that of the black. Bears, though still abundant, are very difficult animals to hunt and kill in a sportsman-like way.—*Franklin Satterthwaite, in Harper's Magazine.*

SWARTHMORE NOTES.

—The Senior class has voted to do away with the custom of holding a reception on the Seventh-day evening preceding Commencement. The Senior Reception was always anticipated with considerable pleasure and there is a great deal of regret among the younger classes that '89 will not give one.

—The oratorical contest for the Magill prizes was held in the college hall on Sixth-day evening last before a large audience. The five prizes were founded by President Magill to encourage the rivalry between the Sophomores and Freshmen to assume a less objectionable form than the old physical contests. There were twelve speakers, six from each class, as follows: Sophomores, Josephine T. Ancona, Penna.; Eliza Hampton, N. Y.; Esther Haviland, N. Y.; J. W. Hutchinson, Jr., N. Y.; William C. Sproul, Pa.; Zaida E. Udell, Michigan; Freshmen, Charles B. Hart, Pa.; Gertrude Hutchings, California; Georgia Porter, Md.; Florence D. Reid, Pa.; Laura Smith, Pa.; Edwin M. Underwood, North Carolina. The speaking was very good, the contestants being judged for composition, strength of argument, and delivery. The winning orations were as follows: "The Women of George Eliot," by Esther Haviland; "A Patriotic Idea," by William C. Sproul; "The Health of the Nation," by Laura Smith; "The Political Newspaper," by Edwin M. Underwood, and "The Society of Friends," by J. W. Hutchinson. The Sophomores thus won three honors to the Freshmen's two. The prizes are certificates entitling the possessor to select books to the amount of ten dollars at a large Philadelphia publishing house.

—President Magill has always been anxious to secure the establishment of a "college senate" here,

after the plan of the one at Amherst College, which has had such a salutary effect as a disciplinary body. President Seelye, of Amherst, in a letter to Dr. Magill, gives a great deal of encouragement and says he can recommend the project, if the college authorities will give it their constant attention.

—The bill drawn by President Magill and endorsed by nearly all the college faculties in the State, giving to college graduates who have studied pedagogics and passed satisfactorily, the same privileges in regard to permanent teachers' certificates that graduates of the Normal Schools enjoy, fell five short of a majority in the House of Representatives, at Harrisburg, and hence cannot become a law this year. There is no doubt, however, that the matter will again be brought up, and it will probably be taken in hand by the College Association.

—The spring athletic contests were held in Whittierfield on Seventh-day last before an audience of about 500 people. Although the games were very good the records were not so good as last year. Only one college record was broken, the two-mile bicycle time being reduced to six minutes, forty-eight seconds.

ODD TREES AND PLANTS.

"THERE is a small tree growing near Tuscarora, Nevada, the foliage of which at certain seasons, is said to be so luminous that it can be distinguished a mile away in the darkest night. In its season, it emits sufficient light to enable a person to read the finest print. Its luminosity is said to be due to parasites."

There is a tree that grows but one place in the world, and that is near the Dead sea; it produces fruit resembling luscious apples, which are beautiful only to the eye, when bitten are found to contain salty ashes. They are called the "apples of Sodom."

The cow tree of South America is another peculiar tree; it yields a fluid which is very much like the milk of the cow in appearance, richness and flavor.

Venus' fly trap is a strange plant. The leaf is two lobed, and on each lobe are three hairs, which on being touched by an insect, the two halves collapse and inclose the insect. Several fine specimens can be seen in the Conservatory in the Golden Gate Park.

A plant growing in the United States of Columbia in South America, is named the ink plant. The juice is used for writing, and is said to be indelible. It is very useful in writing public records and documents. *Vick's Magazine* tells of a plant that grows in Arabia, called the "laughing plant," because its seed produces the same effect as laughing gas. The flowers are of a bright yellow, and the seeds resemble black beans, two or three growing in each pod. The natives dry and pulverize them, and the powder, if taken in small doses, makes the most dignified person act like a clown; he will dance, laugh, and cut the most fantastic capers; when the excitement ceases, the exhausted exhibitor of these antics falls asleep, and when he awakes he has not the faintest remembrance of his frisky doings.—*The Kindergarten.*

PEACE.

ALL conflicts come back to the individual soul. The measure of our civilization is the measure of individual self-control. If we wish to note the progress of nations we must note the progress of individual minds and hearts. If we wish to study humanity we must study ourselves. We may find within all the warfare, all the conflict of feeling, that make the turbulence, the discord, the war of history. All unknown to each other these mighty battles between the lower and higher self are fought. There are defeats greater than Waterloo, there are victories more splendid than any general has achieved, upon the silent, unseen battle-field of the human soul. Not for the mere sake of conflict are these battles fought. Our ideals are ever before us, and the great cry of the heart is for harmony. Like Jesus we are searching for our earthly kingdom of heaven; like Paul, we are asking eagerly for the peace that passeth understanding. And we may learn of Paul the lesson that this peace can come only through conflict—conflict with thought, with feeling; conflict on a high plane, with the forces of life and society.

If we hold a great truth, if there is revealed to us a great principle, we shall not have peace till we share it. If larger thoughts of God and humanity have come to us, the judgment of unrest should and will be upon us till we have entered the contest with these thoughts, till we have shared them freely with others. . . . The moment you enlarge your mind and your heart you enlarge your heaven. Teach, I pray you, the law of progress for all souls here, and hereafter under grander conditions of growth. Show that the love of God is infinite and omnipotent. . . . It is not through the suppression of thought, but through the earnest conflict with it that we grow toward the heaven of peace.—*Marion Murdock.*

WHAT IS TEMPERANCE?

A CORRESPONDENT of the *Christian Register* thus ably enlarges on the dictionary definition of Temperance: According to Webster, temperance consists in "habitual moderation in regard to the indulgence of the natural appetites and passions." The definition is a good one, but we must not fail to note the force of the word "natural"; for on that word lingers the whole worth of the definition.

There are natural appetites and unnatural appetites. A natural appetite should be properly indulged, but an unnatural appetite should never be created; for it comes into existence only through violated law. If inherited, it is criminal folly to indulge it.

Some things are often taken into the human system which are never demanded by a natural appetite, and among them I may name opium, tobacco, and intoxicating liquor. In fact, the natural appetite generally loathes these articles. It is a well-known fact, however, that after a person has indulged in their use for a length of time they so disarrange the whole system, so vitiate the normal powers of the body, that an unnatural appetite is created, which is akin to disease. Such an appetite can never be in-

dulged temperately. Opium cannot be used temperately, except, perhaps, as a medicine. Tobacco can never be used temperately, and there can be no such thing as the temperate use of intoxicating liquor as a beverage; but by their use men create an unnatural appetite, which robs them of their will and makes them slaves.

WHAT, can we separate from God? Jesus looked out upon the world, and saw nothing profane,—nothing by which we could lightly swear; the heavens are nothing independent of God; they are his royal abode; the earth is sacred, for it is his footstool; that fair product of human hands, Jerusalem, is yet his by divine right; and even the hairs of man's head are changed and fashioned by his power alone. Of what, then, can I be disregarding? on what in heaven and earth can I look without a certain reverence? I love the world, for the world is the bright flowing garment of Deity; I own a certain kinship and loyalty to the humblest particle of dust, for the same Power which dwells in me dwells in it also; I bow in reverence before my unpremeditated, impassioned thought; I thank God for joy; share in the Christian worship of sorrow; I am never so near God and the pure spirit of his Son as when I am nearest to man in sympathy and service; and even in my sin I discern the Providential hand, giving me with fatal precision my desert, or, if penitent, blessing me with forgiveness and granting me heavenly grace. And, if we can separate nothing from God, can anything separate God from us? Is not life best with an increasing, deepening consciousness of his presence in it? And death—is not the hand that takes us the same that has blessed us in life? And can we not trust it?—*W. M. Salter, in Unity.*

NEWS AND OTHER GLEANINGS.

—The anniversary of the graduating classes of the Indian Industrial School at Carlisle, Pa., will take place on the 22d instant. The class examination and inspection will be held from 9 to 11.30 a. m., and the general exercises from 1.30 to 4. There are fourteen graduates.

—The *Garden and Forest* contains a sketch of the grounds of the Lyman place at Waltham, Mass., and also an engraving of the famous purple beech tree, which is about ninety years old, has a circumference of more than thirteen feet and branches extending eighty-five feet. The planting of purple beeches should be more common. They require space for growth. On a lawn they are very beautiful.—*Boston Journal.*

—The editor of *Harper's Magazine* selects for publication each year about seventeen manuscript stories, and rejects annually between fifteen and sixteen thousand like matter. It is said, on good authority, that after paying its editors, the same magazine is published at a yearly cost of \$200,000 for original literary matter, and the work of artists and engravers. Of this \$200,000, \$10,000 goes to the authors. The sum stated does not include the expenses of printing or publishing the magazine.—*Exchange.*

—In consequence of the appointment of a new U. S. Treasurer, (James N. Huston, of Indiana), and the transfer of the custody of the funds in the Treasury from his predecessor, a committee was appointed by Secretary Windom, on the 11th, to proceed to examine the books and count the money. The examination will include a count

of all the moneys in the Treasury vaults, aggregating nearly \$200,000,000, of which \$148,000,000 is in standard silver dollars, \$26,000,000 in gold coin, and the remainder in United States notes, National Bank notes, gold and silver certificates and fractional silver coin. This work will take a force of sixty expert counters over four months time.

—A despatch from Pierre, Dakota, says that for some time hundreds of settlers have been lying in wait along the Sioux reservation for the appointment of the Sioux Commission, and recently when the news was received, many of them went on the reservation and staked out their prospective claims. The matter was called to the attention of the Interior Department officials, and now a despatch from Washington announces that settlers will not be molested by the Government if they go on the reservation peaceably, pick out the land, and make no disturbance, as it is only a question of time when the lands will be ceded and thrown open. In consequence of this news the last few days has developed a great rush for the best parts of the reservation.

—Father Darnien, widely celebrated as "the Leper Priest" of Molokai, died at Kalawa, Hawaii, on the 10th of Fourth month last. He was born in Belgium in 1840, and went to Hawaii in 1864; for the last sixteen years his labors have been confined to the leper settlement at Molokai, where he contracted the dread disease which cost him his life.

—The steamer City of Paris, of the Ioman Line, which arrived at Sandy Hook at 11.15 a. m. on the 8th inst., made the passage from Queenstown in 5 days, 23 hours, and 7 minutes, corrected time. The best previous record, which was made by the Etruria, was 6 days, 1 hour, and 59 minutes.

—From a report of the Belgian Consul-General in the Congo State, it appears that the efforts made to introduce European vegetables and fruits in that district have been rewarded with great success. The inhabitants of the Lower Congo have been very successful in cultivating not only the usual African products, such as manioc, sweet potato, etc., but also sorghum, maize, and the "wand" haricot, called "homa" by the natives. The cotton-plant grows in its wild state, and the natives manufacture from it hand wallets, etc.

—The *Sun* has not recently recorded a more interesting bit of geographical news than the announcement of the exploration of the Lomami tributary of the Congo. This noble river empties into the Congo about 125 miles below Stanley Falls, and four years ago Grenfell ascended it, steaming almost due south for over 200 miles, passing scores of large native villages on the way. The exploration has now been carried a distance of 503 miles from the mouth of the river, which is found to be about 1.5 mile wide, from 12 to 18 feet deep, and from its upper course Nyangwe, the great Arab market of Central Africa, can be reached by an overland march of 60 miles. This means that when the Congo railroad is built travelers from Europe can journey by steam to within 250 miles of Lake Tanganyika, avoiding by this new waterway the nine cataracts in the Congo between Stanley Falls and Nyangwe. Another significant phase of this new discovery is that it practically proves the identity of this river with the navigable Lomami crossed by Cameron about 150 miles south, and the river is probably navigable for at least 700 miles, and is the third largest tributary of the Congo.—*New York Sun*.

—The Paris Exposition will afford opportunity for conferences of scientific men in many branches. An interna-

tional meeting of zoologists is to be held in August. The most important work for the meeting will be the unification of the language of zoology in classification. A Physiological Congress is also to be held at Basle, in September.—*Exchange*.

—Two daring Englishmen, Mr. E. W. Everest and Count de Sainville, have started from Winnipeg on an adventurous trip. They propose to descend the Mackenzie, which is nowadays easily accomplished by means of the steamer that was put on the river a few years ago. They intend to start west from the mouth of the Mackenzie, and to follow the arctic shores as far as Behring Strait. It appears that they intend to study the Eskimo of Cape Bathurst and Point Barrow. It is expected that the expedition will occupy two years.—*Science*.

CURRENT EVENTS.

A SEVERE wind storm, lasting about half an hour, visited Philadelphia, New York, and the regions adjacent, late in the afternoon of the 10th instant. It was accompanied by blinding clouds of dust, and some rain. Much damage was done, but none of very great seriousness. Several lives were lost in different parts of Pennsylvania, in local storms the same day. At Ridgeway, in Elk county, the wife of William McNoll and her four children sought safety from the storm in the cellar of their house. Lightning struck the house, and the mother and three of the children were killed. The other child, a month old, was found uninjured in the arms of its dead mother.

On the 10th inst., heavy snow fell at Denver, Colorado, the temperature being 32 degrees.

In a school election at New Brunswick, N. J., on the 13th inst., 535 women voted, and the ticket which they supported had a majority of 756. There was much interest shown.

SERIOUS labor troubles have occurred in Germany, a large body of miners having struck for better wages. Some collisions have occurred with troops sent to the place of disturbance, in one of which several of the strikers, and some other persons, were killed. The Emperor is taking an interest in the settlement of the controversy.

At the session of the Universal Peace Congress, in New York, on the 14th, an address was delivered by Alfred H. Love, of Philadelphia, President of the Society. Paulus Most, a colored Liberiaian missionary, gave an interesting account of the treatment of Africans by white people. In the evening a farewell reception was given to Belya Ann Lockwood and Amanda Deyo, who are being sent to the Peace Congress, at Paris, as delegates from the American Union.

An earthquake was felt on the 14th, in the Mexican State of Guerro. The oscillations were from north to south and lasted four seconds.

The strike of the railroad coal miners of the Pittsburg district, which began two weeks ago, for a uniform yearly scale of 74 cents a ton, was settled on the 14th at a conference of miners and operators in Pittsburg. A compromise was made at 73 cents a ton. About 7,000 men will go back to work at once.

THE Supreme Court of the United States has affirmed the validity of the law excluding Chinese laborers from the country, known as the Scott Exclusion act. The Court holds that Congress has the power to exclude aliens from the country whose presence is deemed inimical to our interests.

BESIDES the miners' strike in Germany, there are other labor disturbances in Europe. The metal workers

and potters at Munich threaten to strike unless their wages are increased. At a meeting of tramway drivers in Berlin it was resolved to demand an increase of wages, a reduction of hours, and extra pay for working on holidays. In the event of a refusal the men will go out on strike. The Yorkshire miners threaten to strike unless their employers concede an advance in wages. Fifty thousand notices have been distributed among the men advising them to quit work unless an increase is granted.

NOTICES.

* * * A Temperance Conference in Western Quarterly Meeting will be held at London Grove, First-day, the 19th inst., at 2.30 o'clock p. m. Joshua L. Baily will address the meeting on the question of the hour—Constitutional Amendment. ELMA M. PRASTON, Clerk.

J. L. Baily will also address a meeting at Kennett Square on the evening of the 18th inst., and at West Grove on the evening of the 19th.

* * * A Religious Meeting will be held at "Friends' Home for Children," 4011 Aspen street, West Philadelphia, First-day, Fifth month 19th, 1889, at 3 p. m. All are cordially invited.

* * * The semi-annual meeting of Nottingham First-day School Union, comprising the schools at Little Britain, Oxford, East and West Nottingham, Fawn, Drumore, and Eastland, will be held at Drumore, on Fifth month 25th, at 10 o'clock a. m.

All interested are cordially invited.

Geo. B. PASSMORE, } Clerks.
Dr. L. LUCRETIA KING, }

* * * A Temperance Conference under the care of Concord Quarterly Meeting's Committee will be held at Friends' meeting-house, Chester, on First-day, Fifth month 19th, 1889, at 3 o'clock p. m.

MARY McALLISTER, Clerk.

* * * The Religious Meeting at "Friends' Home for Children" will be deferred one week on account of Philadelphia Yearly Meeting. R.

* * * Friends desiring accommodations during the time of New York Yearly Meeting will please communicate as early as possible with the undersigned, in order that the Committee having charge of same may be enabled to properly arrange for their comfort and entertainment.

JOSEPH A. BOGARDUS, 177 West St., New York City.

NEVER FULL.

No father's house is full,
E'en tho' there seems no resting place for more;
Forgiving arms and doors do open wide,
If one repentant child implore
Outside.

No mother's heart is full,
Unless it be with louging, burning wild—
Heart-throbblings that no cheerful face can hide—
The wish to clasp her sinning child
Outside.

God's flock is never full.
Fear not to enter holdly at his door,
None ever were refused who there applied;
He hath abiding place for more
Inside.

—Selected.

PHILADELPHIA YEARLY MEETING, 1859.

[Our report, last week, ended, in men's meeting, with the proceedings of Second-day; and in women's meeting with those of Third-day morning.--Eds.]

In men's meeting, on Third-day, the report of the Committee on the late John M. George Bequest received further and final consideration. The minute prepared the previous evening, (giving power to the Committee to locate, open, and manage the School, etc.), was united with, and members of a joint committee, to nominate seven trustees for the Bequest, were appointed. The report of the committee of five appointed in 1857 to confer with the treasurer and executors of John M. George, showed a balance of \$148,594.71 in the treasurer's hands, of which \$11,094.71 is in cash and the balance, \$137,300, in mortgages. The report was accepted and the committee was continued to give further attention to the subject. The queries were then taken up. In reply to the First, the following summary answer was adopted:

"Our religious meetings for worship and discipline have been regularly held, with some exceptions mentioned in seven of the reports, some of which have been accounted for by sickness and inclement weather. Those held on the morning of the First-day of the week have been well attended, those at other times have been much neglected; the hour for gathering has been nearly observed; clear of unbecoming behavior except instances of sleeping."

Thomas H. Speakman, remarking upon the answers, took the view that the Society suffered from the neglect to make needed changes in the Rules of Discipline. He gave notice that at a time which should be suitable, he should propose the appointment of a committee to consider the propriety of a

general revision. The Clerk asked him to defer it until the Queries and their answers were disposed of. Alvan Haines spoke of the attendance of mid-week meetings. Richard Watson thought there was not enough religious instruction; that there is a distinction between the qualifications for preaching and that for teaching. Isaac Wilson said that the word "decline" grated harshly upon his feelings. He did not think there was the decline that some thought. He felt that the principles and testimonies of the Society were not declining. Small meetings may have had fewer members, but that is an individual fault. He instanced very touchingly the reestablishment of a meeting in Canada which had been proposed to be laid down.

In the afternoon, the report of the Visiting Committee was read, as appropriately following the First Query, and it was united with, and the Committee continued. (The report will be given at length, elsewhere.) The Second, Third, and Fourth Queries, and their answers, were considered, and the following summary answers adopted:

Second.—"Love and unity have been generally maintained. Tale-bearing and detraction discouraged. As differences have become known, care has been taken to end them."

Third.—"Many Friends have been concerned to bring up those under their care in plainness of speech, behavior and apparel; to encourage them in the reading of the Scriptures, and to restrain them from reading pernicious books and from corrupt conversation. Two of the reports mention an increased interest in reading the Holy Scriptures."

Fourth.—"Friends have been very nearly clear of the manufacture of intoxicating beverages, except cider, mentioned in one report, and of the sale thereof, with an abatement in another report; one case of renting property for its sale, and five of signing applications for license; with few exceptions, careful to discourage their use as a drink, and cautions in their use as a medicine. Generally careful to discourage the attendance of places of diversion and the unnecessary frequenting of taverns, and to keep to moderation and temperance on account of marriages, burials, and other occasions."

The report of the Temperance Committee was read, after completing considerations of the Fourth Query, and gave rise to some earnest discussion. Many Friends fully approved the report, while a number objected to the Committee's action in issuing an Address to the people of Pennsylvania in relation to the vote on the Constitutional Amendment. The consideration of the subject continued to the hour of adjournment.

In women's meeting, (Third-day afternoon), the proposition to unite with the other Yearly Meetings in the Philanthropic Union was again before the meeting, and it was proposed to refer the subject to a committee, if that should meet the approval of men's meeting. The committee to examine the accounts of Mary F. Saunders, Treasurer, were reported correct, with a balance on hand of \$1,004.96, and she was reappointed to have charge of women's separate funds for the ensuing year.

The state of the Society was then entered upon. The First, Second, Third, and Fourth Queries were disposed of. In connection with the last named the report of the Temperance Committee was read and its work approved. A committee of four, (Louisa J. Roberts, Lavinia P. Yeatman, Jane Price, and Lydia H. Hall), was appointed to join with men Friends in preparing the Minute of Advice proposed in the concluding paragraph of the report.

FOURTH-DAY, FIFTH MONTH 15.

In men's meeting, the consideration of the Temperance Report was concluded, and the committee continued with authority to labor within the limits of its appointment. It was decided, with substantial unanimity, to appoint four Friends to join the women's committee in preparing the Minute of Advice, and Edward H. Magill, Samuel Swain, Wm. Wade Griscom, and Howard M. Jenkins were appointed. The Fifth and Sixth Queries and their answers were considered, and summaries adopted. That in answer to the Fifth shows substantial clearness in all particulars; concerning the Sixth, three reports make exceptions in regard to the support of a hiring ministry, and one case is reported of a member having joined a military organization. The memorial of our late friend, Aaron Borton, was then read, and the meeting adjourned.

In women's meeting, the remaining Queries were read and summary answers adopted. The consideration of them drew out expression from several members. Rebecca J. Cowperthwaite spoke of attendance at places of diversion, Elizabeth H. Plummer of a free gospel ministry, Rachel Mather of a ministry educated in the School of Christ, Mary M. Thomas of deficiencies shown by answers to the Fifth Query. Lydia H. Price exhorted against extravagance, and thought that those who had abundance should endeavor to live not merely within the bounds of their circumstances, but within the bounds of simplicity and truth. Esther H. Barnes thought that when husbands were working hard to support their families, wives and daughters should aid them by every possible economy. Elizabeth Lloyd said that those who have abundance ought to give useful work to those who are in need, and never economize at the expense of the seamstress or washerwoman. Margaretta Walton emphasized all these testimonies, and spoke of the beauty of simplicity. Abigail R. Paul thought it very wrong to dress children in silks and satins and send them out to evening parties. Martha Schofield hoped that false ideas would never prevent any of us from offering remunerative work to the needy ones in our own social circle; if there are many overburdened hands there are also many idle ones,

and the two ought to be brought together. Matilda E. Janney thought that care should be taken to deal with offenders, not only in the authority of truth, but also with tenderness and restoring love. She pleaded with young women against attending evening parties in immodest dress. Frances J. Newlin expressed her sympathy with the overseers in the performance of their duties.

In the afternoon, in men's meeting, the remaining queries were read and answered. The answers to the First Annual Query showed a few changes in the times and places of holding the meetings. No new meetings have been established and none discontinued.

Concerning week-day schools, the summary of answers to the Second Annual Query showed 35 schools, having 139 teachers, 96 of whom are Friends, and 13 professors with them. There are also 22 special teachers. They are attended by 2,999 pupils, of whom 672 are members and 298 have one parent a member. Most of the children attend mid-week meeting with their teachers. Reports were also sent up by several meetings concerning the First-day schools, but these were not complete, the schools not supervised by meeting committees not being reported. The reports, as far as received, showed 35 schools, with 144 officers, attended by 2,153 pupils, 728 of whom are members, and 193 have one parent a member, also one mission school, with 14 officers and 90 pupils. The memorial of our late friend, Samuel J. Levick, was read.

In women's meeting, Isaac Wilson, whose gospel visit had been arranged for in the morning session, was present and spoke at length, acceptably. He was drawn forth in very searching testimony, believing the query of some heart to be "Why, after I have set my face Zionward, do I still endure trials and hardships; why is there an atmosphere about me which is uncongenial to the better life within me?" For such a state he felt sympathy, and would encourage a more perfect trust in the all sufficiency of that faith which will be begotten in the human heart. There is no trouble nor affliction nor temptation in this life but an accompanying measure of the grace of God is given to pass through it.

The reports of the Indian Committee, and of the Committee on Distant and Isolated Members, were read and approved. The memorial of our late friend, Rebecca John, was also read.

FIFTH-DAY, FIFTH MONTH 16.

(The meeting-houses were open, as usual, in the morning, for religious meetings. The attendance was large. Isaac Wilson attended and spoke at Green street.)

If the afternoon, in men's meeting, the minutes of the Representative Committee for the past year were read, at length, as usual. They showed no action of unusual importance. There had been a somewhat larger distribution of Friends' literature than usual, about 1,500 volumes being sent out. One Friend urged that this branch of the work should be more extended.

The report of the Educational Committee was read and approved, and the committee continued.

Remarks were made upon it by Aaron B. Ivins, William W. Birdsall, Edward H. Magill and others. The need of encouraging young Friends to pursue the profession of teaching, by paying salaries that would not suffer so much by comparison with the rewards of other avocations, and by continuing them in school until they were well trained for teachers, was pointed out.

The report of the Indian Committee was also read, and approved, and the committee continued. The report of the Committee on Distant and Isolated Members was similarly disposed of. (All these are printed in full.)

Robert M. Janney called attention to the imperfect character of the statistics in relation to First-day Schools, and expressed his concern that a committee should be appointed to consider the need of promoting a more close relation between these schools and the meetings. This concern was united with, and members of a joint committee were appointed at once, out of the body of the meeting, to act with a like appointment by women's meeting, and report at a future sitting.

In women's meeting the Minute of Advice in regard to the vote on the Constitutional Amendment was reported from the joint committee on the subject, and being read was united with. It is as follows:

"The attention of this Yearly Meeting has been earnestly drawn to a consideration of the evils of Intemperance, and the means of their removal, and particularly to the Constitutional vote which will occur in the State of Pennsylvania at an early day. The presentation of these subjects has brought the Meeting into a deep and earnest exercise, and under the apprehension of our duty concerning them we affectionately exhort our members in that State to a prayerful consideration of the duties which will attend an exercise of their right to vote upon the proposed Amendment. It is not the purpose of this Minute to assume the authority to direct how any civil act shall be performed, but to urge that whatever vote may be cast by any Friend shall be the outcome of a conscientious desire to elevate society, to protect and purify the home, and to advance the cause of Truth."

The minutes of the Representative Committee were read and approved, and the memorial of Samuel J. Leveck was read. The proposition of men's meeting in relation to a First-day School Committee was united with, and members of it were appointed.

SIXTH-DAY, FIFTH MONTH 17.

In men's meeting, in the morning, David Newport and Ezra Fell spoke, the latter particularly referring to the evils of the use of tobacco. The committee to report the names of seven Trustees for the George property presented the following names (one from each quarterly meeting): Alfred Moore, Evan D. Jones, Edward Atkinson, Joseph T. Bunting, Thomas Baker, Bennett S. Walton, and David Masters as such trustees. The report was united with and the Friends appointed.

The committee to nominate new trustees for the Yearly Meeting property reported the names of Robert M. Janney, Henry W. Hallowell, Stephen B. Twining, George L. Maris, William L. Jackson, Pennock Spencer, Richard T. Turner, Jr., Charles H. Tatum, Ezra Lippincott, Joel Borton, Jr., and Jo-

seph W. Eves, one from each quarter, which were united with and they were appointed.

The names of the correspondents as reported by the several quarterly meetings were directed to be entered in the minutes and published in the "Extracts."

The joint committees appointed at a former sitting to prepare a minute of advice to the members, reported, (as already given in proceedings of women's meeting), and the report was united with, and the Committee continued to effect a distribution of the Minute. Remarks of satisfaction concerning it were made by Samuel S. Ash, Isaac Wilson, and others.

There being a discrepancy in the school statistics sent to the men's and women's meetings, the Educational Committee was instructed to prepare and send out blanks to the different meetings where schools are established, so that the reports may be accurate in the future.

The Committee on the Condition of the Education of the Colored People of the South presented its report, which was approved and the committee continued and encouraged to further labor, with authority to draw on the Treasurer for necessary expenses.

The memorial of Mary S. Lippincott was read and drew out remarks of sympathy from several Friends.

In women's meeting the draft of an epistle to the yearly meetings was read and united with. The report of the Committee on the Colored People of the South was read, and much sympathy was expressed with the work of education which it referred to. It was proposed to give \$500 from the separate fund of the women's meeting, and this appeared to be united with, but objection was then made, and the minute to this effect was not adopted. The Committee was continued, and it was announced that Sarah H. Peirce would receive individual subscriptions for the work in Room No. 1. (The subscriptions from women amounted to \$210.36; from men \$39.70; total, \$250.06.)

In the afternoon, in men's meeting, the report of the Committee to examine the Treasurer's account was presented. The receipts for the past year were \$4,124.48, and the expenses \$3,288.09; the balance now on hand is \$4,621.64. It recommended that \$3,500 be raised the ensuing year, and named Thomas J. Husband as treasurer, and Joseph C. Turnpenny and Alfred Moore as correspondents, which was united with and those named appointed. The Committee also reported that they had examined the account of the Treasurer with regard to the George Fund, and found it correct, (as already reported by the Advisory Committee of Five). The Committee on the relation between the Meeting and the First-day Schools reported that the subject had better be referred to a committee to report at the next Yearly Meeting. The committee was continued, one Friend being added from each quarter.

The draft of an epistle to be sent to the other yearly meetings was presented, and with some amendment, adopted. Thomas H. Speakman then asked the attention of the meeting to the proposal, of which he had given previous notice, of a commit-

tee to consider a revision of the Discipline. This drew out remarks from a number of Friends, several of whom expressed unity with the proposal, but the time of adjournment being near at hand, it received no definite action.

The subject introduced (on Third-day last), from women's meeting of appointing a committee to consider a union of this Yearly Meeting with the others now in the Philanthropic Union, was briefly considered, but the meeting was unready to act upon it at this time. The minute of exercises was then read, and after remarks from a number of Friends, the meeting concluded.

In women's meeting, the appointment of Trustees of the George Property, already approved by men's meeting, was united with, and also that of Trustees of the Yearly Meeting Property. The reference of the correction of the school statistics to the Educational Committee was also approved. The report of the committee on the Treasurer's Account was read, and the appointment of Thomas J. Husband as Treasurer of the Yearly Meeting was united with. The action of men's meeting in continuing, and adding members to, the committee on the relation of the First-day Schools and the Meeting, was approved, and the additions were made.

A memorial for Mary S. Lippincott was read, bringing a tender feeling over the meeting. Many, no doubt, remembered when she so ably presided over the Yearly Meeting, and almost all could recall her dignified appearance as she sat, alive with interest, by the side of her successor at the clerk's table. Affectionate tributes were offered to her memory, uniting the meeting into a close bond of sympathy. After the reading of the concluding minute there was a solemn, peaceful silence preparatory to the final adjournment.

For Friends' Intelligencer and Journal.

THE USES OF A FRIENDS' MEETING-HOUSE.

AN edifice that can rightfully be called by this name, whenever erected, or wherever located, was no doubt intended as a place in which to hold Friends' religious meetings.

In the arrangements made according to the good order of the Society, and maintained under our excellent code of Discipline, we have some meetings for divine worship, and some for the transaction of the legitimate business of the organization. The latter—which are called "Meetings for Discipline"—are limited in their attendance to those who are members of the Society of Friends. In addition to the regular meetings, ample provision is made for the occasions of marriages, funerals, Friends traveling with minutes of approval, and committees that have been set apart to visit the meetings, and to make such appointments, in the line of their service, as they may deem advisable, and as way may open for them. All such appointments come properly under the head of religious meetings.

When committees are appointed in the regular order of the Society, it is of course expected that they may have the use of such of the meeting-houses

as may best accommodate them for the transaction of their business. They may even—where the minute of their appointment will admit of such action—call a conference of our own members, and exercise proper care over the assembly which they have thus convened.

There is nothing new in any of the above statements, as they are intended merely to summarize the regulations by which Friends are governed in the occupancy of their meeting-houses; and it is to be inferred that all who assume responsibility in conducting the affairs of the Society, are sufficiently familiar with these regulations to be able to apply them to our own members, and—should occasion require it—courteously to explain them to those who are not of our fold.

But are there any *other* purposes, than those above specified, for which our meeting-houses may properly be used? The answer to this question would be likely to mark the parting of the ways; as it brings us to the point where definite prescription terminates, and discretionary power begins. Here it is that difficulties are likely to occur, growing out of those differences of opinion which exist between zealous progress and guarded conservatism. We may be engaged in some work which we feel sure is a good one; we call upon those interested in the movement (Friends and others), and band ourselves into an organization, after which we require a suitable place for holding our meetings. Some of our members are delegated, or else they volunteer, to apply for the use of Friends' meeting-house, for one evening in the week, or for an occasional First-day afternoon, as may best suit our purpose. We may be so impressed with the conviction that we are working for the public good, and so thoroughly in earnest in our pursuit, as to overlook the plain fact that those to whom we apply have *their* duties to perform, in the proper exercise of which, they may feel it right to decline the granting of our request. We may from having been looking in another direction, or through a glass that concentrated our vision on one object, lose sight of the important trust that has been imposed on these sentinels,—even that of guarding the Society against encroachments from all sides, and of looking ahead for what might lead to confusion, and eventually bring reproach upon the body. We have grown to be so liberal (?) in our views, and so democratic in our proceedings, that we may fail to render to those occupying prominent stations in the meeting, that degree of deference which the individuals merit, and their stations require. When they decline to grant our request, we should not attribute to them harsh motives, or feel that they are lacking in sympathy; when, on the contrary, it may cause them real pain to have to disappoint us, and to thwart our object,—in the fulfillment of their plain duty. Whenever an application is made for the use of a meeting-house for an anomalous assembly, or for an unusual purpose, we must remember that it is for the heads of the meeting to decide whether or not the purpose is in accord with the place, and the gathering likely to be such a one as Friends could be responsible for, and could keep within proper limita-

tions. Should their decision be adverse to our wishes and our expectations, we may feel greatly disappointed; nevertheless, we should cheerfully acquiesce in it, believing that it was based upon a sense of duty, and rendered in accordance with the fulfillment of a trust.

Many of our members who are engaged in works of beneficence, may feel inclined to cooperate with those of other persuasions, with a view to enlarging their sphere of usefulness. In such cases it seems only reasonable that the cooperative work should be performed in some building other than a Friends' meeting-house; and then Friends cannot be held responsible for the conduct of the assembly, but only for that of our members who attend it.

I would speak with delicacy, and with the utmost courtesy, of those who are commonly called "clergymen." Engaged in this profession are several whom I am glad to claim as personal friends, and whose motives I believe to be as pure, and whose intentions as sincere as their outward lives are upright. In conducting meetings, however, they have *their way*, and we have *ours*. How different are the two, must be patent to all who are acquainted with both. There is no occasion for giving offense to our good, sober neighbors—"clergymen or laymen"—when we tell them, in a friendly manner, that we are a peculiar people, and that we cannot join them either in their religious revivals, or in their moral reforms; neither can we invite them to join us in our philanthropic work. Will they not be likely to have more respect for us when we are steadfast in the maintenance of our principles, and consistent in the observances of our practices, than when we attempt to compromise either, and by so doing sacrifice both? Those who remember what Friends had to suffer fifty years ago, and later, in consequence of opening their meeting-houses (to those who were not members) for lectures, must certainly desire to avoid a recurrence of the disorderly scenes and serious disturbances which then gave so violent a shock to the Society. Those distressing times are now, happily, past, and the memory thereof is fast dying out; a generation having grown up almost without a knowledge of them; but recent occurrences have given rise to grave apprehension, and rendered it expedient to hoist the danger signal, lest we again run into the breakers, and experience a repetition of the shock. Within the past few months there have been acrimonious controversies and other improprieties in some of our meeting-houses, that should arouse us to renewed vigilance, and cause us to be constantly on the watch.

To sum up the whole matter in the form of a query—Is it not eminently proper that Friends' meeting-houses should be used for Friends' meetings; and that when an anomalous convention is desired for a purpose that is not strictly Friend-like, a suitable hall should be procured for its accommodation? H. *

Fifth month 17, 1889.

The human heart is like heaven—the more angels the more room.—*Frederika Bremer.*

BENJAMIN LUNDY.¹

[Concluded from Last Week.]

The twelve monthly numbers of *The Genius of Universal Emancipation* for the year July, 1822–June, 1823, lie before me as I write. It is a magazine of sixteen double-column octavo pages, each page containing some eight hundred words, and the whole second volume (which this is) making one hundred and ninety-two pages. There are a few rude engravings on wood or copper—one twice used, representing a slave coffin, with the slave-trader on horseback, brandishing a whip, following a little cart full of black picaninies, while half a dozen full-grown blacks follow the horseman, one of them carrying the Stars and Stripes. Over this cut is the motto: "HAIL, COLUMBIA! HAPPY LAND," and beneath it, "SHALL THY FAIR BANNERS O'ER OPPRESSION WAVE?"

Reference is made to a preceding page, on which, from a Kentucky newspaper, (*The Western Citizen*), appears this statement, signed "Philanthropist": "Having business in Paris, (Ky.), on Tuesday, 17th inst., I there witnessed a scene more shocking to humanity than any that has ever come within my notice. I there beheld between seventy-five and a hundred miserable wretches galling under the yoke of despots, doomed to leave their home, their country, and their friends. Chained and guarded, they were driven, like other stock, from their native land. They were paraded on the public square, in front of the courthouse, the seat of justice. Over their unhappy heads that banner waved under which our forefathers fought and bled for the liberty and independence which they attained," etc. It is quite possible that this scene was witnessed by Lundy himself; for Paris, the chief town of Bourbon county, is on the road from Greenville to Cincinnati, which the Quaker missionary printer had frequent occasion to travel; as he founded anti-slavery societies and collected subscriptions for his magazine. It was also one of the routes by which the Virginia slave-breeders sent their human cattle to the Southwest. This traffic, beginning early in the century, had increased by 1822 to several thousand slaves in a year. In 1832 it was estimated to be six thousand a year from Virginia alone, and in 1836 rose to forty or fifty thousand.

While such "incendiary" matter was coming out in East Tennessee, Lundy's newspaper and cause had agents, whose names he published, in twelve of the slave-holding States and Territories,—at Baltimore, Richmond, Winchester, Wheeling, Louisville, Nashville, St. Louis, Little Rock; at Huntsville, Ala., Pensacola, four towns in North Carolina, and even one agent in South Carolina. In 1832 he had twenty-nine agents in ten of the slave States. And in the interval from 1820 to 1830 he had perambulated large portions of the South, besides twice visiting Hayti; and from 1830 to 1835 he twice visited Texas, where he hoped to establish colonies of free colored persons under the anti-slavery laws of Mexico. In 1830 he said in his *Genius*, then publishing at Baltimore, where Garrison was his associate:

¹From an article in *The Cosmopolitan* magazine, New York, by Frank B. Sanborn, of Concord, Mass., author of a Life of John Brown.)

"I have, within ten years, sacrificed several thousand dollars of my own hard earnings; have traveled upward of five thousand miles on foot, and more than twenty thousand in other ways; have visited nineteen of the States of the Union" (there were then but twenty-four), "and held more than two hundred public meetings, with the view of making known our object; and in addition to this have performed two voyages to the West Indies, by which means the liberation of a considerable number of slaves has been effected, and I hope the way paved for the enlargement of many more." And he added, with pardonable pride: "There is not another periodical work published by a citizen of the United States, whose conductors dare treat upon the subject of slavery as its nature requires and its importance demands." This was a year before Garrison began to print his *Liberator* in Boston, and after the early emancipation organs—*The Abolition Intelligencer*, in Missouri, a newspaper in North Carolina, etc.—had been silenced.

What, then, was the bodily presence of this hero, who almost alone had, for a dozen years, sustained the contest against negro slavery in the United States? Garrison, writing in 1828, a year after he had seen Lundy, said: "Instead of being able to withstand the tide of public opinion, it would at first seem doubtful whether he could sustain a temporary conflict with the winds of heaven." After his death, Garrison said in *The Liberator* (September 20, 1839): "In his personal appearance friend Lundy, like the Apostle Paul, was 'weak and contemptible.' In my imagination I had given to him in shape and size the figure of a Hercules; and my disappointment was great in finding him far below the average of mankind in bulk and stature. I was almost tempted to say to him, as a beloved Irish correspondent of Dr. Watts, on seeing that mighty dwarf for the first time, remarked to him: 'Why, sir, you don't look as if you could say *Boo* to a goose!' 'Boo!' was the clever retort of the doctor; and I should have received as good a one in return had I resorted to that pleasant banter, for Lundy was a ready wit and could make capital repartees. He was not a good public speaker. His voice was too feeble, his utterance too rapid to interest or inform an audience; yet he never spoke wholly in vain. In private life his habits were social and communicative; but his infirmity of deafness rendered it difficult to engage with him in protracted conversation. How, with that infirmity upon him, he could think of traveling all over the country, exploring Canada and Texas, and making voyages to Hayti, is, indeed, a matter of astonishment. But it shows, in bold relief, what the spirit of philanthropy can dare and conquer."

Sir Humphrey Davy, the famous discoverer in chemistry, said: "My greatest discovery was Michael Faraday"; and so Lundy might have said, and perhaps did say (for he was generous), that his chief work as an emancipator was to unchain the pent-up force of Garrison, and open to him his true career. This Lundy did, and the story has been often told. He drew Garrison to Baltimore, where the master and disciple united in issuing the two hun-

dred and twenty-seventh number of the *Genius*, September 2, 1829. It had become a weekly journal in September, 1825, and so continued during the stormy time that Garrison edited it—just six months, for the last weekly issue was dated March 5, 1830, when the partnership between Lundy and Garrison was dissolved, and the senior partner went on with his paper as a monthly, or rather a "semi-occasional" publication. They parted good friends, and on the 17th of April Garrison was committed to the Baltimore jail, for a libel on two Massachusetts men, Francis Todd, owner, and Nicholas Brown, master, of the ship *France*, engaged in the domestic slave trade. Lundy visited him often in the jail, from which he was released June 5, 1830, his fine being paid through Lundy, by Arthur Tappan, of New York. Seven months afterward (January 1, 1831), Garrison began to publish his *Liberator* in Boston, while Lundy had removed his *Genius* to Washington (October, 1830), where it was printed until 1834, when it made its last remove but one to Philadelphia, expiring there in 1838, amid the flames of Pennsylvania Hall, which was burnt by the mob in May, 1838. He removed next to Illinois, where Lovejoy, the anti-slavery martyr, had been killed by a mob in November, 1837, and, while laboring there against slavery, died at Lowell, an obscure village in La Salle county, August 22, 1839. His *Genius* had been printed there for some months, and its final number announced his death.

During the period between Garrison's imprisonment and Lundy's death, the latter had three times visited Texas, and explored its possibilities as a home for free colored people, nearly losing his life there by cholera in 1832. He became better acquainted than any Northern man with that State, both while it was subject to Mexico and while revolting; and he exposed fully and repeatedly the plot formed before 1830, to increase the area of slave territory by annexing Texas. His pamphlet on "The War in Texas," (Philadelphia, 1836), is not only the best account, up to that time, of the Texas Conspiracy, but closes with the remarkable prediction of the Southern Confederacy, which established itself twenty-five years later: "Our countrymen, in fighting for the union of Texas with the United States, will be fighting for that which at no distant period will inevitably dissolve the Union. The slave States, having the eligible addition to their land of bondage, will ere long cut asunder the Federal tie, and confederate a new and distinct slaveholding republic, in opposition to the whole free republic of the North. Thus early will be fulfilled the prediction of the old politicians of Europe, that our Union could not remain one century entire; and then also will the maxim be exemplified in our history, that liberty and slavery can not long inhabit the same soil."

Lundy died, as he had lived, in the firm belief that American slavery would be abolished before 1900, and he contributed more to that result than many—perhaps than any—of his contemporaries. He did not always agree with Garrison in opinion—being more sensible though far less forcible; but his best legacy is that written by Garrison, who in his

first year as editor of *The Liberator* had printed there this sonnet to his teacher and friend :

TO BENJAMIN LUNDY.

The Veteran Advocate of Negro Emancipation.

Self-taught, unaided, poor, reviled, contemned,
Beset with enemies, by friends betrayed.

As madman and fanatic oft condemned,

Yet in thy noble cause still undismayed!

Leonidas thy courage could not boast;

Less numerous were his foes, his hand more
strong;

Alone, unto a more than Persian host,

Thou hast undauntedly given battle long.

Nor shalt thou singly wage the unequal strife;

And to thy aid with spear and shield I rush,

And freely do I offer up my life,

And bid my heart's blood find a wound to gush!

New volunteers are trooping to the field—

To die we are prepared, but not an inch to yield.

SCRIPTURE LESSON, No. 21.

SIXTH MONTH 2, 1889.

JESUS BEFORE THE COUNCIL.

GOLDEN TEXT.—"Thou shalt not bear false witness against thy neighbor."—Exodus 20: 16.

READ Mark 14: 55-65.

JUDAS instructed the men who were with him how they were to know Jesus, giving them the sign that it was he whom he kissed, saying "Take him and lead him away safely." And they led Jesus away to the high priest, where had assembled all the chief priests and the elders and the scribes. This is one of the saddest chapters in Jewish history; we approach it as one of those occasions where strife, prejudice, and hypocrisy have culminated in a hatred without a parallel in the history of religion. That hatred was but the natural result of lives so diametrically opposed. "They say and do not," was the charge brought by Jesus against these teachers of his people. "They bind heavy burdens and grievous to be borne, and lay them on men's shoulders; but they themselves will not move them with their finger," and so they conspired against him; and now, through the treachery of one whom he had chosen as a disciple, Jesus is in the power of his enemies.

Sought for witnesses. It was required by law, then as now, to consider the accused innocent until the testimony of two or more witnesses proved him guilty, but the whole trial was a mockery of justice. It was not lawful to hold such a trial at night, or to hurry the trial; the accused was entitled to counsel to defend him. All these were denied this holy and innocent victim, and the Sanhedrin, so hastily called together, with all their art and malice could find nothing worthy of death against him.

Answerest thou nothing? In this question the High Priest violated the law by requiring the prisoner to testify against himself.

Art thou the Christ? It was only as Jesus claimed to be the Messiah that any ground of accusation could be found to bring him before Pilate. We must bear in mind that the Messiah for whom the Jews were looking was a king who should gather them under the banner of revolt, and drive the Romans

from the land, and they made this hope and expectation their charge against Jesus.

Ye have heard his blasphemy. To say he was the Son of God was saying only what prophets and righteous men in all the history of the Jewish people had been saying. It was one of their chosen expressions that indicated the divine relationship between them and Jehovah, whom in the later time and with a more spiritual idea they reverently called Father. This spiritual relation Jesus claimed for himself, and nothing more. Whatever other idea may have possessed his followers, he always called himself the son,—through spiritual union.

From the whole character of the chief priests, as we have read it in this history, we might expect just such a scene as this. They had so long maintained undisputed authority over the minds of the people, that the appearance of another kind of teacher filled them with alarm. It was the witness for truth struggling in their minds, but they were false to it; and each one of them was willing to sacrifice the pure life of Jesus of Nazareth for his own selfish purposes.

Do we not bear false witness when we withhold the truth? How is it with us when we quietly allow our principles to be misrepresented? We all remember the text in Luke, "Every one who shall confess me before men, him shall the son of man also confess before the angels of God." We sometimes like to show that we are not afraid to venture out in the broad road as others do,—we can take care of ourselves, but every step there is bearing false witness against our loving Father, and inducing others to do the same thing. Peter wept at the thought of his falsehood—a terrible thing for a man. Tears of remorse are scalding to the heart. We leave the loving, devoted heart of the Master in sorrow at the close of this lesson. Let it teach us to be very careful, in all things to be true, either in what we do or leave undone. If we try from childhood to be on our guard every day, how happy will be our lives. We will be saved the bitter sorrow that always follows false doing in word or act.

NOTES ON THE LESSON.

The calmness with which Jesus stood before the council, and heard the accusations of his enemies, holding his peace and answering nothing, exasperated the high priest, who was not prepared for so much dignity and self-possession on the part of one so completely in the power of the council. Yet it was not for him to speak when the testimony of the witnesses was so conflicting and proved nothing. In the silence which he maintained lay his strength.

Here is a lesson for us. False accusation is best rebuked by keeping quiet and patiently waiting for the vindication which sooner or later is sure to follow.

In the example of our lesson there was no other course possible to one whose whole life had been a protest against strife and falsehood—one in whom the wisdom, the power, and the majesty of the Divine Father was so manifested that it was declared "In him dwelleth all the fullness of the Godhead bodily."

Jesus knew they had found nothing against him, and were determined to draw from his own lips some word upon which they might condemn him. Failing in this, the high priest, in the usual form of putting an oath among the Jews, forced an answer in which Jesus claimed to be the Son of God. In this claim lay his condemnation. He had spoken blasphemy, and was at once adjudged guilty and worthy of death. The indignities to which this innocent victim of hate and fanaticism was subjected, were common in those days and for many centuries afterward. Indeed it is only in more recent times that a prisoner has found protection in the law which he violates; only since the peaceable religion that Jesus taught has permeated and leavened society, have those who execute the laws shown respect for the rights of the condemned and protected them from insult and brutality. Much yet remains to be done before the rights of the accused are fully protected. The innocent are often made to suffer with the guilty and much wrong doing goes unpunished, yet there is a slow but steady upward progress, for which we have need to be very grateful.

PHILADELPHIA, FIFTH MONTH 25, 1889.

OUR LATE YEARLY MEETING.

PHILADELPHIA YEARLY MEETING has again placed itself upon record, and while that record may not be up to the standard that the more sanguine hoped for, in every particular, we must all agree that no backward step has been taken. In so large a body composed of two branches, communicating through messengers, it can scarcely be expected that there will be the full understanding of questions considered which would be arrived at were they acted upon in joint session, and in each body there will be a diversity of views; but if the "same spirit" animates all, concession and an agreement to differ will prevail. This was manifested in our recent gathering. In all that pertained to the welfare of the Society there was a beautiful unanimity which has perhaps never been surpassed.

The readiness with which the proposition to bring the First-day school into closer relation with the Yearly Meeting was accepted, gives evidence of the interest felt in this work. When we call to mind the fact that the younger members, who are now taking part in the affairs of the Society, and earnestly concerned for the maintenance of its principles and testimonies, largely represent the children and

youth who a little less than thirty years ago were gathered into these schools, and are their first fruits, we may indeed thankfully own the work and give it our encouragement.

Then our preparative and monthly meeting schools have become a factor in the work of the Society, under the fostering care of the Yearly Meeting, that can scarcely be over-estimated. Much yet remains to be done before the beneficent results of "a guarded religious care" in this direction is extended to all the children and youth within our borders; but with the munificent donation which is now held in trust by the Yearly Meeting and the continuance of the present work, we may look hopefully forward to a time not far distant when every waste place in our borders will have its educational wants supplied. In the attitude our meeting assumed towards the Temperance question we have great cause for rejoicing. The harmony that prevailed when this deeply absorbing subject was presented and acted upon, was the more to be noted when we consider how divergent are the views among temperance advocates respecting the best methods of dealing with the question.

Then again, in the care extended to the smaller branches of the body, and to the isolated members in distant places there is no lack of encouragement. Those who feel called to labor in either direction are assured of the loving sympathy and aid of the body.

While there is so much to encourage our hearts in the progress of the work for the building up our heritage, and cementing more closely the bonds of Christian fellowship among the several branches of our Yearly Meeting, the broader field of our common humanity has not received that attention and cordial support which its importance claims from a people who were the first to stand for the poor and the down-trodden and to make their cause their own. The words of the Master came with great force when he said: "These ought ye to have done and not to leave the other undone." It is of little avail to appoint committees to look after the neglected and ignorant masses in the South and the distant West, and leave them without the means to extend the helping hand where help is found to be necessary. This failure has been a source of deep regret to many; yet with so much to inspire hope and courage, we may be willing to leave the cause of the poor and the oppressed to the All-Merciful Father who will continue to inspire his faithful, devoted ones who have been so helpful in the past, to labor on with the blessed assurance of the Master, "Inasmuch as ye did it unto one of these, my brethren, even the least, ye did it unto me."

MARRIAGES.

HILLIARD.—ACTON.—At the residence of the bride's mother, on Fourth month 11th, 1889, under the care of Salem Monthly Meeting, J. Bernard Hilliard and Sarah H. Acton, both of Salem, N. J.

DEATHS.

BORDEN.—In Norristown, Pa., Sixth-day, Fifth month 17th, 1889, Benjamin Borden, in his 83d year; an elder of Gwynedd Monthly Meeting, Pa.

DICKINSON.—At Pittstown, Pa., Fifth month 12th, 1889, Mary Edmondson, widow of John Dickinson, in the 91st year of her age; originally a member of the Southern Quarter, Md.

HILLBORN.—In Newtown, Bucks county, Pa., on the 10th of Fifth month, 1889, at the residence of her daughter, Martha Eastburn, Rachel, widow of Samuel T. Hillborn, and mother of Isaac H. Hillborn, in the 89th year of her age; a member and for many years an elder at Wrightstown Monthly Meeting. She was the last surviving sister of a family of six, most of whom lived to a very advanced age. There are two brothers of the same family yet living in the West.

JONES.—Fifth month 17th, 1889, Sarah Ann, widow of Benjamin Jones, in her 73d year. Funeral from her son-in-law's, David Pratt, Newtown Square, Pa.

KIRKBRIDE.—Fifth month 13th, 1889, Mary B., widow of Mahlon Kirkbride, in her 71st year. Interment from Trenton Friends' Meeting.

MASON.—In Camden, N. J., Fifth month 12th, 1889, Sarah J. Mason, aged 87 years; a member of Haddonfield Monthly and Camden Particular Meeting, N. J.

PHILLIPS.—At her home in Henry county, Iowa, Third month 30th, 1889, Frances A. Phillips, in the 65th year of her age. She was born in Gunpowder, Maryland, in 1821, moved to Iowa in 1851, and again in 1855, having returned to her father's home after the death of her husband. She was a member of Prairie Grove Monthly Meeting, and for several years an elder. To know her was to love her.

E. T. P.

PUSEY.—In Wilmington, Del., Fourth month 15th, 1889, Joseph M. Pusey, in his 67th year.

RUSSELL.—Fifth month 6th, 1889, at the residence of her son, Theodore Russell, near Wiofield, Henry county, Iowa, Elizabeth M. Russell, in the 84th year of her age.

She was a member of Prairie Grove Monthly Meeting from its organization, and for many years an elder.

In health she was devoted to her meeting, and although deprived for several years of attendance was still greatly interested, living the life of a true and devoted Christian.

SEAMAN.—At her home, Woodbury, Orange county, New York, Fifth month 17th, 1889, Hannah, widow of the late Jacob Seaman, in the 85th year of her age; an elder of Cornwall Monthly Meeting of Friends.

CORRECTION.—In the INTELLIGENCER AND JOURNAL for Fifth month 11th, 1889, in the tribute to the memory of the late Mary Ratlif, her maiden name should have been given as KINLEY, and the age of her husband should have been "in his 91st year."

INTELLIGENCE is an effect as well as a cause; and one potent cause of it in the moral sphere, is obedience to the moral law. "It is good will," says Emerson, "that makes intelligence;" and again he says, "if a man's eye is on the Eternal his intellect will grow."

YEARLY MEETING COMMITTEE REPORTS.
REPORT OF THE VISITING COMMITTEE.

To the Yearly Meeting:

The Committee "to visit the branches of our Yearly Meeting and encourage Friends in the more faithful attention to the requirements of our Discipline, and upholding and sustaining the testimonies of our Religious Society" has several times met in general session during the past year, and by the appointment of sub-committees has been actively carrying on the work throughout the Yearly Meeting, as way has opened therefor.

The Quarterly, and with one exception the Monthly, Meetings of Philadelphia, Abington, Bucks, Haddonfield, and Western, have been attended, and the Monthly Meetings of Salem Quarter; also the Quarterly and nearly all of the particular meetings of Caln, Southern, and Burlington. The First-day meeting at Stroudsburg was attended by the sub-committee for Abington Quarter, and they mingled socially with the families as far as they were able to do so.

The sub-committee for Fishing Creek Half-Year Meeting attended it both in the Sixth and Twelfth months; one monthly meeting in the Eleventh month was attended, and a number of families visited, as well as some of our members residing at Williamsport. Way has not opened during the past year to appoint a committee to visit within the limits of Concord Quarter.

Many appointed meetings have been held, and many families visited, endeavoring not to overlook the aged, sick, and isolated members. In the Quarters where the monthly meetings were attended evening meetings were sometimes appointed, that we might meet with those who were so situated that they could not attend the monthly meetings; these often were held at Friends' houses. In some places, in these evening gatherings, the work mostly consisted in conversation upon our testimonies, which we believe to be profitable, bringing out an interchange of views from the visited and visitors.

The Committee have endeavored to be earnest and faithful so far as they could see the way to labor. They believe there are many within our borders who are under the preparing hand of the Lord, and as they are willing to come forth under this preparation we hope to see a succession of those who will uphold the principles and testimonies which are the basis of our Religious organization. We feel it has been especially encouraging to meet with so many younger members, even the children showing their interest by their desire to be present at the meetings.

Great willingness has been everywhere manifested to aid the Committee, in whatever way was needed.

We believe the labors of a Yearly Meeting's Committee for the purpose of visiting the branches thereof to be beneficial, bringing us into a better acquaintance one with another, and we trust creating an increased interest in our Society.

The sum of \$103.89 has been received from the Treasurer of the Yearly Meeting to meet expenses attending the services of the Committee.

Signed by direction of the Committee,

SARAH GRISCOM, Clerk.

REPORT OF THE COMMITTEE ON EDUCATION AND SCHOOLS.

To the Yearly Meeting :

The concern of the Yearly Meeting for the guarded religious education of the children of our Religious Society has, we think, been fully owned by the Committee to whom it has been entrusted.

The general plan of the work has not materially varied from that of last year. The Visiting Teacher has been continued and has given close attention to his duties, advising with and aiding school committees and teachers, and lecturing to the pupils.

The former good practice of sub-committees from our body visiting at appropriate times the different schools has been kept up, and the Educational Conferences held at 15th and Race streets, Philadelphia, have been continued as heretofore, with no apparent diminution in attendance or interest.

From the report of the Visiting Teacher we learn that he has visited nearly all of the schools, most of them several times, and has delivered lectures, illustrated with suitable apparatus, on Physics, Chemistry, Physiology, Natural History, etc., and has endeavored to adapt them to the grade of the pupils in the schools visited, the children showing much interest in the subjects presented. Frequently the lectures have been attended by the local committees and other friends of the schools.

From statistics at hand there seems to be a small increase in the general attendance at the schools over that of last year.

There is a decided improvement to be noted in some of our schools; in others but little if any change; while some hardly hold their own, owing perhaps to a necessary change of teachers and the difficulty of getting those of experience; and possibly in none has all the work reached that degree of excellence to which it is hoped it may be raised.

The difficulty of securing competent male teachers from among our members increases rather than diminishes, owing to the greater attractions offered by other callings, and much concern has been felt that more of our young men might be induced to fit themselves for the responsible duties of the Teacher, and that more of those who are already qualified might be encouraged to engage in this useful and extensive field of labor. The attention of Friends is called to the need that exists for an increased number of well qualified teachers, especially in the higher branches, who are thoroughly in sympathy with the principles and testimonies of our Religious Society, and who are willing to manifest it by their Friendly deportment, by the use of plain language, and by conformity to the accepted customs of Friends. Whilst this conformity might reasonably be expected of our members, we feel that school committees should exercise a greater care to have those of our teachers who are not members also conform to these reasonable usages of our Society.

Orders have been drawn on the Treasurer of the Yearly Meeting, for the expenses of the Committee, and in aid of schools, to the amount of \$1,920.03.

On behalf of the Committee,

WM. WADE GRISCOM, Clerk.

REPORT ON DISTANT AND ISOLATED FRIENDS. To the Yearly Meeting :

The Committee on Distant and Isolated Members have met twice since last report. From communications with committees and individuals, and from published reports, we are able to state that some action has been taken by each of the Yearly Meetings with which we correspond, in the direction of obtaining information respecting their absent members. We think it probable that this work has now so far progressed in the different Yearly Meetings that it may be practicable during the coming year to collect and compile a full list of names, addresses, etc., and to learn, so far as may be done in this way, the situation of the isolated membership of our Society.

During the year two Friends who are members of the Committee made extended tours of religious labor, with the approval of the meetings in which they are members, in Nebraska and adjoining States, and they have given the Committee many interesting and touching details of their observations amongst the families of Friends in isolated places. We have especially been impressed with their statements upon two points of importance: the maintained attachment of many isolated members to our Society and its manner of worship; and the interest shown in localities where there are several families living near enough to form a meeting. In both particulars the information thus furnished is such, (joined with that which has otherwise reached the Committee), as leads us to believe that there is a field for labor in this direction, and that we could not feel discharged of our duty in regard to it without reporting the fact to the Yearly Meeting. It is felt that we should encourage Friends, in places where there are several members, to form meetings, and, if way opens, to provide places of worship, trusting that as the need for buildings may appear, means may be found to provide them. We are impressed with the conviction that suitable literature, representing the principles of Truth as professed by our Religious Society would be received gladly in many places, and might be the means of doing substantial good.

On behalf of the Committee,

HOWARD M. JENKINS, Clerk.

REPORT OF THE TEMPERANCE COMMITTEE.

To the Yearly Meeting :

In making this the Eighth Annual Report of the joint Committee on Temperance and Intoxicating Beverages we are glad to present an increasingly encouraging view. The stated meetings have been regularly held and while the average attendance has not been so great as formerly, we have realized a growth of interest in this important subject.

Many who were prevented from attending the meetings of the Committee have been faithful and earnest workers in their respective neighborhoods.

We feel there is an apathy or luke-warmness in regard to the needs of our Society on this question; but we trust ere long for an awakening to a higher appreciation of the moral as well as the spiritual life of Friends.

In reviewing our work, there is a sad realization

of the great loss we have sustained in the removal of our loved friend Elizabeth P. Comly. Her life was one of devotion to the work required at her hands, and as we revert to her later years of conscientious performance of known duty and recall her tender earnest spirit as she gave expression in our annual gathering to the deep conviction that impressed her mind, we feel she was truly the pioneer of the temperance movement amongst us. That message was that the Society she had cherished should realize the need of well directed effort against the growing evil of our land; not indifferent meanwhile to the individual labor that would make clean our own vineyard: "that no man put a stumbling block or an occasion to fall in his brother's way."

As a member of the Committee then appointed our friend faithfully labored, frequently under great physical weakness; and when we recall the triumph of the mental and spiritual powers over the frailties of the body, and remember her unswerving desire to practically live the life she called others to, as co-laborers we must acknowledge the inspiration of her spirit. In her desire to impress those of our own Religious Society as well as the public mind with enlightened thought on the injurious effects of every form of stimulant, she devoted a large portion of her time to the perusal of the best literature upon the subject, recommending such selections as she deemed most instructive to the different branches of the Temperance Committee.

Our friend was deeply concerned that the children should be early instructed on this subject, believing that through a correct knowledge they would be fortified against the temptations that might assail them in after life. She felt that teachers could leave the proper impress only when fully awakened to the importance of the thought.

Individual faithfulness in the home as well as in society she believed to be the basis of true reform in the Temperance movement, her own daily living making emphatic the view she held. We feel it was a privilege to enjoy the counsel and companionship of one whose culture, purity, and deep religious thought must have impressed all who came within her influence.

Reports from the various quarterly meetings show good work done by their committees. Seventy-three conferences have been held, including several all-day meetings, one of which was especially for children and is reported as being large, interesting, and instructive.

Abington report evinces a strength and faithfulness on the part of the women Friends in minding the light given them by carrying their burdens without official aid from men's meeting.

Several reports express a concern with regard to the use of tobacco, believing it to be a twin evil with the liquor traffic in its effect, especially upon the young.

Philadelphia Quarterly Meeting's Committee prepared and forwarded a Memorial to the Legislature of Pennsylvania asking for the passage of a law to prohibit selling or giving tobacco to minors.

Philadelphia and Western quarters have given

attention to the manner of instruction in the public and Friends' schools regarding the effects of alcoholic drinks, stimulants, and narcotics, on the human system.

The Book Committee reports the distribution of 68,903 pages of literature in tracts and pamphlets; also six volumes of Gustafson's "Foundation of Death" presented to the libraries of the "Young Temperance Workers." The whole at a cost of \$83.78.

The important subject of an Amendment to the Constitution of Pennsylvania, prohibiting the manufacture, sale, or keeping for sale, of any intoxicating liquors whatever to be used as a beverage, that will be decided on Sixth month 18, 1889, claim our most thoughtful consideration; and an Address to the people of Pennsylvania on this subject was prepared, united with by the Committee, and directed to be printed and circulated.

Your Committee earnestly asks the Yearly Meeting to prepare a Minute of advice to its members encouraging them in this important crisis to throw their influence for the protection of the home and the advancement of Truth.

Orders have been drawn on the Treasurer for \$131.37.

Signed in and on behalf of the Committee,
 JAMES H. ATKINSON, } Clerks.
 ANNIE CALEY DORLAND. }

REPORT OF COMMITTEE ON COLORED PEOPLE OF THE SOUTH.

To the Yearly Meeting:

THE Committee upon the Condition of the Colored People of the South has directed its attention, as in previous years, to the encouragement of the work of education amongst them. This work, we believe, still has a strong claim upon the philanthropic amongst us, and deserves such aid as we are able to extend. The Committee received, by the action of Women's Branch of the Yearly Meeting, last year, the sum of \$250, and a like amount was then raised by individual subscriptions resulting from the concern which a consideration of the subject had awakened. These sums were appropriated to the two schools in South Carolina to which the attention of Friends have been especially directed—that at Aiken, in charge of Martha Schofield, and that at Mount Pleasant, in charge of Abby D. Munro. The property of these schools is under the control of members of our Religious Society: that at Aiken is in the hands of a Board of Trustees, a majority of whom are Friends, and that at Mount Pleasant is now being transferred to a similar Board. Both schools are conducted, we believe, with much regard to those principles of a substantial education, and a sound moral training which are consistent with the views and usages of our Society. They are maintained from year to year only by patient and faithful effort, and while it is hopefully believed that in the future there will be a greater degree of local support than as yet the struggling colored people have been able to afford them, it still remains for those who feel the weight of this concern

to be willing to give it further labor. The virtues of life, the order, sobriety, and truthfulness which will raise the colored people from their present condition, may be greatly supported by every such means as are offered in these worthy schools.

We renew our recommendation of last year that the Yearly Meeting signify its interest in this work and its practical desire to promote its efficiency by an appropriation in aid of the fund required for the support of the schools referred to.

Signed on behalf of the Committee,

GEORGE L. MARIS,
ELIZABETH LLOYD.

REPORT OF THE INDIAN COMMITTEE.

To the Yearly Meeting :

The joint Committee on Indian Affairs reports that in pursuance of the recommendation of this Committee, united with by the Yearly Meeting last year, the Orphans' Court of Philadelphia county appointed Thomas J. Husband Trustee of the legacy of five hundred dollars bequeathed by Benjamin H. Coates for the Christian civilization of the Indians under the care of this branch of the Society of Friends. The amount of the legacy has been paid to the Trustee, and is now in his hands.

No work has been done by the Committee during the past year.

On behalf of the Committee,

ALFRED MOORE, Clerk.

MEETINGS DURING YEARLY MEETING WEEK.

ON Second-day evening, the 13th, the Young Friends' Association held its usual monthly meeting, but as the parlor at 15th and Race Sts. was otherwise in use, met in the Girard Avenue meeting-house. The attendance was large. Besides the routine business, a paper on the Object and Aims of the Association was read by Wm. W. Biddle; and another on the Early Christian Church, (being a commentary on the subjects dealt with in the Introductory chapter to S. M. Janney's "History of Friends"), by Mary H. Whitson; and a third, contributed from New York, on the Deviations of Western "Orthodox" Friends (of the Evangelical or Revivalist body), from the usage of the older bodies in this country and England. All these were carefully prepared and interesting papers. The last one was discussed by some of those present, including William W. Birdsall and Howard M. Jenkins, and at the close of the meeting Isaac Wilson expressed his deep interest in the work of the Association.

ON Third-day evening, a public Temperance meeting was held at 15th and Race Sts., in the Race street end, the attendance, in spite of the heavy rain, being very large. Isabella Shortlidge, of Concordville, Delaware Co., spoke first, urging the adoption of the Prohibitory Amendment, and she was followed by Isaac Wilson in an eloquent address on the same general subject.

ON Fifth-day evening, the Philadelphia First-day School Association held an adjourned session, at 15th and Race Sts., occupied mainly with the reading

of epistles from other Associations, and of one in reply thereto. Of two questions that had been arranged for discussion one only was reached, that of "Who should be the teachers in our First-day Schools, and how can we enlist more mature minds in the work?" This was presented in a brief but interesting paper, which brought out a prompt and able response. But the time for an adjournment had arrived and it was with regret that it was seen the second question could not be heard. The feeling was general that at future meetings the arrangement should be such as to permit more time to subjects informing and helpful to workers in this field of labor.

ON Fourth-day evening, the annual meeting of the Association of Friends to Promote the Education of the Colored People of the South was held at 15th and Race Sts. A statement of the work of the past year was made by Howard M. Jenkins, Chairman of the Association, and a financial statement was read by Henry M. Laing, Treasurer. In addition to the \$250 given by Women's Branch of Philadelphia Yearly Meeting, in 1888, and \$250 raised by private contributions at that time, \$725 had been received from other subscribers, and this had been divided, as usual, between the schools at Aiken and Mount Pleasant, S. C. Clement M. Biddle, who had been at Aiken during the past winter, and had visited the school several times, spoke of the good work done in it, and of the general condition of discipline, cleanliness, etc. Martha Schofield then spoke at some length, giving many interesting details concerning the school, and replying to a number of questions. Remarks were also made by Frances Jackson Coppin, of the Philadelphia School for Colored Youth. Officers were elected for the year, as follows: Howard M. Jenkins, Chairman; Sarah J. Ash, Secretary; Lydia A. Schofield, Correspondent; Henry M. Laing, Treasurer; Executive Committee: Sarah H. Peirce, George L. Maris, Mary Ann Fulton, Elizabeth Lloyd, Alfred Paschall, Clement M. Biddle, Elizabeth Coates, Edward H. Magill, Estelle Hall.

NEWS OF FRIENDS.

PROPOSED NEW HOUSE AT COLUMBIA, PA.

EDITORS INTELLIGENCER AND JOURNAL:

THE meeting-house Columbia Friends propose to build is to be of brick, a 9-inch wall, 25 feet by 30 feet in depth, 16 feet in height to the square, cellar under one half for coal and wood; to have 1 door and 8 windows, hung with weights, outside shutters, to be wainscoted with yellow pine, and to be plastered from wainscoting to square and to be ceiled with yellow pine to the rafters. The building is estimated to cost nine hundred and twenty-five (\$925) dollars. It is supposed that including fences, etc., it will take about \$1,000; the old building to be taken down and cleared away by Columbia Friends.

The money so far subscribed is as follows:

A Friend from New York, . . .	\$25.00
" " " Bird in Hand, . . .	5.00
" " " Christiana, . . .	10.00
" " " London Grove, . . .	50.00
Phebe C. Wright, West End, N. J., . . .	10.00
Total,	\$100.00

The Quarterly Meeting's Committee made no report, so it will not go to the Yearly Meeting as we intended.

Any further information can be had by calling on, or addressing, Mary A. Harry, Trustee, Box 356, Columbia, Pa.

A Columbia Friend adds to the above information that from 16 to 18 persons could be counted upon as regular attenders, and on the occasion of circular or other announced meetings, the house would be well filled.

SWARTHMORE NOTES.

—Two more members of the Senior class have left College to accept engineering positions in Southern Virginia. They will graduate regularly with their class, but were obliged to leave early to secure positions on the corps. It speaks well for the Engineering Department that its graduates secure positions so readily.

—Prof. G. E. H. Weaver has determined to make a trip abroad during the summer; he will leave at about Commencement time. The College will be well represented in foreign study fields during the season, as Prof. Henry W. Rolfe and wife expect to spend the summer in Germany and Prof. Ferris W. Price and family will begin a year's sojourn there.

—The Senior examinations begin on Second-day, Sixth month 33; the regular examinations will occupy the week beginning on the 10th; the Society reunions will be held on the evening of the 14th; the baccalaureate address will probably be delivered by President Magill, on First-day, the 16th; Class day will be held on the 17th, with the class banquets in the evening, and Commencement will take place on Third-day, the 18th, with the Alumni reunion in the evening.

—The college easily won second place in the State Intercollegiate games, in Philadelphia, on Seventh-day, and the contests in which the University of Pennsylvania secured first place were very close. The standing of the different colleges represented was as follows: University, 8 first places, 7 seconds; Swarthmore, 5 first places, 4 seconds; Lehigh University, 2 first places, 2 seconds; Lafayette College, no first places, 2 seconds; Haverford and Dickinson Colleges each won no first places and no seconds.

It is curious how little we praise those whom we love best. We are shy about it, as though we were speaking of ourselves; a tone, a look, the mere presence of some unaccountable restraint of manner—these are indications enough for those who are intended to read them, and bystanders may think it all cold as they like. Our choicest gifts are not for the world to scrutinize; we put them quietly and with averted eyes into the hand that is stretched out to receive them.—*Story of a Family.*

ONE class of men must have their faith hammered in like a nail, by authority; another class must have it worked in like a screw, by argument.—*The Pulpit and the Pew.*

CONSTITUTIONAL PROHIBITION.

EDITORS INTELLIGENCER AND JOURNAL:

The time is past when it was necessary to discuss the true status of the open saloon. It is a public nuisance, admitted to be so by an almost unanimous public sentiment in all countries. That part of the temperance reformation is accomplished. The question that remains is, how can we get rid of the nuisance? Some assert, and will permit no doubt nor denial, that the only remedy is the constitutional prohibition of the manufacture and sale of all intoxicating beverages. To this there are several grave objections.

1. Such a provision has no proper place in a constitution. The constitution should embrace only such things as are not admitted to be clearly within the acknowledged power and province of the legislature. Any power which is plainly within legislative authority should not be put in a constitution.

It is admitted that the regulation, or the total suppression of the saloon is within the province of the law-making power. There is no government anywhere that does not claim and exercise this right, without any constitutional authority whatever. The clause in the Constitution of Ohio prohibiting license has no proper place in it, ought never to have been put there, and certainly has done no good; for under it, and in spite of it, we have had, practically, thirty-six years of free whiskey.

A few years ago the people of New York became alarmed at the flood of bribery which was submerging the courts and ballot boxes of the State, and to check it, adopted four additional sections to the constitution. The reasons for doing so were the same as those now given in favor of the temperance amendment. It was urged that "if this particular crime was taken out of the great body of the statutes, and defined and denounced in the fundamental law, its appearance there would be a constant reminder to the people of the dangerous character of the crime, and would increase their just detestation of all who dared commit it." It was further argued that "once in the constitution, it would forever be beyond the reach of the legislature to modify or repeal." What was the result? Let a writer in a recent number of the *North American Review* answer: "When the legislatures of our State and cities convene, despite the solemn lessons of the past, the Constitution will again be defied and spat upon by the very people who helped to make it, and whose official lives serve to illustrate how vain and impotent after all are even its strong sections to stem the tide of corruption, which, unchecked, must ultimately submerge our free institutions."

Judge Cooley, (in "Constitutional Limitations") says: "A constitution is sometimes defined as the fundamental law of a State, containing the principles upon which the government is founded, regulating the division of sovereign powers, and directing to what persons each of these powers is to be confided, and the manner in which it is to be exercised." And he adds: "Perhaps an equally complete and accurate definition would be, the body of rules and maxims in accordance with which the powers of sovereignty

are habitually exercised." Hurlbut's "Rights and their Political Guarantees" defines a constitution as "but the frame work of their political government;" and Woolsey, in "Political Science," says its object is "to fix the limits and define the relations of the legislative, the judicial, and the executive powers of the state."

These authorities are believed to be in accord with all writers on the subject. Are we justified in setting aside well recognized and established principles, hoping that good may follow? Are we authorized to do a wrong thing hoping that a wished for good may come? Does the end justify the means?

The people of nearly all the States are now suffering for having put what is merely legislation in their constitutions. Let me cite an example. The constitution of Ohio, adopted in 1872, provides that all legislation for cities and towns shall be by general and not by special laws. Ever since that time our statute books, year after year, contain laws with such titles as this: "Be it enacted by the General Assembly of the State of Ohio, That all towns having a population of [say] 15,291 at the last federal census shall be and are hereby authorized to" do a certain thing, referring to one town, and to one only, and yet this is called a general law; thus tending to bring both law and constitution into contempt. It was found that towns and cities need special legislation, and in this country what the people want that they will have.

2. But, suppose an amendment to the Constitution adopted, forever prohibiting the manufacture and sale, as a beverage, of any and all intoxicating liquors, whether distilled, fermented, or brewed, what would be the result? Constitutions do not enforce themselves. Unless the legislature should enact the necessary laws, it would be merely a declaration of sentiment, of no force or effect. And whether or not the legislature would do that would depend on the people who elect it. It is upon the people we must depend in every step of this reform, and that brings us down to the ultimate end of our efforts, the enforcement of law. If the people favor it, it will be done. If they oppose it, it will not be done.

3. But what is the remedy? If the majority of the voters in any county, township, or ward in the State, says it does not want saloons, it will not have them; but if it does want them, it will have them in some form. Experience demonstrates this. Let the legislature enact a law with the following provisions, and if our history teaches us anything, it surely shows us that in a short time we can have the saloon driven from a very large portion of our territory. Let an act be passed providing that on the petition of, say, ten per cent. of the legal voters of any county in the State, as shown by the last preceding State election, the County Commissioners shall order a special election, at which the voters of the county shall vote on the question as to whether or not intoxicating liquors shall be sold, at retail, within the county. If a majority of the votes cast are against such sale, let it be unlawful throughout the county; but if such majority is not against such sale, but a majority in any township or ward is against such

sale, then make it unlawful in any such township or ward.

In any county in which the majority shall be in favor of such sale, and in any county in which the County Commissioners, on the petition of ten per cent. of the legal voters as aforesaid, shall refuse to order such vote taken, in all such counties let a tax be levied of such amount as may be deemed proper, not less than three hundred dollars, on all persons who engage in such sale. If the people insist on having the saloon, make it pay, not only its just and proper share of the taxes of the people, but also an additional amount, to atone, in some measure, for the mischief it does. And make no distinction between brewed and distilled liquors, for two reasons; first, the man who sells the one will almost certainly sell the other; and secondly, while distilled liquors create more open disorder and crime, the evidence is to me conclusive, that the fermented and brewed liquors are doing more harm to mankind than the distilled.

Whenever a community or a locality wants to banish the grog shop, give it the power to do so, and whenever a point is thus gained, use it as an advance post to attack the remainder. JOHN J. JANNEY.

Columbus, O., Fifth month 14.

For Friends' Intelligence and Journal.

OVER-INSURANCE OF UNSEAWORTHY SHIPS.

SAMUEL PLINSOLL will be remembered as a member of the British Parliament who many years ago carried through, under very singular circumstances, a statute providing for the inspection of sea-going vessels, and the condemnation of such as are unseaworthy. He has since obtained the passage of another, introducing certain regulations as to the loading of grain, which prevents loss by the shifting of the cargo, and has vastly increased the safety of such vessels. In an article in the *Nineteenth Century* for Fourth month he attacks another great abuse, which, as he seems to prove, causes every year the loss of 1,600 lives and \$60,000,000 worth of property. This is the practice of insuring vessels far more than they are worth, and the consequent temptation to have them lost. There are many ship owners in the United Kingdom who do not insure their vessels, but take great care of them, and the percentage of loss among vessels so uninsured is not one-fourth of that of all vessels. And he calculates that of the 2,140 lives, and £16,000,000 of property annually lost at sea, the figures above mentioned would represent the saving if vessels were insured for only a part of this value or not insured at all. The existence of the abuse is rendered possible by the practice of insuring vessels on open policies with fifty or more underwriters, each for a small amount. The number of underwriters prevents concert in detecting fraudulent losses, and the smallness of the risk in each case removes the inducement to do so.

We can do no better or braver thing than to bring our best thoughts to the every-day market. They yield us usurious interest.

SUNSHINE LAND.

They came in sight of a lovely shore,
 Yellow as gold in the morning light;
 The sun's own color at noon it wore
 And had faded not at the fall of night;
 Clear weather or cloudy—'twas all as one,
 The happy hills seemed bathed with the sun,
 Its secret the sailors could not understand,
 But they called this country Sunshine Land.

What was the secret?—a simple thing
 (It will make you smile when once you know).
 Touched by the tender finger of spring,
 A million blossoms were all aglow;
 So many, so many, so small and bright,
 They covered the hills with a mantle of light;
 And the wild bee hummed, and the glad breeze
 fauned,

Through the honeyed fields of Sunshine Land.

If over the sea we two were bound,
 What port, dear child, would we choose for
 ours?

We would sail, and sail, till at last we found
 This fairy gold of a million flowers.
 Yet, darling, we'd find, if at home we stayed,
 Of many small joys our pleasures are made,
 More near than we think—very close at hand,
 Lie the golden fields of Sunshine Land.

—Edith M. Thomas.

KEEP US PURE.

Now doth the sun ascend the sky,
 And wake creation with its ray;
 Keep us from sin O Lord, most high!
 Through all the actions of the day.

Curb thou for us th' unruly tongue;
 Teach us the way of peace to prize
 And close our eyes against the throng
 Of earth's absorbing vanities.

Oh, may our hearts be pure within!
 No cherish'd madness vex the soul!
 May abstinence the flesh restrain,
 And its rebellious pride controul.

So when the evening shades appear
 And in their train the darkness bring;
 May we O Lord with conscience clear
 Our praise to thy pure glory sing.

—Selected.

THE FIRST GRANDCHILD.

"GRANDMOTHER," called the farmer, and there came
 Out through the vine-wreathed porch a blushing dame
 Surprised and eager at the strange new name.

The clock within rang forth the chime for eight.
 "A message? Read it—quick—how can you wait?"
 Her husband, smiling leaned upon the gate.

At arm's-length holding in his trembling hand
 The crisp white sheet, while he the writing scanned,
 Then read once more, with voice almost unmanned.

"Thy granddaughter salutes thee," 'Baby Bell,'
 "Mother and child, thank God, are doing well."
 A moment's silence on the proud twain fell.

She broke it soon, "Grandfather, I congrat—"
 "What, me?" the good man cried, lifting his hat—
 "'Grandfather'—me? I hadn't thought of that."

—Annie A. Preston, in *Harper's Weekly*.

From *The American* (Philadelphia).

APPLE BLOSSOMS.

DURING the whole of April, the old apple trees in the lane are closely watched, and not without a deal of impatience, too. "Will they blossom freely?" is asked almost daily, and what a world of anticipation hinges upon this wonderful wealth of bloom!

To linger in the lane when the old trees are flower-laden; when the air is heavy with a honey scent, when the bees' low hum fills the long leafy arch, and every summer bird is happiest—this is an experience too valued to be lost; one that sweetens life until spring shall come again.

The trees are old. They have more than rounded a full half-century, and now bend with the weight of many winters. They are ragged rather than rugged; yet, game to the last, are again sturdily upholding to the bright sunshine of merry May mornings, a marvellous wealth of bloom.

As seen from the crests of the rolling hills beyond, this double row of trees recalls a huge snow-bank, such as has often filled the lane in winter—recalls such as I have seen at sunrise, when they were tinged with a rosy light. In winter, I have often thought of the blossoming trees in May: now I recall the lifeless beauty of mid-winter's snows. In winter the beauty of the marble statue held me: now, the joy of a living form.

But apple blossoms bear well a close inspection. Better than a comprehensive view from the neighboring fields is to draw near, to walk beneath and beside them, to linger in their scented shade. Time after time, until now, a shadow of doubt has crossed our paths, when we gathered early bloom. The wail of winter winds still sounded in every passing breeze, although we plucked violets from the greensward beneath budding trees. Too often, in April, we are over-confident; but there is little danger of disaster now. Apple blossoms are the first assuring gift of fruitful summer. Grim winter is powerless now, to wound us. Tricksy April can play no heartless pranks.

What summer sound is more suggestive than the hum of bees? Certainly not even the song of the returning birds. As I look among the flower-laden boughs above me, I can see not only the bees from the hive, the true honey-gatherers, but burly humble bees go whizzing through the rosy labyrinths, or dipping down to a level with my upturned face, threaten fierce vengeance, if I draw too near. Again and again they come, one after another, and each time, I think, a little nearer, yet never, despite their bluster, venturing to sting. To be sure I make no threats in return nor run away, and so my bold front may deter them, for they really seem to read my thoughts at times. Not so their cousins, the autumn wasp. They brook nothing. I remember, one October morning, throwing a stone at and bringing down an apple, upon which, as it happened, a wasp was feeding at the time. The ruffled insect came the first to the ground, and not only promptly stung me when I stooped to pick up the apple, but followed me across the lawn, into the house, and darted most viciously at my face, time after time.

When the old bee-bench, with its half-dozen rude boxes, stood by the gooseberry hedge in my grandfather's garden, the lane, when the trees were in blossom, was, as I recall that time, even more thronged by bees than now, and the mighty humming of their wings forcibly suggested the rapid flow of water; as the roar of the mill-dam, after a heavy rain. So great a volume of sound, indeed, was there all day, that the night was silent in comparison. So ran my thoughts; so returned vague visions of past years, as I lingered in the lane to-day. But after all, may it not be that I, rather than the conditions, have changed? How often have I longed to hear the songs, to see the bloom, to catch the fragrant breeze that held me spellbound when a boy; and all these later, fleeting years, I have hoped for them in vain.

With the apple blossoms come the birds' nests, and who that has lived in the country knew not of a robin's home in some old apple tree? And did ever a bird sing merrier strains than this same robin at sunrise? Or, even better, as the sun shone forth again, after a shower, the rapid roll of his rejoicing, as he perched upon his home-tree's loftiest branch.

It is the rule, apparently, that very old apple trees have great hollows in them. If the entire trunk is not a shell, then here and there, where branches have decayed and fallen, caves of considerable depth are found, and how quickly wild life tenants such snug quarters. A few of our mammals, many birds, several snakes, besides one species of salamander, and the tree toad have been found at home in hollow apple trees. If, therefore, such a tree stands not too near a dwelling, its occupants may epitomize the fauna of a farm. Although, after a rain, I have found pools of water in old trees, there were no fish, and these need not be looked for, unless some venturesome mud-minnow, that now can work its way over narrow mud-flats, shall, in time, take to climbing trees, as does a perch that is well-known to ichthyologists. "In 1794, Daldorf," says Dr. Gunther, "in a memoir . . . mentions that in 1791 he had himself taken an Anabas in the act of ascending a palm tree which grew near a pond. The fish had reached the height of five feet above the water, and was going still higher."

When I peer into the hollow trees in the lane, here, at home, I only expect to find birds, and seldom have been disappointed, except so far as the English sparrow has ousted the old-time bluebird. It is exasperating to think that the latter have been crowded out and now gather in the more retired woodland areas to breed. What song better fitted with apple blossoms, of a bright May morning, than that of the bluebird? And now, we have instead, the ill-tempered chirping of an alien sparrow!

But apple blossoms are none the less beautiful because of the unfortunate changes meddling men have brought about. They hold their ancient glory still and yield, as of old, that rich, rare fragrance which never cloys. Surely no one ever walked among rows of blooming apple trees, and said, "It is too sweet." Not even of our native wild crab-apple is this likely to be said, and it is unquestionably of

deeper tints and richer fragrance than the average cultivated tree. I know of one exception. At the end of the row upon one side of the lane, there stands a vigorous apple tree. It has more the appearance of the trees in the forest than of those in an orchard, and if its fruit is not quite so small as that of the wild crab, it is but one remove therefrom. This tree rests its glory upon its blossoms, and well it may! Upon these go out all its strength, offering, therefore, beauty to the eye, rather than food for the body. It is a tree with a history, perhaps not worth relating. When set where it now stands, it appears to have been more exposed to the wind than its companions and was twice blown down. When last put back, my grandfather remarked, rather impatiently, "now stay, at least, if you never bear an apple." And the tree stood, still stands. What of the fruit it bears? Tough, wrinkled as a toad, and sour; it is said that even the pigs refuse it, squealing in disgust, when, by mistake, they crunch it. So, if my grandfather's muttered curse fell upon the fruit, the tree revenged itself by adding beauty to its blossoms, and to-day, though twice hoar frost has chilled the opening buds, if judged by the eye alone, it stands, among a goodly number, brightest of them all.

CHARLES C. ABBOTT.

Near Trenton, N. J.

A LITTLE consideration of what takes place around us every day would show us that a higher law than that of our will regulates events; that our painful labors are unnecessary and fruitless; that only in our easy, simple, spontaneous action are we strong, and by contenting ourselves with obedience we become divine. Belief and love—a believing love will relieve us of a vast load of care. O my brothers, God exists. There is a Soul at the centre of nature and over the will of every man, so that none of us can wrong the universe. . . . The whole course of things goes to teach us faith. We need only obey. There is a guidance for each of us, and by lowly listening we shall hear the right word.—Emerson.

FIND fault, when you must find fault, in private, if possible, and some time after the offence, rather than at the time. The blamed are less inclined to resist when they are blamed without witnesses. Both parties are calmer, and the accused person may be struck with the forbearance of the accuser, who had seen the fault, and watched for a private and proper time for mentioning it.—Selected.

I LOVE the brooks which down their channels fret,
Even more than when I tripped lightly as they;
The innocent brightness of a new-born day
Is lovely yet;
The clouds that gather round the setting sun
Do take a sober coloring from an eye
That hath kept watch o'er man's mortality;
Another race hath been, and other palms are won.
Thanks to the human heart by which we live!
Thanks to its tenderness, its joys and fears!
To me the meanest flower that blows can give
Thoughts that do often lie too deep for tears.

—Wordsworth.

NATIONAL TEMPERANCE SOCIETY.

THE Twenty-fourth Anniversary of the National Temperance Society and Publication House was held at 58 Reade street, New York City, on the afternoon of the 14th instant, Dr. T. L. Cuyler, President of the Society, in the chair. The Annual Report was presented by J. N. Stearns, Corresponding Secretary, showing the work of the Society and the progress of the cause in all its departments the past year. The review was most encouraging. The Society had published 58 new publications, making a total of 1,756 now on the catalogue. Thirty-six million three hundred and fifteen thousand eight hundred and seven-teen pages of literature had been printed during the year, making 764,508,299 pages since the organization of the Society. The total receipts of the year were—from publications, \$48,094.67; from donations, \$11,801.92;—making the total receipts, \$59,956.59. Total expenses, \$59,908.67. The missionary work of the Society has greatly increased the last year. Six colored missionaries have been kept in the field and a large amount of literature has been distributed among the colored people of the South. The Society has continued its important work in Congress for a Commission of Inquiry and a national constitutional amendment, to secure legislation to suppress the sale of intoxicating liquors in Africa and among the native races. The educational work among the children has been continued with good results. The Society has rendered important aid in the prohibitory amendment campaigns in the various States. The Report gives a condensed statement of the action of every Legislature in session the past year on the liquor question. It reviews the work "In Congress," "What Governors of States Say," "The League of the Cross," "The Action of Religious Bodies," "Supreme Court Decisions," "Liquor Organizations," "Internal Revenue Tax," "High License," "Results of Prohibition," "Beer Brewers' Congress," "The Saloon as a Power in Politics," etc., etc., and gives a summary of the work in all the national temperance organizations. It is a complete history of the most important events in the temperance world during the past year.

ST. GEORGE MIVART'S CRITICISM ON DARWINISM.

THE conditions of material existence, the primary energies and the ultimate properties of matter, cannot be the offspring of the undesigned play of blind force. But if so, why is it less creditable that intelligence has called into being, through ordained internal forces, all the varied species of animals and plants? If we are compelled, as in fact we are, to suppose this latent intelligence in nature, how superfluous, impertinent, and absurd become those imaginary trains of hypothetical ancestors, with hypothetical qualities, so freely indulged in by puzzled Darwinians, who do not see how without them to dispense with reason and design in nature.

On the other hand, when, having recognized the guidance of a divine reason, we reconsider the play of nature's destructive forces, we can perceive therein also the same agency which we saw in the primary

conditions of the universe and in the mind of man. So considered, we see that natural selection not only may be but must be orderly and providential, as much as the properties of elementary substances or the budding forth of fresh variations in the forms of organic life. Thus natural selection may well be a pre-ordained subordinate agent, not only in the evolution of animals and plants but of families, tribes, and nations of mankind.

Such an evolution of species as this may be called "creation," for all that creation need mean in such connection is implied therein. It is an evolution full of purpose and replete with design, which exists not only at its root and origin, but also accompanies it at every step of its progress.

Darwinism, therefore, wonderfully useful as it has been in stimulating biological research, is not, philosophically considered, a progress, but is rather a retrogression. Deeply considered, it is far more widely divergent from the truth than were the old-fashioned views of creation of 100 years ago.

The teaching which science seems to us clearly to indicate, is that the world has been developed by a process of evolution directly contrary to that which is dreamed of by Darwinians. It is a system in which every activity of every inorganic and organic body, from the dust of a volcano to the imagination of a Michael Angelo, a Dante, or a Shakespeare, is a divinely-ordered process, carried into effect through the re-action of the inner nature of each being, on the stimulus of its environment, the further action of which controls and limits it. It is a process, the co-existences, successions, and laws of which it is the noble task of physical science to investigate in a fruitful and practically limitless progress, by studying the phenomena which are on every side spread out before our gaze, and for the reasonable apprehension as well as the right use of which we are in each degree variously responsible.—*The Forum*.

WHO IS THE RICHER?

IF they praise in my presence the rich Rothschild, who gives from his thousands towards the education of poor children, the healing of the sick, and the care of the aged I am touched and praise him.

But while I am touched and praise him, I involuntarily remember a wretched, poverty-stricken peasant family, who received a poor orphan, a relation of theirs, into their miserable, tumble-down hut. "We will take Katey in," said the wife,— "it will cost us our last penny; we shan't be able even to afford salt to salt our soup with."

"Well, then, we will eat it unsalted," answered the peasant, her husband.

Rothschild does not compare with this peasant!—*Ivan Tourgueneff*.

WHEN a man thinks that nobody cares for him, and that he is alone in a cold, selfish world, he would do well to ask himself this question: What have I done to make anybody care for and love me, and to warm the world with faith and generosity? It is generally the case that those who complain the most have done the least.—*Selected*.

THERE is a wide difference between strictness and narrowness. It is quite commonly said in disparagement of a man's conduct, that he is too strict. But the truth is, no one can ever be too strict. A strict man may or may not be a narrow man. A narrow man may or may not be a strict man. Indeed, a man who has character enough to be strict—to live strictly up to his principles—is likely to be broad, catholic, and liberal in those principles; while a man who has not character enough to be strict in his conduct, is likely to be narrow and ill-defined in his principles. True strictness is a sure sign of character; and no one can have character without having clearly defined principles. It takes character to be liberal; it takes character to be broad; it takes character to be strict. Little character is needed to be loose or to be narrow. If you would be a man of principle, broad or narrow, see to it that one of your principles is to be strict in living up to your principles.—*Sunday School Times*.

HOLINESS is love welling up in the heart, and pouring forth a crystal stream.

NEWS AND OTHER GLEANINGS.

—Over one hundred thousand Americans are booked for Europe this summer.

—The "regal red poppy," an exchange says, has recently been found to have the power of binding with its roots the soil in which it grows in such a manner that it will prove most valuable in supporting embankments. Already French engineers have undertaken the sowing of railway embankments with poppies.

—One of the oldest engineering projects in the world is now gradually approaching completion, and the work will probably be finished during the present year. This is the canal through the Isthmus of Corinth, in Greece. Work was actually begun on the canal under the Emperor Nero, so that over seventeen hundred years will have passed between its beginning, and its final completion. As finally excavated, the canal will be four miles long, with a depth of eight metres, or sufficient for the largest vessels which usually navigate the adjacent seas.—*Christian Register*.

—The editor of the *Woman's Tribune*, after journeying in the far West, says: "One can but rejoice in the care taken for the comfort of emigrants. Even in the regular emigrant cars they have a chance to sleep and wash and get over the ground as fast as their neighbors who have paid not only full fare, but the enormous price charged for the privilege of the Pullman sleeper. But the Pullman Company have purchased the tourist cars, and now for a small additional sum the second-class passengers can have a berth, curtained and provided with a table, and at night made up comfortably with mattress, bedding and pillows; while a porter travels with each coach to look after the comfort of passengers, and keep it clean and pure."

—Works of Mechanical and Industrial Art by the Colored People of Philadelphia, were on exhibition at Horticultural Hall, last week. Among the exhibits were cutlery, watches, and clocks, a model of a steam engine, upholstery, knit goods, cabinet work, brass wire goods, boots and shoes, brooms, glass blowing, type writing, photography, water-color sketches, and paintings. The display was a creditable one, and it is earnestly to be hoped that the prejudice against admitting colored workmen into the va-

rious manufacturing establishments may ere long disappear.

—We learn from *Science* that it has been announced by the United States Entomological Bureau that Brood VIII. of the periodical cicada will appear this year throughout a large extent of this country. This race is of the seventeen year kind. The region in which it will appear commences in southeastern Massachusetts, extends south across Long Island; then down the Atlantic Coast to Chesapeake Bay; thence up the Susquehanna river to Harrisburg; westward from there into Illinois. The Bureau will be glad to receive news of the appearance of the cicadas, and desires especially to receive accounts of all occurrences in West Virginia and North Carolina.—*The American*.

—The most remote point reached by Mr. George Kennan in his Siberian trip was the mines of Kara, 5,000 miles from St. Petersburg and about 1,000 miles from the Pacific coast. The narrative of his adventures and discoveries at these mines will begin in the June *Century* and be continued through several numbers. It may be said to mark the culmination of Mr. Kennan's papers. The mines of Kara are the private property of his Majesty the Tsar, and are worked for his benefit, and it is to them that the "Nihilists" are sent when the Tsar is pleased to commute a death sentence to penal servitude in the mines. Hence an unusual number of political prisoners are gathered at Kara, and Mr. Kennan made the best use of his time while there to make their acquaintance and obtain trustworthy information regarding their life.—*Exchange*.

—There is a well-known petrifying stream of water at Knaresborough, Yorkshire, England, three miles from Harrogate, the well-known sanitarium. It is a cascade from the river Nidd, about fifteen feet high and twice as broad, and forms an aqueous curtain to a cave known as Mother Shipton's Cave. The dripping waters are used for the purpose of petrifying anything sent to be hung up in the drip of the water ledge, which flows over, as it were, the eves of the cave. This ledge, of limestone rock, is augmented unceasingly by the action of the waters which flow over it. This cascade has an endless variety of objects hung up by short lengths of wire to be petrified by the water trickling over them, as sponges, books, gloves, kerchiefs, and veils, hunter's cap, fox, cat, dog, birds, boots, etc., just as fancy prompts people to seek petrifying results. A sponge is petrified in a few months, a book or cap in a year or two, cat or bird a little longer.—*Scientific American*.

—A dispatch from San Francisco says: "The Spreckels Brothers have incorporated a company here to manufacture sugar from beets, which promises to be a gigantic enterprise. They propose, it is stated, to establish ten factories, which will produce 50,000 tons of sugar annually. Nearly all the machinery will be wrought in this State, and the farmers will find a demand for 500,000 tons of beets every year. A new patent process will be utilized to extract a low grade of sugar from the molasses."

—Bees took possession of a grocery store in Plainfield, N. J., one day last week, swarming upon a quantity of comb honey in one of the show windows. There were thousands of the little insects, and their presence destroyed trade for the remainder of the day. When night came the grocer and his clerks smoked the store with sulphur, thereby killing the honey makers.

—The Galveston *News* says that more cattle have been shipped from Texas to the North this season than for many years, although actual figures are hard to obtain from the fact that thousands of cattle have been driven

besides those that have been shipped on the different railroads; 2,030 carloads of cattle, with a total of 40,600 head have passed through Fort Worth alone in one month.

CURRENT EVENTS.

THE bridge of the Nashville, Chattanooga and St. Louis Railroad, over the Stone river, near Nashville, Tennessee, caught fire from a passing train on the 18th inst. Seventeen men, two whites and fifteen negroes, who were working on the road near by went to the bridge, and took an engine on it with the intention of extinguishing the fire with the water from the tender. The span gave way, carrying men and engine into the river, 50 feet below. William Morgan, white, the engineer, received serious internal injuries. The fireman, Charles Gribble, also white, had his leg broken and received other serious injuries. Three of the negro laborers were killed and six were injured, four dangerously.

ADVICES as to the peach and berry crops from points all over Delaware and several localities in Maryland, indicate a fair crop of peaches, and an unusually good yield of strawberries, of better average quality than usual. Some damage to late peaches by frost and storm is reported, and the whole crop has yet to run the gauntlet of the June drop and rose bugs. Berries are likely to yield well everywhere.

ALLEN THORNDYKE RICE, proprietor of the *North American Review*, who had been appointed Minister to Russia, and was just about to sail, died suddenly in New York City on the 16th, of suffocation in connection with an attack of tonsillitis.

THE steamer *Rockton* arrived at San Francisco on the 20th inst., from Samoa, having on board 8 officers and 150 men from the *Vandalia*, and 12 officers and 503 men from the *Trenton*. There were but 75 men, and a small number of officers left at Samoa.

THERE were 5,562 emigrants landed at Castle Garden on the 21st inst., the largest number in one day for many years.

THE monthly report of the statistician of the Department of Agriculture contains an investigation of the deficiencies or surplus of each European nation, especially in the products of American agriculture that seek foreign markets. About one-tenth of the agricultural products of the United States is exported, and no other nation exports so large a proportion.

THE French steamship *La Normandie*, going out of New York harbor, in a fog, late in the evening of the 18th inst., ran down a pilot boat, lying at anchor, and drowned two of the pilots.

NOTICES.

* * Henry T. Child expects to attend Friends' meeting at Christiana, Lancaster county, Pa., on First-day morning next, the 26th inst., and a Temperance meeting at the same place, at 2 p. m.

* * * John J. Cornell will address a meeting at the Girard Assembly Room, N. W. corner of 9th street and Girard Avenue, Philadelphia, on Seventh-day evening, the 25th inst., at 8 o'clock, on Temperance and the Constitutional Amendment. He expects to be at Darby on First-day, the 26th inst.

* * A Temperance Conference will be held at Warminster meeting-house, on First-day, the 26th instant, at 3 o'clock. All Friends and others interested are invited to attend. Under the care of the Women's Temperance Committee of Abington Quarterly Meeting.

CHARLES BOND.

* * The semi-annual meeting of Nottingham First-day School Union, comprising the schools at Little Britain, Oxford, East and West Nottingham, Fawn, Drumore, and Eastland, will be held at Drumore, on Fifth month 25th, at 10 o'clock a. m.

All interested are cordially invited.

Geo. B. PASSMORE,
Dr. L. LUCRETIA KING, } Clerks.

* * Friends desiring accommodations during the time of New York Yearly Meeting will please communicate as early as possible with the undersigned, in order that the Committee having charge of same may be enabled to properly arrange for their comfort and entertainment.

JOSEPH A. BOGARDUS, 177 West St., New York City.

* * Quarterly Meetings in Fifth month occur as follows

27. Warrington, Pipe Creek, Md.
27. *New York Yearly Meeting.*
28. Burlington Q. M., Crosswicks, N. J.
29. Southern, Easton, Md.
30. Bucks, Buckingham, Pa.
31. Nottingham, Deer Creek, Md.

* * First-Day School Unions in Fifth month occur as follows:

25. Blue River, Ind., 8 p. m.

PUBLISHERS' NOTICES.

* * As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

* * Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance may be used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day and must be sent to press at noon of the day preceding.

* * WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person to whom the paper is now being sent. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City Properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

A SPRINGTIME THOUGHT.

IN spring, the seeds hid deep in earth's dark mold
Push upward, striving still to find the light,
Till in full beauty they their buds unfold,
And, free from earth-soil, robed in purest white,
Bloom on, through fair June days, with sunshine bright.

So thou, my soul, if striving e'er to rise
Through this dark mold of sin and doubt, shalt see
The Sun of Righteousness in God's fair skies;
And, having seen, it shall be given to thee
To live in light to all eternity.

—Margaret L. Ballard.

MEMORIAL OF MARY S. LIPPINCOTT.

A MEMORIAL OF CHESTER MONTHLY MEETING, NEW JERSEY, CONCERNING OUR DECEASED FRIEND, MARY S. LIPPINCOTT.

UNDER a sense of the loss that we have sustained by the death of this dear and valued friend, we feel it right to make a brief record of her life, and of her religious experience, for the benefit of survivors, desiring that it may serve as an incentive especially to those who are in the morning of life, to walk in the path of obedience to manifested duty, and to profit by the example of one, who by an early dedication of all her faculties, experienced preservation from evil, strength in weakness, and comfort in seasons of outward trial.

Mary S. Lippincott, daughter of Anthony and Jane S. Hallowell, was born on the twenty-third day of the Sixth month, in the year 1801, in Cheltenham township, Montgomery county, Pennsylvania, and was a birthright member of the Religious Society of Friends. She was endowed with a vigorous intellect and retentive memory, and before she had concluded her tenth year had read aloud to her grandfather, Benjamin Shoemaker, the Bible, as well as the journal of George Fox, and portions of other Friends' works.

The influence of this early course of reading was plainly manifest throughout her life, as she was both ready and accurate in her quotations from the Scriptures, and familiar with the writings of early Friends.

Her school education was received at day schools at Hatboro' and Abington, and at boarding-schools at Westtown in Pennsylvania, and at Fair Hill in Maryland. When about twenty-one years of age, she engaged in teaching, a work for which she seemed to be fitted both by nature and training, and which was not finally abandoned until she was in her eightieth year. She taught at Cheltenham, Ab-

ington, and Westtown in Pennsylvania; at Fairhill, in Maryland; at Alexandria, in Virginia; and at Rensselaerville, in New York.

In 1829, she was married to Isaac Lippincott, a member of Chester Monthly Meeting, New Jersey,—and removed to reside with him, becoming a member of the same meeting, and so continuing until her death. In 1842, she and her husband established the Moorestown Boarding School for Girls, which was continued under her supervision for a period of thirty-eight years. The influence for good which went out from this institution has been widely felt. Her pupils not only received thorough instruction in the ordinary branches of a school education, but their moral and spiritual being was carefully nurtured, and the training there received was of priceless value in after life. In the matter of school and family discipline it may truly be said that she "ruled with meekness,—they obeyed with joy"—and her authority "was but the graver countenance of love." In the education of young women whose means were limited she was almost over-generous, and in this and in other acts of beneficence she did much that was only known to herself, and to those whom she benefited. She was ever desirous that an increased liberality might prevail in the Society for the advancement of its schools, and encouraged Friends to improve those they had, and to use their best endeavors in the establishment of others.

It would appear from her memoranda that she was early brought under the preparing Hand for service in her Master's vineyard. She records that while a school girl, engaged in some household duties, being in a serious state of mind, her spiritual ear was saluted with the language: "Simon, son of Jonas, lovest thou me?" "Feed my sheep." This salutation seemed to foretell the labor that would be required of her, and she alludes to its fulfillment many years afterwards.

When about twenty-two years of age, and for some time subsequently, she passed through many deep baptisms; of these she has left abundant notes. In the early part of the year 1824, she records a fervent prayer, a part of which is as follows: "Be pleased, O righteous Father! to look down with pity on a poor frail mortal of the dust, whose heart is ready to sink, and who is almost overwhelmed. Suffer me not to perish, but keep me, I beseech thee, and suffer me to abide under the shadow of thy wing. Cleanse me, purify me, try me, prove me, and spare not the rod, till all within me that is offensive in thy sight be purged away. Refine me, and baptize me again and again, if consistent with thy holy will.

Create in me a clean heart, and renew a right spirit within me. Teach me humility, yea keep me down in the valley, that I may not think much of myself. Lead me wheresoever thou desirest me to go, and make me willing to bow in full submission to thy holy presence."

She was then in the twenty-third year of her age, and feeling deeply exercised, she writes that she was not at liberty to unburden her mind to any human being, but adds: "I believe it best for me to be sober in all my movements, quiet and retired, that I may be more watchful over myself." The time for her to be cheerful had not yet come, and those who tried to anticipate it were strangers to her inward struggles.

She lived in the desire to do good, and as she grew older became convinced that it was obedience to manifestations from the Most High that qualified for good works,—even the Grace of God that maketh known the divine will to his children, and giveth ability to perform it.

As she followed her convictions, she was early led to exhort others with much tenderness to a dependence on the same divine Comforter, expressing the assurance that under its guidance every human effort, however small, when made with a sincere desire to do good, is acceptable with the Father. By abiding in humility, and keeping a strict watch over herself, in conduct, conversation, and thoughts, she gradually experienced a growth in grace, and in her ministerial gift. In her twenty-ninth year, with the full unity of her meeting, her gift in the ministry was acknowledged and approved.

In the year 1845 she was appointed Clerk of the Yearly Meeting of Women Friends held in Philadelphia, and by successive appointments filled that position until 1867. For this service she had unusual qualifications,—executive ability, great forbearance, and an inward criterion for determining the true sense of the meeting,—all combined with readiness and felicity of expression. While faithfully serving the meeting as Clerk, she was careful not to neglect her individual exercises. Sometimes she would find it necessary to lay down her pen, get into the quiet, and find what she had to do. After a short season of waiting, she would arise, deliver her message with clearness and power, and then proceed with the business of the meeting.

A concern opened by our friend at the close of a First-day morning meeting, was the origin of the First-day school at Moorestown, which was one of the first within the limits of Philadelphia Yearly Meeting. She entered upon this important work with her usual earnestness and was Superintendent of the school for many years. Here, as in her ministry, she did not feel called to sound the note of controversial doctrine, but her teaching was according to the new commandment given by Jesus, "That ye love one another." The testimonies embraced in our first and second queries, were to her vital realities, and her steadfast endeavor to maintain them has been of lasting benefit.

Her heart ever went out in sympathy to those in distress, affliction, or bereavement, and amid her many engrossing cares and labors she was never too busy

or too weary to listen to their troubles, to give words of advice, encouragement, or consolation, and to the extent of her ability, share their burden.

In her middle and later life she was a bright example of the happiness to be experienced from a full surrender, and an early dedication of heart. In the social circle she was a general favorite, her animated and interesting conversation being instructive and enlivening both to the young and the old.

About eight years before her death she and her two daughters removed to Camden, New Jersey, where so long as her health permitted she continued to attend meetings.

Her life as to the outward was a checkered one, and many were her trials and bereavements. Her aged mother, who died in 1847, was the object of her tender care, and her faithful ministrations to promote the comfort of this revered parent are worthy of record as well as imitation. The loss of her husband in 1858 was keenly felt. As partners in life they had been congenial and closely united, and as an elder he had sympathized and traveled with her in her religious exercises. Of five children only one survived her.

But throughout all she was sustained by an unflinching trust. One of her pupils gives expression to the feelings of many when she says: "I have marveled at her cheerfulness, her courage, her patience, and her unwavering faith in the goodness and protecting care of her Heavenly Father." During her last illness, which she bore with great fortitude, she said to her friends that her sufferings were doubtless permitted for a wise though unseen purpose, and was comforted with the firm belief that she would be accepted. That "more sure word of prophecy" to which she early gave heed, and which had been followed by the dawning of the day and the arising of the day star in her heart, had been her faith through life; and when her sun was about to go down in brightness she desired that the young might have their attention directed to this same more sure word.

With full faith in the promise of a happy eternity, she made a peaceful close, on the 18th of the Fourth month, 1888, and on the 21st of the same her remains were interred in Friends' burial ground at Moorestown.

She was aged nearly eighty-seven years, sixty of which she had been a faithful and acceptable minister of the Gospel.

Read and approved in Chester Monthly Meeting of Friends, held at Moorestown, N. J., Third month 7th, 1889, and directed to be forwarded to the Quarterly Meeting.

AND what is Originality? It is being one's self, and reporting accurately what we see and are.

MEMORIAL OF AARON BORTON.

A TESTIMONY OF PILESGROVE MONTHLY MEETING OF FRIENDS CONCERNING OUR DECEASED FRIEND AARON BORTON.

WHEN the faithful ones of earth have received the call "Come up higher," and have realized that "Death is but an open door that leadeth to Eternal Day," it seems a duty, as well as a tribute of love, to preserve the memory of such as an *incentive* to the living to dwell near to that All-Sustaining Power which ever leads us upward and onward. Believing that "the memory of the just is blessed," we feel it right for us to bear our testimony to the zeal of our departed Friend in every good word and work, not for the purpose of eulogizing the dead, but rather that we may encourage those who are following after to mind that Light to which it was his mission to direct, and to persevere in well-doing.

He was the son of Joseph and Elizabeth Borton, was born in Burlington county, New Jersey, on the 25th of First month, 1810, and soon after removed with his parents within the limits of Pilesgrove Monthly Meeting of Friends, and continued a member thereof the remainder of his life.

According to his own account he was impressed at a very early age with the importance of our testimonies in regard to plainness of speech, behavior, and apparel, and we believe was ever after a consistent example to young and old in these important particulars. He was constant in the attendance of our meetings from a feeling that it was profitable to be there, and that the reward was sure. When principle was involved, he was bold in the expression of his views, both by word and act, yet endowed with a spirit of tenderness that brought grief to his soul when Friends whom he loved and appreciated were disposed to censure.

Remembering them that were in bonds as bound with them, he was careful to abstain from the produce of slave labor, believing it to be included in our testimony against prize goods. The temperance cause found in him an able and consistent advocate. Having formed the habit of using tobacco in early life, he became convinced in his latter years that he must renounce it, which he did, although his physician warned him that it might prove fatal; and he ever after lost no opportunity of bearing his testimony in regard to the subject.

About the fiftieth year of his age he was called to the ministry, and manifested his obedience to the call, and his gift was soon after acknowledged by Friends; but his ministrations seldom extended beyond his neighboring meetings, wherein he did much service. The First-day Schools claimed his earnest attention; the children were always the object of his affectionate interest, and oftentimes he made sacrifices that he might not fail to be present at their meetings.

He was one that tried to live an upright life, ready to give words of counsel, and free to lend a helping hand, in any way that he could, to assist a weak brother on his way Zionward. He was an earnest worker in promulgating the principles of truth and righteousness, ever ready to go as his Heavenly Father might bid, to spread the gospel and preach the

glad tidings to Jew or Gentile; not so engrossed in his own profession that he could not mingle with others, but was willing to take them by the hand and say, "Let us go up to the house of the Lord together, and praise Him with all our hearts and souls, not fearing to let our light so shine that it may be seen of men."

As the final change approached and his bodily strength decreased, his loving spirit manifested itself by his appreciation of the visits of his friends; and when upon one occasion near his close, being told that they were about to leave for meeting, he bade them farewell and added, "Give my love to them all." And in this loving frame of mind he continued until the morning of the 5th of Eighth month, 1887, when in the seventy-eighth year of his age, he peacefully passed from earth to the enjoyment of a life well spent.

Signed in and by direction of Pilesgrove Monthly Meeting of Friends, held at Woodstown, New Jersey, the 25th of Ninth month, 1888.

CHARLES E. DAVIS, } Clerks.
AMY DAVIS, }

ASA ENGLE, } Clerks.
SARAH M. GRISCOM, }

NEW YORK YEARLY MEETING, 1889.

THE meetings on First-day, in New York and Brooklyn, were well attended, but there were fewer Friends than usual from other yearly meetings. We were glad to have the few, but could have welcomed more. At 15th street, in the morning, the speakers included Davis Farnas, of Ohio, Frances J. Newlin, of Philadelphia, and Joseph Horner, of Medford, N. J. In the afternoon, Avis Porter, now in her ninety-seventh year, was one of those who spoke.

Among the religious concerns that Friends expressed were the all-sufficiency of the Inner Light, complete submission to its guidance, and the beauty and efficacy of the law of love,—love to God and love to man,—as the ruling motive of our thoughts and actions. Parents were also urged to consider whether a greater love of our testimonies, and a stronger, more intelligent faith in their efficacy, would not be reflected in similar love and faith in their children.

On Second-day, the men's meeting was opened by earnest appeals to members of all ages to take a more active part in the work of the Society. It was urged that not only the Society, but the workers would be benefited by this course. The younger members in particular were urged to take an active part in all proceedings of the meetings.

The morning session was occupied largely in the consideration of four of the epistles from other yearly meetings. At the close of the session, Robert S. Haviland, who for many years has served as clerk of the Yearly Meeting, asked to be relieved from further service in that capacity. At the opening of the afternoon session, his long and acceptable services were warmly commented upon, and his request was

granted by the appointment of William H. Willets as clerk, with Jesse H. Griffen as assistant clerk.

In the morning meeting information was asked for as to whether women were allowed to visit the state prisons as ministers. In the afternoon meeting this question was answered in the affirmative, and it was learned that some of the women Friends were concerned to make such visits.

The report of the Committee on Education which was presented in the afternoon, showed that most of the schools were in a more prosperous condition than usual. The importance to the members of the Society and to the Society as an organization, of keeping up these schools and of contributing of their means, large or small, for the further development of these and other institutions was referred to in the report and dwelt upon by the meeting. The report also called attention to the constant demand, not only in the Society but elsewhere, for teachers who were Friends, or imbued with the friendly spirit by being educated at Friends' schools and colleges.

The First-day School Association held three sessions on Seventh, First, and Second-day evenings. Fourth-day afternoon was also set apart for the First-day school work.

On first-day evening the subject discussed was methods of teaching. William M. Jackson recommended the method of developing thought,—turning the attention of scholars to the light within themselves,—by means of questions and answers. And in reference to the answers he illustrated the importance of not accepting an answer that was given in a set phrase, or formula, or quotation. These might, but more generally did not, contain any independent thought of the scholar. The scholar's own words, framed in his own manner, were the only true index to his thoughts. If we had full and true faith in the Light within, we would depend on it for the child as well as for the adult.

SCRIPTURE LESSON, No. 22.

SIXTH MONTH 9, 1889.

JESUS BEFORE PILATE.

GOLDEN TEXT.—“Take him yourselves and crucify him; for I find no crime in him.”—John 19: 6.

READ MARK 15: 1-20.

THERE are many circumstances connected with the betrayal of Jesus and his unlawful arraignment before the Sanhedrim, which the other evangelists record, that are not found in Mark's, whose Gospel is mainly a summary of the chief events and discourses, recorded more fully in the other gospels.

Our lesson is a study of the scene before Pilate, and the moral cowardice of the friends and adherents of Jesus. No more impressive and instructive evidences of the uncertainty and unreliability of professions of loyalty and devotion when put to the test, are to be found on the pages of history than are here disclosed.

Delivered him to Pilate. Pontius Pilate was the governor, appointed by the Romans. During the Pass-over he took up his official residence in Jerusalem, the better to preserve order while the city and adjacent country were crowded with the Jews who came

from all parts to attend the feast. The accusers of Jesus would not enter the judgment hall for fear of defilement, but stood without in the court adjoining (John 19: 13), where Pilate held the trial.

Art thou king of the Jews? This indicates the charge brought against Jesus, which, with the immense throngs within the city and encamped outside its walls, was a most serious consideration. To raise the standard of revolt at that time, would be to enroll under him who made the claim the whole force of the Jewish people, and these cruel priests knew that the governor dare not let such an assumption go unpunished.

Pilate marvelled. There was nothing in the appearance or manner of Jesus that he could condemn. Innocence vindicated itself in his calm, dignified deportment under the indignities offered him, and the accusations charged against him.

Will you that I release, etc. This shows Pilate's unwillingness to give him into their hands, and his belief of Jesus' innocence.

Crucify him. This cruel demand could not further be set aside, and the unwilling ruler tried to exonerate himself by washing his hands in token of his innocence. (Matt. 27: 24.) Those were hard, cruel times, in which kings and magistrates were often made to condemn the innocent to dreadful torture and death, when they, like Pilate, were unable to see “what evil” had been done, and they too were brought to the rack and the executioner's block upon false charges. We have great reason to rejoice that such conditions in civil society are rapidly passing away under the spread of the religion of love and good-will which the pure and holy Jesus gave his life to establish among the nations of the earth.

Our lesson to-day brings to each one of us a warning. How certainly it shows us we are poor and weak when we are governed by the interests pertaining to this life. But the Divine Father only waits until we are willing and prepared to establish a higher law, a Spiritual Law within us. And this is just what we learn as we trace the footsteps and teachings of Jesus while he walked among men. Moral cowardice has perhaps done more to enslave and dwarf the spirit's growth, strength, and development, than any other one of the vices or weaknesses to which we are liable to yield, and by yielding we surely bring suffering, gloom, and sorrow upon what was intended by a loving Father to be a life of beauty, truth, and happiness. For not only our spirit but our whole being is *divine*—created by the Father on purpose for his own glory. And what a responsibility we take, if by *cowardice*, we allow the lower nature in any form to rule over the higher.

We have such a splendid example in Jesus of moral courage, that it should be an inspiration to us when we are tempted or accused falsely. His noble answer to Pilate (John 18: 36), should ever lead us onward to greater spiritual heights.

NOTES ON THE LESSON.

When Jesus was brought before Pilate and the vague accusations of his enemies were made against

him, the Roman governor insisted that some specific charge be offered. It was not his place to listen to any question of their law, or any complaints connected therewith. Of what crime against the government as administered by the Romans had he been guilty? This was the main point. The account given by Mark is very brief. Luke adds "When Pilate found no fault in him, they became more urgent, and accused him of stirring up the people, beginning at Galilee. This induced him to send Jesus to Herod whose jurisdiction extended over that province but who then was in Jerusalem to preserve order during the Passover. There he was followed by his enemies and the same charges brought against him. We see the same quiet, dignified manner in Jesus that was exhibited before the council of his countrymen. All the indignities offered by Herod and his brutal soldiers, were not able to move him; as it had been written by the prophets, "He was led as a lamb to the slaughter, and as a sheep dumb before the shearer, so he opened not his mouth." Finding nothing upon which to condemn Jesus, Herod sent him back to Pilate, who in yielding to the popular clamor for his condemnation, washed his hands as a token that he was innocent of his blood. The attempt was vain, the name of Pilate has come down to us associated with a crime of the deepest dye, committed because he was too weak and irresolute to be true to himself or to his helpless victim. In the early history of the Hebrew people, justice was administered at the gates of the cities. The elders and chief men of the place sat in an open space just within the gateway, and whoever had a grievance resorted hither to make his complaint; all sorts of cases were tried, and there was no distinction made between the civil and the criminal charges. Later on, and under the now settled form introduced by the Romans, this primitive usage gave way to organized courts held in the judgment hall. The proceedings were much the same, and the noise and clamor which characterized the arraignment of Jesus, and the indignities heaped upon him represent the low estimate in which justice was held, and how difficult must have been its administration in those early times.

For Friends' Intelligencer and Journal.

LETTERS FROM BERLIN.—II.

The sun shines every day now, and nothing ever seemed more beautiful than its light glowing among the red chimneys and gleaming on the white and cream-colored masses of houses on which my window looks out. There are gardens among them too, with blossoming plum trees where the black thrush (*Turdus Merula*) sings in the morning, and a stretch of blue sky above. Every time I look out there comes to mind something beautiful about light that I have heard or seen from the gracious command "Let there be light" and the prayer of Ajax—to the breaking of one of Wagner's magnificent dawns. From the court below, around three sides of which this great house is built, as are nearly all the houses here, there comes now a sound of continuous beating. A soldier in his blue coat and red shoulder straps is pounding

the dust with a wicker work instrument shaped like a tennis racket, from the rugs, great and small, from his officer's apartments; as he hangs them one after the other over a strong iron bar erected there for the purpose, and when he is through some blue aproned maid will come and beat the carpets from some other Wohnung until all are clean. On a great block near the bar they go in turn also to cut up the kindling wood, for before we moved our Lares and Penates here, a printed contract was signed to the effect that we would not cut up kindling in the rooms, nor sit on the front steps, nor hang about the back door, nor stamp on the floor with wooden-soled slippers, nor hang our clothes out of the windows, nor quarrel on the landings, nor throw scraps in the entry.

Now a wandering musician has strolled in to sing and play for the few pennies that will be thrown him from the windows. There seems in this instance of money to be an exception to a law in force here, that *nothing* shall be thrown from a window in the city. A fine of six marks is imposed for an infringement of it, and it was instituted because once a child was throwing something out and fell—and anything that might bring evil to a child here would be amended if possible. A bell from a large printing establishment near by is ringing for twelve, and it is a reminder of how, one day, a month ago, I was walking up the long corridor to the door of a laboratory in Invaliden street, when a voice behind called: "We want you to come with us and take dinner in the Volksküchen." I turned and went down the steps and across the street with two representatives of Mt. Holyoke College, Mass., to see the inner working of this Berlin institution, of which a student of political economy had spoken as so praiseworthy, and which one should not fail to see,—for it insures to all the laboring people a good warm dinner for the sum of fifteen pfennigs, less than five cents U. S. currency. It was twelve o'clock, and hod carriers and street menders and laboring men of all descriptions were filing down some narrow steps into a cellar entrance which had "Volksküchen" printed above. We went down too, the doubtful manner of the foremost of our party gaining assurance at the foot of the steps, and she called back, "Come on; I see a woman with a nice white apron and cap on." This was the cheery, tidy manager, who met us at the door of those low-ceiled rooms, which were packed with men sitting at very narrow tables, on long benches, eating, or newcomers were filing into a *cassé* in the corner near the door to pay their pfennigs, and passing thence to the window communication with the kitchen, to receive the dishes of food. We were among these newcomers and did as they, and each carried away from the window her large round dish, holding about a quart of soup, very thick with peas and carrots, and with a slice of meat in it, and were conducted by the wearer of the snowy cap and apron to the women's room—a narrow stall in one corner, wherein was a table up the centre and benches around. One side was filled with three old women, such as we see so often in the streets carrying huge baskets, or drawing carts, or sweeping the parks. We took the other side and talked with them. Cheery old souls they were,

with an out-of-doors air about them, who insisted on my beginning to eat. "It tasted good. The old empress came there and took dinner, because she gave money for the support of the Volksküchen, and so assured herself that the people were well served." Moved by their insistence and the example of my comrades, I put away the thought of the great iron spoon and of how many people had eaten with it, and if the dishes were well washed, and found the dinner very palatable indeed, and nicely seasoned and steaming hot. We did not taste the coffee, which was served in large mugs, but it looked and smelled good. Then we were taken through the kitchen, where were the boilers in which this mid-day meal is cooked for five hundred people, and saw the dishes and spoons and mugs being washed in three great tubs of hot water, and the potatoes and dried apples and meat being prepared for the next day, and came away feeling so glad that these men who do the hard work of keeping every part of this city in thorough repair and neat and clean, do not have to dine on a cold luncheon carried in their pockets, but eat in warm rooms, good food, varied each day—for there are sixteen of these places scattered over the city—and they grew from one woman's kindly thought for the poor, faithful laborers.

On Sunday afternoon last we took the two story street cars, (the gentlemen sit in the upper story), at the Brandenburger Thor for a ride to the moors outside of Charlottenburg, where the air was sweet, and the sand clean, and modest little *potentillas* and *cruciferas* and *veronicas*, the "blue-eyed speed well" of English verse, were in bloom, and overhead—

"The larks

Soared up and up, shivering for very joy."

It was a joy indeed to sit there among the grasses and wee flowers and listen to the rapsodies of these "laverocks in the lift," and to realize, as line after line from Shelley and Hogg and Jean Ingelow and Wordsworth and others came to me, just how the poets have always loved this "blithe spirit" and how well they have mingled its music with their verse—

"Sound of vernal showers
On the twinkling grass,
Rain-awakened flowers—
All that ever was,

Joyous, and clear, and fresh—thy music doth surpass."

Then we went down to the river's brim where the willows grow and where we could watch the boats slowly gliding down past wide reaches of wet meadow, golden with *Caltha palustris*.

"O brave marsh marybuds, rich and yellow,
Give me your money to hold."

There was a swan's nest, too, among the willows and a bit or two of scenery down the Spree, as simple and as full of tenderness and poetry as those Corot loved best to paint. When we came home we stood up in the front platform of the car, by the driver, for the long ride through Charlottenburg where the magnificent School building, and the palace had less attraction for us than some quaint old houses, with their low, red-tiled roofs, rippled or billowed with windows. There were crowds of people everywhere, filling the gardens and cafés, filling

the streets and the long avenues of budding trees in the Thiergarten, and coaches and cars were carrying hundreds to gardens and resorts outside the city. I can give no idea of the picturesque coloring of these crowds seen through the vistas of grey stemmed trees of the Thiergarten, for in the drives were long lines of droskies with red bodies and blue wheels, with blue bodies and red wheels, with green bodies and yellow wheels, and with—well if you were to see all the color put into them and their linings, and into the blue coats and scarlet waistcoats of the drivers of the second-class ones, you would think all the color would be used up—but no there are the hundreds of officers moving about everywhere "all gaily bedight" their swords dangling at their sides, and the women! One day I said contemplatively, "I wonder if a great many people here are not color blind?" "No doubt of it," said my companion, "and your eyes will soon be in the same condition." "Perhaps," I said, "but they are sound yet, for I can see that this lady ahead for instance is wearing a blue dress, with rows and rows of scarlet braid around the skirt, a snuff colored jacket and black gloves, and has yellow-green ribbon on her hat; and yonder is one with a green dress and sky blue bonnet." I do not mean to say that every one is such a bird of paradise, but a large enough proportion to give picturesqueness to the mass of black and brown and grey clad ones. All nations seem to have their representatives here, and amid the throng go Japanese students, and Chinese men in rich silk garments, East India men and Africans, curiously dressed peasants in holiday attire, and English and Americans in all times and seasons and places, to many of these last, no doubt often comes home Horace's

"*Patrie quis exul
Se quoque fugit?*"

conned in their school days. To each of them I trust comes a wider horizon, even though its line be often blurred by a mist of tears for old days, old scenes, old comrades, which are theirs no more save only in memory. O. R.

Berlin, Fifth month 8.

A LOW TONE.

A recent writer in an educational journal tells us that "a judge of a Massachusetts court, speaking in an entirely kind and magnanimous spirit, lamented the 'low tone' of teachers. He found this peculiarity almost universal. He had sought, in vain, the cause of the phenomenon, and would fain help to apply some remedy for it, if he only saw the way." Low tone may mean an inferior condition in any department of human nature. We may speak of a low tone of morals or of intellect, of thought or of taste. In this case, however, what was meant was rather a depression of the physical and mental system, that prevented that vigor of life and buoyancy of spirits so necessary to the best kind of manhood and womanhood. The writer above mentioned gave various and sufficient reasons for this condition in teachers, especially that of the common custom among them of prolonging school work far into the evening hours by means of crushing piles of juvenile papers to be ex-

amined and corrected, and the consequent absence of that fresh life and elasticity which are dependent upon frequent changes of occupation, companionship, and scene.

It is not only teachers, however, who are afflicted by this low tone. It is but too prevalent among all classes of our busy people. Not that it is a necessary adjunct of being busy; on the contrary, few things are more depressing than having nothing to do. But that is not our chief danger. The extreme division of labor, the strain of competition, the demand only for the very best and most rapid work, these and other accompaniments of advanced civilization have led ambitious men and women to exert their energies in a single direction, far too continuously for the best results. Then comes the reaction, the depression of spirits, the loss of vigor, the sinking and weakening of the whole system, which sleep only partially restores, and which at length impairs the powers, enfeebles the health, and cuts short either the life itself or everything that makes life worth living.

Now such conduct is sometimes dignified by the name of martyrdom to duty, but it is a title which it by no means deserves. There are doubtless a few cases in which duty requires the sacrifice of health, happiness, and even life itself, but they are rare and exceptional, and scarcely ever occur in the ordinary and peaceful routine of life's daily work. *There* duty lies in quite an opposite direction, and calls upon each individual to cultivate, to develop, and to strengthen himself, not to exhaust, enfeeble, and shatter himself. It is strange that, with all the advantages, educational and otherwise, that men enjoy at the present day, they are so slow to learn that their own best development and their usefulness to the world go hand-in-hand. Whatever injures them physically, mentally, and morally, also injures their work and lessens their value. The loss of vigor, of energy, of good spirits, of a cheerful and happy tone of mind, does not end in a mere personal loss. It affects everything they think or say or do, it influences all with whom they mingle, and it operates unfavorably upon the very work which they hope to benefit by their sacrifice. The man who toils all day at one occupation and then broods over it in the evening and dreams of it at night, and who finally falls into the low tone which is the inevitable result, will find, sooner or later, that his business deteriorates with himself. Freshness and vigor, a cheery spirit and a glad heart are as necessary to the true prosperity of business as they are to the happiness of man. Therefore let us banish the delusion that we can resign them for the good of our work, whatever it may be.

Too close application is not, however, the only cause of a low tone. Discouragement and failure are prominent sources. When people cannot, or do not, do their work well and thoroughly, they usually dislike it, and this feeling, united with the sense of short-coming, and the fear of eventual failure, will soon draw mind and body down into a hopeless depression. Then there are some who are employed by others in various occupations, and whose most strenuous efforts never draw forth one gleam of rec-

ognition or token of approval. It is a hard struggle for them to prevent falling into a low tone. Some are constitutionally despondent; the dark side of everything looming up and casting its shadow over them. Some have griefs which they nurse, refusing to be comforted. Some are thrown by circumstances under gloomy influences. Whatever be the cause, it is something which duty calls upon each one to battle with, and, as far as possible to subdue. Egoism and altruism alike demand it. We cannot perform our work in the best manner, we cannot make happy homes, we cannot be valuable friends, nor even good citizens, while we are personally weary and harassed, weak and nervous, heavy and dull, dreary and depressed. Nor is it sufficient to try to banish the signs of such conditions and simulate a cheerfulness that is not felt. That may often be a useful discipline, but it is only like cutting off weeds that should be uprooted. Every one should endeavor so to arrange his life, his hours of work, his recreations, his surroundings as to secure as much health, vigor, hope, and good cheer as possible. Instead of prolonged, work in one direction, or brooding over the same thing, or giving away to gloomy forebodings and discouraged feelings, let the time be so laid out as to afford change of work, change of scene, change of companionship; let open air, sunlight, exercise, amusement, refresh the tired mind; let unused faculties have their turn of activity; let other interests than our own come into our lives. Thus will the circulation be quickened, the spirits raised, hope and courage stimulated, and a new infusion of vigor, power, earnestness, and force render our exertions more successful, our hearts more sympathetic, and our lives of vastly greater value to the world.—*Philadelphia Ledger.*

DRINK HABITS OF AUSTRIAN CHILDREN.

So serious and widespread has inebriety been of recent years among school children that the Vienna school board have, though hitherto ineffectually, been making strenuous efforts for the prohibition of the sale of intoxicating drinks to children. The board has just resolved to invoke the intervention of the government, and a bill is to be laid before Parliament during the present session to prohibit the selling of intoxicants to boys and girls under fifteen years of age. So alarming is the present state of matters that the appearance of a boy at school in a state of drunkenness is by no means a rare sight. During the winter poor children are often sent to school with only a glass of the cheapest spirits for breakfast, partly to allay hunger, and partly to "keep out the cold"—that venerable delusion which still lingers in England. Slav children, of the tender age of five and six years, are so "seasoned" to alcohol from infancy by the administration of small quantities in milk, that these youthful scholars can take a liberal dram without showing any symptoms of intoxication.—*British Medical Journal.*

God is the all fair. Truth and goodness and beauty are but different faces of the same All.—*Emerson.*

PHILADELPHIA, SIXTH MONTH 1, 1889.

SUMMER RECREATIONS.

THE "rare days," the "perfect days" of the year are now close upon us, and these have for some time been heralded by days very close akin to them, for the first awakening of nature from her winter slumber, in our climate, at least, never loses its charm. It always seems as if the hand of God was still re-creating the earth and none but absolutely stolid humanity can remain insensible to the feeling of great joy and thankfulness at the sight of springing grass, bursting buds, and the daily thickening canopy of green leaves. And with this joy there comes to the dweller in cities a desire to see more of nature, to be nearer to her; and to those who are favored to live all the time in close communion with her, a yearning for change, a wish to see her under new conditions, so there is developed a call for recreations.

Most happy are they that can enjoy these in the simplicity that nature loveth; and we are convinced that there is, in spite of well-filled resorts where fashion holds sway, an increasing number that long for such a contact with wood and field, with sand and sea, that will promote a renewal within themselves of fresh life. And to accomplish this in the busy lives that most of us lead, necessitates a study of these summer recreations that they may indeed be what the name implies, seasons of recuperation; when the physical will not only take on fresh vigor, but the mind is filled with a sweetness born of calm and quiet which is alike comforting to the soul. Fenelon most truly and beautifully portrays this last condition when he says: "Whenever we perceive within us anxious desires for anything, whatever it may be, and find that nature is hurrying us with too much haste to do what is to be done, whether it be to say something, see something, or to do something, let us stop short, and repress the precipitancy of our thoughts and the agitations of our actions—for God has said, that his spirit does not dwell in disquiet."

To this task of deciding what we shall do to reinvigorate us, let us bring the same earnest thought and good judgment that we would give to our business pursuits, so that it may be crowned with the same success. And let the just resolve be that in its accomplishment we will not overstep the bounds of prudence in its financial aspect, for there is no more

direct road to failure in the result than to make a mistake here. The mind must be free to enjoy rest and change or nothing will be gained. Fortunately for all persons of moderate means, there are many recreations within easy reach and at slight expense, if only we consider them as such and enter upon them in that cheerful spirit of receiving from them what they have to offer. Even a day at the Park, the seashore, or in the country, if one has been trained to a love of nature, can be spent with both pleasure and profit. Yet we cannot wholly re-create ourselves, but if we have missed this training we are never too old to cultivate an acquaintance with nature, for truly has Whittier said:

"Her many hands reach out to us,
Her many tongues are garrulous;
Perpetual riddles of surprise
She offers to our ears and eyes."

Social visiting, when not carried to excess, has within it many elements of refreshment, for anything that tends to keep alive the ties of family and cements the bonds of friendship, is not to be ignored. We are sometimes jealous for the offices of hospitality when we see them so frequently set aside for the more independent pleasures that money procures, and would suggest in the planning of our summer recreations that old-fashioned visiting be not wholly omitted. Let it, however, carry with it the wholesome condition that visits made involve the obligation of a return at other seasons, so that the helpfulness of change may be mutual.

Not living to ourselves alone, we have also to consider that this is preëminently an age when the poor claim attention, and it is our privilege to aid in some of the many avenues that are opened for their benefit, so that into their lives good may flow. Having performed—each one—his duty here, there will be more susceptibility to assimilate the help we may seek in any of the ways open for a renewal of strength to body, mind, and spirit, that is so desirable in our pilgrimage through a world full of the evidences of the goodness and mercy of God.

MARRIAGES.

LESTER—SATTERTHWAIT.—Fifth month 21st, 1889, by Friends' ceremony, at their residence, Philadelphia, Evan J. Lester, son of Evan Jones Lester, and Helen G., daughter of Edward M. and Elizabeth M. Satterthwait.

DEATHS.

CHANDLER.—At his residence, near Sandy Spring, Montgomery county, Md., on the 20th of Fifth month, 1889, after a lingering illness, Albert Chandler, in the 57th year of his age; a member of Sandy Spring Monthly and Particular Meetings.

This dear friend had been an invalid for several years, at times suffering great weakness which he bore with much resignation.

He was the son of Mahlon and Catharine Chandler.

The former, who is now in his 99th year, still survives him.
D. W. B.

DARE.—On First-day, Fifth month 19th, 1889, suddenly, Gideon G. Dare, aged about 70; a valued member of Baltimore Monthly Meeting.

ELLIS.—In Philadelphia, Fifth month 21st, 1889, Anna M., widow of Amos Ellis, in her 78th year.

JONES.—In Coushohocken, Pa., on First-day, Fifth month 26th, 1889, Edwin Jones, in his 57th year; a member of Gwynedd Monthly Meeting.

MASON.—At his home, Maple Grove, near Huntingdon, Huntingdon county, Ind., First month 29th, 1889, George Mason, in his 58th year. He was the son of Benjamin and Grace Mason, was born in Chester county, Pa., Tenth month 2d, 1831. In 1835 he moved to Richmond, Indiana, with his parents, and at the age of 12 years removed to Maple Grove settlement of Friends.

He was a kind, obliging husband and father, and a good, generous neighbor. We all mourn our loss and will miss him very much at our meeting and in the social circle here.
P.

PALMER.—In Pleasant Valley, N. Y., Fourth month 4th, 1889, Peter Palmer, aged 81 years, 2 months, 17 days; a member of Oswego Monthly Meeting. Interment at Pleasant Valley burial ground of Friends.

PHILLIPS.—"She hath done what she could." Frances A. Phillips, a beloved member and older of Prairie Grove Monthly Meeting of Friends, and oldest daughter of John and Susan M. Price, was born Fourth month 22d, 1821, in Baltimore county, Md., and died Third month 30th, 1889, near Sweedeshurg, Iowa, of heart disease. She was married to James T. Phillips; Second month 8th, 1844, and after living eight years in Baltimore city they came to Burlington, Iowa. They were about the first Friends in this section of Iowa. The husband lost his life while inspecting a new church building in 1855. The widow with three boys returned to the East, but came back to Iowa in 1859 to care for her parents in old age. She performed this filial duty faithfully until their death.

In 1873, with two sons, she moved to the farm, her late home, where the rest of her peaceful life was spent. A multitude of neighbors and friends remember the sweet influence and kind acts in that home life. Many an Eastern boy found a temporary home there until he was settled. She had a severe fall in the spring of '71 from which she never fully recovered. A very large procession of mourning friends followed the remains to Prairie Grove burial ground for interment.
P. E. R.

Henry county, Iowa.

RIDGWAY.—At Cream Ridge, N. J., on the 21st of Fourth month, 1889, Ellis W., son of Elizabeth W. and the late Henry W. Ridgway, aged 52 years; a member of Chesterfield Monthly Meeting.

SMITH.—In Buckingham, Pa., Fifth month 23d, 1889, Jonathan Smith, in his 63d year.

SPACKMAN.—Suddenly, on the evening of Fifth mo. 21st, 1889, at the residence of her daughter, West Philadelphia, Pa., Adaline G., widow of Chalkley Spackman, and daughter of the late George W. and Rachel Gibbons.

TITUS.—At Athens, New York, on the evening of Fifth month 20th, 1889, George Titus, in his 79th year.

WRIGHT.—On Second month 14th, 1888, Avis, widow of Gilbert Wright, aged 75 years.—On Fifth month 2d, 1888, Eliza A., wife of Joseph Wright, aged 78 years.—On Second month 24th, 1889, Hannah, widow of Samuel Wright, aged 83 years. These three Friends were members of Deltayter Monthly and Scipio Quarterly Meetings.

NEWS OF FRIENDS.

FAIRFAX QUARTERLY MEETING.

FAIRFAX QUARTERLY MEETING held, at Hopewell, Va., on the 20th of the present month, was an occasion of much interest. Although there were no Ministering Friends present from other quarterly meetings, we were favored with the company of several speakers of our own household whose labors in the cause of Truth will be remembered by those present. The meeting on First-day morning was about the usual size, and more orderly than on some former occasions. The meeting was addressed by Jesse Hoge, William Williams, and Phineas J. Nichols, and the unusual quiet gave evidence that their labors were appreciated. The public meeting on Second-day was, as usual, much more like a Friends meeting than the one usually held on First-day. The solemn silence prevailing for nearly half an hour was indeed a season of spiritual refreshment. Our friends, J. H., and P. J. N. again acceptably ministered to the meeting, and a beloved sister appeared in supplication.

In the business meeting the reading of the usual queries and answers were reminders of some of our shortcomings, but our general condition was favorable. The monthly meetings comprising the Quarter have all arranged to hereafter convene in joint session, and the Quarterly Meeting decided to also adopt the same management. We were favored with the company of several Friends, both older and younger, from Baltimore and Warrington Quarters, whose presence and fellowship were very acceptable; and we believe the social mingling of friends on these occasions is a very pleasant feature of our quarterly meetings.

A FRIEND.

[After the above was in type we received some notes from another friend. We extract that part which is additional to what we already had.—EDS.]

Our own ministers, William Williams, Jesse Hoge, and Phineas J. Nichols, had discriminating and acceptable service on First-day, and again on Second-day morning before the business of the Society was taken up.

It is often desirable to have aid in the work of the ministry by those rightly sent from other meetings of Friends, but it is unfortunate and hurtful when the thought prevails that these must be urged to come and possibly moved to do so by something less than a proper call. For every meeting suffers that does not nourish and cherish the home seed and the home talent. By these the meetings will live and grow or languish, as they are appreciated or neglected. The meetings of ministers and elders as now constituted have a heavy responsibility resting on them. And to be of service to the body of which they are an arm they have need to be watchful and humble, remembering they are not masters but servants of the church.

On the third First-day in Sixth month, at 10 a. m., occurs our Circular Meeting at the Ridge, near Winchester; and at 3 p. m., the same day at Back Creek.

H. R. H.

THE PROHIBITORY AMENDMENT.

EDITORS INTELLIGENCER AND JOURNAL :

THE following is an abridgement of a powerfully written article by Esther J. Trimble-Lippincott, who died in June of 1888. It is a marvelous foreshadowing of the action required in June of 1889. Our friend was truly a martyr to her endeavors to perform her duties faithfully, and to awaken the conscience of her time,—her death, as was believed by her physician, resulting from disease induced by the exhaustion of her physical powers, from long-continued over-exertion. Being dead, she yet speaketh.
L.

THE SACREDNESS OF LAW ; OR LAW VERSUS LICENSE.

In the beginning God created the heaven and the earth, and the Spirit of God moved on the face of the waters. And God said " Let there be Light and there was Light."

Then, as Light inspired Life, the mysteries of creation unfolded, crowned at length by a being in the image of his maker, endowed with God-like attributes.

This creation, so august, so abject, so free to choose, yet so wholly dependent on the Divine Law-Giver; so miserable when forsaking the law—so blessed when keeping it,—this highest creature must have light to guide him on his way. In asking for light,—in listening to the voice of God,—he leans upon the Divine outstretched arms, and is kept in communication with the most High.

Looking back over the ages for those who grew in spiritual stature to the undwarfed grandeur of inspired manhood, we see Abraham, obedient even when tested through the dearest object of his affections; Joseph, whose whole life was filled with Light, and whose gentle love of kindred, united him to all hearts; Moses, ascending the lonely heights of Sinai, (where all may speak with God, face to face) and promulgating his laws with the authority of " Thus sayeth the Lord;" Samuel, with attentive ear, closely listening to catch the Divine command, with " Here am I, speak, Lord, for thy servant heareth;" Daniel, the keeper of the divine law the servant of the living God, whom no persecutions or threats could intimidate, who, walking in the Divine Presence, rose to the height of a teacher of mankind by standing for all time as a guide to those who would resist the seven-times heated furnaces of temptation.

For the leading onward of the race, a greater than Abraham, Joseph, Moses, Samuel, or Daniel was sent. On the ears of the startled watchers on Judea's plains, sounded the glad tidings of " Peace on earth and good will towards men." And through the beloved Son, so filled with the spirit of God (as was the mother who bore him), the nature of the *Father* is revealed, and a new commandment, exceeding the commandments of Moses, is given—" That we love one another." As the highest revelation of the Divine Giver of life, was this gospel of " Good will towards men." It was an era of regeneration, the saving principle of which was Love,—the Love of the Father towards all mankind as children. Then was

the dawn of the glorious idea of the " Fatherhood of God and the Brotherhood of Man."

Slowly in all times have the doctrines of the Master been understood, and the vital essence of his teachings been received. The generation which crucified, could not obey him, neither could the generations which followed. So long as his doctrines are in advance of mankind, so long must he remain the teacher, inspirer, master, savior, of those he came to seek and to save; and he came to all men.

Instead of the life-giving spirit, symbols and signs came to be accepted. In the church which ruled the Christian world, the love of gain grew apace. Men closed their eyes to the light, and their ears to the voice of God. A mental and moral darkness fell upon them. Finally, the Church and State combined and wealth began to flow into the treasury from a traffic in indulgences. Indulgences to commit sin! St. Peter's at Rome, the grandest church in Christendom, was completed under Pope Leo X. by the sale of indulgences to commit murder, and every prohibited vice. Have we ever known such degeneracy? How long did this abuse continue? Oh, it went on until it became a madness,—until profligacy and pollution were withering the life of society at its very root. At length the conscience of men began to be aroused. Propositions for restricting the sale of indulgences were made. Perhaps a higher price was demanded for the privilege of sinning. The Germans at Constance and Basle demanded the unconditional abolition of the sale of indulgences. Then rang out the voice of Martin Luther through the length and breadth of the land. Because he listened to the voice of God in his own soul, he hurled defiance at the Pope of Rome. Nearly four hundred years ago, that reformation was wrought. The Bible had been a sealed book, but now it was placed before the people. We read our Bible, we read of the holy Nazarene, but indulgence to commit sin yet continues, and still, as ever, God speaks face to face with his children!

In the dark days of human slavery the servants of the Most High went forth, and amid persecution and sacrifice, gave liberty to more than four millions of God's oppressed people. Slavery's chains were not riveted by the love of cruelty, but by the love of gain. The whole country participated in the gigantic sin of that inhuman traffic! Cotton was king.

What is the name of our King to-day? Still " I am the Lord"—" Thou shalt have none other gods before me," is proclaimed. But men have bowed down to idols of gold, and Alcohol is King!

Has the primal law been suspended? In every church in this broad land to-day the little children repeat " Thou shalt not kill," and how many fathers will to-morrow sign a license for a place to sell liquor,—an indulgence for men to commit murder!

Men can no longer sin through ignorance. The children of our schools can teach their parents the poisoning, fatal effect of Alcohol,—that raging stream of death that turns men into demons, chilling the warmest impulses of the heart; deadening the finest intellect,—making of God's noblest creature a foul caricature of his work!—causing murder—causing

woe—causing the violation of all the divine precepts.

It is not that we are blind and cannot see the outstretched arms pleading for rescue from this living death. It is that we turn aside from the ghastly spectacle, for Alcohol is King.

From this sale of indulgences the nation is gathering into its treasury untold wealth, as the price of murder and every foul deed. Ah, the wages of sin is death!

What has been the history of every nation which has risen to worldly splendor, forgetful of the fact that "righteousness exalteth a nation, and sin is a reproach to my people."

Assyria, boasting thirteen centuries of Nimrod's descendants, fell to ruin through luxury and wine, Babylonia laid down her empire when the drunken and sacrilegious Belshazzar read the words of doom, and Darius, the Mede, took the kingdom. Persia, in turn, succumbed to luxury and strong drink and fell into the hands of Alexander who, himself, became the victim of the base conqueror, Alcohol. As Egypt, Assyria, Babylon fell, so fell Greece and Rome from the height of splendor to ignominious death. Wealth was their idol and Bacchus their god!

Oh! ye poets, looking sunward, drinking in life's gladness only,—

"Ye who pipe and ye who play
In a sunshine holiday"

for every Bacchus, ivy-crowned, whom your imagination pictures with the "merry face," set beside it the sad face of the reality,—the disfigured, unmanned face of the victim,—the sorrowing faces of mothers, wives, and children, with all the sunshine gone from them,—and sing no more of the merry Bacchus who has caused all this woe.

An old, old poet, grander than Anacreon, and wiser than Pindar, and sadder for experience, said "Look not on the wine cup when it is red, when it giveth his color to the cup, when it moveth itself aright. At the last, it biteth like a serpent, and stingeth like an adder."

In the whirl of maddening pleasures and vices which brought upon England the most terrible plague that ever visited a nation,—in that dissolute age of Charles II.,—the same old story is repeated—wine, luxury, debasement, and man fallen from his high estate. Intellect, affection, honor gone out of the nation because there was license to commit all the sins which God's voice has ever thundered "*Thou shalt not.*" "*Thou shalt not*" applied to the evils of our time, comes within the governing and restraining functions of human law,—the paternal form of government founded on the idea of protection and of "good will towards men." It is the legal expression of the new commandment "Love one another."

Can a nation calling itself Christian, countenance the licensing of sin, receiving from that source a greater income than from the combined revenue of all that is beneficial and ennobling? Ah, the wages of sin is death!

The unthinking world takes cognizance of the outward wreck and ruin of the drunkard, the rags of poverty, the filth of the gutter. But what are

these to the inward, spiritual ruin? In the filth of the gutter which clings to those rags see the defiled soul—poisoned, seared, made obdurate by the fires of a worse hell than the mind can conceive.

And the defiled soul is as much defiled in purple and fine linen as in filthy rags. And the mother's head is bowed, and the wife's heart is broken, and the God-like intellect is dethroned, just as much in the glittering saloon which has paid five hundred dollars for the privilege of doing all this, as the mean low groggery which has paid but five. Do you not see in Iliac License, the glitter of Assyria's wealth, and the funeral pyre of her greatness?

The old Germans said well of the sale of Indulgences, such a system cannot be restricted; it must be abolished. So say we of our license system.

Since we are convinced of the baleful effects on mankind from the use of this poison, let us prohibit the use, sale, and manufacture of this old, old enemy, the destroyer of souls.

CONSTITUTIONAL PROHIBITION.

EDITORS INTELLIGENCER AND JOURNAL:

IN the issue of the INTELLIGENCER AND JOURNAL of Fifth month 25th, there is published a letter signed by John J. Janney, of Ohio, in reference to Constitutional Prohibition. There is, perhaps, no question of such vital importance to the people of our State, and certainly none which members of our Religious Society so generally advocate as the adoption of the Prohibition Amendment. It has, no doubt, been a source of great surprise and regret to the readers of the INTELLIGENCER AND JOURNAL that a Friend residing in another State, not directly interested in the struggle in this State, should have felt it right to thus oppose the Amendment campaign here, and throw his influence so far as it can be felt at all in favor of the saloon, and against the home. While he does not deny that Constitutional Prohibition, properly supported by the people, will fully accomplish the purpose intended, he opposes its adoption on technical grounds, that have long since been thoroughly considered by the best minds of the country and may now be regarded as settled, even though these decisions have not yet had his approval.

The first objection presented is that "such a provision has no proper place in a Constitution." This objection is fast becoming obsolete. It has been considered and answered in our highest judicial tribunal,—the Supreme Court of the United States,—and in the highest Courts of the States that have thus far adopted Prohibition Amendments. We should be willing to admit that such Amendments *have* a place in the Constitution when those especially qualified to pass upon questions of constitutional law have so decided.

The second objection urged is that "Constitutions do not enforce themselves, and if the Amendment be adopted, unless the Legislature should enact the necessary laws, it would be merely a declaration of sentiment of no force or effect."

Our friend seems to forget that no law enforces itself; that an Amendment cannot be adopted unless

a majority of the voters favor it; that the same people who adopt an Amendment elect the Legislature; that the text of the Amendment provides that laws for the enforcement of its provisions must be enacted by the Legislature immediately after its adoption; and that every Legislator, before he can take his seat, must solemnly promise to support the Constitution, of which the Amendment would then be a part.

The chief purpose of the letter referred to seems to have been the presentation of a plan of limited local option, as our friend's remedy for the saloon evil. In this State the people have had some experience with local option, as many Friends who voted for it in 1872 will remember. After nearly three-fourths of the counties in the State had adopted local option, and in spite of the fact that one of the provisions of the law was that it should continue in force three years, the law was repealed by the succeeding Legislature, and all that had been gained was lost. Constitutional Amendments cannot be repealed by unprincipled Legislators at their pleasure.

In conclusion it may be suggested that as our friend's plan is not now the issue before the people of our State, and Constitutional Prohibition is, it might have shown a greater interest in the welfare of our people, had he waited until the present issue is decided before advancing a theoretical plan not yet approved by practice. * * *

TOBACCO.

THE history of this subject indicates that tobacco was first used for its narcotic effects, by the aborigines of this country. There is reason to suppose, however, that the plant previously existed in Asia, although we have no reliable authority for its having been used for the purposes to which we have devoted it. On his voyages of discovery, Columbus first beheld at Cuba the habit of smoking. There seems to have been no particular aptitude in the European taste for the use of the weed, as it was as late as 1560, when Jean Nicot, the French Ambassador at the court of Portugal, reported of its use to his sovereign; almost nothing having been known of it in Europe prior to that time. It appears that the adoption of the pipe into Europe is attributable to an Englishman, Rapbeleni, who having acquired the habit of its use in Virginia, introduced the practice into his native country. Nearly or quite a hundred years elapsed after the discovery of the habit by Columbus, before it took root as a custom of the English people.

The three centuries following, however, have spread it broadcast over the earth, and sown the seeds of physical and mental weakness and degradation, in one of the most filthy, enervating, and demoralizing habits to which the human family is addicted. The expensiveness to the user, which to the casual observer of its effects constitutes the chief objection to it, is the merest shadow, compared with its more direful results. That it costs the inhabitants of the city of New York, in common with all other large cities of the land, more for cigars than for bread, and that the expense to the people of the na-

tion amounts to six hundred million dollars annually for its use as an inebriating narcotic, are startling facts to present to the mind; but they sink into insignificance when the terrible physical and mental deterioration and suffering to mankind come to be known and appreciated. The once politically important kingdom of Spain, with its chivalry and rich appanage of art and literature, which made its inhabitants one of the first people of the earth, has dwindled into pitiable indolence and weakness, at the instance of the tobacco habit as the principal cause. Spain is now a vast tobacco shop, and takes consolation in the fact, that other nations are rapidly approaching to her level. It is probable that nothing so well as a knowledge of the injurious effects of tobacco on the human system, attained through study of the subject from a scientific standpoint, will become the all-sufficient means of restraint from its use. In view of this, it is not unlikely that in the course of time possibly not very far into the future, (as the philanthropist is now earnestly engaged in the endeavor to elevate mankind to an increasingly higher plane of moral conception and accountability) this subject of the tobacco habit, may demand recognition in our public schools as it does now in some of the churches of our country.

In the schools, the rising generations may receive scientific instruction on the poisonous and damaging properties of tobacco, which alone can properly fortify them against the error of acquiring the habit of its use. In some of the States, Pennsylvania for example, legislatures have seen the necessity for laws requiring that the physiological, pathological, and toxicological effects of alcohol on the human system shall be taught in the public schools. Next in importance to this statute, is one compelling scientific knowledge of the effects of tobacco on the human organism. It is highly essential that something be done to stay the destruction to health, character, and even life, for it materially shortens life, consequent upon this pernicious thing. J. D. J.

LIFE.

MORE life we thirst for, but how can we take!

We sit like children by the gurgling sea,

Dip with our shallow shells all day, and make

A boast of the scant measure, two or three

Brief drops caught from the immensity;

But what are these the long day's thirst to slake?

There is the sea, which would not be less full

Though all the lands should borrow of its flood:

The sea of Life, fed by the beautiful

Abounding river of the smile of God,

Source of supply and fountain of all good,

Boundless and free and inexhaustible.

There is the sea; and close by is our thirst,

Yet here we sit and gaze the waters o'er,

And dip our shallow shells in as at first,

Just where the ripples break to wash the shore,

And catch a tantalizing drop, nor durst

The depth or distance of the wave explore.

Ah, mighty ocean which we sport beside,

One day thy wave will rise and foam, and we,

Lost in thy strong, outgoing, refluxing tide,

Shall be swept out into the deeper sea,
Shall drink the life of life, and satisfied,
Smile at the shore from far eternity.

—Susan Coolidge.

WHILE IT IS DAY.

If I could live without the thought of death,
Forgetful of time's waste, the soul's decay,
I would not ask for other joy than breath;
With light and sound of birds and the sun's
ray,

I could sit on untroubled day by day,
Watching the grass grow and the wild flowers
range

From blue to yellow and from red to gray,
In natural sequence as the season's change;
I could afford to wait but for the hurt
Of this dull tick of time which chides my ear;
But now I dare not sit with loins ungrit
And staff uplifted, for death stands too near.
I must be up and doing, ay, each minute;
The grave gives time for rest when we are in it.

—Wilfred Scawen Blunt.

A SERIOUS PUZZLE.

"I WONDER why," said little Sue,
"You say, mamma, 'If I were you
That's not the way that I should do,'

So many times a day!
I s'pose I'm wrong; but I don't see
If you were turned right into me
Why, truthfully, you wouldn't be
'Most sure to do my way!"

—Elizabeth L. Gould, in *Wide Awake*.

SWARTHMORE NOTES.

—Henry Stanley Newman, a Friend of Leominster, Herefordshire, England, gave an instructive lecture upon his Oriental travels, in the College hall, on Second-day morning. He has visited Palestine, and the descriptions which he gave were very interesting.

—The Faculty has ordained that hereafter the class suppers shall be held on the Seventh-day evening immediately preceding Commencement, to fill the date left vacant by the dropping of the Senior Reception. Heretofore the Class banquets have been held on the evening of Class Day, the day before Commencement.

—The Senior examinations are being finished this week and the examinations in the other classes, and for admission to the college, will be held during the week beginning Sixth month 10th.

—The oratorical contest for the prize offered by Assistant Professor Furman in the Senior class, will be held in the college hall on Sixth-day evening, Sixth month 7th. Among the judges will be Professor Silas S. Neff, of the National School of Oratory, and Charles H. Banes, of Philadelphia. On account of this date the Ennomian-Delphic lower class debate will be held on Third-day evening, the 11th.

—Emily C. Yeo, matron of the Chappaqua Mountain Institute, New York, has been visiting the college during the week.

—Frederic E. Pyle has been appointed to the va-

cant position of Presenter at the Senior Class-Day exercises.

—The Sophomores and Freshmen have both had their class pictures taken. A prominent object in the '91 group was the *Phoenix* cup, which that class recently won for general excellence in athletics.

—The prospects for next year are bright; the number of entries for the classes so far being above the average.

DEATH OF LAURA BRIDGMAN.

THE famous blind and mute woman, Laura Dewey Bridgman, died on the 24th ultimo, at the Asylum at South Boston, Mass. A sketch of her life in the *New York Tribune* says:

She was born at Hanover, N. H., on December 21, 1829. She was born possessed of all her faculties, but during her infancy she was subject to severe fits. When eighteen months old there was an improvement in her health, and when two years old she is said to have been more active and intelligent than most children of her age. But scarlet fever, which carried away her two older sisters, brought her very low. She lost her eyesight and her sense of hearing and for five months she was left in a darkened room. Her sense of smell was almost destroyed and her taste was much impaired. The sense of touch was the only means with which she could communicate with others. She could not walk without support for a year, and it was two years before she could sit up all day. Her health returned when she was five years old and her mind became eager for knowledge. Deafness had been followed by dumbness, and it was only by feeling the motion of her mother's hand that she could make any progress. Sewing, knitting, and braiding were taught her.

It was at this time that Dr. Samuel G. Howe, then director of the Perkins Institution for the Blind, in South Boston, went to see her. He persuaded her parents to let him take charge of her, and it was through him that the avenues of instruction were opened to her.

Laura was eight years old when she was taken to the institution, and there she remained until her death. Dr. Howe, assisted by Miss Drew, began her first lesson by giving her the word knife, which was printed in raised letters on a slip of paper. Then a knife was given to her. By repeating this process with other articles she was led to understand what words represented. Then she learned to spell, and at the end of a year her first writing lesson was given her. She was slower in learning to write well than many of the blind children. After she had been sixteen months under instruction, Dr. Howe, in an official report, said:

"It has been ascertained, beyond the possibility of doubt, that she cannot see a ray of light, cannot hear the least sound, and never exercises her sense of smell, if she has any. Thus her mind dwells in darkness and stillness as profound as that of a closed tomb at midnight. Of beautiful sights and sweet sounds and pleasant odors she has no conception; nevertheless, she seems as happy and playful as a bird or a lamb; and the employment of her intellect-

nal faculties, or acquirement of a new idea, gives her a vivid pleasure, which is plainly marked in her expressive features. She never seems to repine, but has all the buoyancy and gayety of childhood."

At this time Laura had become quite expert in talking with her fingers, and only persons accustomed to this language could follow her rapid motions with the eye. In walking through a passage-way, with her hands before her, she knew all the persons she met, and gave them a passing sign of recognition, but she embraced affectionately her favorites, and expressed the varied language of the emotions by the lips as well as by the fingers. After she had been twenty-eight months under instruction she made great progress in expressing her ideas, and had learned to write letters. Addition and subtraction in small numbers were also familiar to her, and she could count and conceive objects up to 100 in number.

On January 29th, 1842, Laura was visited by Charles Dickens, who was so much interested in her that he remained several hours. His visit is described in his "Notes on America." In order to prevent her being made proud and selfish by undue attention, she was never told that people came to see her particularly, and she always understood that their interest was in the blind children generally.

A remarkable faculty of Laura Bridgman was her ability to read character, and this she did literally at her fingers' ends. She was very thoughtful of her friends, and liked to aid the poor. At the time of the famine in Ireland she bought, with money which she had earned by her work, a barrel of flour, which was sent to the sufferers. In the summer of 1852, when she was twenty-three years old, she undertook to make her permanent home in her father's house in Hanover, but she became so homesick that at last she was confined to her bed, and Dr. Howe, who went to see her, found that she was almost at death's door. He had her brought back to the institution, where in time she fully recovered her health. During a subsequent visit to Hanover in 1863 she was baptized and admitted to membership in the Baptist Church, with which her parents were connected. In 1876 she lost the great teacher who had opened to her the avenues of communication with the outer world; her health suffered severely from the blow, and when she went on a visit to her mother the following summer it was thought doubtful if she lived to return. Soon afterward she was called to mourn the death of her devoted friend and teacher, Miss Rogers. Yet, despite these trials, she lived on in possession of a reasonable degree of health, considering her frail physical system.

On December 21st, 1887, the fiftieth anniversary of her admission to the institution was commemorated, Mrs. Julia Ward Howe, Dr. Howe's widow, presiding at the reception. Dr. Howe, in his will, left Miss Bridgman the interest on \$2,000 annually.

If you would lift me, you must be on higher ground. If you would liberate me, you must be free. If you would correct my false view of facts,—hold up to me the same facts in the true order of thought.—
Emerson.

A NINETEENTH CENTURY MARTYR.

A PARAGRAPH in our issue of 5th mo. 18, (under "News and Other Gleanings"), mentions the death of the Jesuit priest, Father Damien, who had devoted himself to the leper community in the Sandwich Islands. Many articles remarking upon his extraordinary self-sacrifice have been published in different quarters. The New York *Herald* says:

"There is nothing in history more touching than the martyrdom of the Rev. J. Damien de Veuster, whose death has been announced by telegraph. Sixteen years ago this heroic young Belgian priest landed on the rocky island of Molokai, in the Hawaiian group. His heart was filled with profound pity for the abandoned lepers. Stories of the horrible immoralities practiced in a pestilential community, where there was no law and no religion, had reached his ears. He yearned to raise the cross there and preach the tender message of Christianity to the ransomless captives of leprosy. Father Damien knew that certain death awaited him. He knew that his comely body would be polluted by the most dreadful disease known to man. But he went to his post with a smile on his face and sweet words on his lips. He found a damned company wailing in the uttermost depths of physical and moral degradation. Distinctions of age and sex were obliterated. Gaunt misery stalked among the dying wretches. Their homes were fit only for wild beasts. With the advent of the priest order was brought out of chaos. Soon the hush of piety succeeded the savage revels of the hopeless and friendless lepers. Little whitewashed cottages arose. Pretty gardens began to bloom. Christian hymns trembled up from the lost men and women. The peace of consolation brooded over the island. Who shall say what the kind ministrations of Father Damien were to the hundreds of ostracised human beings in far away Molokai, or with what holy devotion he soothed the dying hours of strangers? At last the good man was marked by the inevitable brand of nature. He was a leper too—to be shunned by all on earth save those around him. Slowly he perished, doing what he could to ease and comfort his flock while yet he was alive. Such an example ought to silence the man who cries out against the nineteenth century. No age and no race has produced a more supreme type of unselfish heroism."

The New York *Tribune* remarks: "It is true that Father Damien was not the first man to dedicate his life to the service of the victims of perhaps the most loathsome and hopeless of lingering diseases. The records of the Middle Ages, when this disorder, now stamped out from the earth except in a few plague-spots, was a general scourge covering the face of Europe with pest-houses and asylums where its miserable victims were shut up from contact with mankind, are full of such evidences of heroic unselfishness. But it is safe to say that in the whole history of the race no man ever entered upon the service of the most abjectly miserable of his fellow creatures under circumstances involving a more complete self-abnegation than did Father Damien. There was no glittering ceremonial to stimulate his purpose. The

mission was absolutely unattended by any element of the picturesque and spectacular, such as has so often, no doubt, mingled even in the pious dreams of saints. The scene of his labors was to be a narrow strip of land in the Pacific Ocean, and his only associates during his exile a swarm of wretches, whose bodies had been rendered hideous by the ravages of leprosy, and whose souls had been brutalized by a sense of the hopelessness of their doom and of their utter isolation from their fellow men.

"It was not as a man broken, either by age or sorrow, that Damien resolved literally to give his life to these outcasts. He was only 33, at a period when the pulse of a healthy man beats highest. He was endowed with a splendid physique. He had already attracted the attention of his superiors, and was regarded as a man of marked promise in the priesthood. He knew that when he had once taken his place among the lepers of Molokai he must remain a prisoner with them till the end of his life, and that, in all probability, he would die their death. The brutal indifference of the Hawaiian Government had thrust these poor creatures away on a barren peninsula from which escape was impossible. Damien found them a colony of men and women forgetting God and hating men, and abandoned in their desperation to every form of wickedness. The task of bringing order out of chaos like this might well have appalled even a braver soul than his, but he set about it promptly. He first endeavored to improve their physical condition as the best preparation for a moral amelioration. He worked like a slave with his own hands at everything, from the building of their houses to the digging of their graves. A change for the better in their way of living, combined with the influence of his own lofty character and the constant inculcation of the principles of religion, in time transformed this nest of disease-stricken savages into a Christian community. After eleven years passed in this work the blight fastened itself upon him also, and the five years that have elapsed since that time have been passed in the lingering death of leprosy. Surely few men who have given their lives for others have had to endure so much and so long.

"He was not, however, without a disciple. Some years ago a young priest, Father Conrardy, joined him, ready to take up his work when he should lay it down. Revelations of latter-day heroism such as these kindle a new faith in humanity."

"Apropos of the death of the heroic Damien," says the *Churchman*, "we may mention that outside the walls of Jerusalem is a lepers' hospital tended by deaconesses from the German religious houses. Year after year these heroic women, without pretentiousness, without any trumpeting of their work, almost unknown to the world, have waited upon lepers, while themselves literally dying by inches."

The New York *Independent* also calls attention to the fact that Moravian missionaries have volunteered for work among the lepers and have laid down their lives in their service.

SEEK holiness rather than consolation.—*John Owen.*

From The Wide Awake (Boston.)

VOLUNTEER READINGS IN SCHOOLS.

It has occurred to me that some young teachers may like to know something concerning the methods in this famous school,¹ particularly the manner in which general reading is taught, and the very pleasant way in which the children are led up to an appreciation of the spirit of literature; also that boys and girls may like to suggest trying the plan to their teachers—at any event it seems to me worth the telling, since it differs so much from the methods employed in most schools concerning which I know much about.

One of the features of this method is the Friday "volunteer reading," as it is called, of the lower classes in the school. The children are allowed to bring something of their own selection to read in class on Friday. On this day the Principal takes these classes himself, and he says he enjoys them more than he does any work of the week. The children are to make their own selections, the only thing required being that they shall read the pieces over to some older person at home, and look out words they do not know the meaning of, so that they may read understandingly.

This lesson is not an exercise in elocution, as reading-lessons are made in so many schools. It is a mental work, training the understanding, and guiding the taste. To the children it seems so little like an enforced task that they regard it, almost, as a diversion. But their gain in this weekly three-quarters of an hour is great.

The selections to which I listened that day were as varied as the taste of the seventeen or eighteen eleven-year-old readers could make them. They included prose and poetry, natural history and science, narrative, description, and humor. One boy read an amusing paragraph from the newspaper, that gave him an opportunity of showing his powers of imitation, and gave the others the opportunity they all coveted—that of having a good laugh in school-hours. Another read something about the habits of the tiger; still another had selected the description of a steam-engine, and on being questioned showed himself an enthusiastic lover of mechanics. One of the selections was Mrs. Hemans's poem, "The Landing of the Pilgrims," and from that the children had a history lesson of more than usual interest. If you can believe it, there were children who did not know where Plymouth was; that is, they knew it was on the coast somewhere, and there was a general opinion in favor of Massachusetts, although some thought it might be in Virginia. But there were those in the class who had been there, and had seen for themselves the quaint old town on the hill that slopes down to the water, and knew that it was the first abiding-place of the Pilgrims who wandered here in their search for a new home. These pupils had many interesting things to tell, and were encouraged to tell them, and when at the end of the hour the teacher asked if they had learned anything new, the shout that went up the most generally was: "Yes, we know now all about Plymouth!" There was a little bright, round-cheeked girl from far-away Honolulu

¹ Channey Hall, Boston.

in the class, and she got very much interested over this bit of history; it was like an Arabian Night's tale to her. One of the girls had taken as a selection one of Lockhart's ringing Spanish ballads, while another had chosen a religious hymn, and another a bit of lyric description. I am sorry to say that some had chosen very carelessly, and had not read the pieces at all before coming to class. I think, though, they had the grace to be ashamed of themselves when they contrasted their own poor performance with that of those who had selected with care and made a careful study of their pieces. When the author was one who was well-known the teacher would tell the children about him, and give them some idea of the place he held in literature. Then he would name one or two standard writers and suggest that the children should try and find something they had written. This was not given as a task that must be done, but was thrown out as a suggestion, and some of the children were sure to seize upon it and use it.

It may interest you to know some of the selections that have been brought by children in the past. You must remember, in order to give proper value to their taste in selections, that the children who made them are in the two lower classes of the grammar department, and their ages average from nine to twelve years. On the list that I have are Wordsworth's "Daffodils;" Mrs. Browning's "Swan's Nest;" Goldsmith's "Deserted Village;" selections from Edmund Burke, Daniel Webster, Milton, Shakespeare; "The Death of Paul Dombey;" Holmes's "Grandmother's Story of Bunker Hill," "Old Ironsides," and "Dorothy Q.;" bits from Longfellow's "Evangeline," and from Dickens's "Christmas Carol." This certainly shows how the children became familiar with the best work of the modern writers. The leading is so gradual, too, that the children themselves are not aware how much good it is doing them; they will understand it when they are older, and will be glad of the kind of training they got when they were such little children.

Quite in contrast with this method of teaching is one that obtains in another school where elocutionary effect is sought rather than intellectual appreciation. The story was told me by Mr. John J. Hayes, the accomplished teacher of reading at Harvard College. One day a young girl came to him to take some lessons in reading. She had been told that she had talent and would make her mark as an "elocutionist"—how I dislike that word! Mr. Hayes asked her to read something, and she undertook to recite a poem. She gave no meaning to the lines, but she had a great many gestures; she raised her eyes and her shoulders, and did a great many things that were supposedly dramatic, but which were particularly inappropriate to the descriptive poem she was reciting. After she had finished Mr. Hayes said:

"What do you suppose was the poet's thought when he wrote this:

'O, Freedom! thou art not as poets dream,
A fair young girl, with light and delicate limbs;
A bearded man, armed to the teeth, art thou.'"

A blank look came into the girl's face. "I don't think I know what you mean."

"Why, what do you think the poet meant by those lines?"

"I don't know; I never learned that," was the hesitating reply.

"Yet you tell me you have studied it," said Mr. Hayes.

"Why, yes, I have spent a great deal of time on it, and my teacher marked it for me."

"Let me see it," and Mr. Hayes held out his hand for the book which was put into it with an air of the greatest assurance, as though it was to settle every question of her "study."

And what do you think the "notes" were? Simply these: "right hand extended," "weight forward on the left foot," "raise the eyes," "both hands in appeal," and so on. Not a suggestion about the expression, but all meaningless action. This is the way so many are taught who seem to consider elocution "so far ahead of reading."

The great danger has been, in this late craze, that the world would lose its readers in the flood of elocutionists that are being poured out of the hands of teachers of that terribly over-worked "art." In former times it was considered a great accomplishment to read well; that is to read understandingly, behaving in the meantime like a lady or gentleman, and not like a spasmodic marionette whose wires are out of order, and only works by jerks. It is the reading with the understanding that is taught to the little folks I have been telling of, and it is a kind of teaching that will give its results all through a pupil's life.

It seems to me that this method is a good one for all teachers to follow. In place of the stereotyped reading lesson, from the book that is in constant use, take a day occasionally from the routine, and let the children bring whatever they like for their reading exercise. At first they may disappoint the teacher in the selection, but a little judicious advice will be a great help. One thing may be set down as certain. Most children appreciate writing that seems far in advance of their comprehension. They catch the best spirit of an author, and retain it. This is particularly true of poetry. I have been very much surprised at the fancy quite young children will take to certain poems. It is not the jingle of the rhyme, or the smoothness of the rhythm. It is the something in the poem itself that appeals to a chord in the childish mind. Mrs. Browning said that when she was a little girl she "gathered visions from Plato."

I HAVE seen manners that make a similar impression with personal beauty, and, in memorable experiences, they are suddenly better than beauty. But they must be marked by fine perception, they must all show self control. Then they must be inspired by the good heart.—*Emerson*.

It is wonderful, wonderful, and delightful to think how long a good man's beneficence may be potent, even after his death.—*Hawthorne*.

WE judge ourselves by what we feel capable of doing, while others judge us by what we have already done.—*Longfellow*.

THE WORLD'S PRODUCE MARKETS.

WASHINGTON, May 20.—The following facts and figures are from the May report of the Agricultural Department statistician:

Europe is America's only market for wheat. She imports only 144,000,000 bushels, of which the United States supplies 95,000,000 bushels. Europe's own production of wheat is 1,200,000,000 bushels, more than half the world's crop. Of oats Europe imports 19,000,000 bushels, of which the United States furnishes 2,500,000. Of barley the United States imports 7,500,000 bushels.

Rye is the bread grain of Eastern and Central Europe, and Europe imports less than 1,500,000 bushels, while to all countries the United States exports less than 3,000,000 bushels.

Of Indian corn or maize Great Britain takes nearly three fourths of Europe's imports, or 62,000,000 bushels. The United States exports to all countries 68,000,000 bushels. Russia and Roumania have a surplus, and Southern Europe grows enough for home consumption. Europe imports 1,000,000,000 pounds of rice, but none comes from America. Europe grows more potatoes than she needs, while the United States has to import from Canada. Of butter Great Britain, Belgium, and Portugal only are importers. The deficiency is 25,000,000 pounds, and the United States furnishes 24,000,000. Of cheese Europe needs 140,000,000 pounds to supply her deficiency, and the United States sends 118,000,000 pounds. Europe consumes 2,636,000,000 pounds of cotton, of which 1,850,000,000 pounds is American.

Of wool the United States imports, net, 69,000,000 pounds and produces four-fifths of the wool she uses. Europe produces as much tobacco as the United States does, about 500,000,000 pounds, and the United States furnishes her 242,000,000 pounds.

To sum up, the United States exports about one-tenth of her agricultural products, and this is about all that can be hoped to be done. In view of the danger of surplus production, the report calls attention to the home market for sugar, of which we import so largely, and urges that agriculturists turn their attention to that and to the raising of flax and hemp.

PRESBYTERIAN REVISION OF VIEWS.

THE General Assembly of the Presbyterian Church has been in session in New York City, and has just adjourned. Among its most important proceedings was a vote, on the 24th ult., looking to a revision of its "Confession of Faith"—that adopted at Westminster, in Oliver Cromwell's time. Several of the Presbyteries had sent up propositions favoring a revision, most of them particularly desiring a change in relation to the "doctrine of reprobation." This is set forth in the "standards" of the Confession, (Chap. III., Secs. 3, 4, 6, and 7), as follows:

"By the decree of God, for the manifestation of his glory, some men and angels are predestinated into everlasting life, and others foreordained unto everlasting death.

"These angels and men, thus predestinated and foreordained, are particularly and unchangeably designed; and

their number is so certain and definite that it cannot be either increased or diminished.

"As God hath appointed the elect unto glory, so hath he, by the eternal and most free purpose of his will, fore-ordained all the means thereunto. Wherefore they who are elected being fallen in Adam, are redeemed by Christ; are effectually called unto faith in Christ by his spirit working in due season; are justified, adopted; sanctified; and kept by his power through faith unto salvation. Neither are any other redeemed by Christ, effectually called, justified, adopted, sanctified, and saved, but the elect only.

"The rest of mankind God was pleased, according to the unsearchable counsel of his own will, whereby he extendeth or withholdeth mercy as he pleaseth, for the glory of his sovereign power over his creatures to pass by, and to ordain them to dishonor and wrath for their sin to the praise of his glorious justice."

The action taken by the Assembly was the adoption of an "overture" to all the Presbyteries asking them (1) if they desired a revision; and (2) if so, in what respects, and to what extent? Replies to these questions will come up at the next General Assembly, which will be held at Saratoga, in 1890.

GLACIERS IN ALASKA.

THE most accurate information yet obtained concerning these glaciers is that gathered by Mr. William P. Blake in 1863. According to him, "there are four large glaciers and several smaller ones visible within a distance of sixty or seventy miles from the mouth" of the river. The second of these larger ones has attracted most attention. This "sweeps grandly out into the valley from an opening between high mountains from a source that is not visible. It ends at the level of the river in an irregular bluff of ice, a mile and a half or two miles in length, and about one hundred and fifty feet high. Two or more terminal moraines protect it from the direct action of the stream. What at first appeared as a range of ordinary hills along the river, proved on landing to be an ancient terminal moraine, crescent-shaped and covered with a forest. It extends the full length of the front of the glacier."

This glacier has never been fully explored. A number of years since, a party of Russian officers attempted its exploration, and were never heard from again. Mr. Blake reports that, as usual with receding glaciers, a considerable portion of the front as it spreads out in the valley is so covered with boulders, gravel, and mud that it is difficult to tell where the glacier really ends. But from the valley to the higher land it rises in precipitous, irregular, stair like blocks, with smooth sides, and so large that it was impossible to surmount them with the ordinary equipment of explorers. The glacier is estimated to be about forty miles long.—*Prof. G. F. Wright, in Popular Science Monthly.*

RAINFALL AT SALT LAKE CITY.

THE Salt Lake Tribune of 5th mo. 10, says: The rain that blessed this region yesterday was a Western storm. It passed over San Francisco on Monday and, unless some unforeseen disaster comes, this year's crops in California will be the biggest ever known. It was an unqualified blessing to Utah, and

if the weather can resume its normal condition without a frost, the safety of Utah crops for this year will be pretty well assured. There is nothing in the world more beautiful than is the process by which the rain is sent to the desert. In the warm currents of the Pacific the force pump of the sun was set to work last week and enough of the ocean was picked up to cover all this space between the great mountains with moisture. Then the winds were called out of their caves and made to waft the moisture-laden clouds inland. They were cooled by the mountains and part of their life was pressed out of them. Lightened, they found their way into the Great Basin, leaving more and more of their treasures wherever a high mountain crest caught them, until at last they struck the wall of the Wasatch range and in rain in the valley and in snow on the heights, exhausted their stores. The water that fell here yesterday was a week ago being sported in by the Pacific ocean whales. Now it has been set to work to make sure the lucerne and potato crops here seven hundred miles from the nearest ocean coast. Irrigation by artificial means is a wonderful success, but for a perfect success when the whole world is parched, there is nothing else like the blessed rain. In harvest time irrigation by man beats that of nature, but when plants are struggling under the discouragement of a dry spring it is a joy to see nature set her marvelous machinery in motion and with it delight the gasping world with rain.

FUNGUS GROWTHS.

WHAT, forsooth, is a fungus? A wily invader which, having by some unguarded entrance gained access may do all sorts of mischief; may fill our cellar, for instance, and turn us out of house and home, as one is reputed to have filled the cellar of the wine merchant, barring the door from within and threatening summary eviction and what not! Is it not a fearful parasite which, having found lodging in the tissues of its unwillful host, swells to proportions vast, a hidden tumor, sending its human victim all too soon forth from his tenement of clay?

Even when not thus associated with the destruction of nobler forms, fungi are nevertheless held *suspect*. At best and largest they are odd, peculiar, hiding in out-of-the-way places, far from "the warm precincts of the cheerful day"; "off color," as men say, and owing little or no allegiance to our sovereign sun; pale, ghastly things whose homes are with the dead.

It remained for modern Science to dignify the word; nothing shall be stranger to her touch benign. Even the fungi come into prominence as they come into light. Odd as they may appear and mysterious too, they, like some odd and peculiar people, do greatly improve upon acquaintance. Certainly no one can look in upon a basket of *Boleti* fresh from August woods and not greatly admire their delicate tints, their yellows, purples, browns, and grays. Fungi, once for all, are plants, for the most part very simple ones, too; in their forms more commonly useful than noxious, and positively sources of serious injury and detriment in those species only which to

mankind at large are unseen, unknown, and unsuspected.—Prof. T. H. McBride, in *Popular Science Monthly*.

NEWS AND OTHER GLEANINGS.

—"Bird hunters," the Jacksonville (Fla.) *Times-Union* says, "are not making as much money as of yore. Plume birds have been hunted so much that they are very wild and keep in the most inaccessible parts of the everglades."

—"I've known the time," said Superintendent Powell of the U. S. Geological Survey, "when aluminum was more precious than gold. Then it fell to \$8 per pound; now it is \$2 per pound. When it reaches a cost of twenty-five cents per pound it will be generally used. It is about as light as oak wood, four times as light as iron, and has more resistance than the very best steel. It will be used in the construction of houses, superseding wood and stone or brick. It will take the place of iron and wood in ship-building. Just think of a ship constructed of a metal that will but just sink in water. The ocean steamer of to-day built of iron and wood will be as a canal boat compared to a vessel constructed of aluminum. Such a one will fly as a bird over the waves."—*Exchange*.

—There is clearly no attempt in the Bible to disclose the chronology of the earlier ages of the world. What we call "Bible chronology," is a series of deductions from certain statements in the Bible text concerning which Bible students differ widely. Even where figures are given, we know that in some instances these are employed symbolically or suggestively, and we are not sure that they are not so employed in many more cases.—*Sunday School Times*.

—All that is left of Buddhism, apparently, among the educated classes in Japan is its agnosticism and its pessimism, its avowed ignorance respecting God and the future life, and its despair of doing anything for man here or hereafter except by delivering him from the laws of existence in the rest of unconsciousness. Buddhism as a religion is no longer a competitor, even in the lands where it has been dominant, with Christianity. If the world is to know anything of God and the future, it must acquire its knowledge from the gospel of Jesus Christ.—*Christian Union*.

—"I know an instance," says Dr. J. L. Jenkins of Pittsfield, Mass., "where sons, year after year, continue certain benefactions their father was wont to make—what could be more filial! I trust we may yet import from China, or some other pagan country, great increase of ancestral veneration, and so be led to perpetuate the usages of the fathers."

—The machinery palace of the Paris Exposition, now open, is the largest building ever constructed under a single roof. A remarkable feature of the building is that the roof has no interior support, except twenty great arches, binged at the foundation plates and apex so as to provide for expansion and contraction under changes in temperature. The roof is glazed. The length of the building is nearly 1,400 feet, its width 370 feet, and its height 170 feet. A gallery 30 feet from the floor extends the entire length of both sides. At the four corners are steam generators for driving the entire machinery. An idea of the colossal character of the Exhibition may be gained from the fact that the power available this year is four times as great as that furnished during the exhibition of 1878. The American machinery exhibit occupies one-third of the entire space in this building and is in all respects but one more imposing than the exhibit at any previous international exhibition. The exception is in agricultural machinery, in which progress is not shown corresponding

to that manifested in other lines. The electrical exhibit by Thomas A. Edison occupies one-half the entire American frontage, covering 9,000 square feet. It is the largest single exhibit in the Exposition.

—The Commissioners to negotiate with the Sioux tribes of Dakota for the opening of their great reservation in that Territory, have left Chicago on that errand. A dispatch from Pierre, South Dakota, says: "Eleven million acres of land, or 63,750 farms of 160 acres each, to be thrown open to settlement under the Homestead law—that, in a nutshell, is what the Sioux Commission is expected to accomplish. If, as is expected, the Commission secures the signatures of two-thirds of the adult Indians on the great Sioux reservation, this enormous tract of land will be opened within two or three months, and a rush of settlers may be looked for that will make the recent Oklahoma craze seem a tame and insignificant affair. The southern boundary of the reservation is the Niobrara river in Nebraska, its eastern the Missouri, its northern the Cannon Ball, which flows a few miles south of Bismarck, N. D., and its western the 103d meridian, which runs through the Black Hills. The reservation may be said, in general terms, to embrace an area averaging 325 miles in length by 140 in width. The Government, it is understood, is willing to pay for the eleven million acres, which is about one-half of the Sioux Reservation, about \$14,000,000, and it is believed that the negotiations will be completed by August 1. The land is reported productive, the climate healthful, and the territory easy of access."

—An earthquake was felt at the Lick Observatory in San Francisco at nine minutes past three on the 19th of last month. The shock was not heavy, but an extraordinary feature of it was the great duration which is registered on the instruments. For two minutes and twelve seconds the vibrations were felt. They were from north and south.

—Prof. Cleveland Abbe, in the *Forum*, asserts that the study of the known "phenomena has failed to establish that there has been any sensible change in the climate at any point of the earth's surface during the past two thousand years."

CURRENT EVENTS.

A LARGE meeting favorable to the adoption of the Prohibitory Amendment was held at the Academy of Music, Philadelphia, on the evening of the 27th ult., and was presided over by Governor Beaver. Many meetings in the same behalf are being held in all parts of the State.

A STEAMER sailed from New York on the 25th ult., for Greytown, in Nicaragua, with men and supplies to begin the construction of the proposed Nicaragua Ship Canal.

ADMIRAL KIMBERLY, who is in command of the American forces at Samoa, has advised the contending natives to make peace, in order to attend their crops, and avert famine. He now telegraphs by way of Auckland, that they are disbanding, and peace prevails. The Conference of the three nations at Berlin is reported to be about concluded, a satisfactory adjustment being reached.

A TORNADO swept over Clemons, thirty-five miles west of Emporia, Kansas, Third-day afternoon. The news was brought to Emporia by persons on a stock train, the wires being down. It was reported that four persons were killed, and a number injured.

A DESPATCH from Baltimore on the 28th ult., says that since the 21th 2.04 inches had been added to the unprecedented rainfall of the present season, making the total for the month so far 6.32 inches. With the 8.70 inches of April, 15.02 inches have fallen in the two months, which is more than double the normal precipitation.

NOTICES.

* * * A special meeting on the subject of Temperance, under the care of Concord Quarterly Meeting's Committee, will be held at Birmingham Friends' meeting-house, on First-day, the 9th of Sixth month, at 3 o'clock p. m.

Friends and others interested are cordially invited.
MARY MCALLISTER, Clerk.

* * * The Burlington First-day School Union will be held at Crosswicks, Seventh-day, Sixth month 5th, at 10.30 a. m. Will be glad to have members of other Unions meet with us.

WM. WALTON, } Clerks.
SALLIE T. BLACK, }

* * * A portion of the Philadelphia Quarterly Meeting's Committee to visit the smaller Branches, will attend the First-day morning meeting held at Haverford, Sixth month 2d, 1889, at 10 o'clock.

Train leaves Broad street Station at 8.45 a. m. for Wynnewood Station. Returning, leave Wynnewood Station 11.56 a. m., 12.40 and 1.56 p. m.

* * * A portion of the same Committee will attend the Preparative Meeting, held at Merion, on Sixth month 5th, 1889, at 10.30 o'clock a. m.

Trains leave Broad street Station 8.45 and 9.45 a. m. for Elm Station. Returning, leave Elm Station, 11.58 a. m., 12.42 and 1.58 p. m.

* * * Mothers' Day Peace Meeting, 1524 Arch street, Sunday evening, 8 o'clock. A number of speakers will be present. All cordially invited.

S. T. ROGERS, M. D., President.

* * * Circular meetings in Sixth month occur as follows:

1. Calu, Pa., 2 p. m.
2. Middletown, Del. Co., Pa., 3 p. m.
16. Roaring Creek, Pa., 2 p. m.
16. Guopowder, Md., old house, 10 a. m.

* * * Quarterly Meetings in Sixth month occur as follows

1. Whitewater, Richmond, Ind.
3. Centre, Dunning's Creek, Pa.
3. Prairie Grove, Prairie Grove, Ia.
6. Salem, Salem, N. J.
10. Baltimore, Sandy Spring, Md.
10. Genesee Y. M., Farmington, N. Y.
13. Haddonfield, Medford, N. J.
20. Fishing Creek, Millville, Pa.
20. Scipio, De Ruyter, N. Y.

ROYAL

BAKING
POWDER
 Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

We have General Agency for sale of Securities of DES MOINES LOAN & TRUST CO.; also offer Debentures, School and County Bonds.

MILK,
CREAM,
AND
BUTTER
ALWAYS
ON HAND.

LUKENS WEBSTER,

120 S. FIFTEENTH ST.

Milk delivered daily, and butter twice a week to all parts of the city and surrounding country. We are dealing with the most reliable dairies. Orders by mail solicited and promptly filled.

LARD OF THE VERY BEST QUALITY
A SPECIALTY.

HILL'S CHAMPION STEAM COOKER & BOILER.

The best, cheapest, and most durable Cooker in the market. Has tight joints and will cook any kind of meats, vegetables, puddings, etc., and without steam and odor in the house. Can be used on any range, oil or gas stove. Warranted as represented or money refunded. Send for illustrated circular and prices.

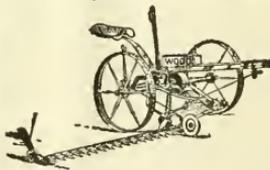

AGENTS WANTED

L. S. GAY, Gen'l Agent, 64 N. Fourth St., Philadelphia, Pa. (Near Arch St.)

The use of the INTELLIGENCER and JOURNAL as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement. When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.

WALTER A. WOOD, HARVESTING MACHINERY.

Mowers all sizes;
Self-Rake Reaper
Single Apron Har-
vester and Binder,
Bundle Carrier,
Tender Attachmen
for Mower, & their
Self-dump Hay rake

This company manufactured and sold last year, 54,036 machines. Ask for the Wood and take no other.

Local agents appointed or information given by

W. H. LIPPINCOTT, Woodstown, N. J.

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 8, 1889.

{ JOURNAL.
Vol. XVII. No. 854.

WE REAP AS WE SOW.

WAS it not said by some great sage
That life is an unwritten page?
We write our fate, and when old age
Or death comes on,

We drop the pen.

For good or ill, from day to day,
Each deed we do, each word we say,
Makes its impression on the clay
Which molds the minds

Of other men.

And all our acts and words are seeds
Sown o'er the past, whence future deeds
Spring up to form our wheat or weeds.
And as we've sown

So reap we then.

—Selected.

NEW YORK YEARLY MEETING, 1889.

In women's meeting, on Second-day, the minutes for the following Friends were read: Elizabeth W. Chandler, a minister from Centre Monthly Meeting, Pa.; Rebecca J. Cowperthwait, and Joseph Horner, ministers from Medford Monthly Meeting, N. J. Then followed the epistles from four of the yearly meetings, and the appointment of a committee to assist the clerks in gathering the exercises of the meeting, and a committee to nominate a clerk and an assistant clerk. In the afternoon this committee proposed for clerk, Amanda K. Miller, for assistant clerk, Jane W. Carpenter, both of whom were reappointed. The report of the Educational Committee was considered, and a committee was appointed to nominate a new Representative Committee for the succeeding three years.

On Third-day, in women's meeting, the Queries with their answers were taken up, and their consideration was begun. (See notes elsewhere on this and subsequent business in women's branch.)

In men's meeting in the morning, after a visit from Elizabeth Thistlethwaite, four queries and answers were read and considered. It appeared that meetings were generally well attended except those in the middle of the week. The falling off in membership in past years was attributed by one Friend to our lack of ministers, and possibly this was due to the neglect of duty by those who were qualified in other respects. Davis Furnas of Ohio, thought there was now no cause for discouragement; and that all our religious duties would be performed if worldly matters were relegated to their proper place. If we would clear out the spirit of the money-changers the,

Lord would come into his temple. Another Friend regarded the query as to love and unity as implying more than not hating. There was a middle ground of indifference to be avoided also. We should cultivate a positive feeling of love, and to this end we should improve our opportunities, social and otherwise, to become more interested in our fellow members individually. Other Friends concurred in expressing similar views of this inquiry. Another Friend said that Christ in presenting the cup to Judas at the last supper showed him a mark of favor. He regarded it a beautiful example, showing that we should even go out of our way to serve, or extend the hand of kindness to, those who show a coldness toward us.

In the afternoon the Committee to visit Subordinate Meetings was reappointed by both bodies, with the addition of the name of Jacob Capron. The Representative Committee reported that they had, jointly with the Representative Committees of Baltimore and Illinois Yearly Meetings, caused to be presented to the new President and Secretary of the Interior, the views of Friends in relation to the Indians, with special reference to securing the necessary legislation for the appointment of matrons to instruct the Indian women in housekeeping and other matters needed in building up the home influence. The committee were encouraged to believe that some practical legislation on this subject might be secured in the near future. The question whether Indian affairs should be referred to the Representative Committee, or to the Committee on Philanthropic Labor, was deferred to a future sitting.

The rest of Third-day afternoon was occupied with the Queries. Special concerns were felt in regard to the ministry. Samuel S. Ash, of Philadelphia, said that our testimony in favor of a free gospel ministry meant something more than that our ministers should not be paid. It meant that we should make it possible for them to preach the gospel. Labor in the ministry was, he feared, too often embarrassed by the want of means to pay traveling expenses. He thought this ought to be the care of the meeting, and not merely of individuals; and further that Friends should take charge of the business affairs of ministers in their absence, and as far as possible prevent the losses which would otherwise be inevitable. Other Friends united with this concern. It was urged that a more efficient, more systematic ministry was, and had been for some time past, the greatest need of the Society; and Friends were urged to consider whether some remedy for this condition

could not be found without doing the least violence to our testimonies.

Third-day evening was occupied by a public meeting of the Committee on Philanthropic Labor. Reports of the sub-committees on Indian Affairs and on Prison Reform were briefly considered, after which the labors of the committee on the Education of the Colored People in the South were taken up. The presence of Martha Schofield and Samuel S. Ash made this subject peculiarly interesting, and the knowledge gained of the workings of the Schofield School in South Carolina, the results of the work, and the present condition and hopeful future of the negro race, was most gratifying. The present need of the school is a larger house for its industrial training departments. Liberal contributions for this purpose have already been received, but additions of any size will be received and acknowledged by addressing Martha Schofield, Aiken, South Carolina, or other Friends interested in this work in the several yearly meetings.

The religious meeting on Fourth-day morning was largely attended, the entire body of the house and a large part of the youths' gallery being occupied. The religious liberty we enjoy by adhering consistently to the doctrine of the teaching of the Spirit, and the consequent freedom from creeds and theological dogmas and controversies, was very acceptably dwelt upon by Samuel S. Ash and others. Some of these matters of doctrine, it was said, were doubtless important, but they were secondary to the spiritual condition of love to God and man and the life of purity and uprightness in obedience to the Voice Within. These matters being secondary should not be made the grounds of division and exclusion, but should be treated in the spirit of love. The meeting was also brought into deep feeling by a communication from Martha Schofield. The query: Who shall roll away the stone from the tomb of the Savior? was beautifully applied by her to the difficulties of life arising from our condition, surroundings, inherited weaknesses and tendencies. There were but few, perhaps, who did not realize how constantly this question must have been with her in the countless difficulties of her life-work, and how constantly it must still go with her, though with an ever-strengthening faith, to the end. Few that heard her could have failed to receive something of the same inspiration.

There were other exercises that might be dwelt upon with profit if space permitted. These were from John Keese, of Manhasset, Robert S. Haviland, Thomas Foulke, Rebecca J. Cowperthwait, Burling Hallock, and Elizabeth Thistlethwaite.

In the afternoon Joseph Horner, of Medford, had a meeting for young people, after which the First-day school held its concluding session. The reports from the several First-day schools were read, and awakened much interest, there being over sixty-five brief responses from Friends present, by way of collateral information and special exercises. The prosperity of the schools and their good effect upon the regular religious meetings, was especially noted. Josiah T. Tubby, superintendent of the Brooklyn First-day school, urged teachers to look constantly to

only true Source of Wisdom, whose light was sufficient for them, and without which they could hope for no true success.

In women's meeting, on Fifth-day morning, the reference of Indian Affairs to the Representative Committee was concurred in, and the epistles from the other yearly meetings were read and considered.

In men's meeting, Jacob Capron, of New York, said the reading of the Queries was profitable as a means of awakening discussion and self-examination as to our condition and needs, and leading to amendment and instruction in these directions. But the Queries should be kept applicable to changes of conditions, should be pertinent to our present needs and dangers. If they were allowed to become obsolete, they would of necessity become a lifeless formality. Other Friends concurred in this view.

The report of the Committee on Philanthropic Labor was then taken up, which was a short general report submitting the reports of the several sub-committees; and appended to these was a leaflet containing the recommendations on some of the subjects as issued by the sub-committees of the Friends' Union for Philanthropic Labor. The work of the Committee on the Education of the Colored People in the South was read and warmly approved. Then came the report of the Committee on Prison Reform. This was approved, but the recommendation that the meeting send a petition to the Governor of New York requesting his signature to two bills now in his hands, called out much discussion. (The two bills provide for the appointment of police matrons in the station-houses, and for the employment of prisoners in the State prison.) The objection of some Friends was not to the reforms proposed, but on account of doubt whether the meeting was sufficiently informed as to the provisions of the measures as finally passed, and also a scruple against frequent petitions. A message was finally sent to women's meeting announcing that men Friends were not able to unite in approving the proposed petitions, whereupon the women sent a committee to represent their strong feeling in regard to the matter. (See notes, below, of women's proceedings.) It was decided to appoint a joint committee on the subject, and this, on the following day, reported in favor of a petition on the police matron bill.

Other business on this day in women's meeting was the report of the Treasurer, the report of the book committee, and the reading of the essays of epistles to be sent to Illinois and Baltimore Yearly Meetings; also the consideration of the report of the sub-committee of the Committee on Philanthropic Labor, on corrupt literature. The report was approved but not the appended leaflet of suggestions. Men's meeting reached the same conclusion. The rest of the afternoon in men's meeting was occupied with the question of reappointing the Committee on Philanthropic Labor, but it was found impossible to reach a conclusion on this question, or to finish the other business, so the meeting adjourned till Sixth-day morning.

On Sixth-day, the proceedings occupying two sessions in each of the two bodies, followed about the

same course in each, except that in men's meeting the epistles from Illinois and Indiana were read, and the epistles to be sent to the other yearly meetings were read and approved. The matter which consumed most of the time of the morning session was the reappointment of the Philanthropic Committee. The extreme views were, on the one hand, to reappoint without change; and on the other hand not to reappoint at all, but to have special committees on each subject and responsible to the yearly meeting only. The conclusion at last united upon was to continue the committee for another year and refer to it the following subjects only: The Promotion of Temperance, Reform in Prison Management, Education of the Colored People in the South, Settlement of Differences by Arbitration, and Discouragement of the Use of Tobacco. The following matters were also disposed of: the publication of memorials, appropriations for several purposes, report and reappointment of Committee on Isolated Members, report of Committee to present a memorial to Congress and the President in favor of international arbitration and against the liquor traffic with the native races of Africa and the islands of the western Pacific; and a greeting to be sent by the yearly meeting to the convention to be held this summer in Switzerland for the suppression of the legalization of vice. John T. Willets was appointed treasurer, and Charles Griffen, 171 Cherry st., New York, was appointed correspondent.

The minute of the exercises expressed the feeling of all, that in a meeting in which great diversity of opinion had been held and freely expressed, the discussion had been very profitable and instructive and there had been maintained a remarkable unity of feeling and kindly consideration of one another's views.

NOTES ON THE PROCEEDINGS IN WOMEN'S MEETING.

THE fourth Query called forth much expression and the concern on the part of several that women, especially the young, should by their example try to lend strength to resist the temptations of intemperance, to their brethren who are so much more strongly tried in their contact with the world. A trifling act of disapproval on the part of a young woman may turn the tenor of a life into a new and better channel. Martha Schofield said: "Very often only a kindly word or thought has the power to help another to resist temptations. The young man is often tempted astray, but if he knows that some one cares for him and will help to lead him back to the right path, great strength will be given." Elizabeth Thistlethwaite felt there was some encouragement in the answers to the third Query as it showed that we are beginning "to see ourselves as we really are," the answer saying that greater care should be had in regard to the several points of this Query. It was felt that as there are so few in our Society needing aid, we should turn our attention to others in need outside of the meeting.

The concern expressed that as those who now fill the higher seats will soon have passed away, others

will have to fill their places, let these seek the true source of inspiration and righteousness, that they may be prepared for these duties. "Be ever on the watch. Let not the little trials come in and take away our peace. We should grow to be willing to suffer and become, as far as it lies in us, more like our Example, remembering that the banner of the Lord is love. If the young Friends could centre down to this condition, they would not so much desire amusements. There is no distress of mind after having done the Father's bidding, as when seeking merely for our own amusement."

On Fifth-day one of the reports from the Philanthropic Committee was sent in from the men's meeting, with which was the proposal that a petition be sent to Governor Hill requesting him to sign the bills known as the "Fassett Bill" and the "Police Matron Bill," which have passed the legislature and are awaiting his signature to become laws. The men reported they had accepted the report, but rejected the proposals. A feeling of sadness seemed to pass over the whole meeting at this, and one woman after another appealed for the poor women who are daily subjected to ill treatment in the station-houses, with no one to care for them and perhaps encourage them to a better life. The whole heart of the meeting seemed to cry out against this decree of the men, not to lift a helping hand to try and raise the fallen. Some thought it best to follow as the men had led the way, but even the young people rose and spoke against it. Haunah A. Plummer told how much value the Police Matrons are in Chicago, caring for the helpless babes whose mothers are brought in drunk, and guarding those who have committed a first offense and trying to lead them in a better way. It was thought possible that the bills might have been changed in their passage, but that this should not stand in the way if they should remain the same. It was decided a delegation should be sent into men's meeting to request them to appoint a committee to act in unison with one from the women's meeting, and thus bring it again before the men. Six women were appointed, Eliza F. Rawson, Mariauna Chapman, Anna Field, Sarah Merritt, Phebe C. Wright, and Eliza Ann Shepherd. As they went out the sympathy of the whole meeting seemed to accompany them. Their request was granted, and Sixth-day morning the joint committee reported they approved the sending of a memorial to Governor Hill in regard to the Police Matron bill, but that there was not sufficient unity to do so in regard to the Fassett bill. The memorial to be placed in the hands of a committee who were to ascertain if the bill had passed the legislature as presented, before forwarding the memorial. Phebe C. Wright and Mary Willits were appointed on this committee.

The Philanthropic Committee was continued.

In the report of the Committee on Isolated Members it was recommended that the monthly meetings take up the work, as they could reach them better. This was united in by the meeting, and it was proposed to send papers and epistles to members so situated. Martha Schofield remarked how pleasant it was to receive such messages, especially written ones

as they are "fresh from the pen and not cold print."

The men's meeting directed that a memorial be sent to the Geneva Convention to abolish State Institutions of Vice, expressing their sympathy with the movement, women Friends concurring. In speaking of the Philanthropic Labor to be done, Hannah A. Plummer said: "We must not be discouraged at the amount of work, but in our daily life learn to choose between the necessary and unnecessary, to know the little things to be left undone. Not what others think we ought to do, but what seems best to our own light is what is right.

'I'm glad to think

I am not bound to make the world go right,

But only to discover and do

With cheerful heart the work that God appoints.'

And one hour of thoughtful silence will nerve the heart for days and days."

LONDON YEARLY MEETING.

LONDON, England, 5th mo. 25.

EDITORS INTELLIGENCER AND JOURNAL:

THE Yearly Meeting commenced on Second-day, the 20th inst., by the holding of the Meeting on Ministry and Oversight. There was a large attendance, including an unusual number of Friends from the American Continent. Samuel Morris, and his companion, Morris Cope, from Philadelphia, were very cordially received. Dr. James Carey Thomas, Baltimore, Prof. J. J. Mills, of Earlham College, (Richmond, Ind.), and Laura Haviland, Chicago, with minutes from their respective monthly meetings, were also present, together with W. and S. Thompson, of New England, and Jno. T. Dorland, Jr., from Canada Yearly Meeting. The reports presented by the quarterly meetings on Ministry and Oversight were generally encouraging, and much expression of view on how to deal with the large and increasing number of those not in membership (said to number about thirty-five thousand) who attend our First-day schools, and show warm attachment to the Society. Those also who are drawn towards Friends through what are now definitely known as "Mission Meetings," claimed similar attention, but with not the same amount of sympathy. The Mission movement is extending, but the lines on which it is being worked are not entirely satisfactory to Friends generally, and confessedly need more judicious management. The question of birthright membership claimed some consideration as manifestly complicating the matter of dealing with the admission of any large number of new members from the working classes.

The Yearly Meeting proper commenced on Fourth-day morning and was not considered to be larger than of late years. The reading of the certificates of the two Friends from Philadelphia Yearly Meeting elicited many expressions of hopefulness that the time might be approaching for a renewal of correspondence with that Meeting. One Friend thereupon remarked that seeing we so very cordially welcomed our dear Friends from a yearly meeting with which we had not corresponded for a great many years, he hoped that it might be a step towards dis-

continuing the formal annual letter, which it was now evident was not a necessity—in order to receiving Friends traveling on religious service in this country from America.

A memorial concerning the late John Bright, from the meeting to which he belonged, was read, and will be, no doubt, widely copied into the public press. It treats his character very fairly and claims a good deal of credit for his training in the careful manner of Friends sixty years ago.

Again the subject of the conducting of Mission meetings, Bible classes, and adult schools, claimed attention and a good deal of criticism and much counsel was extended, encouraging Friends to have faith in their principles and not to expect more success by following the practices of other denominations. There is considerable diversity of practice in regard to what goes on in these meetings. In many meetings throughout the country what were formerly First-day afternoon or evening meetings are now conducted as reading meetings, and some as missionary meetings, where recourse is had to the singing of hymns, the formal offering of prayer, and other unfriendly usages. A distinction is endeavored to be kept up as between these meetings and other ordinary old style meetings of Friends.

The number of members was shown to be 15,574, not including Ireland, being a small increase upon last year.

A Friend of some prominence had the temerity to reopen the subject of the publication of "A Reasonable Faith," which gave two out of the three Friends, authors of that little book, an opportunity of defending themselves against his attack, which it was felt had better not have been made, and it was not further pursued. The result of the discussion was an evident gain. * *

MEMORIAL OF SAMUEL J. LEVICK.

A TESTIMONY OF THE MONTHLY MEETING OF FRIENDS OF PHILADELPHIA CONCERNING SAMUEL J. LEVICK, DECEASED.

IN conformity with the custom in our Religious Society of placing on record, for the encouragement of survivors, memorials of deceased Friends who had in their day been conspicuous standard-bearers therein, we believe it right for us to prepare this simple testimony concerning our late esteemed friend Samuel J. Levick.

He was the son of Ebenezer and Elizabeth W. Levick, members of the Religious Society of Friends, and was born in Philadelphia, Eighth month 30th, 1819. The guarded care and training of his parents were as a hedge of preservation to their children, and helped to fit them for usefulness in mature years.

From his infantile days Samuel was susceptible to the tender influences of the Heavenly Father's love, and being of a sensitive nature his sympathies were enlisted for the poor, even in childhood. In early youth he became interested in the colored people living in the lower part of the city, mingling with them in their homes on First-day afternoons and reading to them and instructing them. He af-

terwards procured a room where others joined him in the work of collecting and teaching them such lessons as would advance and elevate them in life. He was a member of the Junior Anti-Slavery Society, and was interested in other associations having for their object the amelioration of the condition of the human family.

In the spring of 1841 he was married to Ellen, daughter of Caleb and Jane Foulke, of Quakertown, Pa., and settled near there as a farmer. In a little more than a year afterward this beloved companion was removed by death. He subsequently married Susanna, daughter of Charles and Jane Mather, and continued to reside at Quakertown until 1848, when they moved to Philadelphia. In 1857 they returned to Quakertown, where he was engaged in business until 1874, when they again removed to this city where he resided the remainder of his life.

As he was faithful and obedient in youth to what he felt called to engage in, he was fitted for a more extended field of labor, and he became a public ambassador for Christ in his twenty-first year, continuing in the work of the ministry for over forty-five years. His gift therein was acknowledged by Richard Monthly Meeting in Fourth month, 1842, and confirmed by Abington Monthly Meeting of Ministers and Elders in Fifth month of the same year. He did not shrink from declaring the whole counsel of God according to his understanding thereof, boldly and forcibly. Earnest, animated, eloquent, and frequently pathetic, bearing the magnetism of his warm heart to his hearers, he was an attractive preacher, especially to the young. His communications were generally of a practical character, frequently giving evidence that they were in the demonstration of the spirit and with power, and when fully equipped in the armor of the Lord and Master no greater valiant could be found in His service. His interest in the free ministry of the Gospel and his faith in its conformity to the teaching of Christ were unbounded. Satisfied that the Religious Society of Friends was the one with which he should be connected, and fully recognizing the ground of its establishment, he was yet no sectarian, but mingled freely with people of all denominations, regarding all as children of the same great and good Father. At times he felt called to appoint meetings among those of other religious societies, which were very satisfactory, calling his hearers not to any creed or form of worship, but ever encouraging them to live up to the teaching of that Power which enlightens the conscience. In our mid-week meetings at Race street he was particularly favored of latter years in addressing the hundreds of school children there assembled, clearly presenting to their comprehension many of the undisputed truths of the Gospel, acknowledged by all Christian sects. He traveled much in the work of the ministry, having visited all the Yearly Meetings except Illinois, and very many of the meetings composing them, and his company and services in the ministry were welcomed wherever he went. While he was not without his seasons of trial and deep proving he was ever able to rise above these, and being blessed with a remark-

ably cheerful disposition he looked upon the bright side of life, and feeling that he had a right to enjoy the good things thereof without abusing them, he practically carried out this view in his intercourse with the world.

Samuel J. Levick was a man of strong and earnest convictions, and very plain and outspoken in the expression of his views. He was not a man to withhold his thought lest the candid expression of it should make him enemies. Many with whom he did not agree in sentiment were inclined to think him too earnest and persistent in the expression of his convictions, but perhaps this should be overlooked in one so thoroughly honest and open in all his words and actions, who never bore malice, was kind and forgiving to all, and who never spoke disparagingly of any in their absence. His strong will and impetuous temperament were often a source of anxiety, and we should mention as instrumentalities of great help to him the steady discretion and wisdom of some of his nearest friends, and the meek and quiet spirit of his wife. He was deeply interested in public affairs, both national and local, active in the work of organized charities in our city, and in the progress and education of youth. For several years he was the efficient secretary of the "Society for the Prevention of Cruelty to Animals," holding this position at the time of his death.

He was one of the delegates to Washington from our Yearly Meeting in 1865, to express our sympathy with the government after the assassination of President Lincoln.

A week previous to his death he suffered from an attack of oppression to which he was subject, but was able to be about the house most of the time. While sitting in his easy chair at the close of a quiet First-day, he was peacefully gathered to his rest on the 19th of Fourth month, 1885, in the sixty-sixth year of his age.

His funeral at old Merion Meeting-house was largely attended, and testimonies were borne by several Friends in the ministry from different meetings.

Read in and approved by the Monthly Meeting of Friends of Philadelphia, held First month 16th, 1885.

MEMORIAL OF REBECCA JOHN.

A TESTIMONY FROM ROARING CREEK MONTHLY MEETING CONCERNING REBECCA JOHN, DECEASED.

WHEN those have passed from our midst who, by obedience to the revelations of the Holy Spirit, have witnessed preservation from the temptations of life, and have been enabled to show forth the fruits of the Spirit in their daily walks, and to receive an assurance of a crown everlasting, we believe there is an advantage in holding such up as examples to those that remain, that these may be encouraged to trust in the power and mind the same light which illuminated their path, and gave them the victory. Under

this feeling we are concerned to bear our testimony to the beautiful and exemplary life of our dear friend, Rebecca John. She was the daughter of Zephaniah and Hannah Underwood, and was born on the 15th day of Second month, 1808, in the county of York, Pa. When about 28 years of age she went with her parents to Centre county to reside, becoming a member of Centre Monthly Meeting. Here she grew more concerned to walk in accordance with her Heavenly Father's will. In her 32d year she appeared in the ministry, and her gift was acknowledged by Centre Quarterly Meeting, held at Centre the 17th day of the 11th month, 1842. She was united in marriage with our friend Perry John, and came with him to reside within the limits of this Monthly Meeting, where she labored faithfully the remainder of her life. Her ministry was sound and edifying.

In the Ninth month, 1886, she was attacked with illness which was attended with great suffering. This she bore with much patience for about nine months, when relieved by death. She once remarked, she believed her Father in Heaven beheld her in this affliction, and that he would do all things right. At another time she expressed herself, saying, I feel so very lappy, and again she said, there was not a cloud in her way, but all was bright and clear. Her sufferings terminated on the 3d day of Sixth month, 1887, and her remains were interred in Friends' Burying Ground, at Bear Gap, on the 6th of the same, where a solemn meeting was held which was attended by many of her friends and neighbors.

Read and approved by Roaring Creek Monthly Meeting, held at Roaring Creek, Fifth month 26th, 1888.

THE USE OF HARDSHIPS.

LET none consider hardships as reflecting on the goodness of the Creator. The difficulties of our state are among its best blessings. The distance at which good objects are placed, and the obstacles which intervene, are the means by which Providence rouses, quickens, invigorates, expands all our powers. These form the school in which our minds and hearts are trained. Difficulty and hardship bind us more closely to objects. We love more ardently what we have suffered to attain, and enjoy nothing so exquisitely as what we have pursued through calamity and danger. It is in such pursuits, when we endure and labor for ends which conscience and religion enjoin, that our whole nature is called forth and perfected.—*Channing.*

HEED not distressing thoughts when they rise ever so strongly in thee; nay, though they have entered thee, fear them not, but be still awhile, not believing in the power which thou feelest they have over thee, and it will fall on a sudden.—*L. Penington.*

SCRIPTURE LESSON, No. 23.

SIXTH MONTH 16, 1889.

JESUS CRUCIFIED.

GOLDEN TEXT.—“And being found in fashion as a man, he humbled himself, becoming obedient even death, yea unto the death of the cross.”—Phil. 2: 8.

READ Mark 15: 21-39.

THE story of the cross and the incidents connected with this lesson are too dreadful to be made the subject of class study. Only in the privacy of the inner consciousness can a scene so sacred, yet so revolting to the feelings, be contemplated.

To those who hold a faith that bases acceptance with the Father just where the well-beloved Son based it,—upon *obedience* to the Divine will, to the Inward voice heard within the soul of every rational creature that has reached the age to understand its teachings,—to the Friend who is truly rooted and grounded in this most blessed and soul-inspiring doctrine of the Gospel of Christ preached by Jesus, in whom the fulness of divinity dwelt without measure, this deed was most cruel and wanton, and, as a judicial transaction, must ever stand as among the most heinous offenses perpetrated by man upon a human being.

The saving power of the crucified Jesus to the whole family of man, is in the example of faithfulness to known duty which he exhibited, faithfulness to the testimony given him to bear to the world, rather than save his life by being false to it. In this sense he becomes the Savior of every soul that, through his example, is willing to suffer, even to the death of all that is precious. The Christ, the anointing power which enabled Jesus to thus suffer, is still able to save to the uttermost, every one seeking with full purpose of heart redemption from all that stands in the way of acceptance with our Heavenly Father.

F. W. Robertson says truly: “In Christ there is not given to us a faultless essay on the loveliness of self-consecration to convince our reason how beautiful it is; but there is given to us a self-consecrated One, a living truth, a living person, a life that was beautiful, a death that we feel in our inmost hearts to have been divine. And all this in order that the spirit of that consecrated life and consecrated death, through love and wonder and deep enthusiasm, may pass into us, and sanctify us also to the truth in life and death.”

Our lessons of the history of the meek and lowly One in this gospel are about closing and we wonder that such cruelty could ever have been committed by human beings. The common people, as they were called, had been oppressed and degraded, not only by the Romans, but also by their own high priests and scribes. Their sense of justice and true manhood seems almost destroyed. Even the chosen twelve could not for a time understand Jesus's teachings about humility and pure, unselfish love for all. They had to grow up to it, as we must try to do, from week to week. He went about doing good to the souls and bodies of the poorest, the most loathsome in their afflictions. He never thought of his own ease and comfort, but only of relieving them, when he himself

"had not where to lay his head." Who could imagine such a life to end in such a death between two malefactors. His enemies did not understand that a pure, heavenly spirit could not be disgraced by any outward circumstance. He told his friends that they, too, must take up their cross and follow him, if they wanted to be his disciples. Not a perishable wooden cross, but to deny ourselves whenever we want to do wrong, or speak an unkind word to or about any one. Sometimes it is hard to keep this feeling down, but in so doing we are bearing our cross.

This Crucifixion lesson is a deep warning to us to grieve not the Holy Spirit. Had the Jews, whom he was trying to serve and to save, but listened to the witness in their own hearts, what life-long sorrow they would have been spared. All the mockery that he endured was as nothing to the sorrow that remained with them.

NOTES ON THE LESSON.

The place of crucifixion is called both Golgotha and Calvary, the one is Hebrew, and the other Latin: they have the same meaning. It is not certainly known why this name was given; some have supposed that it was because the mount resembled in shape a human skull. The most probable opinion is that it was a place of execution, that malefactors were beheaded or otherwise put to death there and their bones left unburied.

Much is being said and written about the exact site of Calvary, but to Friends who believe that every soul has its own cross to bear, there is little except the historic interest that attaches to the exact point where the cross stood, upon which the beloved Son hung for hours in all the agony of mortal suffering. The fact remains that he so suffered: that he suffered for us is a central truth, but not as God to pay a ransom for our inheritance of sin that we may be free, but as a perfect example and pattern that we who are also the sons of God may take heart, welcoming the heaviest cross, and bearing it faithfully as did that beloved Son who taught obedience through what *He* suffered.

We must ever bear in mind the unmeasured difference between ourselves and this "holy, harmless, undefiled suttlerer," who came with his message of peace and good-will, and could say, "I do always the things that are pleasing to him," (our Heavenly Father), yet was despised and rejected by those whom he would save and bless, and through their sin was nailed to the cross; while we, by our own sin and disobedience make the cross; upon which must be sacrificed every will and desire that separates us from the same source and fountain of life in the soul—the same Father in Heaven, who, as we surrender to his guidance, will give us the grace to say, "not my will but thine be done." Robert Barclay writes: "Blessed forever are they, that having truly had a sense of their own unworthiness and sinfulness, and having seen all their own endeavors and performances fruitless and vain, and beheld their own emptiness and the vanity of their vain hopes, faith, and confidence, while they remained inwardly pricked, pursued, and condemned by *God's holy witness in their hearts*, and so

having applied themselves thereto and entered his grace to work in them, are become *changed and renewed* in the spirit of their minds, passed from death unto life, and know Jesus arisen in them, working both the will and the deed, and so having put on the Lord Jesus Christ, in effect are clothed with him and partake of his righteousness and nature; such can draw near to the Lord with boldness and know their acceptance *in and by him*, in whom, and in as many as are found in him, *The Father is well pleased.*" This is given in language common to the age and time in which it was written, but when taken in the simplicity of its meaning has the same significance which Friends who examine for themselves with the spirit of the earnest seeker now accept for the "truth as it is in Jesus."

"HIMSELF HE CANNOT SAVE."

The highest praise of all,
Though meant for mocking-jeer:
Others he came to save:
For him the nails, the spear.

Could he both keep and give?
Himself for us he gave.
He needs must die for love;
Himself he could not save.

So, who would save must give,
Nor think himself to gain.
Who would make others live
Must spare nor love nor pain.

—Emily Tolman, in *S. S. Times*.

AN APPEAL TO PARENTS.

O, DEAR PARENTS, think of your responsibilities to your children! A responsibility that you cannot avoid without incurring a heavy penalty. The great importance of an early religious training cannot be urged too strongly. At the first dawning of the intellect the child's mind should be turned to Deity—impressed with a fear of doing wrong or indulging an unkind word, thought, or deed towards another.

Teach it the love of God, through the tender mother love. Let the parents first cultivate the Heavenly attributes in their own breasts, and their labor will become easy and beautiful, and they will behold their dear children growing up like plants about them. Harmony and peace will prevail in the home, and our Society will not be wearied and harassed trying to devise ways to make our meetings attractive to the young. For they will have grown up so much interested in the Society, and will bring so much life into it themselves, that the heart will overflow with the grateful prayer: "I thank thee, O Father, that thou hast hid those things from the wise and prudent, and hast revealed them unto babes," in Christ.

R. M. T.

Sandy Spring, Md

Our business is to stay ourselves upon the Lord and to fully realize the truth that all things will be found to work together . . . for the very best . . . to those that above all things desire to love and serve Him.—*John Barclay*.

PHILANTHROPIC WORK AMONG FRIENDS.

THE active philanthropic work of Friends has always been one of the chief characteristics of the body. It is natural that this should be the case. Regarding their Creator as a God of love, and cherishing especially the new commandment which Jesus gave, they could not be content without evidencing in a practical manner that their love for their fellow men meant more than a profession in words.

One of the earliest of the concerns of the American Yearly Meetings was that for the Indians. In the endeavor to aid them in the preservation of their rights and an advance towards Christian civilization the labor of many years and the expenditure of large sums of money have been bestowed. There has never been any question, so far as we are aware, that this was a perfectly proper and suitable direction for the Society's organized bodies to take. Committees on the subject have been appointed, and their labors have been supported by funds from the general treasury. It has been regarded as a fit manifestation of the earnest desire of the Society to do good to those who needed help.

The labor for the colored people is of the same nature. Like the Indians they have suffered many wrongs. Like them they need aid. The example of Fox and Woolman and a long line of those whom we most regard has pointed out our duty toward them. The utmost that Friends can do will be but a small part of what needs doing. There is no danger of our exceeding the limits of what is called for, or what is appropriate for us.

Other fields of labor are offered in other directions,—the effort to cast out intoxicants and their kindred, to destroy the evil broods of corrupting literature, etc., to aid the prisoner, and lift the fallen. To some one or other of these many feel especially called, and their earnestness, within due bounds, is a crown of honor to them. So much is this the case, indeed, that our Society must see that it is the gainer by having within its fold those who are not merely formal and professing Friends, but who are friends indeed to all mankind, manifesting their love in acts that are loving.

Exactly how the Philanthropic Work is to be adjusted, so as to complement and support but not to

disturb or displace, the Society's own interior work, has evidently not finally been determined. But we hope no one will fail to see the need and the duty of seeking sincerely for this adjustment, in good faith, and with the sincerest sympathy. The Society is the instrument, and it must be preserved strong, or its work cannot be done. The philanthropic labors are the outcome of that good spirit which the Society must possess in order to be worth preserving. "But wilt thou know, O vain man, that faith without works is barren?" "For as the body apart from the spirit is dead, so faith apart from works is dead."

THE overwhelming disaster which has fallen upon the city of Johnstown and neighboring towns and villages in Western Pennsylvania, is elsewhere described in an imperfect general way. Accurate details have been obtained with difficulty by the newspapers, for the calamity was so sudden and so tremendous that it was almost impossible to learn its exact circumstances.

Funds for the relief of the sufferers have been subscribed in this city and elsewhere. They amount to very large sums, but all will no doubt be needed, and can be put to good use. We are desired to say that Friends' Book Association, southwest corner 15th and Race Sts., will receive and forward contributions of money.

CORRECTION.—In our issue of 6th mo. 1st, in the memorial of Aaron Borton, he is mentioned as the son of Joseph and Elizabeth. It should be Joel. Also, at the close of the memorial, it should read: "he peacefully passed from earth to the enjoyment of the reward for a life well spent," the words italicised being omitted in our printing.

These errors were due to the copy from which we printed.

MARRIAGES.

LONGSTRETH—EVANS.—At the bride's residence, under care of the Monthly Meeting of Friends of Philadelphia, Fifth month 28th, 1859, John L. Longstreth, of Philadelphia, son of the late Daniel and Elizabeth L. Longstreth, of Warminster, Bucks county, and Emily T., daughter of the late John C. and Louisa A. Evans, of Philadelphia, Pa.

DEATHS.

BETTS.—In New Hope, Pa., Fifth month 22d, 1859, Ellen Hart Betts, in her 23d year.

Though young she was a conspicuous example of faithfulness in the household, at meeting, and in the First-day School, as scholar and teacher. Conscientious and true, how endeared to her the circle of her social life,—how precious now the light and love of her memory. So few her years yet an ornament to home and a power in her valued Religious Society. She has spoken and acted a lesson worthy to be seriously heeded by all the companions of her happy days. Her last words were the sweetest and

rarest of all consolations uttered, as they were, from the consciousness of a clear mind: "My time has come. I see my Beautiful Home. I am not afraid to die!"

S. S.

BRINGHURST.—In Wilmington, Del., Fifth month 27th, 1889, Anna Richardson, widow of the late Joseph Bringhurst.

DILWORTH.—At her late residence, Wilmington, Del., Fifth month 28th, 1889, Juliet W. Dilworth. Internment at West Chester, Pa.

GASKILL.—On the morning of Sixth month 2d, 1889, Aaron W. Gaskill, in his 81st year; an overseer of the Monthly Meeting of Friends held at Green street, Philadelphia.

HAMPTON.—Fifth month 5th, 1889, Catharine S., widow of Asa Hampton, in the 79th years of her age; an esteemed elder of East Hamburg Monthly Meeting of Friends, N. Y.

HOOPES.—At his residence in Avondale, Pa., Fifth month 29th, 1889, after a protracted illness, Henry Hoopes, son of F. Pratt, and Abigail Hoopes, of West Chester, Pa., in the 37th year of his age; a member of London Grove Monthly Meeting.

KILLE.—Fifth month 26th, 1889, of scarlet fever, Florence R., daughter of George H. and Sarah B. Kille, members of the Monthly Meeting held at Green street, Philadelphia, in her 8th year.

PAUL.—At Germantown, Fifth month 25th, 1889, Edwin Bettie Paul, in his 44th year, son of the late Bettie Paul.

SCATTERGOOD.—In Philadelphia, Fifth month 25th, 1889, Mary Rhippis, daughter of Elizabeth S. and the late Samuel S. Scattergood, and granddaughter of the late William S. Hallowell.

STOTESBURY.—Suddenly, Fifth month 30th, 1889, at Chelton Hills, Pa., Martha P., widow of Thomas P. Stotesbury, and daughter of the late Thomas (Jr.) and Eliza Parker, in her 66th year.

TAYLOR.—In Newtown, Bucks county, Pa., on the 23d of Fifth month, 1889, in the 83d year of her age, Sarah Ann Taylor, widow of the late Mahlon K. Taylor of Taylorsville, Pa.; a member of Newtown Particular and Mako-field Monthly Meetings.

For Friends' Intelligencer and Journal.

SOUTHERN QUARTERLY MEETING.

We left West Chester the 27th of Fifth month en route for Easton, to attend Southern Quarterly Meeting. Vegetation wore its most verdant robes, freshly washed by the copious rain of the last few days. Some of the corn fields were partially immersed, and wheat fields flattened as if in swarth, or twisted in occasional bunches by varying winds, resembling small shocks. There even were places where it seemed growing in water. Other fields, perhaps of a less rank growth, stood erect, having had strength to resist both wind and wave. It was too early, especially with the swift passage by steam, and our untutored discernment, to judge of the peach crop status, although we have already had the usual tidings through the press concerning quality and quantity. The young orchards looked very fine, and many of the older ones in a flourishing condition. The sun shone out brightly after a very stormy day, an hour or more before reaching Easton, after 7

p. m., when we were met by Robert Kemp, son of Margaret, and taken to their pleasant home, so familiar on other visits in the last twenty years. Third-day morning was bright and promising for the coming days. We took a delightful drive of several miles to the house of Henry and Emma Speakman. They have a great variety of fruit. The strawberries are abundant. We saw them making the boxes for shipping, the strips coming just the right length, two for each box, with slight indentures for the angles, they are easily adjusted, and with a magnetic hammer for the tacks, they are speedily completed.

In the afternoon we attended the Meeting for Ministers and Elders. Eleven were present, including Martin Maloney and ourselves. The word of encouragement was given, that relying on the Divine Power, and being obedient to the promptings of the Spirit, having faith in the Almightyness of Truth, the smallness of their numbers should not weaken that faith, but rather lead to increased watchfulness, that we might show forth the Glory of the Father. An earnest call was extended—that those holding responsible positions in the Society should be careful, that their example might always be helpful, and never a cause of stumbling to others.

We were desirous of making a visit to Hannah Willson and family, also others where we had been kindly entertained in the past; but needing rest, we returned to our kind friend's M. A. K.'s. Fourth-day morning was bright and cool. The roses are in full bloom, in great beauty and variety, and in our ride yesterday we greatly enjoyed the laurel which was abundant on either side of the road for quite a distance skirting the woodland. About 70 assembled for the Quarterly Meeting. After a solemn silence, fervent prayer was offered by a brother, that the Divine blessing might dwell in our midst, in which other hearts united. Then expression was given to the thought of our exceeding great privileges compared with those of early Friends; their devotion, even among the children, in assembling for spiritual refreshment. And, it was asked, is not the need as great and pressing to-day amid the varied engagements, the rush and hurry of life? Should we not be thankful for these seasons of retirement, this time to "be still and know that I am God"? Is there not strength in the united aspiration of spirit realizing that we are members of the one family, with a common need for established relations with the source of life and truth? Then we separated for the business session, which did not require much time. The "Extracts" from our late Yearly Meeting had been forwarded, and a part of them was read, affording interest for all, and especially those not privileged to have attended the Yearly Meeting. The ancient meeting-house, which has been newly roofed, stands close by, a monument of early Friends and their precious memories. We went from meeting to the delightful home of James Dixon on Third Haven River. We had missed his genial presence and cordial greeting at the meeting, and were now glad to find him brighter and better than anticipated after his late illness. The wife and mother who had always kindly welcomed friends had passed from the

earthly home since my last visit, but there was the beloved daughter and niece to make cheer and comfort in the home. We called at Susan K. Bartlett's, whose pleasant residence is on Miles River. At all of these places the roses abound, lending their charmed influence amid other varieties of fragrance and beauty. From there we came to Robert B. and Amanda Dixon's on the same river, a lovely home. The boating in each of these places is a great attraction, especially for the young people, though older ones often mingle with them to enjoy the pleasure. Two of their children are now at Swarthmore, but will soon return to enjoy familiar scenes and share the home life.

In the evening we attended a Temperance Conference in Easton, a committee having been appointed at the last quarterly meeting to provide for one. Elizabeth Lloyd, who is greatly interested, presided, and the meeting was free for the expression of any who wished to participate. They have "Local Option" in this county, Talbot, but labor under great disadvantages from unjust legislation, an act having been passed providing that any one forming a "club" of ten or more can use and freely distribute intoxicants, and there is no limitation to the number of these "clubs." There has been some change in the Legislature and they now hope this law may be repealed,—a hope we sincerely shared. The meeting was thought to be satisfactory, and we adjourned at an early hour, returning with our friends, R. and A. Dixon, glad to rest for the duties of the coming day.

Fifth-day morning was warmer than the last few days. An easterly wind blew soft and rain-like. The "Youths' Meeting" was longer than that of the previous day. Vocal prayer, after a season of silence, arose for our preparation to receive the good seed of the Kingdom. Then the call went forth for a religion pure and undefiled—not valued for its name so much as the fruit it bears,—a "religion that will enable us to do justly, to love mercy, and walk humbly with our God." And most especially that will regulate the whole of life, sanctifying the home with unselfish love, and adorning it with the graces of mind and spirit from whence shall proceed characters that can stand true and steadfast amid the changes and temptations of life. E. Lloyd followed with earnest words emphasizing the power of love which sweetens all other qualities and virtues, and constrains us to walk in the path that leads to Eternal Life. We separated from the dear friends gathered, thankful for the measure of faith which permitted a visit at this time to Southern Quarter. May the feet of others dedicated to the cause of truth and love journey thither. We returned to M. A. Kemp's and after dinner, with little time for rest, bade them farewell, taking train for Philadelphia *en route* for Bedford county.

BLUE RIVER QUARTERLY MEETING.

AFTER a day of wearisome car-riding and waiting at the depot, our little company of five persons, two from Clear Creek, and three from Benjaminville Monthly Meeting, were met at Salem, Ind., by kind friends on the evening of the 23d of Fifth month, and taken to their pleasant homes for a night of rest, preparatory to the duties of the Quarterly Meeting. The magnificent trees of oak, beech, sugar maple, etc., the high hills,—mountains, almost,—the huge rocks, the clear running streams, the springs of pure water issuing from the solid rock, gave to me, fresh from the broad and level prairies of Illinois, a new and strange sensation, this being my first visit to this part of the State since, a child of six years, I lived here for a year or two with my mother. Such a country for roses I never saw,—so many kinds, monthlies, standard, climbing, etc., the bushes of enormous size, so many of them in every yard, every bush literally loaded down with profusion of bloom, their perfume scenting the air around with its subtle fragrance.

After a refreshing night's rest, our host took us to see some invalid friends, with whom we spent a short time pleasantly, and then went on to see an almost bed-ridden friend, 82 years of age, with whom and the family we had a sitting after dinner. Then went to the meeting for ministers and elders, which was small, but alive. We there found two other friends from the first-named meetings. The ministry in this meeting was clear and acceptable. At its close we visited a dear friend who is confined to her chair, having been unable to walk for many weeks, though having good use of her hands and arms, and in full possession of her mental and spiritual powers, and in a sweetly resigned state of mind. In the evening the First-day School Quarterly Conference was held, but owing to the rain falling at the time to convene, it was not nearly so large as usual. I would be glad to give a full account of the exercises, for they were of a high order, and would interest all who feel a concern in such work. They were participated in by many, from the little child of five or six to the youth of twenty. There were essays, readings, and recitations, original and selected. One in particular, original, on "What shall my future be?" by a lad of fifteen or sixteen, contained such excellent sentiments, and was so well delivered, that it was the subject of special comment after the meeting. Others on "Work," "The advancement of the First-day School Cause," etc., were good, and I am sure would compare favorably with the productions of any other gathering of like ages. Blue River certainly has a good showing for a future of rare usefulness among its members, which it is very encouraging to contemplate. No fear, here, I think, of the "decline" so often and so mournfully spoken of in other localities. The reports from all the schools were good, showing an increase of interest in this cause. The First-day School here is very large and well attended, these conditions implying an efficient superintendent and teachers, which is the case.

On Seventh-day, at 10 a. m., the Quarterly Meet-

ing convened, the house being full. It was gratifying to observe so large a proportion of the younger members in attendance, and all giving such appreciative attention to the speaking and the business, of which last there was very little save routine work.

First-day dawned bright and beautiful, after the rain of the previous evening, for which we all felt thankful, as the practice has been for two or three years, to meet in the beautiful woods surrounding the house, the latter not being large enough to accommodate more than one-fourth of the number usually congregated on this day of the meeting. Seats were improvised from the benches of the house, buggies were drawn up in a circle around the speaker's platform, and an attentive audience listened to an inspired discourse of an hour or more in length, dwelling much on the necessity of love and a non-sectarian spirit, though admitting the need of denominational organizations. From twelve to two the time was devoted to the refreshing of the body, dinner having been brought to the grounds in the morning and served in real picnic style, after which we again assembled in as much quiet as it seemed possible with so large a crowd to obtain, and again were words of wisdom and strength handed to us by the Master's devoted servant, to the edification of many.

A most touching and heartfelt prayer at the beginning of the morning meeting brought a very solemnizing feeling over the whole assembly, the influence of which seemed to pervade throughout the continuance of the meeting. It was estimated that from 1,000 to 1,200 people were on the grounds. The need of a large meeting-house was keenly felt. A meeting for the youth, which was well attended by all ages, was held Seventh-day evening. On Second-day morning the greater part of the visitors departed for their distant homes, leaving a kindly feeling among those with whom they had mingled, and carrying with them many blessed memories to cheer their future days.

One point of interest I have omitted: a call upon a venerable couple, aged ninety and ninety-two years, the eldest one, the wife, being very smart and active. Met us, and going out to the carriage with us, urged us to remain and take tea with them; but we thought it would be an imposition to do so. These aged Friends are a link in the chain that binds the past and the present together, and can tell many an interesting narrative of olden times, seeming to have their mental faculties unimpaired save for a partial forgetfulness of recent events. The home of our dear friend, Priscilla Hunt, was also visited,—the place where she died.

E. H. C.

THE only way to escape sterility of mind and character is to feel and live with men and not apart from them, to bear cheerfully the stress and struggle, to be patient with to-day's imperfections, and to struggle after the ideal by entire and continuous identification with the actual. In the swift current of life and action is to be found the most vigorous and victorious living.—*Christian Union*.

THE DECLINE (?) OF THE SOCIETY.

EDITORS INTELLIGENCER AND JOURNAL.

IT is saddening to hear Friends refer, sometimes even in our meetings, to an alleged decline in our Society. They mourn over empty benches and forsaken meeting-houses. If this be really anything more than the commonplace error and plaint of old age, that the former times were better than these, there must indeed be a sad outlook for the organization. It means that the Society has finished its peculiar work, that it gives only in a lessening degree the spiritual and intellectual sustenance that it did formerly, and that therefore it was not founded on an ever-living truth.

If it be admitted that there is some falling off,—and it is questionable whether it is nearly as great as some of our more melancholy Friends imagine,—it seems to me that the cause is much deeper than mere failure to do our duty. This comes from lack of interest. "True," you say, "but this is acknowledged. We should take more interest in our meetings, do our duty in the Society, and our membership will then not fall off as it has been doing, but will increase and the Society will grow and prosper."

Ah, but my Friend, this is effort, conscious effort. Interest does not come so. It is not made. It comes of its own volition. If what is said at our meetings is discouraging; if it tells of taking up a cross in order to follow Christ, of meeting many trials in following the right path, instead of showing the truth that *there* only can be found pleasure and happiness; of Friends being a "peculiar people," which may mean peculiarities in garb and speech; of continual reference to the past and a calling upon modern Friends to imitate those of the early days of the Society; who can doubt that many Friends, and particularly the young, who must be the hope of the Society, will lose interest; the Society will decline while that sort of spirit grows in it and it will deserve to do so. It never could fall back if it were looking forward. History has rich illustrations of this fact. Jesus of Nazareth did not mourn over the past but with a soul in his work, and with manly force brought a *New Dispensation* which did not require effort to interest. When George Fox came he turned his back on the old mistakes of ceremonialism and with contagious zeal exhorted his followers to start *anew*. Can we imagine that those who sat at the feet of these men had to make an effort to be interested? What an absurdity it is to suppose that to sit with the hand over the face weeping for past glories will attract the young or the thoughtful? No, that attitude is not for them. Take thy hand from thy face, O Friend. Thou art blind so. Look out upon the world. Canst thou not see any avenues of modern thought as yet untrampled by the feet of Friends and in which a glimmer of their Heavenly Light is not yet apparent? Are there no places which still need the application of the principles of our Society or must they still be merely meditated upon in the secret of our meeting?

The intellectual world is in a conflict over the authority of the Bible. It is spoken of as "Science versus Religion." Have Friends a part in this or will

they suffer their younger members either to become influenced by the anti-religious side, or else by a revulsion of feeling be drawn into that which is called orthodoxy? To my mind Friends have every interest in the discussion and have already a knowledge of the principle by which the problem might be solved if they would but learn of the present.

Quakerism need not fear that any development in science will disturb its doctrine of the existence of a Supreme Being, or that the most forcible exposition of the handiwork of man in the construction of the Bible can ever cast a doubt on the Inward Power of the Deity.

Perhaps the first and most necessary thing to be accomplished would be the entire doing away with the metaphorical manner in which our doctrines are expressed. We use phrases which are half-symbolical, half mystical, often wholly mysterious. We comprehend them better than is possible to those outside of the Society, but even to many of our own associates they lack the definiteness that they might have if given with the clearness of modern forms of expression. Anyone who turns aside from these conventional terms and seeks with entire freedom of thought to know what lies deepest of all, of the existence of the Universe, of the existence of the Deity and his relations to man, one who will not consider as sacrilege any doubt that may come to him of any received forms of belief or unbelief, one who seeks to know of those things that are ultimate, and will not even acknowledge the existence of a Deity until he has found him, will come back from his quest with a greater knowledge of how deeply imbedded in Eternal Truth are the foundation principles of the Society of Friends. Those principles can never perish, but they may pass out of the hands of the Society if we lose sight of their real depth and meaning.

Modern criticism of the Bible discards the ceremonies which the churches claim are instituted by that Book. Friends rejected them two hundred years ago. Modern criticism can find nothing purer than the precepts contained in the Bible. Friends can make no contention there. Modern science comes from a laborious search through the universe with a confession that there is behind it all a Mysterious Power, a final first cause, that is unknowable, unfathomable. Friends cannot deny the truth of this. They have ever acknowledged that "Touching the Almighty, we cannot find him out." But to this Quakerism adds that the Infinite Power that fashioned the heavens, that from nebulous chaos brought forth untold systems and the countless diversity of living forms that exist on our own planet, is no more absent now from His highest creation than He was from the first formations in the beginning of time. Quakerism tells of an Unsearchable Power in the human soul that is one with that in the material universe. Quakerism invites to a study of that Heavenly Impulse, which, while it leads man to seek that which is good also gives him a discernment by which he can discriminate it from that which is evil, and strength to pursue it in the directed way. True Quakerism leads man to know that all trials and unhappiness that are in control are reserved, not

for those who will, but for those who will not follow the Inspiring Spirit; while only so far as a man lives aright will he have the rewards of peace and happiness.

Are not these some of the "glad tidings of great joy" which the Society of Friends might take up afresh as its mission to the world? If these old doctrines were as distinctly comprehended and as widely applied as they might be, Quakerism would no longer burrow among old ruins with the antiquated implements of the past, but would put on new armor and with fresh vigor would take its rightful place in the front rank of the most advanced thought of our day. Let those who have the love of these principles at heart and the ability to express them come forth to the people and they will surely find that there will be no lack of interest then in our meetings and they themselves will soon forget to look for evidence of "Decline" in our Society.

NEWS OF FRIENDS.

DUANESBURG QUARTERLY MEETING.

THIS was held at New Baltimore, N. Y., on the 22d, 23d, and 24th of Fifth month. Its several sittings were fraught with deep interest. The meeting of ministers and elders was not large, but a solemn covering was spread over it. Isaac Wilson of Canada was in attendance, inciting us to watch against all presentations of evil, even in thought, and to have a care lest our minds wander unduly in our sittings for worship. He admonished us that the Divine insight of the true elder is equal to, or superior to, the gift of the ministry, being made capable of judging of the right qualifications for such worship.

A meeting was appointed for Isaac Wilson on the evening of the 22d, at New Baltimore, in the Reformed Church, which was well attended and much interest and appreciation was expressed by those of other societies who heard him. In his testimony he enlarged upon and made practical application of the beautiful figures of the "Vine and its Branches," showing that the sap of Divine life flowing into and flooding the soul, crowds out everything of evil tendency in our nature, and our lives are thus made fruitful in the Divine sight.

On Fifth-day, at the meeting-house, the exercises of our Friend were mainly upon that condition of mind commonly called luke-warm, careless, and indifferent in regard to our spiritual welfare. He was favored in pointing out the danger of dwelling in these conditions, and with earnest and powerful entreaty moved the hearts of his hearers until many of us felt to accept the blessed invitation, "Come let us go up to the house of the Lord together." The business of the Quarterly Meeting followed in joint session, and the accounts brought from the different meetings were in the main encouraging.

On Fifth day evening a parlor meeting was held at the house of a Friend which was felt to be productive of good. On Sixth-day another large and favored meeting was held at the meeting-house, many beside Friends being present. Friend Wilson opened his exercise with the account in Genesis of

the flaming sword which turned every way to keep the way of the Tree of Life. He said that Adam was not responsible for the sins of the human family. That we are all Adams by nature. That Divine Law always works right in the line of common sense, but this must be enlightened by spiritual insight. Our differences of opinion do not affect the law. Salvation was not to preserve men from the consequences of sin, but to keep them from the commission of sin. God looked upon the chaos and confusion and darkness of the human soul and said, "Let there be light, and there was light."

The inebriate, the profane, the soul steeped in sin, this is the stable and the manger, but light dawns in the East, there shall be a wonderful birth there, if we will but receive him in the way of his coming. The flaming sword, the light by which we are enabled to discern our true condition, accompanied by a consuming fire which burns all dross from our nature. He touched upon many figures and parables taught by Jesus, making plain their spiritual significance. The discourse was long but full of life to the end. The voice of supplication at the close brought the influence of a blessed benediction upon our hearts.

M. J. H.

FRIENDS' MEETING AT ATLANTIC CITY.

WHILE spending a few days at Atlantic City we remembered an advertisement we had seen in the INTELLIGENCER: that there would be a Friends' parlor meeting on First-day morning at 171 South Carolina Avenue. We felt it right not to forsake the assembling of ourselves together, but accept the invitation of this Friend who had so kindly opened her doors that we might meet together in social worship under our own vine and fig tree as it were. While sitting in silence we felt we had the promised blessing and the Master was with the two or three there gathered. After meeting we thought what a lesson of faithfulness this Friend had taught us; that she who had so many cares could lay them all aside, gather her children around her, and invite Friends' to partake with her of the good things the Lord will provide for all those who wait upon Him.

A. S. D.

SWARTHMORE NOTES.

—An interesting tennis tournament has been in progress among the young women of the college during the past week. The contest was begun on Fifth-day morning of last week, and was finished on Third-day.

—The Senior examinations were finished on Sixth-day last. The entire class acquitted themselves very well. The examinations for the other classes begin on Second-day next, and continue through the week.

—The captains of the base ball teams of the two lower college classes and the Preparatory School have arranged an interesting series of games. The contests have been close, and have aroused considerable class spirit.

—President Magill and Elizabeth Powell Bond will tender the Seniors a reception on the evening of the banquets in the lower classes, the Seventh-day before Commencement.

—Only two classes of the Preparatory School will be open for students next year, the third class being dropped with the close of the present term. The college students welcome the change and hope soon to see the Institution distinctively a college. The growth of the college department has been steady of late years, and class after class of the Preparatories has been dropped until now but two are left.

THE CLOUDS.

The sky is full of clouds to-day,

And idly to and fro,

Like sheep across the pasture, they

Across the heavens go.

I hear the wind with merry noise

Around the house-tops sweep,

And dream it is the shepherd boys—

They're driving home their sheep.

The clouds move faster now; and see!

The west is red and gold.

Each sheep seems hastening to be

The first within the fold.

I watch them hurry on until

The blue is clear and deep,

And dream that far beyond the hill

The shepherds fold their sheep.

Then in the sky the trembling stars,

Like little flowers shine out,

While Night puts up the shadow bars,

And darkness falls about.

I hear the shepherd wind's good-night—

"Good-night, and happy sleep!"—

And dream that in the east, all white,

Slumber the clouds, the sheep.

—Frank D. Sherman, in *Harper's Young People*.

THE KING'S DUST.

"Thou shalt die," the priest said to the king.

"Thou shalt vanish like the leaves of spring.

Like the dust of any common thing

One day thou upon the winds shalt blow!"

"Nay, not so," the king said. "I shall stay

While the great sun in the sky makes day;

Heaven and earth, when I do, pass away.

In my tomb I wait till all things go!"

Then the king died. And with myrrh and nard,

Washed with palm-wine, swathed in linen hard,

Rolled in naphtha-gum, and under guard

Of his steadfast tomb, they laid the king.

Century fled to century; still he lay

Whole as when they hid him first away,—

Sooth, the priest had nothing more to say,

He, it seemed, the king, knew everything.

One day armies, with the tramp of doom,

Overthrew the huge blocks of the tomb;

Arrowy sunbeams searched its chambered

glloom,

Bedouins camped about the sand-blown spot.

Little Arabs, answering to their name,

With a broken mummy fed the flame,

Then a wind among the ashes came,

Blew them lightly,—and the king was not!

—Harriet Prescott Spofford, in *St. Nicholas*.

THE DAISY.

NOT worlds on worlds in phalanx deep,
Need we to prove a God is here ;
The daisy fresh from winter's sleep,
Tells of his hand in lines as clear.

For who but He that arched the skies,
And pours the dayspring's living flood
Wondrous alike in all He tries,
Could rear the daisy's purple bud,—

Would its green cup, its wiry stem,
Its fringed border nicely spin,
And cut the gold-embossed gem,
That set in silver gleams within,

Then fling it unrestrained and free,
O'er hill and dale and desert sod
That man where'er he walks, may see
In every step the stamp of God ?

—John Mason Good.

THE CALAMITY ON THE CONEMAUGH.

DURING the time of the preparation of this issue of the INTELLIGENCER AND JOURNAL, an overshadowing of sorrow and pain has prevailed throughout Pennsylvania, and beyond its borders, by reason of the terrible destruction of human life at Johnstown, and near that city, on the afternoon and night of the 31st ultimo. This was caused by a sudden flood in the Conemaugh river, increased by a wave coming down from the mountains above, where the dam enclosing a large artificial lake gave way. The loss of life is without precedent in this country, or in any other "English speaking" country, except in battle. At this writing, (4th instant), the estimate is made, (in a proclamation issued by Governor Beaver), that 5,000 persons have been destroyed and \$25,000,000 of property. But these are only estimates, and it will be many weeks before enough data can be obtained to make anything like a trustworthy enumeration. The destruction occurred at Johnstown, and in the towns and villages above and below. We take from a daily paper the following details.

The flood was caused by the meeting of two storm waves of opposite extremes of temperature. Commencing about 10 o'clock on the morning of the 30th, the wind blew strongly from the southeast, increasing in velocity until it became a gale, traveling at the rate of forty-two to forty-eight miles an hour. This gale blowing off the ocean was warm and heavily laden with moisture. During the same period there was an unusual fall in the temperature in the West, central about Southern Michigan, which moved slowly eastward. The cold wave and the warm, moist gale met over Western Pennsylvania, on the 31st, and the low-hanging rain clouds burst over the Allegheny Mountains, swelling every mountain rivulet to a mountain torrent. The unusually heavy rains of several preceding weeks had filled every brook and river, and when this great downpour of rain came the swollen streams swept everything before them.

Throughout the 31st, and until the next noon the storm raged, and then it dispersed completely. During the twelve hours when the storm was at its

height on the 31st, the rainfall at Harrisburg was 4.34 inches, and these figures will fairly represent the fall throughout the region where the storm was central. To the east, the west, and the south the swollen rivers carried destruction, and the force of the flood was felt throughout the course of the Allegheny, Ohio, and Monongahela rivers, the Susquehanna and Juniata, and even the Potomac and Patapsco rivers.

The point at which the tempest reached its greatest fury and wrought the greatest loss of life and property was in the narrow valley of the Conemaugh River, at the foot of the western slope of the Allegheny Mountains, in Cambria county, about forty miles north of the Maryland State line and ninety-two miles east of Pittsburg. The South Fork Creek rises among the Allegheny Mountains, and a few miles above the scene of disaster it broadens over a little basin, where it was formed into a big reservoir by a huge dam. This reservoir was built in 1840 as a feeder of the old Pennsylvania Canal, which fell into disuse when the Pennsylvania Railroad was built. In 1860 the old dam broke and let out all the water, and the property remained idle until it was bought in 1880 by the South Fork Fishing and Hunting Club of Pittsburg. The club built a new dam at a cost of \$30,000, erected private cottages and a club-house, forming a summer resort for the members of the club.

The basin, which has since been known as Conemaugh Lake was the largest artificial body of water in the country, held by a dam 700 to 1,000 feet wide, 90 feet thick at the base and 100 feet high. The lake was about three and a half miles long, and from a mile to a mile and a quarter wide.

A chain of thriving little villages nestled in the Conemaugh Valley before the flood swept down, beginning with South Fork, a town of 2,000 inhabitants, which was four miles below the dam. There the South Fork Creek changes its name to Conemaugh River. Three miles below South Fork was Mineral Point, a little mining village of 800 inhabitants. Then came Conemaugh, four miles down the stream, a borough of 4,000 inhabitants, with several iron mills and manufacturing establishments. A mile below was Woodvale, a suburb of Johnstown, containing about 2,000 inhabitants and many handsome residences. Cambria City adjoined it with a population of about 2,500, and then came Johnstown, lying on a sloping plateau between the Conemaugh River and Stony Creek, which met there.

Johnstown, fourteen miles distant from Conemaugh Lake, was a busy manufacturing city of about 30,000 inhabitants which had grown up around the vast mills of the Cambria Iron Company. These works employed about 8,000 men, and were the main support of the town. Iron ore and coal were drawn from the neighboring mountains, and the vast plant of the company, which cost about \$5,000,000, lay on both sides of the river. Other industries of varied character had grown up in and about Johnstown, making the city an important manufacturing centre. Just below this point the river is spanned by a heavy stone bridge recently built by the Pennsylvania Railroad to replace an iron structure. Then came the little settlement of Sheridan, the tele-

graphic station of Sang Hollow, six miles below Johnstown; the village of Nineveh, four miles further down; New Florence, six miles below, and Bolivar, three miles beyond, about twenty miles from Johnstown.

Swollen by the steadily pouring rain the Conemaugh River rose above its banks and began to spread over the lower portions of the towns along its course early on the 31st. Rapidly the water rose higher and higher, but the people, who had seen many freshets in the valley, felt no great alarm and feared no great disaster. In the midst of the storm the alarm was sent down the valley that the great South Fork dam, which backs the Conemaugh Lake 250 feet above the river level, had weakened and threatened to burst. It did break at 3 o'clock that afternoon, and in an hour had poured down over the doomed valley. Some contractors who were building a new draining system at the lake tried to avert the disaster by digging a sluice way on one side to ease the pressure on the dam. They had about forty men at work, and did all they could, without avail. The water passed over the dam about a foot above its top, beginning at half-past 2.

There had been but little rain up to dark of the 30th. When the workmen woke in the morning the lake was very full, and was rising at the rate of a foot an hour. It kept on rising, until at 2 o'clock it first began breaking over the dam and undermining it; men were sent three or four times during the day to warn people below of their danger. When the final break came at 3 o'clock there was a sound like tremendous and continued peals of thunder, trees, rocks, and earth were shot up into mid-air in great columns, and the wave started down the ravine. A farmer who escaped said that the water did not come down like a wave, but jumped on his house and beat it to fragments in an instant.

At the present time the lake looks like a cross between the crater of a volcano and a huge mud-puddle, with stumps of trees and rocks scattered over it. There is a small stream of muddy water running through the centre of the lake site. The break in the dam is about 200 feet wide, and there is but a small portion of the dam left on either side.

Before the wave came down, the overflow of the Conemaugh was such that the streets of Johnstown were flooded to a depth of three or four feet. Awakening to a sense of their danger the citizens strove to remove their goods to the mountain side, and they struggled about in the torrents that poured through every street. Up in Stony Creek a great boom held in check a mountain of logs. The swollen stream tugged and strained at this mountain of lumber until it gave way, and with a mighty roar the enormous mass hurled itself down into the submerged section of Johnstown, crashing through the houses as though they were flimsy structures of cardboard, and sweeping dwellings and all their contents of living beings and household goods off into the Conemaugh River and to death. But this was only the beginning, and Johnstown was so far the only suffering town. Then the wave from the bursted lake came down. The enormous volume of water

swept along the course of the Conemaugh Creek, dealing destruction on every hand, obliterating the villages of Mineral Point, Conemaugh, and Woodvale, and rushing upon the city of Johnstown and its suburb Cambria City, already wrecked by the breaking of the boom in the Stony Creek. With a rush and a roar the torrent swept the last vestiges of the city down the river, hurling houses, mills, machinery, timber, and trees against the massive stone bridge of the Pennsylvania Railroad, and forming a dam that held back the flood until Johnstown was buried thirty feet beneath the turbulent waters.

Upon the tracks at Johnstown two sections of the Pennsylvania Railroad's day express were standing, and three or four of the passengers were drowned. The round-house, with its forty locomotives, the Cambria Iron Works, with their massive machinery, all were swept like crumbs from a table into the seething flood and heaped upon the vast pile of wreckage. Most of the passengers on the trains fled up the mountain-side in time to escape the flood. On every hand the people of Johnstown were battling for life in the flood, and cries for aid fell only upon the ears of those who were powerless to help them. In the whirling wreckage the victims were crushed and torn and forced out of sight beneath the waters.

Many who floated upon roofs and timbers went to a death more horrible than that of those who were swallowed up in the flood. The stone railroad bridge withstood the flood, but the embankment at its western end was washed away. The huge pile of wrecked dwellings and broken timbers that lay against the stone viaduct caught fire from overturned stoves and lamps inside the houses and the vast pile became the funeral pyre of hundreds of unfortunate creatures imprisoned there.

Below Johnstown the smaller towns of Nineveh, New Florence, and Bolivar escaped utter annihilation, but to their inhabitants fell the sad lot of looking helplessly upon the people who were swept past, dead and alive, in the raging flood. By hundreds they counted the unfortunates, but were powerless to render aid, except to a few who came within easy reach. At Sang Hollow, six miles below Johnstown, the operator in the Pennsylvania Railroad signal tower counted the bodies as they floated past, and it was he that sent over the wires the first definite confirmation of the reports of the dread calamity in the valley.

All along the river banks lay the bodies of the dead, swept ashore and half buried in the mud or caught by the bushes through which the high waters flowed, and the mute story of disaster thus told was all that could be learned for two days.

Not until late on the 2d inst. was it that any one was able to reach the spot where Johnstown had stood. Then as the first men crossed the river the story of death and ruin was told without words, for of all the thriving city of 30,000 inhabitants not a half-dozen buildings remained standing, while the bodies of the dead lay on every side, left by the receding waters. As a haze after village in the track of the flood was reached the story was unfolded in all its sickening details, and the utter devastation of

the once thriving valley was seen to be complete. Thousands of people whose homes, relatives, and friends had been lost in the flood were roaming upon the mountains without food, shelter, or sufficient clothing, and there was the most urgent need of the relief which could not be furnished until after days of painful waiting. Bridge after bridge along the railroads on either side of the valley of death had been destroyed and miles of track washed away, so that communication with the outer world could not be restored until after days of toil by hundreds of workmen.

BRANDYWINE BANKS—ABOVE THE FORD.

"It is either on the Wissahickon or on the Brandywine" was the remark made by an artist friend when I showed him the negative from which the illustration in this number was taken. What gave special value to the opinion was, first, it was correct, and, second, the fact that this same friend had carried his camera to the antipodes in search of landscape attractions, and hence he was a judge.

It was a distinct recognition—this verdict of his—of a peculiar grace and charm which, in all his knowledge, no other streams than these two possessed.

Along the Brandywine no bank or vista repeats itself. From source to mouth along the stream there are no landscapes in duplicate. It is a region that changes constantly as you go, and hence it is one of perpetual surprises. Each bend in the road awakens a new emotion or produces a new impression. While its views seldom or never attain to grandeur, on the other hand, they never degenerate into tameness. I do not know a mile of its course that would not afford at least one striking or captivating picture. At one place, without moving the tripod of my camera from where I first plant it, I can obtain four views, each of which *connoisseurs* have pronounced beautiful.

However, quite far apart from the impression such a view may ordinarily produce, there are certain practical suggestions which it calls up. It serves to indicate the kind of land on which, even in this *acre scarce* region, trees may be not only useful, but where, in the long run, they may prove to be the best crop such land can have. The complaint is often made, "There is no place here where trees can be planted without using soil which is worth more for something else." Tell me, friend, whether land which any springtime may be beneath the waters of an overflowing stream, can be of any great value for raising cereals? It may be a splendid walk for your sleek cattle, but, as a rule, there is hardly an acre of other equally good land from which you do not reap larger crops and obtain more pasture. At all events, *along the stream banks*—even if these trees serve no other purpose—they will be living, strongly-anchored posts to which you may fasten your wire fencing, in assurance that it will remain longer under pressure of ice and flood than simple "post and rail" will do.

But the bank of the other side is a hillside. It is too steep to farm, but it nurtures in a somewhat thin soil a luxuriant growth of trees. If it did not, the ground would be wasted and go to swell the list of

useless acres, of which even Eastern Pennsylvania contains not a few. Notice—and if your eyes be sharp you will detect the suspicion of a road which is snugly hidden in just the most attractive way by the vegetation fringing the bank. This leads to the inquiry: Whether a country is not the better for being beautiful; whether, indeed, in spite of all the utterances of self-styled practical men to the contrary, they are not themselves most profoundly impressed by an attractive landscape? When they speak of a new country, is not their first statement: "It is a beautiful country," or the opposite? Don't evade this question. Would you knowingly (without the very strongest inducement) settle or buy in a region that was desolate, dreary, or uninviting? Other things being equal, would not your choice always rest upon a home where clumps of trees added variety to the landscape? So then, after all, it appears that these scattered groves, these tree-lined stream banks, do attract men! But attractions always have a value—usually a cash value! Read what Mr. Harrison has so well said in *Garden and Forest* concerning the removal of the trees from the slopes of the White Mountains. Already the tourist, the health-seeker, and the artist have recognized the changed conditions. Naked hillsides cease to attract, and the summer visitors are turning to other locations. In the near future the citizens of New Hampshire will find that they sold for a "mere song" trees which, *growing*, were a greater source of revenue to them than the timber they produce will ever compensate for the loss of. The State will probably soon learn the lesson which long before was taught to the dwellers on the shores of the Baltic, when Herr von Korff bought for 200,000 thalers, and cut away, the trees which the state would pay millions to restore, if it could.

Bear in mind, you through whose land the Brandywine flows, that before long the beauty of your meadows can be changed into currency; that every tree and shaded road along the banks will be an element in the bargain between you and the home hunter.

Say I am sodden in sentiment, if you will; but to me that butternut tree hanging over the quiet water is a poem with a meaning in every branchlet. It is full of healthful influences, and suggests more to me than any hour of sauntering along our crowded streets ever did. The rustle of its leaves gives purity to the air. The rain drops that trickle through its foliage carry oxygen to all the animals that live in the stream beneath. When at last the water has washed the earth from the roots and lowered the tree into the Brandywine, I shall feel that the spot has been robbed of a charm for whose creation air and earth and clouds have been half a century under contribution. The soul that finds no special need of such tree-lined stream banks requires a second birth to enjoy what of paradise even the earth affords.—*Prof. J. T. Rothrock in Forest Leaves.*

If we stand in the openings of the present moment, with all the length and breadth of our faculties unselfishly adjusted to what it reveals, we are in the best condition to receive that God is always ready to communicate.—*T. C. Upham.*

SECRETARY NOBLE'S REMARKS AT
CARLISLE.

At the closing exercises of the Indian School at Carlisle, on the 23d ultimo, Secretary Noble, of the Interior Department was present and spoke. We take the following report of his remarks from a daily journal:

I announce a policy that I know will be welcome to everybody, when I say on behalf of our good President, that he cherishes and wishes the people to understand that he is determined upon securing justice to the Indian who is within the borders of our country. He has his Ministers to understand, and chiefly myself, who happens for the moment to be in possession of the Secretaryship of the Interior Department, that the men who are appointed as Indian agents, as Indian inspectors, as Indian traders, must understand, upon entering upon the discharge of their duty, under any commission that he has signed, that they must secure sobriety, truthfulness, morality, justice, and decency within their command. [Great applause.]

So much I am authorized to speak for him. You will allow me a few words on my own behalf, to which I commit no man, but to which I unhesitatingly commit myself. I believe that the practice of justice is essential not only to the welfare of each individual, but that it is necessary for the security of any Government. [Applause.] The idea that many men possess, that we should avoid injustice because of its effect upon its victim, is a narrow and most selfish consideration of the subject. The truth is, as human experience develops, that the effects of injustice bind their victim with its perpetrators. It is the rule of human conduct that the deeds we do return to the doer either in the way of reward or in the way of punishment. If you will look upon the career of those men who have mercy in their hearts and excellence in their conduct, you will find it even as in yonder picture on the wall (indicating the portrait of Susan Longstreth, of Philadelphia), or in its living person, that a long life of thanks and goodness is reflected by its true light from the eye and peace from the countenance. Where rapine is the practice of the man, where immorality is the daily pursuit, it shows itself in the face and character of men, and even as in a savage tribe the countenance is affected, so in each individual there is left a mark of that career. It was a remark made by the Governor of Pennsylvania to-day, as he sat here, that in the faces of those who came to this institution last, the contact of the wild and rugged Western life was visible in the faces of those who came first to the platform. They bore the marks of the wretched contact in which they had been; but gradually, as they were educated, as they were lettered, refined, and cultured, these marks disappeared from the faces, and the man who had been here longer stood more erect and more independent than when he was admitted from the wild and far-off West.

These considerations have led me to-day to feel that in coming here I was no longer as I have been for many weeks past, a man who could in some small degree represent the Government in giving to others

favours, but as with your worthy superintendent, I was the man who was to recognize on behalf of my Government, that he was conferring upon all the people of my nation a great and mighty gift, a magnificent result that his tact and management displayed in elevating these persons from the position that they have held to that greater equality of intellect that makes all men and women alike. [Applause.] Every day, in my humble position many of my fellow citizens bear to me credentials and all manner of letters and commendations whereby they may secure an office, but it is a magnificent result to present to Government such credentials of excellence as your superintendent can present to-day and claim no office except a simple word of praise and commendation.

FOR BUSY MOTHERS.

Nothing in Christ's instructions to the disciples, when he sent them out on that first itinerary, seems to me more suggestive than the command, "As ye go, preach." So many of us never reach the temple or the synagogue, or even find time to sit down upon the mountain side and gather our congregation about us. All our preaching and teaching must be done "as we go;" the hands full of burdens, the feet hastening on needful errands, the flesh often weary, but the lips at liberty, if the heart be vigilant and the eyes watchful, to speak words that may be as good seed on responsive soil.

"I often wish," says a busy mother, "that I had time to teach my children botany and physiology, and the things that were such a delight to me when I was a teacher; but it is entirely out of the question. It is all I can do to feed and clothe them."

But can you not slip in some lessons "as you go"? Children do not like regular lessons; they hate them for the very regularity's sake; but they are easily caught by the guile of object lessons built upon the work or play in hand. The busy mother is peeling an apple for the child, and she asks, "What is the skin good for?" and when the child replies as he probably will, that it is not good for anything, she can charm him by reminding him of the days when the apple lived on a tree, without any house to protect it from the rain, and showing him how the skin, with its smooth, varnished surface, is like a rubber coat, keeping out rain and dew, so that the soft pulp could ripen without decaying—a wonderful coat that grew bigger every day, and always exactly fitted. It may not be a very important lesson to teach, but it sets the child to thinking about the purpose of the apple skin, and starts him on the practice of trying to find out the reason of things.

Or she is fitting a dress to a restless child, and she beguiles the little victim and interests all the others in this way. "We must not make sister's dress too tight, because right under here are her lungs, that must have room to fill up with air when she breathes. They are like the sponge that mamma washes you with, only the little holes are full of air instead of water. If you squeeze the wet sponge up tight in your hand, what will the water do? Yes, it will 'squeeze out,' and if we press sister's lungs up in

a tight dress it will squeeze the air out, and there will not be any chance for fresh air to get in, and she cannot grow and be strong."

I have seen children of five and seven, whose delicate mother did all her own work, who could describe, in childish language but with perfect correctness, the circulation of the blood and its purification, the story of the mouthful of bread from its grinding in the mouth to its place as bone or muscle in the House Beautiful, the growth of the oak from the feathery germ in the heart of the acorn, the principle of the steam engine, the mystery of the cloud and the dew, and many such familiar phenomena upon which many adults look with unseeing eyes. They had never been in school; the younger could not read at all, and the elder but stumbingly; they had learned their lessons from their mother's lips, never guessing they were anything but delightful stories. Yet the chief value of their instruction was not in the positive knowledge gained; it was in the fact that they had been taught to think, had been made intelligent observers, inquirers into the reason of things, and as a mere labor-saving investment the mother's teaching paid. Her children were never at a loss for amusement; their imagination and invention found endless resources, where many children could only helplessly ask, "Oh, what can I do, mamma?"

In morals the same course is open to the busiest mother, and the only training and instruction which is of any great value springs from the seed dropped "as you go"—daily, hourly, constantly, without waiting for the leisure, which may never come, to thoroughly prepare the ground and go forth with deliberate purpose to sow. It would seem as if the Lord, in looking forward to the time when vineyards and olive gardens should be multiplied, anticipated also the increase of care and labor that might interfere with the formal instruction of the children. And so he says of the law, "These words which I command thee this day shall be in thine heart, and thou shalt teach them diligently unto thy children, and shalt talk of them when thou sittest in thine house, and when thou walkest by the way, and when thou liest down and when thou risest up."

Daily, familiar conversation, at table, in the parlor, by the bedside, the last words at night and the first in the morning—our Father's presence, our Father's wishes, our Father's commands, our Father's help, associated with the common detail of our daily life or hourly aid and comfort and counsel—this is Christian nurture that is within the reach of the busiest mother, if indeed "these words shall be in thine heart."—*Emily Huntington Miller, in Christian Union.*

MERE ESSAYS IN THE PULPIT.

ANY thoughtful attendant of the various churches must often wonder why theological schools do not train preachers to talk to their hearers instead of reading carefully prepared papers in the pulpit. The plea of embarrassment and self-consciousness will not do. A man who cannot forget himself utterly and entirely in the Gospel message which he is to deliver is not yet thoroughly trained for pulpit duty.

With one exception the ministers of all the Protestant sects pray extemporaneously, and it would seem that any human being who can address his Creator aloud in the presence of his fellowmen need not fear to address his fellowmen in the presence of his and their Creator. The impression which a minister's slavery to his manuscript leaves upon every hearer's mind is that of listening to a mere literary effort instead of receiving a personal appeal or warning, based upon the Gospel and on living evidences of its indwelling presence in the speaker's heart and mind. It is not possible to conceive that when Nathan went to David and recited his allegory of the man with the one ewe lamb he carried the story in writing and read it with some occasional side glances at David. It was not a scene like that which the modern artificial pulpit presents. He told the story, watching the reflections of his words as they chased across his hearer's face, like shadows fitting across the landscape. Nathau must have said those four monosyllables—that terrible accusation that has echoed down the ages—"Thou art the man"—looking straight into the hearer's eyes and through them into the hearer's heart and soul.

It is impossible to overestimate the physical force lost by reading a sermon instead of its delivery without the use of manuscript. In the former case the effect of the speaker's glance and expression is lacking. The gaze of the human eye is the most potent spiritual force known to man or to the lower animals. There is no feeling possible to humanity which the eye cannot express in one second and with an eloquence and clearness which no language can equal. Throughout creation the expressions of the eye are the Volupük of mind. By the eye man communicates with his faithful dog, or overawes the captive beast of the jungle. It is the first instinctive method of communication between wild and civilized man. To the world-be saviour of souls nothing can supply the place of the language of the eye, no logical argument, no rhetorical flight, no graces of diction. Therefore it would seem that our theological schools do not fully equip their graduates unless they have trained them to "think on their feet" or to memorize their written thoughts, to be delivered as if extemporaneous.—*Chicago Evening Journal.*

NEWS AND OTHER GLEANINGS.

—The present Senior class of Vassar College, numbering 49, is the largest ever graduated from the College. The Freshman class, numbering 73, is the largest since the year '73-'74. Other evidences of prosperity are noticed in better equipped departments, in additional scholarships and in improvements in the sanitary condition of the College. A disadvantage which the institution labors under is the plan of its buildings, which are all in one large structure. Its principal competitors, Smith College, Wellesley, and Bryn Mawr, all have the moderate and more desirable system of separate buildings for the important different purposes.

—A large sycamore tree, planted in 1832 by Alice and Phoebe Cary, on the Hamilton turnpike, in Hamilton county, Ohio, is still standing and is one of the finest trees in the country. They were children, returning from school, and saw a farmer grub and throw a small tree on the road.

This is the tree they planted, and often afterward visited when they and it had grown up and flourished.

—United States Marshal Needles reports everything quiet in Oklahoma, adding: "I know there has not been a man killed there. There have been no death encounters over claims and town sites. I consider this condition of things remarkable in view of the heated contests over claims, and especially over town lots in Guthrie. There is but one thing to which it can be attributed—the absence of liquor."

—The preparations are nearly complete for the European excursion that is to be enjoyed by 250 delegates of the American Association of Civil Engineers, the Institute of Mechanical Engineers, and the National Association of Mining Engineers. They are to visit London, where they will have a reception in Guildhall, upon the invitation of the Institution of Civil Engineers of Great Britain, and they will spend part of their time in viewing the more important engineering works in Queen Victoria's kingdom. Afterwards they are to visit France, where they will be welcomed by their brethren, and where, besides inspecting the Universal Exposition, they will study the achievements of French engineering.

—The site of the new Zoological park at Washington, for which Congress appropriated \$200,000 at its last session, has been selected by the commission to whom the matter was referred. It lies along the banks of Rock creek, northwest of the city, between Woodley lane and Klingel roads, and comprises about 150 acres, delightfully situated and admirably adapted for the purposes. It is about two miles from the White House.

—For the insect that skeletonizes the foliage of roses, hellebore, applied as for currant worms, is effective. A solution of saltpetre, a tablospoonful to two gallons of water, kills the cabbage worm. Paris green sprayed on the foliage of the plum trees at blooming time and several times thereafter destroys the curculio. Sticky fly paper attached to a lath, if held before a grapevine while some one startles the thrips on it, will capture them as they spring away.—*American Garden.*

CURRENT EVENTS.

BESIDES the terrible destruction in Western Pennsylvania, great damage was done in other parts of the State by the storms of last week,—especially on the Juniata and West Branch of the Susquehanna. At Williamsport some thirty lives were lost, and the destruction of property there was heavy, as also at Lock Haven, Huntingdon, Lewis-town, and many other places. Great damage was done to property and growing crops in Maryland and in the Shenandoah Valley, Virginia. Railroad travel has been much interrupted, and the main line of the Pennsylvania road, west of Harrisburg, will not be open for use, on account of the destruction of bridges, for some days yet.

NOTICES.

* * * Twenty-fifth anniversary of the Home for Aged and Infirm Colored Persons, Fifth-day, Sixth month 13th, 1889.

Religious meeting at 10.30 a. m. Bishop Campbell and others will be present.

Annual meeting at 3 p. m., with reading annual report, election of officers, etc.

Address by W. H. Furness, Fanny J. M. Coppin, and others.

Entertainment at 7 p. m., addresses, recitations, and other exercises.

Friends are invited to attend.

* * * The regular meeting of Young Friends' Associa-

tion will be held Second day evening, Sixth month 19th, at 8 o'clock, in the Parlor, 15th and Race streets.

All interested are invited to be present.

* * * Samuel B. Carr and Henry T. Child expect to attend meetings on the Constitutional Amendment at Friends' meeting-house Ma-len Creek, on First-day, the 9th inst., at 9.30 a. m., and at Reading at 3 p. m. All are invited.

* * * The Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting of Friends, will meet at Race street Meeting-house, Philadelphia, on Seventh-day, Sixth month 15th, 1889, at 11 a. m.

GOD IS LOVE.

I CANNOT always trace the way
Where thou, Almighty One, dost move,
But I can always, always say
That God is Love.

When myst'ry clouds my darkened path
I'll check my dread, my doubts remove.
In this my soul sweet comfort hath,
That God is Love.

Yes, God is love—a word like this
Can every gloomy thought remove,
And turn all tears, all woes, to bliss,
For God is Love.

—Christian Union.

From the North American Review, 6th Month.

WHY AM I A QUAKER?

To one who before all else would be a Christian, the reasons for adhesion to any given denomination must lie in the circumstances of his education, and in his preference for that form of Christianity, in doctrine and practice, which distinguishes the body to which he adheres. I am a Friend, then, because for two centuries my ancestors have as Friends served their generations; and yet more from a conviction that in Quakerism is to be found "what Christianity is in itself," divested of non-essentials and relieved of the accretions it had gathered since the apostolic times.

The Society of Friends grew out of a vivid apprehension of the spiritual presence of Christ made perceptible to men, especially to those who welcomed that presence; of an intense faith in God's universal love to mankind, and an honest endeavor to carry the reformation of Christianity to completeness by a return to the tenets and to the life, moral and religious, of the first Christians. Christ the eternal Word, Christ incarnate, and Christ ascended, yet ever enlightening and teaching men, was their foundation. Without reference to the historic fact, they resumed many of the views held by the orthodox Greek fathers as to God's nearness to man, man's affinity to God, and the universality of the Father's love to those who even the heathen knew were "his offspring." Quaker Christianity commends itself to me by these traits, and especially by its universal spirit. Assured of the operation of the Spirit of God upon the mind and the conscience, the Friends accept without reserve the testimony of the Scriptures to themselves, that "holy men of old spoke as they were moved of the Holy Ghost," and regard the Bible as the only divinely-authorized record of the doctrines they are bound to believe. They hold that

the Bible is to be understood and applied by spiritual aid, and have based their Christianity upon its truths and facts, under the illumination of the Spirit. But they have adopted no special theory of inspiration, and have expressed their belief chiefly in Scripture terms, whereby they have escaped serious theological difficulties.

The Friends accept in their fullest import the words that God loves "the world," while he hates sin. Many who have been lovers of their kind and have looked beneath the surface of things, have found themselves face to face with the sin and misery of their race, and have emerged from that dark shadow giving varying answers to the problems it suggests. Of such an experience George Fox wrote: "I saw that there was an ocean of darkness and death; but an infinite ocean of light and love which flowed over the ocean of darkness, and in that I saw the infinite love of God." Nevertheless, he did not weakly fly to any superfluous view of the dread reality and fruits of sin. He and his associates had felt too profoundly "the immeasurable nature of the compunction awakened by wrong-doing—the total inability to forgive one's self—the sense of an evil that is irreparable and sin beyond all guage,"¹ to deal lightly with either redemption or retribution. Their conviction was that through and by Christ an offer of salvation was made to all, and that the ultimate fate of each soul is determined by the acceptance or rejection of divine light and love. Believing in God as Creator and King, and recognizing his omnipresence in all the processes whereby the universe has become what it is, they prized above all his relation to men as a Father, to Jew and Gentile, Christian and heathen, who, though marred by the effects of sin, hereditary and personal, still have a child-likeness to him and are the objects of his paternal love and care. This love, ever outflowing, found highest expression in the coming of Christ, who, as the Word that was with God and was God, became flesh, bringing God and man into closest union. As one with the Father and with us he revealed him, by his words, his life, his spirit, his death, in which he was "the propitiation for the sins of the whole world." Yet Christ is ever the Word, who touches the moral and religious nature of man, imparting to all some knowledge of God, some discernment of the right, some recoil from the evil, some aspiration after the good, some power of grace over sinful tendencies, and, if received, some quickening of the sluggish or dead soul into spiritual life and communion with God.

The mode of worship of the Friends is as simple

¹ James Martineau, "Types of Ethical Theory," Vol. II, p. 66.

as its ideal is true and its experience delightful to those that enter into it. It looks upon the few or the many met in Christ's name as permitted to know the "real presence" and headship of Christ, with access, individual and united, through him unto the Father in spiritual communion, without the necessary intervention of any minister or priest. The "liberty of prophecy" accorded in this manner of worship admits of edifying one another, of heart-felt, united prayer and praise, and the preaching of the Word. If its ideal is high, it is the more exacting that worshippers shall habitually walk in the light, following the master in close companionship. But as it depends so little on prearrangement, it is empty indeed unless there be real life in the congregation. In this simple worship there is an unique feature—the privileges given to women. Christianity is the only religion that has placed women in a true position. The sacred friendship of our Lord for the sisters at Bethany and for the group of noble women that came up with him from Galilee to Jerusalem, with his hallowed love for his mother, prepared the way for this result and for the saying of Paul, "There is neither male nor female in Christ Jesus." The Friends apprehend that devout believers of either sex may receive spiritual gifts for the profit of all, and that among these is that gift of prophecy which fits the recipient for speaking to others unto edification, exhortation, and comfort. They have, therefore, made room in their organization for the exercise of such gifts by women, and have proved that the use of this liberty is consonant with all that is best in womanhood. They have found inestimable benefits from acting out with quiet confidence what they believe to be the teaching of the Bible in this respect.

Intentness to act in harmony with the spirit of Christ has led them to anticipate or quickly to side with legal or moral reforms, and to have sympathy with the races subjected to oppression or looked upon as inferior. The reduction of capital punishment for crimes (once frightfully common in Great Britain), the reform of prisons, the abolition of the slave-trade and of slavery, the removal of the evils of intemperance, social purity, and the placing of all classes on an equality before the law, are among the movements in which they were pioneers or with which they were early and efficiently associated. As early as 1688 a written protest against slavery as unfit to be practised by Christians, was sent by some Friends from Germantown, Pennsylvania, to their superior meetings; and during the intervening period, until the abandonment of the system, they were among the most faithful in pleading for its suppression and the most Christian in the spirit of their protest against it. From its rise the Society of Friends has advocated great caution in the use of intoxicants, and it was the first Christian body to make the disuse of them a subject of disciplinary advice. It was a Friend who started "Father Matthew" on his beneficent crusade against "the drink," and up to the present time its influence has been persistent and active against the unspeakable miseries caused by the abuse of alcoholic beverages.

War has brought into exercise many heroic virtues, among them self-sacrificing courage in defense of the honor, the property, and the corporate existence of peoples. It has, doubtless, been the expression oftentimes of a lofty patriotism, and has been providentially used or overruled to the advancement of the world. But human history has been largely written in blood; too generally has war been carried on in disregard of the sentiment of humanity, as well as of every other moral principle. To-day millions of men, forming the standing armies of Christendom, in the very prime of manhood, are withdrawn from productive industry and are supported by the toil of others. The severe labors they should perform are thrown to a degrading extent upon women; they are in a large measure debarred from the elevating influences of family life, are subjected to the idle vices of the barracks, debasing the populations around them and being debased by bestial passions.

The industries of Europe groan under the burdens these armies impose, until in Italy—the one Continental state from whose reports accurate information upon this subject can be had—the income-tax is 14 per cent. and the combined taxes upon the farmer equal 40 per cent. of the product of his land. Great nations like France and Germany, armed with every device for slaughter that ingenuity can devise, and moved by ambition or revenge, stand ready to be hurled against each other. In the middle ages the Popes sometimes commanded a "truce of God," to arrest such fratricidal strife. But to-day no European church but the Society of Friends lifts its voice in entreaty and protest, in Christ's name, against such iniquity. When even philosophers like Spencer and Comte see that the military stage is a temporary one, through which people pass from barbarism to a true civilization, I cannot but rejoice to belong to a body that has confidence in the Prince of Peace, from whose teachings such philosophers have drawn their moral conceptions; that believes he is calling upon the church to condemn all war and to lead men, not into a cowardly devotion to moneymaking, but into labor in self-forgetting love to set each member of the body politic in his best estate, physically, mentally, morally, and spiritually. Be it that the time is far till this day comes, it is still well to labor and to wait with patient courage through the decades or the centuries till the end is gained.

The Bishop of Peterborough, in the *Contemporary Review* for January, 1886, vigorously defends the use of oaths by witnesses in courts and in other legal proceedings involving grave consequences; yet he desires that they should be abandoned. Moreover, with faintest hope, he looks forward to a time when men's words shall be as good as their oaths and the latter may be laid aside. The movement in this direction in Great Britain and America was begun by the Society of Friends, who believe that, although Christ recognized the rightfulness of legal oaths under the old dispensation, he distinctly forbade them in the kingdom of God he came to set up. During the last two and a half centuries the progress towards the end which the Bishop seems to regard as desir-

able has been a most hopeful one, and confirms a confidence that Christ's law of truth-speaking, "Swear not at all," was founded on a sure insight into our moral nature, and was intended to promote entire truthfulness, individual and national. To accept this view, and to be released from calling down a curse upon one's self in case, through infirmity, one should fail to speak the exact truth, wears to me the aspect of a privilege.

J. A. K.

TRUE WORSHIP.¹

A MESSAGE which for days has had lodgment in my own mind, I bring to you: "Worship the Lord in the beauty of holiness." It is a direct, personal message, clear as the noon-day sun. It leads us quite away from the obscure regions of perplexing speculations. It takes no account of "our little systems" that as Tennyson has written ". . . have their day and cease to be." It does not ask for outward incense. It is not satisfied with service of prayer and song for stated days and hours,—a service so easy to perform and then so easy to forget.

It honors us with the demand that we make ourselves *whole*. It holds up before us the highest ideal toward which to live. We smile at the labored stitches or crooked lines of the little child struggling with feeble, untrained fingers: but when great and difficult things are to be done, the strongest and wisest are honored by the demand to do them. And so the demand that is made of us, that we "worship the Lord in the beauty of holiness," that we "be perfect, as our Father in Heaven is perfect," honors the human soul in the greatness of its demand.

An exquisite rose has developed and opened before my eyes. Day by day the tiny rootlets of the plant have chosen from the soil the atoms of nourishment that its growth demanded, and day by day the marvelous process has gone silently on, by which, according to the law of its nature, its green leaves have unfolded, and it has made the dainty stuff of its delicate pink petals and filled them with delicious odor, and it stands a perfect rose—typical, is it not, of the beauty of holiness? It is true that it is easy for the rose to be perfect. No search of our biological students has yet discovered any temptation of the rose to depart from the law of its growth, to struggle after the height of the pine tree or the power of the oak, or the form of the violet, or the fragrance of the lily. It betrays to the most painstaking search no indifference in its growth, no carelessness in the bestowal of its parts. Pistils and stamens do not exchange stigmas for anthers; calyx and corolla have no question of precedence. It is subject absolutely to law, and the fulfillment of its design is its perfection, its holiness, its sweet perfection, whose gentle ministry I love to acknowledge.

But in the development of a man there is not only law, there is liberty also. The temptations that the rose has not, the human soul, because of its infinite endowment, must meet with from the start. It finds itself in unfinished parts, left by its Builder and Maker to choose from out the varied elements

of life those things which will go to make up its completeness, its holiness. The unfinished physical structure has a law of growth to follow just as the rose has; and the mysterious power of selection that sends one atom to make the delicate petal, and another the firmer fabric of leaf or stem, has its counterpart in the faculty of the blood to bestow a nerve atom here, and a particle for the spent muscle there. Sometimes, through the stress of work, the physical structure is worn faster than it is restored; sometimes it is the excitement of play that destroys the balance of waste and repair. Again, narcotics and stimulants, and various dissipations that are so insidious in their charms, and often so fatal in their power, all disturb the laws of growth. They throw into confusion the microscopic organisms that would delight to work toward physical perfection. What painter would knowingly mix his paints for the picture which he hopes will endure, with an element that would leave his canvas riddled and defaced? Yet this is what we do when we indulge in those things that go to our physical undoing. Would it not be a help to us in forming our physical habits, in planning the life of the body, if we acknowledged as an element of holy worship, the purity and perfection of the physical life?

As I have said, we find ourselves in unfinished parts. There is only the *beginning* of a man, the *promise* of a woman, in the helpless baby whose first year among us has "no language but a cry." How slow and long seems the process of mental youth, from the first responsive smile that so gladdens the mother-heart, through all the successive steps of reaching and grasping, of speaking single words and combining them into sentences, of reading the written page, of mastering the laws of numbers, of observing the properties of matter, of learning the history of the race, up to the full mental stature of the mature man or woman. But every step of this long way, which we call education, whether in the schools or in the business of life, is toward wholeness, is toward the completion of the embryo intellect. There is a third unfinished part,—the spiritual nature, dependent in some measure upon physical and mental development, and yet capable of remaining dwarfed while this development goes on; or in spite of physical infirmity and impoverished intellectual conditions, of growing toward the divine pattern of the perfect man. Sometimes this unfinished spiritual part, seems a poor, little inheritance. We may have stout muscles for "putting the shot," but the weakest of wills for doing the thing that we know is the next thing for us to do. We may be fearless in our arithmetic performances and yet not have courage to speak the truth. We may be brilliant in wit, but with a coldness of heart that chills every other heart within the radius of its influence. We may have fine intellectual preceptions, but with a grain of bitterness that mingles with all of life. The spiritual nature grows by obedience.

"So high is grandeur to our dust,

So near is God to man,

When duty whispers low 'Thou must!'

The youth replies, 'I can.' "

¹An Address by Elizabeth Powell Bond to Swarthmore Students.

And there is never a response to this whispered demand of duty, even in the simplest ways, that does not clear the vision, that does not strengthen the soul and lift it to a higher level of spiritual life. When once this life of obedience begins, all good things minister to the growth of the soul. The burdens of our work grow lighter; our disappointments lose something of their sharpness; our affections grow sweeter and nobler; we feel our lives more and more rooted in the life of God. The life of obedience is the life that leads to wholeness, to the "beauty of holiness."

Can we doubt that this is acceptable worship of the Lord? Could any assurance of love and devotion be so dear to our earthly parents, as our efforts to do well? What incense to the Lord could be so sweet as the daily obedience to his law written in our hearts? It is good to "sing praises unto the Lord;" it is better to fit our lives to his requirements. It is good to "magnify his holy name;" it is better to show in our daily lives that his name stands to us for truthfulness and purity, and faithfulness and sweetness. It may be only after long service, after many failures, after many tears and discouragements, but the day waits for us all, in which we may attain to the beauty of holiness—a day in which this human life of ours will be in harmony with the divine.

For Friends' Intelligencer and Journal.

THOUGHTS ON PHILADELPHIA YEARLY MEETING OF 1889.

AFTER the absorbing interest of Yearly Meeting is over and we are settled down to the plain experiences of life by the quiet fireside, we may, perhaps, enter into a calm retrospect of the proceedings of the General Assembly of the Members of our Society. This body is composed both of the "faithful" and the "unfaithful," although technically it is composed of "representatives," (through whom the quarterly meetings are supposed to be present), and the appointed officers of meetings—ministers, elders, overseers, clerks, etc. In the first, these meetings for "the affairs of the church" were solely formed of "six Friends for the city of London, three for the city of Bristol, two for the town of Colchester, and one or two for each and every of the counties of England and Wales respectively," and the preceding quarterly meetings were "to take care to nominate and appoint" them. (London Epistle, 1677.) This was the beginning of London Yearly Meeting, the original of the whole Society, the more particular services of which then consisted of care in relation to sufferings, were set forth in the Epistle of 1682. From this our present yearly meetings have been modeled with such changes as place and circumstances rendered advisable. But the distinctive feature for the affairs of the Church, however much lost sight of, is the prominent object for such gathering together. The operation of its internal autonomy, the condition of its constituent parts, and the labor necessary to the successful oversight of these are the most particular duties of the assembled body. That which is outside being secondary, however

proper in its right place, should not be allowed to crowd out or displace the other.

In the light of this Constitution of our Yearly Meeting may we not seriously ask whether the session of 1889 fills the object designed by its founding? Is there not cause to fear that that which should have been the second became the first or was made the first, and thus the business for which the Yearly Meeting was primarily instituted much overlooked?

It is to be noted that considerable part of the time of several sittings was properly devoted to the Bequest of J. M. George. No subject of more importance to our Society can be proposed than the education of our children. There is none which appeals more strongly to our sympathies, and which is better calculated to bring out expression of our varied views. But at the same time our views should be well digested and our conclusions rather than our logic, presented. The former may be nearly correct and valuable, the latter faulty and diffuse.

We have a difficulty in our large house in hearing, especially if the speaker is near one end, so that near one-half of what is spoken cannot be heard by all. To remedy this the erection of rostrums might be proposed to be near the centre of each side.

It is to be regretted that the very, very important subject of the condition of Society has within a few years been much curtailed by other matters. This, undoubtedly, as it is brought into consideration by the answers to the several inquiries, is one of essential interest. It is as a letter stating how our brethren fare in religious life and how they are succeeding in maintaining their standing in what to us is vital truth, having in its keeping the life of the Society. Twice at least was this consideration cut short by reports from committees having connection only remotely to the answers from the quarterly meetings, and twice or oftener by adjournments.

There is no opportunity by which our edification as a Society can be more happily effected than by a proper use of these interesting occasions, when from the fullness of the heart the mouth of the dedicated servants may speak of the things which they have handled, tasted, and seen. When these come together and consult on the things which have been as the marrow of the bones to them, and it may be for a life-time extended to more than the three-score years, their words are precious, being "seasoned with grace and full of wisdom;" and it unites the body in a solemnity of feeling which has no fellow, wherein the life is quickened and all "can thank God and take courage." This desirable covering is not witnessed when the true order of business is disturbed by the presentation of immature or foreign subjects.

In several respects the late Yearly Meeting may be noted as a remarkable one. As mentioned before, the course of business was interrupted. The state of Society received far less attention than its importance demands. The essay of Epistle to our friends of other yearly meetings was brief, and confined to common civilities. No minute of Exercises was presented. The timely revision of Committees was not attended to, and minutes of last year were over-

looked. In one Committee of several years' standing, (I am informed), quite a per centage pay no attention to the appointment. In another, several of the prominent members have deceased and others are indifferent to the service. This latter defect arises from the injurious practice in part of appointing persons on committees who are not in attendance,—a practice which cannot be too strongly condemned, except where the person has been consulted in very exceptional cases.

Summary, such as the above is made not in unkind feeling, but to induce serious reflection, and in the hope of improvement, and of warning lest we find that by working in the fields, our own vineyard is not kept.

R. HATTON.

Westmont, N. J.

A WORK FOR YOUNG FRIENDS.¹

I HAVE been much interested in the little book containing the Constitution and By-laws of "Young Friends' Association," which came to my hand a few days ago. The preamble, declaring that a thorough knowledge of the history and testimonies of the Religious Society of Friends, together with a closer acquaintance and association among the young people connected with it either by membership or community of feeling is essential to an active interest and participation in its affairs, and to an intelligent promotion of its principles, will meet with, I am sure, hearty approval.

All will acknowledge there is work to do in studying the history and testimonies of Friends, in making closer acquaintance with and in participating more actively in the affairs of the Society if its principles are to be intelligently promoted. There is much valuable literature of the Society to be gathered and distributed. The formation of the Discipline and the changes made in it from time to time are to be noted.

And you are to consider seriously the current topics of interest to the Society.

That young Friends are stirred to do this is to me a matter of congratulation.

To be a Friend in this period of the world's history is to have one's lines cast in very pleasant places. The old antagonisms are gone. The question of religious liberty is settled. Our meeting houses are built. Our children are born into the Society and we are living on the income of our well earned and well invested inheritance.

We are too much, perhaps, as a body, what the aristocratic class of Society is,—looking at the world through spectacles of self-satisfaction.

This is a danger which awaits every organization after the struggle for existence is passed, and it requires all the watchfulness and earnestness of individuals as well to keep keenly alive to the needs of others while our own wants are gratified.

When I am roused to think of the glorious privilege of being a Friend, and it comes upon me with all its power what a Friend stands for, I am humbled at the thought of how much that has done for me and

how little I have done for it. I am humbled to think how weakly I have helped to hold aloft the banner raised so high a century ago.

Let us consider what that standard, lifted so far above all other standards, held for us; and to the young women I want to tell this particularly, that it had equality, it had no distinction on account of sex in religious deliberations.

I suppose it is impossible for us to realize all that it has done for the world. I believe that to-day the moral movement of the world owes an uncounted debt to that one glorious position taken by Friends,—that the Divine Spirit might speak through a woman. To take off of her the disabilities of the church, to accept her as a messenger when she came inspired to speak, this was left for Friends to do; and having accepted the principle of the "inward light," the "Divine light of the soul," which makes all men equal, there could be no sex distinction in regard to who should testify. It was for Friends to read the record plainly as it is written, "In the image of God created He him, male and female created He them, and God said let them have dominion over all the earth."

It is possible to suffer temporarily through the very perfection of our principles. Nobody attacks us, nothing but praise of our ideas is heard. Distinguished people come to Philadelphia from far off and tell us their highest ideal of Christianity is exemplified in the doctrines of Friends. A distinguished woman who has risen through much persecution from her sect, to preach among them, said to me, I "never have a spiritual quickening when I do not feel this is the blessed doctrine of Friends." Advanced thinkers of modern time acknowledge the position of Friends to have been placed ahead of other societies.

Friends have everywhere prepared much soil but I am jealous of Quakerism that the seed does not always quicken on its own ground. I am jealous of Quakerism when the churches gather the services of our young people to further organizations so far behind our own.

I know the temptation to carry our inspiration to work in avenues strictly in accordance with Friends' ideas, but under other guidance, simply because a leadership was found who said "come with me and we will do what you believe." And here is where I want to emphasize my ambition for our young Friends, that you place yourselves among the leaders.

Your fathers and mothers have led the world in spiritual insight, and now when the great moral questions of the day are pressing upon us it is only for you to rise in your strength and say: "come, we know the way."

You have so much to tell. You have an especial interest in all the current topics bearing upon the well-being of your neighbor.

You will consider the Labor Question. The rights of the wage earner. The employment of children of school age. The question of Compulsory Education. Prison Reform, Capital Punishment, Peace, Arbitration, Legislation for the observance of the First-day of the week, Temperance, and underlying all these the Woman Question. I say underlying all these be-

¹ Paper read at meeting of Young Friends' Association Philadelphia, Fourth mo. 8, 1892, by Lucinda M. B. Mitchell.

cause these all belong to the people and can only be settled as the people settle them.

And here is pressing need for leadership. To you who have always known the value of the cooperative plan in your homes and in the Society, I would say, lift your beacon light and lead on to equality in the State. The time is come when our Republic needs her daughters as well as her sons. She is crying to every freedom-loving child, "protect me, my enemies assail me, wait not too long."

Just now the proposed amendment to our State Constitution is before us. It is to be voted on by the people, they say, but that is not true! One-half of the people, only, can vote, and among the half that may not vote are all the daughters of patriotic ancestors, the daughters of the peace-loving founders of Pennsylvania. Now is an appropriate time to emphasize this injustice, and I would like to believe there is not a single member of the Society of Friends who is not prepared to lead in this work of reform.

Frances Willard says "All questions of morality, sooner or later, find their way to the ballot box and are voted up or down." She also says "There is no enemy dreaded so much by liquor dealers and saloon keepers as a woman with the ballot in her hand."

There are no difficulties in this question to you. You do not have to broach it as one of our eminent townsmen said the other day in regard to coeducation, that he had approached the question "from the standpoint of deep-rooted prejudice."

You can tell the world you know whereof you speak; that to the equal position of men and women in your Society is due the place it holds to-day of honor, of dignity, and of purity.

Plead this for your State that has done so much for the home. Without the State there is no home. The ballot for the home. This is the demand to be made. This is fitting and urgent work for you.

There is a little band of Temperance workers I know something of who are making it their business to note all objections to prohibition they hear from different sources and bring them before their members to be answered; thus arming themselves with arguments to meet opposers of the reform.

You will meet all manner of objections to the enfranchisement of women. They say good women will not vote. You can tell them you never knew a good woman who shrank from duty, and here press the point; the pursuit of politics is a duty.

You will hear women will vote as their husbands vote. You will recall instances where woman's "inward light" has led her to speak when her husband was silent.

They say women are too emotional to vote, but you have only to remember the beautiful faces and dignified presence of your Quaker mothers as they sat and waited.

They say women do not know enough to vote. Your Society puts no restrictions upon women in regard to education.

They say women will neglect their homes for politics. You know what a Quaker home is and that no call of duty elsewhere ever made a home duty secondary.

SCRIPTURE LESSON, No. 24.

SIXTH MONTH 23, 1889.

JESUS RISEN.

GOLDEN TEXT.—"I am the resurrection and the life; he that believeth on me, though he die, yet shall he live, and whosoever liveth and believeth on me shall never die."—John 11: 25, 26.

READ MARK 16: 1-13.

WHATEVER individual views we may hold as precious truths concerning the literal rendering of the account given in our lesson and in the other gospels of the resurrection of the body of Jesus, the well-beloved Son, it must be spiritually understood to be helpful to us in our day. Each soul must know for itself an arising with Christ into newness of spiritual life. The resurrection that Jesus preached and taught was, and is, spiritual. "I am the resurrection and the life," was one of his declarations, in which he meant to teach, as Friends understand it, that the arising of the soul into a higher and holier state is brought about by believing in the power of the Christ principle to awaken the desire for holiness, and when lived up to, that it will transform the life into the image and likeness of the holy pattern.

That the grave, though it was doubly sealed and watched, could not hold the Christ, is made very clear by the testimony of all the evangelists. As to the literal rendering of what they have written, it must be left to the revealings of the spirit in each mind.

The doctrine of the resurrection brought great hope and comfort to the hearts of men. If a man die shall he live again? was a question of remote antiquity. That the souls of the righteous, after the death of the body, return to God, is taught throughout the Hebrew scriptures; but that each lived a separate existence in the eternity of the future was not clearly understood. It was plainly and forcibly taught by the blessed and holy Jesus, and individual accountability for "the deeds done in the body" was based upon that doctrine.

It was no small part of the "glad tidings" which the Gospel message brought to the hearts of men, that there is a future life. Through all the ages the renewals in the visible world,—the returning seasons of growth and beauty, clothing field and wood in the fresh garments of a new existence, had been teaching the same lesson of life and immortality.

It wanted only faith to believe that the Great Father, the Creator of the universe, who clothes again the lily of the field, who gives freshness and beauty to the naked branches of the waiting forests, will do as much for the creatures whom he made in his own image and likeness,—that somewhere, and in some way, known only to himself, these also shall live again and forever.

And it was given to the Christ to satisfy this longing, and to demonstrate that the spirit inbreathed of God must live while He lives; born of God it is born to an eternal existence. There is an arising, a resurrection unto newness of life, even in our earthly existence, under the Christian power as it becomes the controlling principle of our life; the old things are

constantly passing away, and we are made "new creatures" in that life which no change that may come to the body can destroy. When we have attained to this condition, we can say the apostle, "Whether we live or die, we are the Lord's."

The Gospels point to the wonderful works of Jesus, and we shall ever feel the power of his words of wisdom, and the joy of that hope which, through him, we clasp to our hearts; and if, sometimes, for want of a deeper faith, it has lost its influence, in our better moments it comes back to us with a holy peace, and a trust and confidence that only the revelations of truth can bring to the spirit.

The devout Channing says, "Immortality is the glorious discovery of Christianity. I say discovery, not because a future life was wholly unknown before Christ, but because it was so revealed by him as to become to a considerable extent a new doctrine. Before Christ, immortality was a conjecture or a vague hope. Jesus, by his teaching and resurrection, has made it a certainty. Again, before Christ, a future life lent little aid to virtue. It was seized upon by the imagination and passions, and so perverted by them as often to minister to vice. In Christianity this doctrine is wholly turned to a moral use; and the future is revealed only to give motive, resolution, and force to self-conflict and to a holy life."

NOTES ON THE LESSON.

We know absolutely nothing of the crucified One from the time that Joseph of Arimathea took the inanimate form from the cross, wrapped it in fine linen, and laid it in his own new tomb in which no mortal had before found sepulture.

As the few who followed afar off to see where Jesus was laid witnessed the last sad rites for their Master, and saw the great stone rolled against the door of the sepulchre, they turned with infinite sadness and pursued their homeward way, feeling that all was lost, yet resolving that as soon as the Sabbath was past they would return, bringing spices and other preparations for the proper embalming of the body. The holiest Sabbath of all the year to the Hebrew nation drew to a close, and the dawning of the First-day of the week found the two faithful women at the Sepulchre, on their errand of loving devotion. They have no need to inquire "Who will roll away the stone?" for it is already removed, and as they come nearer they hear the words, "He is risen! He is not here!"

So down the centuries that have come and gone since that First-day shed its radiance over the earth, the watchword of the Church built upon the Man of Gethsemane,—of Calvary,—of the tomb, has been, He is risen,—he lives,—and because he lives, we shall live also.

His own were slow to believe the testimony then; they thought he was lost to them forever. How should they have faith so strong as to sustain and support them in expectation of his coming back to them,—they who on the first approach of real danger had all forsaken him and fled! Would they have left him in the hour of extremest peril, had the faint-

est thought that the grave could not hold him, taken possession of their minds? His own to-day are slow of heart to believe, but this much they do know, that whatever may be affirmed or denied concerning the humanity that was crucified, the Divine fullness which made him the Christ, could not be crucified. This is the Christ—the Saviour of the world, this the Christ that the grave had no power to hold,—that ascended on high and ever liveth to make intercession with men.

FROM LITTLE TO GREAT.

MANY years ago, an invalid lady, whose home was in the country, visited a large city near which she lived, on a sultry August day. She had business in some of the smaller streets and alleys, and was appalled at the number of pale, puny, and sick babies in their mothers' arms, who were literally dying for a breath of fresh air. What could she do?

"I cannot save all," she said, "but I may save one. There is room for a mother and her child at home."

She took the one mother and her child to her country house, kept them for a fortnight, and then took them home and brought others. Her neighbors followed her example. The next summer the number of children entertained amounted to hundreds; the next, thousands.

Another woman, who lived in the city and had no money to give, was vexed that she could not help in this most gracious charity.

"I can, at least, tell others of it," she said. She wrote an account of it for a New York newspaper.

A third woman, possessed of great wealth, sent a thousand dollars to the editor with the request that he should open a fund for this noble purpose. The Fresh Air charity was the result. The various organizations throughout the United States for the removal of the poor children from the poisonous air of the city to the country, have grown out of this first attempt of a single weak woman to save one dying baby.

During the last two years the charity has taken root in England and on the continent. No one but God knows how many lives have been saved by it.

If the woman who thought of it on that torrid day as she passed, sick and weary, through the slums, had decided, "I cannot save all why should I trouble myself with one?" how many lives that might have been saved would have been lost!—*Exchange.*

FAITH and works are not two distinct and separate agencies, as many persons would seem to suppose, any more than are cause and effect. Faith is the life, and works are the proof of life. Unless good works are to be seen as the result of faith, there is no reason for supposing that there is any faith in that direction; and unless the good works which are seen are a result of faith, they are not to be depended on as a permanency.—*Stand by School Times.*

ARCHDEACON FAURER in a recent sermon said, "You will be saved neither by opinions nor by observances, but solely by your character and life."

THE LESSON OF THE HOUR.

THE thrilling events of the past few weeks, caused by two most powerful elements, fire and water, have been well calculated to arrest the attention of the most thoughtless, and arouse even the sluggish to action for the relief of suffering humanity. All honor is due to the sympathetic hearts of a people who have, almost as one individual, come to the rescue of a homeless, stricken people, and we can but recognize the indwelling of a divinity within man to be thus so stirred to remedial action by the effects of the power of uncontrolled nature.

And lying beneath all such occurrences there are lessons to be learned that cannot be fully grasped until the immediate needs of the physical nature are supplied, for it has been most truly said "that all the beautiful sentiments in the world weigh less than a single lovely action," but after the action let us dwell awhile with sentiment, asking the question: What are the lessons God means to convey to us by permitting such devastations?

Some years since, after a terrible disaster in a neighboring State, causing great loss of life by the breaking of a railroad bridge, in a sermon delivered on the occasion of the burial of the dead, there was uttered these expressive words as the voice of those whose lives were a sacrifice. "Here we lie at the command of a Providence that makes wisdom for the many come from the disasters of the few." Can we not apply the same words now? Can we not search in this event for causes that will reveal a wisdom that has hitherto been hidden, or perhaps unheeded when perceived, that will in the future aid, partially at least, in preventing troubles? True we cannot fathom the ways of Him "which doeth great things past finding out; yea, marvellous things without number," but we can watch well our own ways that through them harm may not come to ourselves or others. We can learn that if we pursue pleasure it must not be of such a character that any life can possibly be endangered. That by its pursuit in no wise shall injury come, either physical, mental, moral, or spiritual. If we see a danger near we shall not cease to give the alarm even if we are censured therefor. Let "thy light rise in darkness and thy obscurity be as the noonday," saith the prophet,

and we believe that promise will be sure now as when given to Isaiah that "they that shall be of thee shall build the waste places; and thou shalt be called the Repairer of the breach." Not that the just shall always escape misfortune, for we know that nature's laws are not turned aside even for their protection; but having lived the true life here, it will continue in the beyond, for this immortality so unknown or so dimly seen by the ancients, was clearly revealed to us by the Master in his declaration: "In my Father's house are many mansions; if it were not so I would have told you; for I go to prepare a place for you."

One lesson is here renewed in these emphatic words, used on another occasion: "Don't waste life in doubts and fears; spend yourself on the work before you, well assured that the right performance of this hour's duties will be the best preparation for the hours or ages that follow it." Perhaps the deepest lesson for all to learn is that of the sacredness of life itself; that it may be preserved to fulfill its mission here, else why the overwhelming grief born of such disasters? Surely not for the material wealth lost, though this be ever so great, for it can in some degree at least be restored. But it is for the preservation of the human lives that are spared, that money and service are so lavishly bestowed. For these, sacrifices are made that become even precious to the self-denying ones who count it pleasure to aid sorrow when she comes in this terrific guise; and such workers grow nearer to the divine image under its merciful discipline.

The heart of a people being once aroused by heroic deeds, called forth by such misfortunes, all do not again sink to one level of inattention to good works; for having once tasted of the "sweet pains of self-sacrifice," having learned the joy of obedience to a higher call than devotion to self, there will be a recognition that goodness is an achievement of the will and power within, and can be known only when the selfish life is slain, when heaven, here as well as hereafter, becomes an assured reality to those who learn life's lesson well.

 MARRIAGES.

NICHOL—MARSHALL.—Sixth month, 1889, at the residence of the bride's parents, under the care of Chesterfield Monthly Meeting, N. J., James H. Nichol, son of Mary H. and the late James Nichol, of Philadelphia, and Caroline M., daughter of Thomas P. and Sophia B. Marshall, of Trenton, N. J.

 DEATHS.

BAYNES.—At Plymouth, Pa., on First-day morning, Sixth month 9th, 1889, Thomas P. Baynes, in his 81st year; an approved minister of Gwynedd Monthly Meeting, Pa. He was a native of England.

COLSON.—At Woodstown, N. J., Sixth month 2d, 1889, at the residence of her son-in-law, George M. Andrews, Sarah Ann Colson, aged 82 years. Interment at Mullica Hill.

COX.—Suddenly, Fifth month 31st, 1889, at Johnstown, Pa., Joseph G. Cox, of Philadelphia, son of Susan F., and the late Joseph G. Cox, aged 41 years, 8 months; a member of the Monthly Meeting of Friends held at Green street.

DYER.—Fifth-day morning, Sixth month 6th, 1889, at Medford, N. J., William Dyer, in his 83d year.

PAXSON.—Sixth month 2d, 1889, at Pinocroft, the residence of his brother-in-law, Charles W. Pickering, Montgomery county, Joseph S. Paxson, of Philadelphia, son of the late Richard Paxson.

TOMLINSON.—On the 13th of Fifth month, 1889, Mary K. Tomlinson, a member of Makefield Monthly Meeting, Bucks county, Pa., in her 63d year, daughter of B. Palmer and Hannah P. Tomlinson.

Of this dear friend and sister it might be truly said, she was ever ready "to rejoice with those who did rejoice and to weep with those who did weep." Her interest and concern for the welfare of others were not circumscribed by the bounds of a large circle of relatives and friends, but her sympathies went out to all with whom she came in contact. Her hand was ever ready to lighten the labor of others, and her words of comfort and consolation were freely given to all, to encourage them to bear their afflictions with humility and resignation. In the light of her example may we find the inspiration to do our duties in life as they come before us, and as we have opportunity.

CORRECTION.—In our issue of Sixth month 1st, in the death notices that of Albert Chandler was incorrectly printed Chandler.

LONDON YEARLY MEETING: CONCLUSION.

LONDON, Fifth month 31.

EDITORS INTELLIGENCER AND JOURNAL:

THE great variety of subjects engaging the attention of this Yearly Meeting has exceeded anything hitherto experienced, and with little exception they have been dealt with in a thoroughly earnest and business-like manner, and without much friction. The amelioration of the condition of the poor and degraded in our large towns, the cause of peace, home and foreign missionary efforts, the drink question, and the opium traffic, have all, in addition to the interests of the Society itself, claimed much careful attention. These latter will most likely be of the greatest interest to the readers of the INTELLIGENCER AND JOURNAL. The home mission work is conducted under the guardianship of a committee of the Yearly Meeting, but cannot be said to be controlled by the meeting; and many of the practices sanctioned by the committee are strongly objected to by a considerable number of members. Rather animated debates consequently ensue, each year, when the question of reappointing the committee is before the Meeting. The opposition has been increasing of late, and was stronger this year than last,—mainly on account of some of the "missionaries" having proved insubordinate to the elders and other experienced Friends in the meetings in which they are settled. It is being found that (as in the Western States of America) these men assume a lordship over

the congregations and override the long established order of our meetings for worship. Notwithstanding the strong opposition, the supporters of the "Missions" obtained the reappointment of the committee for three years.

The Archbishop of Canterbury, the primate of the Established Church, had communicated with the clerk of the Yearly Meeting with a view to the Society of Friends joining a great evangelical organization which is in contemplation. The correspondence was read, and evinced a courteous spirit, but the terms offered could not be entertained, nor could the object of the Union be very clearly ascertained. The clerk was directed to reply that we could not accept the proposal, though appreciating the friendly courtesy which prompted it. The Bishop of London took part in the meeting of "Friends' Temperance Union," and made a capital speech, as did also his wife.

There were some excellent observations on divine worship, ministry, and prayer, when the consideration of the state of Society was before the Yearly Meeting, especially in regard to prayer. The familiar style of addressing the Almighty, and the want of reverence exhibited by the very free use of the holy name were severely commented on, as well as the two frequent and long vocal appeals in our Meetings, "as though we should be heard by our much speaking."

Upon the whole it may be thankfully admitted, that the two weeks, save one day, which the Yearly Meeting, including the Meeting on Ministry and Oversight have occupied, have been profitable and favored seasons. * *

THE FIRST-DAY SCHOOLS: MONTHLY RECORD. III.¹

THE Bible Class attendance was good, Fourth month 21st., and much interest was evident upon the subject of the miracles. The teacher said that although quite radical upon most points of faith, he felt satisfied to accept the record of the apostles upon this as it stands. He did not believe that Joshua made the sun and moon stand still, for that would have interfered with some of the greatest laws of the universe. Nor did he believe that Jesus or his disciples ever performed miracles themselves, but that the power of God shone through them, and as God was quite equal to the creating and sustaining of the universe, He was amply able to make here and there such little changes in His designs as He thought proper. "There are more miracles going on at this moment than are recorded in the Scriptures." "If we doubt the record of all miracles we have a good deal to doubt," said a scholar. The question was asked, "Why do they not occur now, since the same Power that performed them then is still in the earth?" "They are not needed now." "What is to be understood by the word miracle?" questioned one. "Something that seems out of harmony with those universal laws with which we are acquainted. The changing of water into wine is much used just now

¹From the Secretary's Minutes of a First-day School, 1885, mo. 29, 1889.

as an argument against Constitutional Prohibition;—taken as a cloak for cowardice." Electricity, in its present uses, might well be esteemed a miracle. The teacher thought nothing a miracle if it can be explained on scientific principles. A scholar suggested that they were performed to show the power of the true God.

The Bible lesson was in the eighth chapter of Matthew, showing the apostle's application of Isaiah's saying, "Himself took our infirmities and bare our sicknesses." "Does Jesus' 'Follow me' mean that we are to do just what he did?" The scholars thought not, but rather that we should follow our own light as he followed his. An anecdote was told of a Friend who went West to preach, leaving his family so straitened that they wrote at last begging him to come home, but he sent them word that the Lord would care for them, and went on preaching. The teacher thought with others that the man had not had a true call. "What does thee mean by a true call?" inquired one present. "That the minister must be led by the Spirit of truth. I have often felt that the cause of Friends was being greatly injured by ministers who had no true call to the work." "Of course they are fallible as well as others," said one of the elders of our meeting. The questioner added that she had sometimes sat through a sermon which contained nothing for her, and yet friends had told her afterwards they thought it excellent, and that sometimes the words appeared to be addressed to a few persons only, even when the call was a true one.

A scholar raised the question of the meaning of the words "The sons of the kingdom shall be cast out." They were explained: The sons of the kingdom were first the Jews, for the kingdom had been promised to them, but that they were cast out from it because they would not accept it, while other nations, looked upon as inferior, did accept it and have been admitted. What is meant by outer darkness? was answered with "To be shut out from the consciousness of God's love. He loves us always, but we sometimes make it impossible for ourselves to feel that love." "Now, or hereafter?" "Both now and hereafter, but not forever. It depends upon ourselves; the power has been given us to come into the light if we will." "Does the Bible teach forgiveness and return to goodness after death?" "It does not matter very much whether it does so or not, for I believe that the light that comes to thee directly is more important than anything in the Bible. I think God will always visit his children," was the teacher's reply.

Fifth month 5th the Primrose Class was occupied with the primary Lesson Leaf on Watchfulness. After having the lesson read by the scholars in turn, the teacher asked them "What does watch mean?" "To watch our minds and see that bad thoughts do not enter," said a boy, and a girl said "To watch means to pray to God." "What must we watch for?" "Against evil thoughts and temptations." The parable of the ten virgins, referred to in the printed lesson was read, and one girl being asked to give it in her own words could not; but by the help of ques-

tions it was gradually drawn from her. The important points in the lesson leaf were talked over, the little temptations which must be guarded against, temptations to selfishness.

This class was composed of but four, one of them being a pleasant-faced but inattentive little girl, and one a boy fairly brimming over with life and activity. The latter could only have been quite happy if he had been chosen to answer every question and do all the talking, and yet is a thoroughly good boy at heart. It has been said that children are true barometers, fine weather always showing in the height of their spirit. It seemed true in this case at least. Fortunately for the teacher's rule, she was fond of him and he of her, otherwise the entire lesson could only have been spoiled by his constant forgetfulness to continue obeying. The hour called to mind a little verse of Coleridge's, which might be a help to many a First-day School teacher:

"O'er wayward childhood would'st thou hold firm rule
And sun thee in the light of happy faces,
Love, Hope and Patience, these must be thy graces,
And in thine own heart let them first keep school."

The Reverence Class was yesterday considering the proceedings of yearly meeting. As none of them had been in regular attendance throughout the week, the teacher directed the following inquiries to a visitor who had attended: "Will thee not tell us what important measures were considered this Yearly Meeting week?" "The education of the colored people of the South interested me greatly. The different meetings were also engaged in looking up their scattered members and Friends were urged to send them Friend's literature, and encourage them to group themselves into new meetings when practicable. The Temperance Committee was very interesting, though New Jersey and Delaware did not seem so deeply in earnest as Pennsylvania. The Colored Schools at Aiken and Mt. Pleasant report that they are doing a great missionary work, especially the former, of which Martha Schofield is head. She was present at the meeting, and had come partly for the season of moral and spiritual refreshment, and partly to raise \$6,000 for an industrial school building, which was greatly needed in connection with the other. \$3,000 of it was subscribed by two Friends." "Were any changes made in the Discipline?" "No; the time was fully occupied with other matters." "Was any action taken with regard to Indian affairs?" "Considerable interest and sympathy were apparent, but the Government is more active in the Indians' interest than formerly, and our committee did not see a great deal for them to do at present. The question of living within the bounds of our circumstances was dwelt upon. That much by itself was thought not to be sufficient; for the wealthy could follow that literally and yet set an example of wasteful extravagance. All were called to a more simple, quiet mode of living." "The Queries were satisfactorily answered, I suppose?" "Yes, quite so, except that several mid-week meetings have been dropped, owing largely to the members having moved from the places."

The teacher expressed earnestly the feeling that

the Philadelphia Yearly Meeting is without doubt one of the most remarkable deliberative bodies that meets anywhere in the world. It transacts a large amount of business, and in a way which differs from all other bodies. It is successful without any parliamentary rules. All have an equal voice, even quite young people. The power of the spirit of Quakerism impressed him strongly on every such occasion,—the force and strength that lie in the spirit of toleration. "The spirit of Quakerism is the divine spirit, I think," responded the visitor. "Yes, the divine spirit acting through human beings." He went on to say that a lady who had attended a session of the United States Senate said the dignity and solemnity of the gathering did not compare with that of the Philadelphia Yearly Meeting. It is a wonderful body, with a wonderful way of proceeding. It shows better than almost any other one thing the great difference between Friends and other bodies. It works quietly, systematically, successfully, and always seems able to adjourn in about the same length of time. The visitor added that a committee had been appointed to look after the First-day schools, and establish a closer bond of sympathy between them and the meetings. The committee on the George School had been continued, as also the educational and temperance committees. The scholars were asked if they had anything to suggest or ask, but as they were silent a short explanation was given of the relations between the business meetings: the Preparative, subordinate to the Monthly, these to the Quarterly, and these again to the Yearly meeting. The Philadelphia Yearly Meeting's organization is an independent body, subordinate to nothing but the Spirit, but in correspondence with others like itself, for the sake of maintaining a bond of sympathy throughout the whole Society. "I tell you," said the teacher, "you may look far and wide and you will not find anything more wonderful than the conduct of business in the Religious Society of Friends. No parliamentary rules, no presiding officer even, only a clerk to record the proceedings. Unity is necessary to action, hence it is a conservative body; but though this plan seems sometimes to retard, yet it is on the whole a very safe one; it gives a great strength to the body by throwing an added responsibility upon it and upon each member. If at any time you are not among Friends, and wish to impress your hearers with the power and peculiarity of this sect, I know of no way so good as to tell about the manner of procedure of the Yearly Meeting. Outsiders can scarcely realize that such management is possible.

"The Discipline does not control the Society of Friends. It is a record of understandings arrived at by the organization after many years. The Society came together without rules; other organizations meet under rules. The Discipline is subordinate to the principles which brought Friends together as a Society. There are doubtless many who, if asked to tell what they know of Friends, would say that their coat collars stand up behind and they say 'thee.' I wish you to be able to express among strangers the fundamental principles of Friends, also the principles of their business organization." The First-day after-

noon of yearly meeting week some of the First-day schools of this section assembled, and we can look with a just and modest pride at the interest and growth apparent. Never has there been a more satisfactory gathering of its kind than that upon the afternoon of the 12th, and such an occasion could not have been, but for the faithful, patient, steady, loving, interested, heart-whole labor of several hundred people, teachers and pupils. It *must* have a marked influence upon the community. There can not be too much of simple, unostentatious goodness in the world; our underlying principles are as sadly needed among humanity in this day as at any time in the past. There will always be enough of evil to develop the full working power of every one among us or in sympathy with us; but there never can be enough to make it right or best for us to grow discouraged. "Whatsoever thy hands find to do, do it with thy might" is the only requirement; and every individual who has endeavored with single-minded effort to be true to his trust, to be found faithful at his post, shall, without any care as to the result, be admitted to the joy of an "exceeding great reward."

For Friends' Intelligencer and Journal.

VIOLETS.

EAST of town stretches the rail-road track, connecting the dull little country place with the busy world outside. Early in the spring the dead grass by the side of the track was burnt off, and now a new growth has sprung up, vividly green and waving lazily in the soft breeze. On the telegraph wire, a red-mingled blackbird is teetering and chattering, while a woodpecker on the post gives an occasional harsh cry. Over there in the field you hear a lark in the grass, and farther down the track is another, faintly echoing the clear, high trill. Here, with the spring sunshine over you and around you, and the fresh, damp earth under your feet, you may come to hunt for violets. Down in the hollow, where the ground is moist and a little shady, is the common blue violet (*Viola cucullata*) with its large white eye and heart-shaped leaves. Farther up on the hill the Larkspur violet grows, its leaves deeply cleft and its blossoms a trifle less conspicuous. Very similar to the Larkspur violet, but easily distinguished by the fact that its lateral petals are not bearded, is the Bird-foot violet, also a native of central Iowa. In the woods, too, we find the yellow leafy-stemmed violets.

The sweet-scented English violet, cultivated in gardens, comes from Europe; so does the pansy, with its pretty French name, signifying "thoughts." No flower has been more improved by cultivation than the pansy, and one unacquainted with its history would scarcely recognize in the little flower so abundant in the fields of the Old World the progenitor of the royal blossoms which the florists now produce.

The violets are chiefly natives of the North Temperate Zone. Gray mentions sixteen species of the genus *Viola* as indigenous to the northern United States. Most of them grow from rootstalks and are perennial. Some have short stems while others are

stemless. The spurred, five-petaled corolla is characteristic of the family, and the most careless observer knows a violet when he sees it.

Indeed one would never suspect from the appearance of this modest and unpretentious member of the vegetable world, that it is not a typical flower, growing, blooming, and forming its seeds in the most orthodox manner possible. Yet simple and innocent as it appears, the violet has an important secret hidden under its leaves and the botanist will tell you that it affords a striking instance of a certain rather unusual form of fertilization.

With respect to the manner in which the pollen is transferred to the stigma, flowers may be divided into three classes: Large, showy blossoms with nectar glands, are fitted to attract insects which carry the pollen from flower to flower and thus effect cross fertilization. Such flowers are called *entomophilous*.

A second class, called *anemophilous* flowers, depends upon the wind to bear the pollen. These flowers do not require gay coloring or nectar glands but are abundantly supplied with pollen, as much is liable to be wasted before it reaches its proper destination.

Lastly, we have the *autogamous* flowers, whose organs are so arranged that when the anther opens, the pollen grains are brought into contact with the surface of the stigma. It is chiefly to this kind of fertilization that the violet owes its preservation. But it is not the dainty blossoms that are purpling the ground these spring days that are characterized by it. Probably no plant is entirely autogamous. The violet certainly is not and its secret is simply this:—Early in the season the gay blossoms are produced. These are ordinary entomophilous flowers. Later, small inconspicuous flowers appear which do not develop a corolla and which are hidden beneath the leaves (or, in some species, underground.) These blossoms are autogamous and are far more fertile than the others; so that it is the pods produced by them which contain the seeds upon which future crops of violets depend.

Would you have suspected it? Surely truth is much stranger than fiction, and yet how little we concern ourselves about the wonders lying about us every day.

ANNA L. NICHOLS.

State Centre, Iowa.

WE hear often of greatness of character. The only true greatness consists in unconquerable purpose of obedience to God. It consists in adhering with energy and courage to truth, duty, and honor. It consists in taking our rules of action from our own minds, enlightened by revelation, and following our deliberate convictions of right in the face of death and danger. It consists in asking ourselves, first, not what is expedient or safe, but what is generous, excellent, and acceptable to God; and in forming purposes of rectitude with a force which men and time and suffering cannot subdue. This holy energy of mind is the only true greatness, and it is a greatness not beyond the reach of our nature.—*Channing*.

To be dextrous in danger is a virtue, but to court danger to show it, is weakness.—*Wm. Penn.*

For Friends' Intelligencer and Journal.

NOTES BY THE WAY.

A HEALTHY mind in a healthy body is in the Latin language a proverbial saying. It has dwelt with me lately, on account of some interesting remarks of a Friend who spoke at Race street meeting lately, and who told us of the sad experience of one of his nearest relatives,—a brilliant young man, who, at the age of twenty-three, obtained a place of business with a large salary. He visited at his employer's house, where wine was offered him; and he was desired to accompany the women of the house, who had perhaps nothing to do during the day, to places of evening entertainment. His time during the day was his employer's, the early hours of the night, said our friend, he needed for rest.

After meeting was over I told the speaker that I had observed something of the same myself, but had never, I believed, heard any one speak of it before. When stopping at a hotel in a western city, on one occasion, I had met young men employed in a great retail store (probably upon their feet nearly the whole day), yet in the evening they were desired by one of the women boarding there to escort herself and her niece to the skating rink.

That intoxicating drinks have a greater hold on the system when the body is fatigued, and the nervous energy, exhausted I infer from a remark of a near personal friend, who was born in the north of Ireland where he probably saw whiskey punch drunk every day in the year. My friend, who is a professional man, said: "Nothing would be more agreeable to me, when exhausted by a case, than to drink wine, but I know that then I must not take it." To an old friend in Chester county I once said, in substance, "Is it not strange that women will wear tight dresses and tight shoes?" "Not stranger," he replied, "than that men will drink intoxicants and use tobacco."

In considering the vagaries of fashion I am reminded of a homely saying in Lancaster county, "Pride is never too hot, nor too cold."

* * *

In a late number of the INTELLIGENCER and JOURNAL appeared an article from the *Ledger*—a notice of Henry Franklin, a colored man of this city. He was my neighbor, living very near Race street Meeting House, in the Academy of Fine Arts, the large building at the corner of Broad and Cherry streets. He was employed as janitor and messenger, and served in that capacity about twenty-five years. He was also "an interesting model in the sketch classes."

I stood beside his coffin in the back of the Academy, and saw the large wreath of flowers laid at his head, presented by gentlemen connected with the Academy.

A friend who was in attendance at our late yearly meeting, has told me, how, when still a slave, Henry Franklin used to come to the home in Adams county, of her parents, the late Wm. and Phebe Wright, both I believe born Friends. Bill Budd, as he was then called, lived near Friends' meeting, at Pipe Creek, in northern Maryland. He first came

with his master and the six horse team to Wm. Wright's to buy fruit trees at William's nursery. Afterwards he came alone; he would leave his horses tied around the wagon-pole eating; and would bring his wagoner's bed into the kitchen, and lay it upon the floor. He told the Wrights how much he desired his freedom, which he expected at twenty-five. It has been said that he ran the home farm, for the Shreiners were wealthy, gay folks, who liked ease and enjoyments, and perhaps began after awhile to be in declining circumstances. He loved the boys, the sons, like his own family; but he feared that some of the slaves would have to be sold, so he left them, and came up to William Wright's, that being an active station on the Underground Railroad. Afterwards he crossed the Susquehanna and stopped at the house of another Friend, an active abolitionist, Daniel Gibbons, father of Joseph Gibbons, late editor of THE JOURNAL.

An account of the life of Henry Franklin, as we now call him, was written by Hannah M. Levick, sister-in-law of our late minister Samuel J. Levick. Henry lived long among Friends at or near Quaker-town, in the eastern part of the State, a locality which was also for years the home of Samuel J. Levick.

* * *

A short time since I was in the store of John Wanamaker, now Postmaster-General. In a conspicuous place stood a handsome glass case, and inside upon a rest that was neatly covered with plush lay an old, heavy pocket knife. It had a broad, coarse blade with the point broken, and a little blade, which had apparently been broken and sharpened off. A card attached bore this inscription: "This knife, the property of John Brown, of Assawatomie, was taken from him when arrested at Harper's Ferry." The plate on the handle bears the name "John Brown." The blade bears the following inscriptions: "Pirate Chief and Robber of Kansas. Taken from his person, attack on Harper's Ferry Armory, 17th October, 1859. Presented to Governor Henry A. Wise, of Virginia, by Archd. M. Kibsmiller."

In fancy, I can trace the travel of this knife. Who was Archibald Kibsmiller? Was he the sheriff of the jail at Charlestown, who rode out with John Brown, to hang him? How the knife passed from Governor Henry A. Wise of Virginia into the hands of a Philadelphian of very different political views I can fancy thus: Many years ago, when I was a girl, my father, Thomas Earle, was member of the Convention to revise the Constitution of our State. To his great surprise, probably, a member from Philadelphia county brought forward as an amendment, the proposal to place the word "white" in the description of those who should vote, thus depriving colored men of the constitutional right which they had before possessed. Against this "Amendment" my father battled earnestly. The discussions much interested my younger brother and myself. The public being admitted as spectators, I had a seat, and present also on one or more occasions, were two fair-haired girls, daughters of perhaps the most prominent member of the Convention, the distinguished

lawyer, John Sergeant. One of these daughters afterwards married Henry A. Wise, of Virginia, who was Governor when John Brown was executed, and who bore the title of "fire-eater," from the extreme manner in which he upheld the Southern views. But blood, it seems, "told," for one of the most earnest of the Virginia Republicans is John Sergeant Wise, the offspring of the marriage I have spoken of. And thus we see how the old knife may have passed into the hands of the Republican Postmaster-General, to be placed on exhibition in his store.

* * *

I was quite struck while traveling among Friends on Long Island with instances of longevity. I was told of one Friend who was near ninety, yet her daughters must rise early in the morning to keep her from taking the "butt-end" of the work. Our friend, Samuel Griscom of Philadelphia, is the son of Samuel Griscom, who, (with his wife), lived at Reading where he was engaged in constructing the canal. They had twelve children, all of whom survive but one, and the youngest of the eleven is now 55 years old. The one deceased did not die a natural death, but was killed by a railroad accident.

This long life in such a number is rendered striking by the following statement found in the New York World Almanac for this year and perhaps essentially correct. The average duration of human life is about 33 years. One quarter die before the age of 6; one half before 16, and only about one person of each 100 born lives to the age of 65.

P. E. GIBBONS.

SWARTHMORE NOTES.

The close of the college year is very near at hand. The Commencement exercises will occur on Thursday next, the 18th inst.

—Following the example of all classes of people, everywhere, the students and instructors subscribed to the Johnstown Sufferers' Fund last week, and over \$300 was raised. The classes voted to do without their customary class banquets and turned over all the money saved for this purpose to the Fund. The Juniors giving \$30; the Sophomores, \$30, and the Freshmen, \$35. The Eunomian Literary Society also turned over a large portion of its funds. Grant Dibert and Genevieve Elder, ex-'91, and Harry Randolph, '92, resided in Johnstown, and all lost relatives and friends and property, so the money was sent to these.

—The contest for the Furman prize in Senior oratory was held in the college hall on Sixth-day evening last. The judges were Professor S. S. Neff, of the National School of Oratory, Chas. H. Banes, and Mrs. Mennena, all of Philadelphia. There were ten speakers, and Clara Haydock, of New York, secured the prize, which was a handsome medal.

—The Sonerville Literary Society has petitioned the authorities for a room to be used as a reading room and for other society purposes, as the societies on the young men's side have.

—Professor Rolfe and wife, and Professor Weaver sail for Europe on Fifth-day. They will go by differ-

ent lines but Germany is their objective point. Professor Price and family will not go until a week or so later, and will spend a year in Germany.

—Professor Appleton visited Smith College, Northampton, on Third-day. His purpose was to witness the presentation of the "Electra of Sophocles, by the Senior class there, and compare notes with Swathmore's presentation of "Antigone."

—Margaret Howard, of Philadelphia, was present at the meeting on First-day last.

—Cards are out announcing the wedding of Dr. Spencer Trotter, Professor of Natural History, and Laura Lee, of West Chester, on Fourth-day, the 19th inst.

THE PROHIBITION ISSUE.

EDITORS INTELLIGENCER AND JOURNAL :

"The Tree is known by its fruits."

THE manufacture and sale of alcoholic liquors as a beverage is a business whose fruits are evil; therefore it is a nuisance, and has no inherent, moral right to exist. No man has a right to do wrong. Because the traffic is an attack upon the life, liberty, and happiness of the people, we ask that it be put under the ban of our organic law. We have no right by legislation, to guard, license, or regulate this evil. Evil will not come to order. Order is a law of Heaven, not of evil. The states of Maine, Kansas, and Iowa have Constitutional Prohibition of the liquor traffic. The testimony of the intelligent, unbiased minds of those States, of the Governors, Ex-Governors and many prominent business men is clear, conclusive, and even accumulative that Constitutional Prohibition there is a grand success, and is rapidly advancing those commonwealths in moral and material prosperity.

We want this great crime against the State to be outlawed, so that all moral and religious influences may grapple with it as with other crimes. Good and true men and women have been made willing in the love of God shed abroad in their hearts to sacrifice life, fortune, and endure all degrees of bodily discomfort as a testimony for the truth, and for the good of their fellowmen. Are we willing to sacrifice our indulgence in alcoholic stimulant in its various forms for the sake of our brother? Have our spiritual natures been so nurtured that we have the strength to forego what we surely must now know is an injurious indulgence, for our own sakes, for society, for the State, the Nation, the human race? We know that alcoholic indulgence leads to the alcoholic disease, a disease the most terrible in its final results. How many more of our sons must go down to a drunkard's grave? How many more of our daughters must go down to the grave of the broken-hearted ere the sleeping conscience of this people is fully aroused to duty?

Sovereign voters of Pennsylvania, keep your eyes single to the light, be not turned aside from the plain, true issue. The saloon or the home, which must go? This is a time when the mammon of unrighteousness doth vaunt himself and worketh to darken your vision in many seductive ways.

"Righteousness exalteth a nation, but sin is a reproach to any people."

JEREMIAH J. STARR.

A WOMAN'S ASPIRATIONS.

O God! this fleeting life I have from Thee!
 Within me hast Thou breathed a spark divine!
 I hold that life a sacred trust to be,
 And all I am and can be wholly Thine,
 An utter longing fills my soul, that I
 Be proved not quite unworthy ere I die,—
 Ere I be called to render up my soul,
 Again made perfect in Thy perfect whole.

What can I be to show my gratitude?
 Sincere at heart down to the very core,
 Gracious and quiet ever in my mood,
 With kindness speaking,—feeling it much more,
 A woman truly worthy to be loved,
 A woman by no sickly motive moved,
 But guided by a brave integrity
 At whose approach all evil thoughts must flee.

No words or acts of love shall be too small
 For hands and heart with power like mine to do,
 No task imposed by love shall ere appall,
 But cheerfully I will the end pursue,
 Knowing that help will come, tho' I am weak.
 To do my duty—that is what I seek.
 I care not whether it be great or small—
 Small things done well, are greatest after all.

Love, not ambition, be my guide through life,
 Not selfish love that only seeks to find
 A place of shelter in a world of strife:
 But self-forgetful love for all mankind.
 To counsel strong, yet stronger still to aid;
 A woman fit to live; a lifetime made—
 By thought and deed, thro' guidance of the soul,—
 Though not a perfect, yet a noble whole.

I feel within unconquered, unsubdued,
 The strivings of a vast and mighty force,
 A voice speaks clear, "Go forth and fight for good
 "Go bravely forth and run a manly course."
 I will obey. I consecrate my life
 To Thee, O God! I'll enter in the strife
 'Gainst ignorance and crime, and do my part,
 Albeit with bleeding wounds and broken heart.

True courage shall my every act reveal—
 A courage to command or to obey,
 A courage which shall make those near me feel
 That here is one to trust on darkest day,
 A courage always to stand up for right,
 To help the weak and guiltless in the fight,
 A courage that is tempered and refined
 By gentleness and modesty combined.

No human brother, fallen how'er low
 Shall ever look to me in vain for aid
 Within the power of man, but he shall go,
 Revived and cheered, his pathway clearer made.
 Whene'er I may, I will a hand extend
 Of friendship true. Each word I speak shall tend
 To rouse, encourage, strengthen, and inspire,
 And make my hearers seek for something high

Whate'er I do, I'll do with all my might,
 And all to God's great glory, and because

I love Him and my fellow-man aright.
 I'll know no futile dream, no idle pause,
 But ever will I labor day and year;
 Though vexed by many a doubt and many a fear
 I'll work on bravely to the very end,
 The humble child of God, the whole world's friend.

B. P. M.

THE WOOD-ROBIN.

How calmly the lingering light
 Beams back over woodland and main,
 As an infant ere closing its eyelids at night,
 Looks back on its mother again.

The wood-robin sings at my door,
 And her song is the sweetest I bear,
 From all the sweet birds that incessantly pour
 Their notes through the noon of the year.

'Twas thus in my gay boyhood time—
 That season of emeralds and gold,—
 Ere the storm and the shadows that fall on our
 prime
 Had told me that pleasures grow old.

I loved in the warm summer eves
 To recline on the welcoming sod,
 'Neath the broad-spreading temple of twilight
 and leaves
 Where the wood-robin worshipped her God.

I knew not that life could endure
 The burden it beareth to-day;
 And I felt that my soul was as happy and pure
 As the tone of the wood-robin's lay.

Oh, beautiful, beautiful youth!
 With its visions of hope and of love;
 How cruel is life, to reveal us the truth
 That peace only liveth above.

Now, the wood-robin trills the same tune
 From her thicket in garden and glen,
 And the landscape, and sky, and the twilight
 of June
 Look lovely and glowing as then.

But I think of the glories that fell
 In the harvest of sorrow and tears,
 Till the song of the forest bird sounds like a
 knell,
 Tolling back through the valley of years.

Sweet bird, as thou singest forlorn,
 Through the visions that rise from the past,
 The deep of the future is purpling with morn,
 And its mystery melting at last.

I know that the splendor of youth
 Will return to me yet, and my soul
 Will float in the sunlight of beauty and truth,
 When the tides of the Infinite roll.

Oh! I fain would arise, and set sail
 From the lowlands of trouble and pain;
 But I wait on the shore for the tarrying gale,
 And sigh for the haven in vain.

And I watch for the ripples to play,
 And tell me the breezes are nigh,
 Like a sailor who longs to be wafted away
 To the lands that lie hid in the sky.

—James G. Clark.

A JUNE MORNING.

O, MORNING! light upon the trees,
 You stir my soul to ecstasies!
 While yet there dwells a joyous calm
 Over the woodland sea of green,
 O'er meadow bays and inlets sheen
 With huttercups, where birds wake psalm.

The bleating, bark! of pastured sheep
 On some fresh lawn doth hither sweep
 To mingle with the songster's note;
 While doves and bees anon let stray
 Their voices 'mid the roundelay
 That on the cool, sweet winds doth float.

Winds seeming straightaway borne to me
 From graves of fairy minstrelsy
 Beyond that highland's purple-blue,
 Expanding wide its mystic domes,
 Round which my fancy gently roams,
 Warmed by the sparkle of the dew.

Still farther up my gaze is lost
 In heaven's azure, with its frost
 Of cirri cloudlets, like those wings
 Italian painters gave to prayer
 'Neath baby forms, as being more fair
 The thought which thus an image brings.

I can but think such morn as this
 Must dawn prophetic of the bliss
 Somewhere, some time, awaiting man,
 For though I tell its charms by name,
 It wears a promise that doth claim
 The angel's harp and snowy van.

—William Struthers.

THE DESTRUCTION BY THE FLOODS.

CONCERNING the great destruction in Pennsylvania and elsewhere by the floods on the 31st ult., we take the following further information from the daily newspapers.

THE LOSS OF LIFE ON THE CONEMAUGH.

JOHNSTOWN, Pa., June 9.—The number of dead actually recovered in the entire district thus far is estimated at about 3,000. About half of these have been identified, and all but about 200 buried. Efforts are being made to secure accurate returns from every point, and Mr. J. A. Larkin, of Johnstown, who is now in charge of the Registration Department, in the absence of Mr. McConnaughy, who was obliged to return to Pittsburg, states that in a day or two a report, giving all the information possible in this connection, will be made up.

Messengers have been sent out to all the morgues in the 20 miles of territory to secure figures and to make investigations concerning private burials by individuals and along the river banks. "The difficulty of the task," said Mr. Larkin, "will be apparent when it is known that in the hurry and excitement attending the first news of the disaster many bodies that were found were buried by those who found them, and no record was made of the number of them, or description given of those unidentified. However, under as good a system as we have been able to devise, lists of the identified dead will be made up at once, and description of those not identified will be published. This, with the list of the liv-

ing, will enable us to get at something like a fair estimate of the actual loss of life. Bodies are being buried with but very little delay after finding, on account of the badly decomposed state in which most of them are discovered. Even the best preserved of those now dug out cannot be kept with safety to the health of the living, and they are interred as quickly as possible after a description is obtained." The number of bodies recovered being about 3,000, the number registered of the living 20,000, and the whole population before about 29,000, leaves the total, "allowing for slight inaccuracies in figures," at over 8,000.

THE GREAT BARRICADE AT JOHNSTOWN BRIDGE.

JOHNSTOWN, Pa., June 9.—Booth & Flinn have so far had charge of the removal of the "drift" above the stone bridge. Their Superintendent, Thomas McNally, estimates that there are about thirty acres in the drift. Between the confluence of the creeks and the bridge he thinks there are about 24 acres, and there are at least six above. The vastness of the accumulation, he says, grows upon the workmen daily. From the bridge, the hillsides, or any other point, it does not seem to be anything like what it really is. To get a fair idea of it a person must not only walk over it, but wait to see how comparatively little one dynamite blast will do and what small headway the 550 men now employed there can make in a day. Below the confluence the logs, wrecked houses, boards, stones, dirt, etc., form a compact mass upon which footways have been worn.

With the present appliance and force of men Mr. McNally says it would take months to clear away the drift, but with the means to be adopted, and with about 1,000 additional men, there ought to be nothing left of the drift two weeks hence. Not more than about 1,500 men, he says, could be used with advantage in the work. Two clearings have been made in the drift. One is at the bridge where the dynamite blasting has been done, and the wood is sent down the river.

The water area cleared here from Wednesday morning until 4 o'clock this afternoon is estimated at only about three-quarters of an acre. The other clearing near the confluence at the Johnstown side of the drift is about half an acre. There it has been necessary to drag all the material out of the water, to be burned near the bank.

The odor at some points is very offensive, notwithstanding the liberal use of disinfectants. "We are using bromine for this purpose," says Mr. Mitchell. "It is worth 40 cents a pound. 1,000 pounds of it have been contributed by the Union Salt Works, and they promise to give us all of it that we want. If we did not use this or some equally powerful disinfectant we could not work here. We sprinkle it in solution, using six pounds to a barrel of water. We have enough bromine left to make about 100 barrels of the mixture.

Since Tuesday until now, 4 o'clock, 19 bodies have been recovered in working up from the bridge through the drift. Twelve of these came from the three-quarters of an acre, more or less, that is cleared, and the seven others have been found close to the bridge by the remainder of our men who are break-

ing into the drift and dragging material upon the bank. Superintendent McNally and the workmen around the half acre of water cleared near the confluence say that two bodies have been taken from that spot. That would make a total of 14 bodies taken from an estimated aggregate area of about an acre and a quarter of cleared away drift.

WORK TO BE DONE BY THE STATE.

A conference was held in Johnstown on the 9th inst., at which were present Governor Beaver, Adjutant-General Hastings, Chairman Scott, Contractor Flinn, some members of the Pittsburg Relief Committee, and leading men connected with the emergency government of the Conemaugh Valley, at which important action was taken. It was decided that the State authorities should assume all liabilities for the removal of the debris from the town sites and the drift at the stone bridge, and the work necessary for putting the valley in good sanitary condition and preventing the pollution of the water supply of distant cities and towns. It was agreed that the Governor should appoint a commission to take general charge of the valley, and that on Wednesday next General Hastings shall assume general direction, not only of the military and police, but also of the clearing away of the debris and putting the town sites in proper condition for rebuilding. It was also agreed that none of the money sent for the relief of the sufferers should be used in clearing the towns; that this work should be done by the State, and that the contributions of money, food, clothing, etc., which the public are expected to continue shall be used to supply the necessities of the survivors.

The change of plan thus agreed on took place on the 12th instant. Most of the men who had been at work quit the night before and doubt was expressed as to the operations under the new system.

DAMAGE ELSEWHERE.

The floods of the 31st were unprecedentedly high along the Potomac and did great damage. Relief is being given from Baltimore and elsewhere. There was little if any loss of life. A member of the committee from Baltimore made the following statements to a newspaper correspondent:

At Point of Rocks, 12 miles below Harper's Ferry, the committee relieved 31 families, spending \$1,010. Robert Ivory, a colored man who lost his own house, was given \$50 and commended for his heroism in making three trips in a boat through the flood and drift-wood to rescue a family of five members, named Fox. This place, which contains about 150 small houses, was literally covered with mud. Houses were overturned and swept away and the streets were converted into high mud banks. Sixteen families were relieved at Berlin, which is four or five miles from Harper's Ferry. They needed both money and clothing. The damage, as observed from the train, was very great. The water had risen nearly 40 feet on some of the houses, and had smashed and torn others apart. Gardens were ruined, fences and sheds carried away, and trees and lumber piled in heaps all over the place. At Harper's Ferry, the dwellings in the lower part of the town were submerged and wrecked. The railroad bridges were damaged, that over the Shenandoah suffering most.

On the West Branch of the Susquehanna, the principal damage was at Williamsport and Lock Haven. The towns on the Juniata also suffered severely. Several lives were lost by the sudden giving way of a bridge at Williamsport.

LIGHT IN THE SHADOW.

THERE is nothing comparable in interest with the development of a human life. The love of biography so widely diffused, bears constant testimony to the recognition by men at large of the supreme importance of the unfolding of personal character. The story of the man who begins with small opportunities in boyhood, and, by patience, integrity, courage, and submission, comes at last to great place, noble character, and large usefulness, is the one story in which men never lose their interest and which constantly re-creates hope and ambition in struggling or despondent souls. Such a story not only teaches the lesson of the power of steadfast purpose and continuous energy, but always bears witness to the presence of something behind the man greater than he, wiser, more far-seeing; something which takes into account the largest possibilities of his nature, and which, by hope, by impulse, and by pressure, pushes him constantly onward. In every great career two elements are combined—the element of powerful personality and the element of strength, of plan, and of energy outside and above the man.

Looking at a successful career from the outside, it seems as if the course of such a career were perfectly plain, as if the man saw from the beginning what he could attain to, and so, because he saw the remote end, was able to surmount cheerfully all obstacles, to pass through all difficulties, and to maintain an unshaken courage in all adversities. But this is really never the case. There are times in the lives of the greatest men, when aims become indistinct, when hopes wither, and courage faints; times when the man works, not because he sees whither he is going, or what he shall accomplish, but simply in blind reliance or in desperate resolution. It is these dark experiences, common to all men, great and small, which seem to serve as avenues of access to heart and mind for the deepest teachings of life. When a man's career is taken out of his own hands, when the consciousness of weakness is borne on him so strongly that he feels as if the very foundations had failed, there often comes with this absolute giving up of all resource in one's self the vision of a greater power, the glimpse of a diviner purpose in which the individual life is folded and toward the realization of which it is borne irresistibly forward. The supreme comfort of life lies in this clear perception of the tremendous educative power and purpose behind it—an influence which no man can escape, and which he can defeat only by his own infidelity. It is a great thing to feel, when our own small plans are in a moment destroyed, our own ambitions in a moment thwarted forever, that, instead of losing, we are exchanging a lower for a higher thing, that the fall of the blossom means the coming of the fruit. An educative process is always a painful one, involving constant self-denial, self-surrender, self-abnegation; but there is nothing in life that so dignifies and ennobles a man, nothing which in the end crowns him with such enduring success. One can well afford to stand at times baffled and heart-sick, to feel that nothing is certain, that one's plans and hopes may in an instant be blotted out, if with this sense

of weakness there also comes the sense that a higher power is directing one's career, and that through these painful experiences the unseen God is transforming a lower into a higher conception of life, opening up a soul to new and greater truth, and lifting one through shadow into his own light.—*Christian Union*.

INCREASE OF DIVORCES.

THE advance in the printing of Col. Wright's report on "Divorce in the United States," has reached the point where the tables which represent the movement of divorce in Europe are to be had, and Dr. S. W. Dike has so far studied its statistical tables that a summary of facts is possible. He reports that divorces have doubled, or more than doubled, in the twenty years or a less period, in the United States, Canada, all Great Britain, France, Belgium, the Netherlands, Baden, Saxony, Hamburg, Norway, and Alsace-Lorraine. They are gaining in Russia, Rumania, Denmark, and Venice, but the gain in Europe, with four or five times the population of the United States, is much slower than it is in this country. Divorces in the United States increased from 9,937 in 1867 to 25,535 in 1886. The total divorces and separations reported in these tables in Europe in 1886, including those for Russia, reached 25,000. The certainty of the movement on both sides of the Atlantic is to be noted. It is also to be observed that it advances among people of every religion, race, and political or other social condition. When it is considered that the traditional view of marriage in Europe is that of the Roman Catholic church, which does not allow divorces, it will be seen that, allowing for the difference in the conditions, the movement of divorce is very nearly uniform, both in the older civilization and in its newer developments. This indicates that something is profoundly out of joint in the organization of society.—*Boston Herald*.

OUT-DOOR ACTIVITY AND HEALTH.

THE strong animal is, as a rule, the least liable to damaging emotion and its consequences. Train your girls physically, and up to the age of adolescence, as you train your boys. Too many mothers make haste to recognize the sexual difference. To run, to climb, to swim, to ride, to play violent games ought to be as natural to the girl as to the boy. All this is fast changing for us, and for the better. When I see young girls sweating from a good row or the tennis field I know that it is preventive medicine. I wish I saw how to widen these useful habits so as to give like chances to the poor, and I trust the time will come when the mechanic and the laborer shall insist on public playgrounds as the right of his little ones. . . . My wise mother shall see that her girls do not dawdle about indoors, but get a good tramp under all skies as a part of the habits of life. A sturdy struggle with a rough day blows the irritability and nervousness of the hour out of any but the truly sick, and I know as to some folks that the more they are out of doors the better they are, morally as well as physically. —*Dr. S. Weir Mitchell*.

THE years no charm from nature take;
As sweet her voices call,
As beautiful her mornings break,
As fair her evenings fall.

—Whittier.

NEWS AND OTHER GLEANINGS.

—Work on the Leland Stanford, Jr., University at Palo Alto, Cal., has been pushed, fourteen of the buildings being nearly completed. These include the halls, recitation rooms, lecture rooms, and the buildings to be devoted to the various departments of the institution. Nearly all of them are but one story high, but "their architectural features are such that they are very attractive and almost imposing." The dormitory will be begun in a few days. This will be a stone building, 14x275 feet and four stories high. It will accommodate 200 students.

—A most useful little series and one to be commended to young and old alike is the "Guides for Science-Teaching," published by the Boston Society of Natural History. They are prepared for the encouragement of practical instruction in low-grade schools and the doing away with those methods which begin and end with the recitation of statements from a text-book. The elementary lessons in botany, biology, (more properly morphology) and physiology come within the scope of the series.—*The American*.

—Water for drinking purposes should never be below 50 degrees. We can almost always get it, even in the hottest weather, as cool as this by letting it run for a minute or two from any household faucet, or drawing it from any country well. If not, there is no objection to cooling it to the point mentioned. The East India "monkey," which can now be had almost anywhere in this country, and by means of which the contained water is cooled by its own evaporation, answers the purpose admirably. I am quite sure that, if ice-water should be generally discarded as a drink, the average duration of life would be lengthened and existence rendered more tolerable.—*Dr. William A. Hammond, in North American Review*.

—The semi-annual volume of the proceedings of the American Philosophical Society (for the first half of 1889) contains a publication of portions of the Journals of André Michaux, Botanist, written during his travels in the United States and Canada, 1785 to 1796. Michaux was born near Versailles in 1746, and was selected in 1785 by the French Government as agent to explore the territory of America, and to gather seeds of trees and shrubs, which were to be sent to France and planted there. His journeys in America cover the territory from Hudson's Bay to the Indian river in Florida, and from the Bahama Islands to the banks of the Mississippi river. The first connected and systematic work upon the Flora of North America was based largely upon his collections.—*The American*.

—In announcing the arrival at Deeming, N. M., of Lieutenant Schwatka, a despatch from that place states: "His party has been successful beyond all expectations in their explorations, and especially in Southern Chihuahua, where living cliff and cave dwellers were found in great abundance, wild as any of the Mexican tribes at the time of Cortez's conquest. The abodes they live in are exactly similar to the old, abandoned cliff dwellings of Arizona and New Mexico, about which there has been much speculation. It was almost impossible to get near the dwellers, so wild and timid were they. Upon the approach of white people they fly to their caves by notched sticks placed against the face of the cliffs, if too steep, although they can ascend vertical stone faces, if there are the slightest crevices for their fingers and toes."

—The announcement made by Miss Willard at the Convention, that the sum needed by Ramabai to open her school is raised, was a mistake. Her secretary desires us to make the correction; only \$11,880 had been raised up to October 15th; \$10,000 is expected from California, but not yet received. Hence there is still need of contributions. We are also requested to emphasize the fact that Ramabai's book is now transferred to the Woman's Temperance Publication Association. It can be ordered of us; price, \$1.35. It should be largely ordered, as its profits go to the Ramabai fund.—*Union Signal*.

—"Five years of gunpowder," says Dr. Primo in the *New York Journal of Commerce*, "have worked a change in the entire aspect of Florida waters. Five years ago, between Kissimmee and the Gulf, I saw countless flocks, hundreds of thousands of water-fowl, on the lakes and the drowned lands. Last year on the same lakes and lands I did not see, all told, a hundred. This is the effect of the unrestrained use of gunpowder. It is a recognized fact that guns have expelled the birds from the more accessible parts of Florida, and destroyed some varieties, even in the south country.

CURRENT EVENTS.

GREAT liberality has been shown in all parts of the country in aid of the fund for the relief of the sufferers by the floods at Johnstown and elsewhere. The subscriptions of money in Philadelphia, up to the evening of the 10th inst., are stated to be \$796,000, and in the whole country nearly three millions of dollars. But this is exclusive of great quantities of supplies,—food, clothing, etc., sent from many places. Some progress has been made in clearing out the site where Johnstown stood, but much remains to be done. The loss of life is now estimated as under ten thousand. It is expected, at this writing, that a million of dollars will be advanced from the State Treasury to clear away the *débris*, and render it possible to rebuild. It is ascertained that the dam whose bursting caused the loss of life, was strong, but not well built,—its defect being that it was lower in the middle than at the sides, and that there was not enough provision for drawing off the water by sluices, etc. The consequence was that the water ran over the breast in the middle, and speedily ate it away, causing a great gap into which the sides fell.

A DESTRUCTIVE fire consumed most of the business portion of the city of Seattle, Washington Territory, on the 7th instant. Estimates of the loss vary from seven to ten millions of dollars, of which one-fourth may be covered by insurance. The purpose is expressed to rebuild with more permanent materials.

NOTICES.

* * A portion of the Philadelphia Quarterly Meeting's Committee to visit the smaller branches, will attend the First-day morning meeting held at the Valley, Sixth month 16th, 1889, at 10 o'clock.

Train leaves Reading depot, Broad and Callowhill streets at 8.15 a. m. Change cars at Bridgeport for Maple Station on Chester Valley railroad. Returning, leaves Maple Station at 4.38 p. m.

* * A Conference on the subject of Temperance, under the care of Concord Quarterly Meeting's Committee, will be held at Friends' meeting-house, Goshen, on First-day, Sixth month 16th, 1889, at 3 o'clock p. m.

Friends and others interested are cordially invited.
MARY McALLISTER, Clerk.

* * The Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting of Friends, will meet at Race street Meeting-house, Philadel-

THE CHILDREN.

WE need love's tender lessons taught

As only weakness can;
God hath his small interpreters;
The child must teach the man.

We wander wide through evil years,
Our eyes of faith grow dim;
But he is freshest from His hands
And nearest unto Him!

And haply, pleading long with Him
For sin-sick hearts and cold,
The angels of our childhood still
The Father's face behold.

Of such the kingdom!—Teach thou us,
O Master most divine,
To feel the deep significance
Of these wise words of thine!

—John G. Whittier.

For Friends' Intelligencer and Journal.

NOTES OF A TRIP TO CENTRE QUARTERLY MEETING.

We set out, after our return from Southern Quarter, to visit Centre Quarterly Meeting, leaving Philadelphia at 11.25 on the night of the 30th, the day before the terrible floods in central Pennsylvania.

We did not take a sleeping-car, but rested some through the night, arriving at Huntingdon after 6 a. m., where we waited over two hours to take the Huntingdon and Broad Top Road southward. It was then pouring rain, and had been most of the night. The country was new to us, after leaving Huntingdon, but the view was greatly obstructed by the rain and clouded atmosphere. Several Friends from Centre county took the same train,—William Fisher and daughter, Thomas May and nieces, and Henry Idings,—which made it very pleasant for us, especially with the detention caused by the heavy storm. We were led to wonder how the clouds could contain so much moisture. We spoke in a former letter of the flooded crops in Delaware and Maryland, but they bore no comparison to what we witnessed to-day. Whole fields and gardens were deluged, fences covered, streams rushing down the mountain sides, rivers swollen and angry, spreading over much wide stretches of land. We followed a good part of the way the Roystown Branch of the Juniata, rough and muddy. While detained at Mount Dallas the passengers employed the time watching logs and debris floating down the stream. Some of them anticipated wash-outs, and bridges destroyed, but we could not

fear, trusting to the underlying Power and Providence about us all. At Mount Dallas the road passed into charge of the Pennsylvania Railroad, and we waited for the conductor to take the train, but such fears existed as to the safety of the road that he would not take the risk, so the conductor of the Broad Top brought us on to Bedford. It was thought the last bridge we passed would soon go, and the train ventured no farther than that place, hearing of wrecked bridges beyond.

We felt exceedingly thankful to be safely landed, though in a pouring rain, and taken to a hotel in a coach, as our friends from Dunning's Creek had not been able to come. We rested after dinner, when word came that Uriah Blackburn had arrived, having overcome great difficulties in trying different routes. Afterwards Thomas Cleaver came, and we started between 3 and 4 o'clock, for Fishertown, in comfortable carriages, shielded from the storm. The ride, 13 miles, was through the storm. Streams rushed wildly along the roads and in one place for quite a distance—the horses carried us barely through deep water which came into the carriage. It seemed as though they would be obliged to swim. We arrived safely after 6 p. m. Much damage is done to crops, and many houses are flooded. In the evening it is still raining fast.

Seventh-day morning. It is still cloudy, but no more rain falling. Word came of the disaster at Johnstown. How great the anxiety of many will be in different parts of the country who have relatives and friends there. The wife of a man in this neighborhood had gone there to visit her mother, and is one of the many drowned by the rushing water. It was said she could have been saved, but would not leave her mother, who greatly desired her to escape; she leaves a large family of children.

In the afternoon we attended the meeting for Ministers and Elders. Eleven of us present. No friends from West Branch have arrived—doubtless prevented by the storm. Neither has Darlington Hoopes, who was expected, been able to reach here. While regretting the circumstances which prevented others from being with us, we met with feelings of thankfulness for the privilege afforded. In the afternoon, or at the close of the meeting, a First-day School Conference was held, which was cause of encouragement—from the general interest manifested, and so many of the young people taking part, in essays and recitations, from the very young to the full grown men and women, giving evidence of serious thought and culture. We spent the evening at Azariah and Sarah Blackburn's, near where we

homed, and had dined at another neighbors', Eli and Martha Blackburn, he having been blind for forty years, yet taking an active part in the care of their little farm.

First-day morning. The weather bright and fair. They do not expect the crowded meeting usually had, on account of the floods and the many who have gone to Johnstown. Two young men from West Branch reached the neighborhood last evening in a wagon, having had a tedious journey, coming a great round to overcome obstructions. The new meeting-house is a very neat and comfortable one, and they avoid much of the confusion and crowd experienced in the old, which stood in a beautiful grove, where young people from the country around observed quarterly meeting as a general pic-nic. Although some remained outside this morning, and others were slow in gathering, there was perfect order and quiet within, and a good meeting. The spoken word found receptive hearts. Allusion was made to the occasion when the disciples besought Jesus to eat, and he said: "I have meat to eat that ye know not of." And when they marvel'd, not yet spiritual enough to comprehend the meaning of his words, he added: "My meat is to do the will of Him that sent me and to finish the work." Now the feast was prepared, the table was spread, and the invitation sent forth that all who will come may come and partake freely without money and without price. And the vital importance was set forth of realizing the need for this spiritual food, that the good seed may not be choked by the cares of the world and love of riches; and how needful that our religion, whatever the profession or name may be, shall cover the whole of life, regulating and controlling every effort and desire, so that we shall reserve no time, no place, no corner of life wholly to our control—but in all things manifest the Father.

We dined at Mary Mickel's, a sister of U. B.'s, and were glad to rest for a season and enjoy mingling in her family. Meeting assembled again at 3 o'clock, not so large as the morning. Many young people gathered, and little children, three boys sitting on the steps at our feet, morning and afternoon, lending an influence of hope and inspiration. The importance of laying the right foundation in our homes and creating a healthful atmosphere, not only for the physical but also for the moral and spiritual welfare of the inmates and all who may be partakers therein, was set forth. And the need for the young to make a good beginning—not following the call of others or fearing to be singular or cowardly in not conforming to the usages of society, but with the moral courage to say No, and mark out a pathway for themselves in accordance with the pointings of truth. They were earnestly entreated to abstain from all that could injure or defile, learning of Paul, that if by partaking he should cause his brother to offend, he would abstain to the end of the world. We separated under a feeling of thankfulness for the privilege of thus being banded together in love. We took tea at the home of Thomas W. Cleaver whose wife is sister of Watson Tomlinson, of Byberry; his daughter lately married to Dillwyn, son of Albert Hoopes.

Second-day morning. Raining again, and so continued all day. Met for the Quarterly Meeting quite a goodly company. After a season of silence a Friend arose with the language: "Ye are the temples of the living God," and the call to have these temples a fit receptacle for the Divine guest. Then a concern found voice for a realizing sense of individual responsibility on the part of all our members that the young who really do value their birthright to membership should not leave the burden to the older Friends, but generously share it, believing that we can only have the full benefit of religious organization by this general interest and willingness to contribute our part for the good of the whole, remembering also how dearly bought our great privileges were, and the religious liberty we enjoy, which might not have been without the suffering and sacrifices of our early Friends. There is still the vital need for us to uphold our foundation principles and bear testimony to the "inward light," giving evidence as in early days, that we love one another, and that we may avoid the undue emphasis of the letter which killeth in exalting "the Spirit which giveth life."

The business of the meeting was transacted together in love and harmony, no report reaching us from West Branch. We were thankful that we were permitted to enjoy this season of close fellowship amid the sad tidings which continue to come of the destruction of life and property. We have received no intelligence from the East, no mail having come and no train since the one which brought us through perils.

We dined and spent the afternoon at the home of Hiram and Mary A. Blackburn very pleasantly, some of their married children stopping with them. My companion, E. J., went last evening to visit her niece Hannah Hoopes, wife of Jason Blackburn.

Third-day morning. The sun is once more shining. We returned last evening to our comfortable home with Uriah and Hannah Blackburn. Friends from Centre are endeavoring to practice patience also, while anxious to reach home. But homes here are kindly open for us all, so long as we may be obliged to stay. We took a ride to-day with Uriah and wife to the summit of Chestnut Ridge, where we had a grand view of the Allegheny Mountains, for an area of near 50 miles, embracing the highest peak, also a bluff called the Blue Knob. The valley lying between is skirted by cultivated slopes, the farm-houses dotted here and there, that of Uriah's among them on the farm where they formerly lived. It was a beautiful sight, so extended, and on the east a view of the Cove Mountain, also Will's Mountain, with their accompanying scenery. The Ridge is a lovely building location, but they cannot get water, so while farming land is on the higher ground, the tillers of the land have their homes on the lower. The surface land is covered in many places with soft slate, and layers of it are to be seen lining the banks and covering the roads. We rode around to the comfortable home of Elias and Anna D. Blackburn, and enjoyed a visit with them and their interesting little flock. In the afternoon we called to see Samuel Penrose, brother of Martha Blackburn, who has been ill

for some weeks. We found him very patient, and while extremely feeble, in a quiet, trustful state of mind.

Before coming home we went to see the old meeting-house. The background is woodland, skirted by rocks and a grove fronting, where crowds used to gather at the time of quarterly meeting. The burying-ground is close by—where the forms of many were laid who were wont to worship in the old house. We also rode beyond to see a wonderful spring covering about half an acre, the water bubbling up at one corner. A grist and saw-mill are run by its power, and it does not seem influenced by either rain or drought.

Fourth-day morning. Still cloudy. Hiram Blackburn has just started with the three men Friends from Centre county for Osterburg, where they will take stage for Hollidaysburg, hoping to find railroad facilities for Bald Eagle and send back a report of the condition of things, and if there is any possibility of our getting to Clearfield county. Made a visit to Elisha and Hannah Moore's—they formerly lived in Clearfield county.

Fifth-day morning. We started with our kind friends U. and H. Blackburn for a ride to Bedford Springs along the road which was impassable when we came up from Bedford, and saw where the floods had been and a part of the road which had been built up since, bordering on Dunning's creek. Kept in view of mountain ranges and fine farms by the way. Passed by a commodious and attractive looking retreat for summer boarders called Arrandale, between Bedford and the "Springs," where many prefer stopping, going to and fro for the benefit of the mineral and iron water. The buildings at the Springs are very extensive, but many of them dilapidated and out of repair. The surrounding mountains and woodland afford pleasant retreats, and altogether must present attractions for many in the crowded centres of city life. We learned at Bedford that Darlington Hoopes, Davis Furness, Levi K. Brown, and two women Friends got as far as Hainsburg on Seventh-day morning, and were obliged to remain there until Third-day. This information did not come by mail, but by one of Bedford's citizens, who was detained there with them. We found we could go to Clearfield by stopping over night and part of the day at Huntingdon and again at Tyrone, having to take boat over streams that are left bridgeless.

Sixth-day morning. Our minds seemed astir, and we broached the subject to our friends of making a move, which they reluctantly acceded to, desiring that we should remain until travel was on a firmer basis. We started after dinner in company with Jennie Fisher and Lydia Way of Centre county, taking train at Bedford, after 4 p. m., the second which had gone since we came down, a week ago. On every side was evidence of the powerful flood, bridges hanging and stranded, stations and other buildings undermined, many trees leveled and quantities of lumber washed into piles in many places. When we reached Saxton we left the cars, and walked altogether about three-fourths of a mile, crossing the Keystone Branch on a flat-boat, and taking cars on the other side, up a steep ascent to

the further abutment of the lost bridge. We met with David Tatum, an Orthodox Friend, from Cleveland, Ohio, who has been from home three months working for the Amendment. He did not look physically strong, but the righteousness of the cause and fervor of spirit sustained him.

We reached Huntingdon after 7 p. m., to find the train for Tyrone gone three-fourths of an hour, and no other till noon next day. We had to cross the Juniata in hacks, finding the bridge gone, of which we had not been apprised, and one left standing for carriages to go over. It was indeed a wild looking place. There was nothing to do but find a hotel and make ourselves comfortable,—which we did.

Seventh day. In the morning walked around the town, after a heavy shower, and were ready to leave at 12.17. Following the Juniata to Tyrone, we saw continually the ruin it had wrought. The track had been newly laid in many places. The mountain scenery, with verdant valleys between, was lovely to behold, and we could picture the grandeur and awfulness of the scene when covered by the raging, roaring waters. We arrived at Tyrone after 1 p. m., to find an extra train would go in an hour to Unionville, but not any to Curwensville before 7.30 p. m., and perhaps much later. We could not bring our minds to this tedious waiting, so concluded to come on with our friends to Bald Eagle, finding the evidence of destruction as great as before. We were very glad to reach the comfortable home of W. P. Fisher and meet the daughters, who have been pupils at Richard Darlington's school and the West Chester Normal. The wife and mother has passed away since my visit here nearly three years ago.

First day. We attended Bald Eagle meeting in the morning, feeling exceedingly thankful for the privilege, although we had expected to be at West Branch. We found a greater number assembled than anticipated, and trust we were blessed together. There was the arising of grateful remembrance, and testimony borne to the faithfulness of those in our day, the fathers and the mothers who had the courage to be true, even as our earlier ancestors; and that in the line of advancement, profiting by the added advantages and experience of these worthies, we should certainly bear aloft to-day the standard of truth, placing our light where it would be seen as a beacon star by others. And while we fully believe an especial mission was entrusted to our Society, that God is no less in any other, as way is made for the moving of his Holy Spirit, for he is "no respecter of persons." And how much loss has been sustained by blind prejudice and unwise sectarian zeal, contending for doctrines, forgetting that "my kingdom is not of this world, else would my servants fight." We were interested in the First-day school held before the meeting, which was divided into two classes, junior and senior. The latter read and commented upon the "Lesson Leaves." The topic of the former was "Watchfulness."

We dined at Benjamin and Jennie Rich's—he a son of John, who was long an active member at Fishing Creek. In the afternoon we made several very pleasant calls; in the evening at Dr. E. and Louisa

Russell's. It rained again very fast in the afternoon. We returned to our home at W. P. F.'s, and were glad to rest, cheered by the sweet notes of the whip-poor-will which I had so desired to hear, not having done so for many years.

Second-day morning. Cloudy and rain-like. We watched for trains all day. The main line trains of the Pennsylvania road are many on the Bald Eagle branch, but not being regular trains, only stop when they let off a passenger. The only train professing to run as usual was at 5.40 p. m., and we waited from that time until after 9, before it came. It was a beautiful moonlight night, but we felt some uncertainty about being met at Port Matilda. It was useless, however, as we found there Sarah Way's son Edwin who had been waiting several hours for us, and were taken safely over the mountain to their comfortable home in Half Moon Valley, arriving at half-past 10 o'clock. We regretted not having daylight for the extended view from the mountain, but caught faint glimpses of its grandeur. We were glad to rest, feeling grateful for our manifold blessings and so desiring that whatever circumstances should attend our way, we might never swerve from our faith in the goodness of God.

Third-day. Raining. We made some calls, dining at Robert Way's, whose wife, Lucretia M., is daughter of Wm. P. Fisher. A meeting had been appointed at 2.30, p. m. Several children from the Friends' school were in attendance, which added to the interest of the occasion, and we were glad to find ever so many others gathered. After a season of refreshing silence, expression was given to the feeling of responsibility which sometimes arose in calling the people away from home cares and business engagements; but when we considered how free we were to extend the invitation to social gatherings, or for the advancement of material interests, surely we should not falter when the purpose is to promote our spiritual welfare. The call went forth for greater faithfulness and obedience to manifested duty on the part of some, and the dear children were affectionately counselled to keep themselves pure and receptive to the still, small voice within. Our time was short in the valley; we parted with the little company under a feeling of thankfulness for the opportunity. Made a little visit to Wilson Way and wife, where Sarah Way and son Edwin called, taking us to Orlando and Mary Way's, four miles on the road towards Tyrone. We were sorry to disturb our friends at such an early hour, rising at 3 o'clock a. m. and getting off about 4, not knowing how we should find the roads; but got along comfortably. We had heard the whip-poor-wills through the night and they were still singing when we started. It was interesting to pass the farm houses, where all seemed wrapt in slumber, but gradually we saw the smoke ascending from houses among the hills, the cows being milked, and the busy day commencing. All the way we saw marks of the flood and great disaster about Tyrone. We arrived in time for our train at 8.20 to Curwensville, and parted with our friends who had so kindly helped us on our way, with grateful hearts.

MIND AND MATTER.

THE apostle Paul says: "What man knoweth the things of a man, save the spirit of a man which is in him? even so the things of God knoweth no man, but the spirit of God." In this saying is contained a great psychological truth. Our bodily organs are so constituted as to bring our minds into connection with the universe in which we live. Through impressions made upon our senses, the mind perceives the qualities and relations of material things. This presupposes the existence of two separate objects: viz, one capable of making the impression, and the other to perceive it when made. The first is generally located outside the person, the second inside, and, by being conscious of the impression, proves itself to be distinct from it. The one we term matter, the other mind. The mind, then, is limited in all pertaining to its knowledge, to these impressions made upon it through the medium of the senses, and to such operations of its own as are the result of a consciousness of the exercise of its own powers. Any knowledge over and above this so obtained, together with that acquired from the mind, must be infused into it by some power exterior to itself. We accordingly find that, from the earliest periods, there have been two schools of philosophy: the one disposed to question the truth of any idea that has not been evolved from perception and consciousness, and calling itself rational; and the other accepting as truth those revelations made by this exterior power, and called, by its opponents, mystic. By close observation and a system of classification the former of these has found that animal life exists in many forms, beginning with protoplasm and ending in man, and has *inferred* that it commenced with the former and is destined to go higher and higher in the scale of being as its surroundings become more favorable. This is simply an inference, as there is no evidence that any existing class of animals has passed over into another; for while there has been improvement in species, this improvement has not gone so far as to change the identity of the class to which it belongs.

This effort to resolve all created things into stardust does violence to the Baconian philosophy, and is really placing the imagination above the reason in man. Now Paul, in common with all Christians, held a different opinion on this subject. He taught that the intelligent part of man was susceptible to other impressions than those received through the senses or through the teachings of other men; in short that it may be taught by that divine principle of all life, even God himself, and that it is only as it is so taught, mediately or immediately, that it can be instructed in those higher things that pertain to another and higher form of life. If the soul is immaterial and does not lose its identity on the death of the body, it is all important that it should gain some knowledge of this higher life while here, in order that it may be prepared for that which is to come hereafter. Especially is this so since a knowledge of and a living under this higher life, only fits it the better to discharge the duties belonging to the present one. This view implies that the present life is a

kind of school in which the higher faculties may be developed as the bodily powers are in childhood. Surely the class that claim that protoplasm may develop into man by powers inherent in itself, will not deny the soul to be equally progressive. The plasm of the child develops if the surroundings are favorable, but food and exercise are essential in order that it should do so. The mental germ may also flourish and grow, but it must have its appropriate food; and its powers must be exercised, or it will remain feeble and weak. So it is with the spiritual part of man's nature; it must feed on that spiritual food that comes down from God out of Heaven, or it will remain spiritually weak. We thus come to understand what Jesus meant when he told the Jews he came that they might have life and have it more abundantly. Now we can conceive a weak body with a strong mind in it, and of a strong mind whose spiritual faculties remain feeble and weak for the want of exercise; instead of receiving ideas from God, it rests content with those originating in itself or received from other men, and its spiritual powers are dwarfed. As the body may be well-developed and the mind be weak, so intellectually the man may be strong, but he may not be good; and on the other hand, many men of very ordinary minds are remarkable for their goodness. Now the man Christ Jesus was the only one who was altogether under the influence of this spiritual life, while there are few, if any, who have entirely ignored it. The great mass of mankind have occupied an intermediate position. With those we call good it has so far predominated as to regulate their actions; with those we call bad its influence has been fitful, occasionally influencing but more generally allowing natural dispositions to control the life.

The great question for us to decide is, Is it better to place the government of our lives in the hands of this Power that knows all things and loves all things, or to take it upon ourselves to direct our steps, relying upon our own knowledge and judgment to do it aright? We are told it is the humble, seeking soul the Lord loves, and that it is such he will instruct in his ways. Such is the testimony of the spiritually minded in all ages of the world, beginning at the prophets, coming down to Christ and his apostles, and confirmed by the good men of all denominations. It was in the secret of their own souls where they all looked for direction, it was there they found strength to fight the battle of life, and it was there the comforting assurance came to them that they were accepted of the Divine Father. It is encouraging to see the greatest preachers of our day relying more and more on the inshining of the *Logos*, and less and less on the teachings of men as a means of winning men to righteous living. The battle of the present is being fought between the children of the light on the one hand, and the sons of Belial on the other; between those who believe in a God and that he is a teacher of his people himself, and those, whether agnostic or not, who claim that man, as man, is entirely competent to find out all that is certainly to be known, that morality has been the slow growth of the ages that have come and gone, and its laws formulated from experience as human wants dictated

their necessity, and that it is to this ethical culture we are to look for the improvement of men in the future.

Such being the case, it follows that the evidence the spiritually minded rely upon to prove the truth is of an entirely different kind from that used by men of science. The testimony relied upon by the latter is the result of observation, modified by reflection, and appeals to the understanding because it agrees with facts already ascertained or admitted; the former appeals to impressions made upon the mind that are of an entirely different character. The sense of obligation to a Power superior to ourselves, of duty to that Power as revealed to that consciousness, and the feeling of satisfaction, often amounting to joy, when we have been faithful to its requirements, is the kind of evidence the spiritually minded are seeking. Appeals to this evidence in the mind of another may meet a response or they may not. If they do, there is more or less of spiritual life there; if they do not, spiritual death has supervened; for "my spirit shall not always strive with man, saith the Lord." We thus come to understand that saving of Jesus, "Every sin and blasphemy shall be forgiven unto men; but the blasphemy against the Spirit shall not be forgiven." For by denying the operation of God's Spirit on the mind of man, we are denying Him and breaking the only bond that unites us to him. As in Him is life, so apart from Him there can be no life.

W. W.

Loudoun Co., Va.

ADDRESS TO SWARTHMORE GRADUATES.

THE following is the address of Joseph Wharton, President of the Board of Managers of Swarthmore College, at the Commencement exercises, on the 18th instant:

Graduates of Swarthmore: Again it falls to my lot, as President of the Board of Managers, to congratulate a class of students in this College, who, having completed their courses here to the satisfaction of the Faculty, have received the diploma certifying this to all concerned, and who are now about to enter the more advanced school of practical life, where they doubtless will, to some extent, apply what they have here learned.

This congratulation for an honorable achievement I offer with cordial sincerity, but I am entitled, and perhaps expected, as one who long ago entered that advanced school, to offer something more: namely, such counsel as my experience may suggest. This I shall do, without pretending to superior wisdom, by inviting your attention to the old-fashioned injunction, "Be careful to get the worth of your money," or, in other words, do not give away the higher value for the lower value.

A trivial theme, apparently, to set before persons whose immaculate sheepskins show them to have just grappled with much more formidable problems, yet let us consider.

It must, at the outset, be well comprehended that the word money, as here used, stands not for coin only, but for anything of value; that all values are relative or comparative; that many of them are interchangeable.

Then it is easy to perceive that, concerning any commodity or desideratum standing before one, the question to be solved is not simply, "Shall I seize this good thing?" The question is usually much more complex, and may be thus stated or divided: "Is this thing desirable for me under existing circumstances? Can I afford to pay the price for it? Is it more valuable to me than any other thing that can be had for the same price?"

For instance, a microscope is not desirable to a blind man; the ordinary citizen, though an admirer of gems, cannot afford to buy the Kohinoor; a plough is valuable, but the musician prefers a violin at the same price. So neither of those persons would get the worth of his money by buying the microscope, the Kohinoor, or the plough.

Then there are absolute differences in value, for who would give a pound of silver for a pound of copper, or a pound of gold for a pound of silver? And so intangible a thing as a few words of advice from a physician or a lawyer may be well purchased with much gold.

Looking beyond these simple types to more important matters, we find numerous instances of unwise exchange, from the times when our first parents surrendered Eden for the forbidden fruit, when Esau sold his birthright for a mess of pottage, and when the prodigal wasted his substance in riotous living, or those later times when Alexander, with the world at his feet, gave his life for sensual indulgence, and when Antony abandoned Actium to follow Cleopatra, down to the prosaic present day, when frivolous young people give everything for mere ease and amusement, when a pure young girl gives herself to a whisky and tobacco-sodden blackguard, or a solid and earnest young man takes for his life-partner a silly or vicious woman.

Are the instances of wise choice and exchange in important matters less numerous than the unwise? Surely not, or our race must have perished.

Nations, surrendering ease, have, through privation, struggle, and bloodshed, conquered freedom and attained to splendid development. Cromwell and Washington may be set against Alexander and Antony. Noble self-denial that shuns delights and lives laborious days, the abandonment of cherished evil habits, the arduous, resolute strife to rise, the painstaking search for knowledge, the cordial helping of others at one's own cost, all of them involving present sacrifice of lower things that higher things might be gained, have abounded and at this time abound and prevail, as the constant advance of our race testifies.

Now, when a child is born into this world that usually gives nothing for nothing, a great number of absolutely necessary things must in some way be acquired, yet how slender appear the means available for their acquisition. How shall he who is dependent upon the gratuitous loving care of others for mere continuance of life pay for those costly and indispensable treasures?

The good gifts of God, for this is the tersest expression of palpable facts, constitute the little one's sole but sufficient capital: namely, life, the cherishing

care of parents, the various senses and faculties with their wonderful power of growth, the inherent tendency to rectitude, time in which to develop, to choose, to act. With this capital wisely husbanded and expended, one may go far, as many illustrious careers and innumerable honest, happy lives testify.

During infancy, and largely during youth, the care of this capital must fall upon parents or friends, but you to whom I speak have now reached the point when you naturally assume the management of your own inheritance. You are yourselves to see that you get the worth of your money, that in many ways you do not give away the greater value for the lesser value.

We know that copper is valuable and even indispensable; so is physical health and perfection; so are the enjoyments of our bodily sense. To walk and labor, erect and strong, to breathe freely of the pure air, to bathe in stream or sea, to eat and drink with relish—how good are these things, how necessary to an independent and useful life! So good are they that one must hesitate to surrender them, even for the better things that belong to and grow out of mental perfection.

Fortunately such surrender is usually not required, since within their proper limit they greatly aid, instead of preventing, mental development or perfection, which is to them as silver is to copper, and which, while bringing higher rewards and gratifications is the best safeguard of bodily health and happiness. It is the giving away of the higher value for the lower, instead of using the lower as means to gain the higher; the caring for only physical enjoyment and excellence to the neglect of the mind; the subordination, therefore, of mind to body, that defeats itself; and ends in degradation of both body and mind. It is, on the other hand, the curbing and pruning of the bodily propensities by the mind and will that cause even the body to attain its highest vigor, its keenest enjoyment, and that leave the mind free to pursue its triumphant march.

How splendid are the achievements and how rich the rewards of that untrammelled intellectual process! Even when employed to minister to man's material comfort, how potent; when turned to explore the universe, how far-reaching are its methods, and how cunning the implements it invents; when endeavoring to grasp the rules which govern that universe, "to think the thoughts of God" as Newton said, how majestic is the human mind. To what admirable heights can it attain when properly guided, and alas! to what wicked and foul service can it be perverted.

For all this glory of mental power must in its turn yield to the formative, purifying, exalting power of the divinely controlled spirit. That spark of Deity within us which stirs and urges and restrains, which is restless and incessant in its endeavor to mould man into ever higher and more beautiful perfection, which insists that no uncleanness, no deformity, no weakness shall anywhere remain—that is the appointed master of the intellect, capable of guiding it aright, and of governing it for its own good, even as the mind constrains the body.

Most marvelous and admirable of all the charac-

teristics of our wonderful human frame is this spiritual life, with its control over mind and body, its superiority to circumstances, its indomitable courage, fortitude, and endurance, its power of persuasion, indignation, and wrath, its secret bliss and anguish, its capacity for growth when obeyed, and its fatal possibility of decay through continued abuse and denial.

This is your highest treasure, that must not be sacrificed for any lower things, your seed of life more precious than rubies, your pearls that must not be cast before swine, your pure gold that can buy, without loss of itself, all that is good of those lower things.

Are then body, mind, and spirit to be regarded as separable, or as inimical to each other? Can it be denied that thinking is the essential of mind, and that we conceive it to be a function of the physical brain? Can a sharp line be drawn between the wise morality which a sound intellect orders and the holy life which indicates spiritual excellence?

The answer must be negative. The complete human being cannot be thus dissected or analyzed; the highest perfection is that in which no part is stunted, but in which all parts are completely and harmoniously developed.

Nor must it be presumed that the words mind, and soul or spirit, strictly define entities of which we have clear knowledge. Those words illustrate the endeavor of mankind to find explanation and expression of what they observe, feel, or conceive, and they illustrate also the tendency of words to slide away from their first meanings to somewhat different meanings as mankind's notions change. For it is clear that in the accepted ideas upon these great matters, so marked a development has occurred as might tempt an evolutionist to declare that the human soul itself has advanced.

Who now troubles himself to apprehend critically those differing conceptions of the old Romans which they expressed by the words *anima* and *animus*, or to translate Hadrian's "*animula vagula blandula*," otherwise than by our words soul or spirit (which we use almost interchangeably), thus attributing to Hadrian, modern conceptions of immortality which he doubtless never entertained.

The earlier Jews claimed no immortal souls; the Greeks of Homer's time had a conception of future life, even for most of their heroes, about as wretched as the modern Roman notion of purgatory; the ancient Romans adopted this sad conception as is suggested in Hadrian's above mentioned epigram by the line "*Nec ut soles dabis jocos*" and as is fully set forth by Virgil in his *Æneid*, very few of either Greeks or Romans venturing to hope for something better.

But you who have more positive and hopeful beliefs are not to abandon them for those, or for any other feeble and tentative faiths. You are not to share the hesitancy of the Anglican clergyman who, when asked by one of his audience whether he did then really believe in a Deity, replied, "Well, perhaps there is a kind of a something."

Yet do not attempt to force belief, and do not pretend a belief which you do not possess. If either of you is so imbued with what is sometimes called

the scientific spirit of the age, as to be unable to believe in God and immortality with the comfortable certainty of his ancestors, and can indeed hardly accept those great ideas as good theory, he may, at least, adopt them provisionally as good working hypotheses; his conduct and thoughts will then, doubtless, so shape themselves as to accord with and lead to firmer beliefs later on.

Let us, then, without contending about words, be satisfied to believe that our lives here are but links in a chain of being of which we can perceive neither end, whether we regard it in the line of descent and transmission, or in that of individual continuance; that the consequences of our actions run on with fatal accuracy for good or evil; that we can with great latitude choose and regulate those actions and therefore the future of ourselves and of our descendants; that it behoves us so to choose and regulate that our lives shall not be wasted, that the talents entrusted to us shall not be lost, but that in the turmoil and traffic of the world we get the worth of our money.

A CRITICISM.

EDITORS INTELLIGENCER AND JOURNAL:

IN looking over the report of Philadelphia Yearly Meeting as published in the INTELLIGENCER AND JOURNAL, I notice that the reporters and others in preparing matter for publication, use so often the following expression, "Friends believe" or "Friends were appointed," or in answering the queries, so many of them commence by saying, "Friends are clear," or "Friends are regular." It seems to me that in every instance almost, the word members should be used so that the form would be thus: "our members are clear," or "our members believe." To those of us who are familiar with the expression it seems all right, as by long usage we have become accustomed to it, but the absurdity of this form of expression can best be illustrated by supposing that some other religious body should use the same forms that we do with the difference only of supplying their religious name in the place of our own. For instance if the Methodists had a query somewhat similar to ours on intoxicants, it would seem very singular to answer by saying "Our Methodists are clear," etc.

I think I have illustrated enough to make my meaning clear, and it seems to me that as the printed minutes of our several yearly meetings are distributed in such a way that many of them fall into the hands of those who are not familiar with our phraseology, that when we can do so, our construction should be perfectly clear and comprehensive and not so peculiar as to excite ridicule.

I hope you may think the subject of enough importance to be thus brought to the attention of our membership.

G. E. C.

Holder, III.

Go out of doors and get the air. Ah, if you knew what was in the air. See what your robust neighbor, who never feared to live in it, has got from it; strength, cheerfulness, power to convince, heartiness, and equality to each event.—Emerson.

PHILADELPHIA, SIXTH MONTH 22, 1889.

TRAINING FOR USEFULNESS.

THIS is a work that in its outcome develops a sense of responsibility, and the labor that is necessary thereto should be begun in the nursery. It seems natural in some children, and is exhibited in the readiness to perform special duties that are assigned them; while there are others, often in the same family, that appear to have no faculty whatever in this direction, but wait to have everything done for them and never think of being helpful to another. It is a great wrong to a child to be allowed to drift aimlessly through the years of its infantile life, with no training except what it acquires through its impulses, which at best are erratic and visionary and devoid of system.

The readiness with which a child accepts the little responsibility at first assigned him, in most cases depends chiefly upon how the matter is presented; there is always a right way to win cheerful obedience, and the wise parent will make it a point to secure his hearty coöperation in the effort. It is never wise to make the first requirements burdensome; it should be some simple, easily performed service for himself or for one he loves, and when once made should in no case except sickness or absence, be left to another or remain unperformed. This cannot be too strongly insisted upon. Many a vacillating, unprofitable life can be laid at the door of a weak yielding to the whim of the child by the parent.

"It is good for a man that he bear the yoke in his youth," wrote the prophet Jeremiah, and surely none had greater reason than himself to be thankful for a discipline that gave self-control and undaunted courage to meet the changes and vicissitudes of a long and most eventful career. This training is essential to every child whatever his condition or prospect in life, not alone that he may be fully equipped,—“thoroughly furnished” as the apostle Paul expresses it,—but that he may get out of life all that it has to bestow for the enrichment of his own existence. Said the Master, “It is more blessed to give than to receive;” and we know how true it is that he who blesses, is himself twice blest, first in the satisfaction that he has been helpful to another and in so doing he has made his own life fuller of enjoyment than it would have been without

the service he has performed. The men who in their youth were trained to bear responsibility are the men that know how to set a proper estimate upon the this principle in man, that is essential to the attainment of the best possible results; they know the value of every noble, generous deed, through the discipline that has been needful in their own training, and this discipline gives steadiness of endeavor and a perseverance that rises from disaster or defeat with a strength and energy which gives the power to overcome.

And this overcoming is the very key-note of effort. It is upon “him that overcometh,” that the “new name” is bestowed, and the ability to overcome is gained through the power of doing well whatever we undertake and assuming the responsibility that it involves.

There are multitudes of people who can labor, but they lack the faculty of working for some definite end,—if only some one else will take the responsibility of success or failure they are satisfied to be the tool in the hand of the leader. If there was a fuller sense of the value to the individual of conscious ability to meet and withstand the untoward events that are in the path of all of us, we should have much more real pleasure of living than we now enjoy.

Being equal to every emergency is not a gift, as some suppose, but comes of that sense of inherent power which is developed by learning the art of doing thoroughly and cheerfully what is set before us. And as we are willing to assume responsibility in the little, we shall be made rulers over more.

In our issue of Sixth month 8, in the letter from London, our correspondent referred to “Dr. Thomas, of Baltimore,” and the editor in revising the manuscript, made it “Dr. James Carey Thomas.” From notices in other journals, we conclude that this was an error, and that it should be Dr. Richard M. Thomas.

MARRIAGES.

MORGAN—WOOD.—At the residence of the bride's parents, Torresdale, Pa., Sixth month 5th, 1889, by Friends' ceremony, Charles Evans Morgan, of Wilkesbarre, Pa., and Lizzie Knight, daughter of John and Sidney Wood.

DEATHS.

ADAMS.—At the residence of his mother, Catharine Adams, Sixth month 9th, 1889, Charles S. Adams; a member of the Monthly Meeting held at Green street, Philadelphia.

AMBLER.—Suddenly, in San Angelo, Texas, Fifth mo. 25th, 1889, William, son of Chalkley Ambler, of Philadelphia.

GILLINGHAM.—Sixth month 11th, 1889, J. Watson Gillingham, in his 72d year.

LIPPINCOTT.—At Moorestown, N. J., Sixth month 11th, 1889, Willie S., son of Elizabeth C. and the lato Samuel H. Lippincott, aged 3 years, 5 months.

MARTIN.—At his residence in Kennett Square, Chester county, Pa., Sixth month 7th, 1889, George Martin, in the 92d year of his age.

In the death of this aged Friend "our Society" has parted with another of the "Fathers in Christ," and one who was a faithful watchman on its walls. Clear in vision, he was quick to see the approach of danger, and prompt in giving the warning thereof, and was ever faithful in supporting the testimonies of his people. The last time he left his home was to attend the mid-week meeting, where (if able) he felt it was right to attend, and his solid bearing in all our religious meetings testified of his faith in the virtue of silent worship.

He was a man of generous impulses and in him the unfortunate and needy found a ready helper. The doors of his house were ever open to the stranger and the friend; especially were those who were traveling under the weight of the gospel word welcomed to the comforts of his home, and assisted in their work as there was necessity. Upright and just in all his dealings with men, his long life leaves an unblemished record.

In his last sickness he gave evidence that his life-work had been done under a faith in the power of the Son and sent of the Father, and as he had lived in obedience to this, when mortality was about to be swallowed up in immortality a song of grateful praise to the Heavenly Father filled his heart, illuminating the countenance with the peace of God, which continued to rest upon the inanimate form after the liberated spirit had passed to the mansion prepared.

M. W.

MEARS.—Sixth month 9th, 1889, Marian W., widow of John Mears, and daughter of the late Lewis Walker, in her 87th year; a member of the Monthly Meeting of Friends of Philadelphia.

PACKER.—On the 8th of Sixth month, 1889, after a long and distressing illness, of heart disease and dropsy, Ann Packer, long an esteemed minister of Green Plain Monthly Meeting, Clark county, Ohio, aged 84 years, 2 months, and 25 days.

This well known Friend was the last of a family of ten children of John and Ann Battin, whose united ages at the time of decease footed up 777 years, 3 months, and 7 days.

RIDGWAY.—At Cream Ridge, N. J., Third-day, 11th of Sixth month, 1889, Elizabeth W., widow of Henry W. Ridgway, of Crosswicks, N. J., in her 81st year, daughter of the late George Woolley, of Philadelphia; a member of Chesterfield N. J., Monthly Meeting.

TRAINER.—On the 9th of Sixth month, 1889, at the residence of his son, D. E. Trainer, at Trainer, Pa., William Trainer, in his 83d year. Interment at Upper Chichester, Friends' ground.

TRIMBLE.—At Colorado Springs, Sixth month 10th, 1889, George Trimble, in his 44th year. Interment from the meeting-house, Waterville, Pa.

THE SCRIPTURE LESSONS.

It being the close of the quarter, no Scripture Lesson has been prepared for the last First-day of the present month, sixth month, 30. It is suggested that the schools in session take up some special subject, either Temperance, Peace, Arbitration, or what would be a very instructive and profitable study, some portion of the Book of Discipline bearing upon

the distinctive features of our Religious Society. While in all these prepared Scripture Lessons there has been a care that the explanations shall accord with the principles and testimonies which are the ground-work of our profession, there is room for and a need of teaching on these vital points more definite than can be given in the passing recurrence to them as they come up in the course of Scripture study. Our young people must have their attention directed to the fundamental truths which we hold so essential to the development of Christian character, and there is no more fitting time and place for the consideration of these momentous subjects than when assembled in their classes on the First-day of the week. The freedom they enjoy in asking questions and giving answers as these present themselves to the mind, and the encouragement they receive to think and consider, and come to a judgment, are all educating forces that sooner or later will have a determining influence upon motives of action, and indeed upon the whole after-life of these scholars. The First-day school should be the nursery of the church; regarded in this light its importance can scarcely be over-estimated, and now that all the yearly meetings of our society recognize it as a branch of work which should claim the care and oversight of our meetings, there seems to be every encouragement that is needed to increase and extend its influence, until no meeting, however small, shall be deemed complete without its First-day school, conducted in accordance with the views and the usages of Friends, and taught by those who are fully in accord therewith.

The lessons for the next six months will pass from the life and times of Jesus and the establishment of Christianity, back to the history of the Hebrew nation, taking up the thread of the narrative, in Samuel I., at that point in their experience of which it is written "there was no open vision,"—the people were in servitude to the nations among whom they had settled, and had almost forgotten Jehovah the God of their fathers. Some of the finest characters in ancient history will be embraced in this study, and while war with all the atrocities of those ancient times will enter largely into consideration, we must bear in mind the low condition of morals that prevailed and the slow but steady progress the race, even then, was making towards a better social condition, and the recognition of individual responsibility, and of accountability to the Great Ruler of the Universe.

SWARTHMORE COLLEGE COMMENCEMENT.

The Commencement exercises of Swarthmore College took place at the College on Third-day last, the 18th instant. There was the usual attendance of friends of the graduating class and other friends of the institution. The Class this year numbers eighteen, ten young men and eight young women. Their names and the degrees they receive are as follows:

Bachelor of Arts: Alexander G. Cummins, Jr., Smyrna, Del.; J. Carroll Hayes, West Chester, Pa.; Mary Kirk, Lumber City, Pa.; Margaret J. Laurie, Jericho, N. Y.; Alice S. Palmer, West Chester, Pa.;

Louella Passmore, Oxford, Pa.; Ralph Stone, Wilmington, Del.

Bachelor of Letters: Clara Haydock, New York, N. Y.; Elsie D. Stoner, Columbia, Pa.

Bachelor of Science. In Science: Julia Hicks, Old Westbury, N. Y.; Frederic B. Pyle, London Grove, Pa.; Jennie F. Waddington, Salem, N. J. In Engineering: Justin K. Anderson, Unionville, Pa.; Howard A. Dill, Richmond, Ind.; Horace B. Forman, Jr., New York, N. Y.; Ellis M. Harvey, Ward, Pa.; George Masters, Philadelphia, Pa.; Willis W. Vail, Quakertown, N. J.

The exercises took place in the large assembly room, at 11 o'clock. There were six speakers appointed, as has been usual for the past three years,—as follows:

"John Ericsson: His Life and Inventions," Howard A. Dill, Richmond, Ind.

"The Influence of Greek Life on Greek Sculpture," Mary Kirk, Lumber City, Pa.

"Plans for an Increased Water Supply for Swarthmore Village," Willis W. Vail, Quakertown, N. J. (Excused from speaking.)

"Asa Gray: Botanist," Jennie F. Waddington, Salem, N. J.

"Goethe and Napoleon: Poet and Soldier," J. Carroll Hayes, West Chester, Pa.

"The Immoderate Spirit for Defensive Armament," Elsie D. Stoner, Columbia, Pa.

After the conferring of the degrees, the graduates were addressed by Joseph Wharton, President of the Board of Trustees. (His address is printed elsewhere in full.)

At the close of the address, after an interval of silence, Isaac H. Clothier arose, and on behalf of the Board of Managers made the following important announcement:

At a meeting of the Board of Managers of the College, held yesterday, (17th instant), the following letter from the President, Edward H. Magill, was read:

SWARTHMORE COLLEGE, SWARTHMORE, PA.
PRESIDENT'S OFFICE, Sixth mo. 17, 1889.

To the Board of Managers,

Dear Friends: After twenty years of service at the College, nearly all in the arduous position of President, I feel, with advancing years, the urgent necessity of a period of rest, as well as a permanent release from exacting responsibilities which, however congenial, would, if prolonged too far, inevitably overtax the health and strength of any man.

I therefore respectfully ask for leave of absence from the College for one year from Eighth month 15th next. I desire to spend that year abroad in study and the building up of my health. I would ask to return then to the College, and fill such position as the Board may deem best, my own choice being that of the Professorship of the French Language and Literature.

In accordance with this programme I hereby respectfully offer my resignation, to take effect at such time as the Board may elect. In thus terminating my long personal service as the executive head of the institution, I desire to thank the Board for many kindnesses shown me, both individually and collectively, at different periods. Conscious of mistakes and of imperfections in the performance of my high trust, I have ever striven to be true to what I conceived to be the interest of the College, to which I have

devoted, with enthusiasm, the best years of my life, and which I shall ever regard with affectionate interest, endeavoring always, in my measure, to aid in its mission of higher education in the Religious Society of Friends.

Sincerely and respectfully,

EDWARD H. MAGILL.

After due consideration of the subject the Board of Managers adopted the following resolutions by a unanimous and a standing vote:

Resolved, That the resignation of Edward H. Magill as President of this college be accepted,—to take effect on Commencement day 1890—leave of absence being granted him meantime with full pay.

Resolved, That Edward H. Magill be, and is hereby appointed to the position on the College Faculty of Professor of the French Language and Literature, beginning with the commencement of the college year, Autumn 1890.

Resolved, That the Board place on record their appreciation of the ability, the diligence, the devoted enthusiasm to the college service, the faithful and zealous conduct of affairs, which for eighteen years have marked the administration of Edward H. Magill as President of this college.

Resolved, That the Secretary be instructed to transmit to him a copy of these resolutions, with the best wishes of the Board for the restoration of his health, and for his future welfare.

Extracted from the Minutes,

M. FISHER LONGSTRETH, Secretary.

The following committee was appointed to have charge of the college during the absence of the President: Clement M. Biddle, Emmor Roberts, Eli. M. Lamb, Martha McIlvaine, Lydia H. Hall, and at a meeting of this committee held at the close of the Commencement exercises, Prof. William H. Appleton was appointed acting president for the ensuing year.

The Commencement season was opened on Seventh-day evening with a reception tendered the graduating class, with the members of the Faculty and instructors, by President Magill and the Matron, Elizabeth Powell Bond. A large number of invited guests were also present, and everyone had an enjoyable time. At the same time the Junior class was being entertained by Abby Mary Hall, '90, at the home of her parents, Thomas and Lydia H. Hall, in Swarthmore village; the Sophomores were enjoying refreshments presented them by Mrs. Isaac H. Clothier, of Wynnewood, and the Freshmen also had a "feast" as the guests of the Matron;—thus each of the classes which had so generously appropriated the money reserved for their banquets to the Johnstown sufferers was provided for.

On First-day morning Dr. Magill delivered his baccalaureate address to the graduating class before a large audience in the college Meeting-house. His subject was "Life is What you Make It: Nothing Comes by Chance." During the course of his remarks the President referred to the fact that it was the seventeenth time he had addressed the classes departing with their college's honors, and he sketched the growth of the institution since it graduated its first class, in 1873.

On Second-day the Class-day exercises were held before a large audience of alumni, alumnae, visitors, and students. The exercises in the college hall were

opened by the address by the President, Ralph Stone, which was followed in succession by the class history, by Elsie D. Stoner; the class poem, by Louella Passmore; the prophecy, by Clara Haylock, and the presentations by Frederick B. Pyle. After the close of the indoor exercises the audience adjourned to the campus in the front of the East College, where the ivy planting was held. The class president, after a short speech, unveiled a beautiful marble slab, engraved in imitation of the class shield, which had been built into the wall of the building, and about which a beautiful ivy clung. The stone was the gift of the class of '87. The class spade which was handed down to posterity by the class of '71, was turned over to the Class of '90, and the ivy poem was recited by Margaret J. Laurie.

FRIENDS' ELEMENTARY AND HIGH SCHOOL, BALTIMORE.

THE annual exercises for the twenty-fifth year of Friends' Elementary and High School were held yesterday. At 10 a. m. the graduating exercises were held in the gymnasium. The principal, E. M. Lamb, delivered an address and awarded the diploma of the institution to the following graduates: Carroll T. Bond, Mary E. Broomell, Walter Cox, Henrico A. Munger, Sophia F. Smith, and Arthur B. Turner. There were seventy-five of the pupils who attained an average of eight and one-half on a scale of nine, and received annual certificates. The following were the leaders of their respective classes: Senior class, Walter Cox; junior, John S. Bishop; second junior, Hetty L. Cox; second junior, second part, A. Nellie Spicer; second junior, third part, M. Bessie Lamb; second junior, fourth part, Lonis Passano; third junior, Edward L. Davis; third junior, second part, Sallie Bishop; class A, Ella Keyser; class B, Edith Boblitz; class D, Edwin L. Barnes; class E, Ezra B. Whitman. The leader of the whole school was Hetty L. Cox, with an average of 8.997 out of a possible average of nine.

During the quarter of a century that the school has been in operation over 2,600 different pupils have been enrolled. The number in attendance during the past year was nearly 300. At the close of these exercises the principal was presented by the teachers and pupils with a handsome carved oak chair as a token of their esteem and a memorial of the occasion. In the evening, from 8 to 11 o'clock, the reception was held in the main building, where an exhibition of drawings and paintings executed by the scholars and the work of the kindergarten department were displayed. The anniversary ode was read by the author, Anna D. Andrews, of the class of '86. — *Baltimore Sun*, Sixth month 15.

JONATHAN DYMOND, the celebrated essayist, whose unanswered essay on War has changed the thinking of thousands, and who suffered for the last two years of his life from a disease that forbade his speaking, completed his essays (including that on War) in that time and died at thirty-two, about the age of the Master whom his writings honored. — *Exchange*.

From *Yearly Friend's Review*, Sixth month.

FRIENDS' MEETINGS IN CANADA.—III.

IN the Fourth Month number of the *Review* it was stated that Eighth month 6th, 1817, Friends in the south of Norwich were granted an indulged meeting, to be held in a school-house on the First- and Fifth-days of the week, at the eleven-th hour, under the care of a committee; and Seventh month 1st, 1818, they were granted the privilege of purchasing five acres of land for the purpose of building a meeting-house upon, and also a burying-ground, to be called Pine Street Meeting. This was the first established of the different meetings which now compose Norwich Monthly Meeting.

Yarmouth and Ancaster Friends were first indulged a meeting in Fourth month, 1819; those of Malahide, in 1822, and of South Malahide, in Eighth month, 1841. On the 8th of Eighth month, 1849, Lobo was first granted an indulged meeting, and Arkona Friends on the 14th of Twelfth month, 1870.

Norwich Monthly Meeting was first held at Pine Street and Yarmouth, on the 12th of Eleventh month, 1828.

At Pelham Half Yearly Meeting, held the 21st of Eighth month, 1844, a proposition was received from Norwich Monthly Meeting "for the establishment of a meeting for worship and a preparative meeting, composed of the members of the indulged meetings of Bayham and South Malahide, to be held in the new meeting-house in Malahide, and to be known as Malahide Preparative Meeting." On account of some irregularity this proposition was returned to Norwich Monthly Meeting, but was brought up again at the next meeting and united with, and the meeting accordingly established in Second month, 1845. Six months later a proposition was forwarded and united with for holding Norwich Monthly Meeting one-third of the time at Malahide, commencing in Eleventh month at Malahide, thence to Pine street, thence to Yarmouth, and so held alternately.

At Pelham Half Yearly Meeting, held in Pelham in Second month, 1846, we find was recorded the following minute: "Was introduced in this meeting by a committee from Canada Half Year's Meeting, three of whom are in attendance, a proposition of the propriety of holding a yearly meeting in Canada, composed of Canada and Pelham Half Yearly Meetings, to be known by the name of Canada Yearly Meeting, to be held at Pickering in Sixth month." The meeting at this time appointed a committee to confer with the committee from Canada Half Yearly Meeting. In Eighth month this committee reported that "they had met, and after much deliberation were united in submitting to the proposition. But after a time of solid consideration thereon, the meeting united in referring the subject to our next Half Year's Meeting for further consideration." At its next meeting the subject of requesting the privilege of holding a yearly meeting in Canada again claimed the attention of Friends, and "after a considerable time of deliberation thereon, this meeting is united in informing Canada Half Year's Meeting that we are not prepared to unite with them in the proposition."

In Second month, 1857, there "was received from

Norwich Monthly Meeting a request from the members of Lobo indulged meeting for the establishment of a preparative and a meeting for worship in that place." After consideration the meeting united with Norwich Monthly Meeting in the establishment of the meeting in Lobo.

In Second month, 1858, Norwich Monthly Meeting informed Pelham Half Yearly Meeting that it was united in holding the monthly meeting in Lobo one-fourth of the time, to be held there first in Fourth month of that year, alternating with Pine street, Malahide, and Yarmouth.

A proposition was made in 1853, and again in 1858, to have the place of holding Pelham Half Yearly Meeting in Second month changed from Pelham to Pine street, but not receiving the unity of Friends it was dropped. In Eighth month, 1864, Pelham Half Yearly Meeting adjourned, to meet in Lobo in the Second month following, and in Eighth month, 1865, it was established, to be held in Second month in Pelham and Lobo alternately, and has been so held ever since.

In 1873 Genessee Yearly Meeting was held in Yarmouth, Ontario, for the first time. It was since held in 1876 and 1878, and every three years since 1878.

In Eighth month, 1882, Norwich Monthly Meeting received the sanction of Pelham Half Yearly Meeting in establishing a preparative and meeting for worship at Arkona. The meeting for worship to be held on First-days and on preparative meeting days. The preparative meetings to be held jointly, and to be known as Arkona Preparative Meeting.

The following minute was recorded at Pelham Half Yearly Meeting, held in Eighth month, 1885: "A proposition was made in this meeting to raise the shutters to take into consideration the propriety of adjourning at this time to next meet in joint session, which being united with and having the concurrence of women Friends, the shutters were raised, and after due deliberation this meeting unites to now adjourn to meet in joint session in Pelham in Second month next." This action was taken in harmony with the growing feeling in that direction, in accord with the practice of some of the subordinate meetings and in anticipation of the action to be taken by the coming yearly meeting, and of the changes likely to take place in the proposed revision of discipline, requiring all our meetings to be held in joint session.

NEWS OF FRIENDS.

BALTIMORE QUARTERLY MEETING.

We are indebted to the kind care of the publishers of FRIENDS' INTELLIGENCER for notice of our approaching quarterly meetings. We note its good effect, as one of the features of our excellent paper.

The meeting was held on the 10th, at Sandy Spring. Representatives were present from our monthly meetings, Baltimore, Sandy Spring, Little Falls, and Gunpowder, with reports. The report from Baltimore is encouraging as to the attendance, since Friends of Western District Preparative Meeting have occupied their comfortable new house on Park

Avenue. In the members a renewed spirit of loyalty to the meeting is evinced, the ministry is growing, and the membership is increasing.

We had a good and quiet meeting, with acceptable labors by our own valued ministers, Martha S. Townsend, Albert A. Hull, and Mordecai Price. Rebecca Price, one of the ministers of Baltimore Monthly Meeting, is at Little Falls in feeble health, and Darlington Hoopes is traveling in Pennsylvania and New York, in the ministry.

A remarkable feature in connection with the quarterly meeting, was its very small size. The people seemed almost to be paralyzed in view of the fearful calamities which have overtaken our country in the destruction of dams and bridges and submerging of lands. This in connection with the unparalleled loss of human life, almost made people forget themselves and their duties. The Potomac river rose to an unprecedented height, submerging for a hundred miles the Chesapeake and Ohio canal and river banks, and the people are without the necessities of life. Only one Friend was in attendance from the Quarterly Meeting of Fairfax, south of the Potomac River.

HENRY JANNEY.

Baltimore, Sixth month 14.

CIRCULAR MEETINGS AT EAST BRANCH, N. J.

EDITORS INTELLIGENCER AND JOURNAL.

Please publish that Chesterfield Monthly Meeting of Friends united in the appointment of four circular meetings, to be held at their old meeting-house at East Branch, in Monmouth county, N. J., one in each of the following months, Sixth, Seventh, Eighth, and Ninth months. The said meeting was laid down many years ago, there being very few Friends in the neighborhood. The location is high, with surroundings of good productive farms, and comfortable homes, inhabited by a class of people who seem pleased to have an opportunity of attending a Friend's meeting, as was evidenced on last First-day, by the large number who were very attentive listeners to Dr. Franklin T. Haines, of Rancocas, who was favored to speak to them with great power.

The next meeting will be held on First-day afternoon at 3 o'clock, the 21st of Seventh month next. We should be pleased to have our ministering Friends who feel drawn that way, meet with us. Correspondence with Charles H. Tantum, Imlays-town, N. J., Franklin Black, Bordentown, N. J., or W. Maxwell Marshall, Trenton, N. J., would receive prompt attention, they being a committee appointed to make arrangements and take charge of the meetings.

W. M. M.

Trenton, N. J.

SCIPIO QUARTERLY MEETING: CORRECTION.

EDITORS INTELLIGENCER AND JOURNAL.

I observe in the first number for Sixth month, in the list of quarterly meetings to occur, that Scipio Quarter would be held on the 29th at DeRuyter. This being an error, it may be my duty to state that the last quarterly meeting at DeRuyter was in Sixth month, 1886. Since then the Sixth month Quarter has been held at North Street, Scipio. Our

monthly meeting here was laid down and the quarter changed to North Street, Seipio, at the time, therefore, I feel that the change should be noticed in the paper.

HENRY TRIPP.

DeRuyter, N. Y., Sixth mo. 5.

—Apprehensive that Friends of Fishing Creek Half-Year Meeting, many of whom have their homes on the affluents of the Susquehanna, might have suffered in the recent floods, inquiry was made of Ellis Eves, at Millville, who replies, Sixth month 14: "I am glad to be able to say that Friends here have not suffered, with the single exception of Shadrach Eves, whose mill dam was taken out. We seem to have been favored, this time."

THE WOMEN'S YEARLY MEETING OF 1843.

WITH A REVIEW OF ITS VARIOUS EXERCISES, BY AMANDA K. CLARK, OF NEW YORK.

[The following metrical description of the Women's Yearly Meeting of Philadelphia, in 1843, has been preserved since that time in manuscript, and recently a correspondent in New York has sent it to us with the suggestion that it should be published, for which purpose he has obtained the consent of the author. It will be read, we have no doubt, with much interest.—EDS. INTELLIGENCER AND JOURNAL.]

I.

Once more our Heavenly Father's gathering hand
Hath called together our assembled band,
Hath blessed the work of every passing day,
And led our counsels with its gentle sway;
And bidding us upon its power repose,
Hath brought our labors to a peaceful close.
Sweet are these annual meetings unto those
Whose love toward all without restriction flows;
Pleasant it is to grasp the stranger's band,—
Those pilgrim members of our sister band
Who, for the sake of truth from far have come;
Leaving behind the endearing cares of home
With us the burden of the day to share,
And blend with ours the voice of grateful prayer.
Cheering it is our absent friends to greet,
Or at each turn familiar faces meet;
To see the "bowed with years," the gay with youth,
With linked hands uphold the cause of Truth—
To know the purpose that inspires one soul
Urges, pervades, and animates the whole.

II.

O well and nobly has our work been done;
In love perfected as in love begun;
No petty jealousies have risen up
To mingle bitterness with Memory's cup.
But Truth and Order, like good angels spread
Their peaceful sway like wings above our head,
And safe from Error with such guardians true,
The work was prospered which we found to do.
Thrice noble work! for unto us are given
The best, the choicest of the gifts of Heaven—
A hallowed legacy that's dearer far
Than all the diamonds of Goleonda are;
The proud inheritance our fathers gave,
And freely offered up their lives to save;
The ark of testimony, which they bore

Through persecution in the days of yore,
When Bigotry had doomed them to the stake
Because its statutes they refused to break;
Still, still aloft they held the precious gem
Safe to their children, tho' 'twas lost to them.
As Daniel walked from out the lion's den,
Proof 'gainst the woven toils of wicked men;
Unhurt and purified from out the flame,
The hallowed Ark of Testimony came.
And we, their children, say, shall we forget
The "ancient land-mark" which our fathers set?
Shall we be slothful and refuse to bear
The yoke, because it galls the neck to wear?
Say, shall we abrogate one simple law
Because the burden may be hard to draw?
Say, shall we cast like worthless weeds aside
The covenant for which our fathers died?
Shall one by one its time-worn rules decay
And thus the honored fabric fade away?
Oh, no! may we, their children, bear it still,
And all its laws with cheerfulness fulfil,
Walk by its light and let its precepts guide
Our onward path, whatever may betide.
And then the martyred spirits of the blest
Shall bend to bless us from their homo of rest,
Shall aid us still with strength to bear on high
The sacred truths for which they dared to die.

III.

Mothers in Israel, when your heads have pressed
The dreamless pillow of eternal rest,
When to rewards from works you shall have passed,
(For recompense will come to all at last);
May we, the careless now, the young in years,
To heavenly voices then incline our ears,
And come as standard-bearers in your place
As firm to do, as earnest in the race,
Nor turn aside until the goal be won,
The welcome language at its close, "Well done!"
Your kindly counsel we will not forget,
And may it bear good fruit to cheer you yet.
Like pleasant echoes still your words I hear,
Your earnest pleadings fall on fancy's ear;
Again I see you as in power you stood,
Saying, "Come taste the Lord, for he is good!"

IV.

How would our vessel spread its airy sail?
How would its pennon flutter on the gale?
How would the helmsman learn its path to steer,
If Rachel Hicks, the compass, were not here?
'Tis she who rises up when all beside
Are wavering—the question to decide—
And by her forethought and discernment keen
Becomes the motive power of the machine.
And unto her hath the "Eternal Word"
Given the Spirit's sharp and flaming sword,
"Which every way against the assaults of Sin
Turneth to guard the Paradise within."

V.

Our ship hath helmsmen and a faithful crew,
Strong, tireless oarsmen, and good pilots too;
And those who climb the mast-head to descry
And give the warning when the shoals are nigh,
Or, on the prow, like sleepless watchmen stand
To spy the outlines of the "Promised Land."

VI.

And first of all amidst this blessed band
Armed with the truth, see Rachel Barker stand.

I meet the glances of her searching eye,
Clear as the surface of a summer sky;
Again I read the purifying trace
Of deep devotion on her thoughtful face;
The stamp of intellect is also there,
In the calm look those chastened features wear.
Upon her heart in characters of flame
Hath Israel's Shepherd registered his name,
And she (like holy Samuel of old)
Was early gathered to his peaceful fold;
Who, "while the blossoms of her years" were
young,

His eloquence imparted to her tongue.
I hear her voice—what says it? "Let us try
To walk as do the stars that tread the sky.
No discord breaks the 'music of the spheres'
As on their journey in the lapse of years;
But still unswervingly they hold their march
In harmony thro' heaven's extended arch.
So in our proper orbits let us move,
The force that binds us to our Centre—Love.
O let us shape our course indeed aright,
Like these unerring 'children of the light';
And then like stars in heaven we all shall shine,
Clothed in the radiance of a light divine."

VII.

Another voice falls on my listening ear,
And Mary Lippincott's sweet tones I hear;
Whose heart is touched as with a living flame
Fresh from the altar of the great I Am.
"Would ye be saved from misery and sin?
Obey the teachings of the light within,—
That light which shines in every human breast,
The beacon star of Everlasting Rest.
Though we awhile may shut its presence out,
And meet with hours of darkness and of doubt,
We may not quench its lustre; it will rise
On wings ethereal to its native skies,
And if we mind its dictates, bear us hence
Above the fading things of 'time and sense,'—
Far from the earth and all its care away
To where eternal splendours ever play.
The 'temples of the living God' are we,
And hear the impress of Divinity!
Shall we these temples ruthlessly profane,
Where God, the builder, rightfully should reign?
Shall we these sanctuaries stain with sin,
When their High Priest an altar rears within;
When on that altar with 'consuming fire'
He would destroy each selfish, vain desire,
Would we but bow beneath His wise control
And dedicate to Him the immortal soul?"

VIII.

The gift that Anne Morris left behind,
Like "chains of gold" about the heart we'll bind;
For like "an ornament of grace" 'twill shine
Brighter than all the treasures of the mine—
The precious "pocket piece" which she has given,
The pure and priceless currency of Heaven.

IX.

O, that each erring prodigal would come,
Who may have wandered from the Father's Home!
Attend to Rachel Wainwright's earnest call
And turn again to the paternal hall!
The Father then with outstretched arms shall
come
To bid his long-lost children "Welcome home;"

And the repentant wanderers to his breast
Shall in one long embrace of love be pressed.
Then shall the feast rejoicingly be spread,
The hungry soul be satisfied with bread,
The parched and thirsty lips be bathed with wine
Pressed from the clusters of the living Vine.
Songs of thanksgiving in that home shall reign,
Because the lost ones have returned again;
With joyfulness the banquet shall be crowned,
Because the dead are raised, the lost are found!

X.

How by the power of Heaven's eternal Word
The depths of Hannah Wilson's soul were stirred;
How did the counsel on her lips that hung,
Descend in gentle music from her tongue;
How tenderly, how sweetly, did she warn
Those who were revelling in life's early dawn,
While yet Existence wore her magic hues,
The "better part"—the fadeless crown—to choose.
For all life's gilded dreams must melt away
As fades the dew drop 'neath the morning ray.
There yet will come to every one an hour
When Pleasure's siren voice will lose its power;
For life's gay morning cannot always last,
The halcyon days of youth will soon be past.
Earth hath no balm our sorrows to assuage,
Or cheer the pathway of declining age;
Religion's hand can chase Affliction's gloom,
And strew with flowers our progress to the tomb.
Oh, then may we ere empty is the glass,
Improve "life's winged moments" as they pass,
Seize from His hand the freely offered prize,
"Who loveth best an early sacrifice."

XI.

Many there were who lesser offerings brought,
And in the treasury threw their mite of thought,
Which, like the widow's hard-earned gift, tho'
small,
Equalled in worth the richest of them all—
Jewels of price worth more than orient gems
That brightly beam in kingly diadems.
And if, like Ruth, it falls to me to glean
The field o'er which the reapers first have been,
If the redundant sheaves be not for me,
May I, like her, a patient gleaner be.
And then, perchance, 'twill be my lot to find
A few forgotten treasures left behind,
Which, like "rich orient pearls at random strung,"
The harvesters aside for me have flung.

XII.

And last of all, tho' least of all forgot,
Came the bold summons of Lucretia Mott,
Who in the bonds of love arose to crave
Our aid to burst the shackles of the slave;
For each must, fearless, battle for the right,
And then to all the burden will be light.
Not single-handed can the task be wrought;
But legions to the standard must be brought;
Would we this foul dishonor e'er efface
From our loved country, from our name and race.
Can this fair land that spreads from sea to sea
Be justly called the "Nurse of Liberty,"
When in her very midst Oppression reigns,
And unmolsted forges still his chains?
We ask no violence, for we would prove
That freeing bondsmen is a work of love.
Nor would we in our vain power go forth

From Wrong and Tyranny to purge the earth,
But, like Elijah, rest until we hear
The voice of God upon the inward ear;
And then, like him, obey the heavenly call,
Looking to Him for strength, who gives it all.
For in the earthquake God did not abide,
Nor yet upon the impetuous whirlwind ride,
Nor was His presence in the raging flame
That wheeled in circling mazes as it came.
None ever found Him in the haunts of strife,
The heats, the turmoils, and the storms of life,
Not in excitement can we hope to find
His dew-like influence resting on the mind;
But when from wind and tumult we depart,
And hide within the chambers of the heart,
Then through the holiest recess of the soul
"A still, small voice" like cooling airs shall roll.
That voice shall lay the path of duty bare,
And make the spirit feel that "God is there."

XIII.

Not for the fettered African alone
Our hearts their active sympathy have shown,
But for the wretched natives of our land
That stricken, scattered, miserable band
Who from before the white man's face have passed
As fall the leaves before the autumn's blast.
That noble race who in the days of yore
Could boast an empire stretched from shore to shore,
And wandered o'er their hunting grounds as free,
As tameless as the billows of the sea;
Who in the shadowy recess of the wood
Worshipped the Source of Universal Good,
Adored Him in the thunder's solemn roar,
Or in the foaming surge that lashed the shore;
And in the swaying of the forest trees
Heard the Great Spirit's voice upon the breeze,
Or "read His awful name emblazoned high
In golden letters on the illumined sky."
Their pleasant hunting grounds are altered now,
Seamed with unsightly furrows of the plow;
And where the forests reared their heads on high
In silent majesty to greet the sky,
Now wave the fields of cultivated grain
And smiling plenty crowns the verdant plain.
Alas! that plenty they may never share,
The tribes dissolve like vapor in the air;
Wandering like outcasts on their rightful soil,
They view with jealous eye our fruitful toil,
And mourn to see our splendid homes arise,
Where once they saw, dissolving in the skies,
The circling smoke from hearth-stones quite as dear
As those the "pale face" in his pride can rear.
Now one by one with faltering steps they bear
Their fathers' bones with reverential care,
To the new home the white man's bounty gave
Beyond the Mississippi's troubled wave.
Father of Waters! soon thy stream shall tell
In dirge-like murmurs their funereal knell;
Soon like the foam upon thy swelling tide,
Shall be the memory that they lived and died.
O may we not, although their "sun is set,"
Its last, faint twilight totally forget,
But do our part to ease their cheerless state,
And win them gently from their wretched fate;
Teach them that tho' much wrong our race can do,
It yet is capable of "more too;"
Into their darkened minds diffuse the light,
Till Truth shall beam upon their mental sight,
Teach them that still there is a listening ear,

Willing the story of their wrongs to hear;
An Arm of Power their injuries to redress,
A Hand stretched forth to sanctify and bless;
That tho' their earthly homes from them be riven,
There is a "mansion" left for them in Heaven;
That tho' upon this transitory scene
Their names may be as they had never been,
God will those names upon his book enroll
That ("when the Heaven shall vanish like a scroll,"
And melt before an all-consuming fire),
Shall still survive great Nature's funeral pyre.

XIV.

The Hand that gathered hath dispersed again
In perfect order the assembled train;
And each, as homeward she returned once more,
Some hoarded remnant of the banquet bore.
For Christ himself "who blessed and brake" hath
given
The precious "bread that cometh down from Heaven,"
And of the fragments that remain behind
May all be garnered by the hungry mind;
For spiritual food 'twill prove indeed
More than sufficient for our utmost need.

XV.

We paid no price save love and gratitude,
To those who left this spiritual food;
But as they "freely had received" from Heaven,
So unto us the bread was freely given.
The thirsty ones no fee, no tribute gave,
But stooped unheeded to drink the Gospel wave;
Which, like the streams and little sparkling rills
That dance in mirthful music down the hills,
Casting around them wreaths of glittering spray,
And resting now and then when tired of play,
Is "free as air" to all who, at its brink,
Weary and faint, may haply stoop to drink,
Its source is found upon "God's holy hill,"
Where heavenly dews and showers of love distil;
Forth from the Rock it springs, the sweetest draught
The way-worn pilgrim-spirit ever quaffed,
A clear, translucent, and abundant stream
Whose waters sparkle with a glorious beam.
Through "God's own holy city" does it glide
And gladdens angels with its crystal tide;
Beside its waves their glorious forms they bow
Which catch the image of each radiant brow,
While silver voices whisper round its brink
"Ho, every one that thirsteth, come and drink!"

XVI.

May the new lambs but lately entered in
To the enclosure from the walks of sin,
Increase its strength with each succeeding year;
That, when in future we assemble here,
They as good helmsmen may arise to guide
Our cherished Ark above the swelling tide,
For soon the faithful hands that hold the trust
Must rest from labor in the silent dust.
Then the tempestuous floods will rise in vain,
Powerless will blow the winds, will beat the rain;
The Ark upborne above the opposing tide,
Upon the waves triumphantly shall ride;
And towering still above their foaming crest,
May find an Ararat whereon to rest.

XVII.

And ye, our absent sisters, though the eye
Discerns you not, your spirits still were nigh;
With ours your silent orisons were blest,

With ours your knee to Heaven's Great King was bent.
 And O, believe that though ye were not here,
 Your spiritual presence hovered near;
 That though your outward forms no eye could see,
 We felt you in our very midst to be.
 Aud lo! we send glad messengers to you,
 Who shall refresh your souls with Hermon's dew,
 Who came to bid the steadfast and the true
 Their onward progress toward "the mark" pursue;
 Like good Samaritans to heal the heart
 That may be quivering with Affliction's dart.

HOW CAN WE BEST TEACH CHARACTER IN OUR FIRST-DAY SCHOOL.¹

WHEN the Business Committee of our Union asked that some one from our Meeting should bring forward a paper on this subject, the question was raised "What is character?" One answered, "Character cannot be taught for it is *the man*." Another said, "It is reputation." A third Friend called it a person's distinguishing qualities.

If the first Friend was correct,—if a man is as he is born, his character simply hereditary,—we had best teach parents instead of children. Indeed, this is a partial truth, so weighty that we should give it weighty consideration; but it is only a partial truth, for no matter how straight the twig shoots up from the good seed it can be bent. Bent by improper training, by evil companionship, by misfortune, and also by what the world calls fortune. Now, if it can be bent in one direction, why not in another? If a character can be injured by ill-treatment, why can it not be strengthened and improved by good training.

The second Friend called character reputation. Reputation should be valued and guarded, but is what others say of us,—not our real character.

The third defined the word as a person's distinguishing qualities. An individual represents to his friends and neighbors just those principles and abilities of which he is possessed—distinguishing marks by which he is known and which his name simply stands for. To believe hereditary influence determines all character, is akin to belief in original sin, which Friends long ago denied. It can affect it no further than physical qualities affect moral qualities. The teacher's task then seems to me to be to train the mind to control physical tendencies. But the question before us is "What is the best means?" Many a teacher and parent is seeking for advice on this point, praying for power to impress children's hearts with principles which shall always remain with them; but too often have their efforts been complete failures. It is not always the willing spirit that makes the work perfect, though such a spirit is indispensable in an efficient teacher, but it needs also wisdom and tact. We cannot study method too much. We see these children but one day of the week; during the remainder they are under very different influences, perhaps, therefore the impression made must be deep or it will be washed away as a mark in the sand. A child may listen with apparent interest to a moral lecture from a teacher whom it

respects, without any of the lessons taught taking forcible hold on the mind. This I think is where we make the greatest mistake. In the schools of to-day teachers are using illustrations and specimens more and more. They are finding out that childish minds can grasp practical things better than theoretical. If they teach botany they supply specimens of plants. If a child study physiology he has before him a manikin and skeleton. He does not even study grammar in the old prosy way, but steps to a black-board and maps his sentence off in black and white, analyzing and parsing with a piece of tangible crayon in his hand. Now why should we not carry out the same ideas in teaching character? Would it not be a more effective lesson to point out to a class of boys a good man—a living specimen of moral character, than to give a sermon on right living? And here is history's aid. In spite of wars on wars it is full of subjects which can be studied with profit; models for our children to look upon while building their own moral structures—men who have risen above the vices and temptations of the times in which they lived, who made sacrifices even of life for the principles they loved. Such fame we should teach our children to respect and admire. Does this sound too much like hero-worship? If the hero is a strong, virtuous character I cannot see what harm is done. Above all let us give them that most perfect model, the Nazarene, and let them worship as did that great hero-worshipper Peter, for on this rock is his church built.

The most effective example to place before a child is, perhaps, a living one, and no other will a child so gladly follow as one of its own kindred. It may not seem a feasible idea, but if we could by some means find out the good qualities of a respected relative of a child, we could do much good by a little timely praise of those virtues and encouragement of their emulation. Is character hereditary? then are we aiding the development of the child's inherited virtues, at least we will be teaching what can be understood most readily—a lesson that goes straight to the heart, for a child's love of its kindred is very strong. In doing this, we need not fear too much that we may lead them to follow defects in those characters. By continually denouncing the evil we bring it too much into notice. Let us spend the time in upholding the good. Far more harm is done by neglecting to commend a virtue than by overlooking a fault. Show our little ones that we are not looking for subject for criticism and condemnation, but rather seeking everywhere the good, the true, and the beautiful; and they may learn from our example to seek it too.

THIS world, its bustle, its pursuits, and its highest glory, will soon be over to every one that is now in it. Then the answer of "Well done, good and faithful servant"—will be a more joyful sound than all the friendship and favor that this life can bestow.—*Richard Shackleton.*

VIRTUES which have gained us the love of man must gain us the love of God.—*Mlle. de Guérin.*

¹ Read at Concord Union, held at Chester, Fourth month 20, 1889, by Katie R. Styer.

PEACE MOVEMENT AT NIMES, FRANCE.

At the old city of Nimes, in Southern France, during the past two years, much zeal in the promotion of Peace and International Arbitration has been manifested by a number of its younger citizens, who have constituted themselves into an organization bearing the designation of "The Nimes Association of Young Friends of Peace," the active membership in which body is limited, by rule, to persons under twenty-five years of age, although the honorary adhesion, or actual cooperation, of those of riper years, is not excluded. But for the most part, this Society consists of young men of the city and district.

This Association was founded in 1887, chiefly through the exertions of L. A. Barnier, of Geneva. Its honorary President is Frederic Passy, Member of the French Chamber of Deputies. Ladies are admissible as honorary members of the Association.

Ordinary membership involves a very moderate annual subscription, and adhesion to a programme, the extreme simplicity of which is a noteworthy feature. It states that "the object of the Association is to labor, by all means, for the establishment of universal and permanent peace," and, in particular, "for the institution of an International Tribunal of Arbitration, furnished with a special Code; for the suppression of standing armies and for the establishment of national militia, in order to ensure internal order." The active members meet once a fortnight. Quarterly meetings are also held, at which the presence of honorary members is welcome.

These young men of Nimes are, themselves, in a position to speak feelingly, and from practical experience, in reference to the evils of militarism. For not only are they and their friends sufferers from the burdens of the immense war taxation of their country, but they are also, in turn, rendered the victims of the Conscription, which in France as in other Continental countries, exercises such a deadly influence upon the moral and intellectual progress, and the pecuniary interests of the youth of the nation.

The Association has prepared a comprehensive Manual or Almanac, containing a choice selection of extracts from the best French writers and orators, in favor of peace and in denunciation of war. Amongst the authors thus quoted, are Victor Hugo, Jules Simon, Michelet, Desmoulins, Grand Rabbi Isidor, A. Franck, Charles Lemonnier, Frederic Passy, Charles Toureille, Henri Babut, M. de Rienzi, M. Edouard Laboulaye, M. Dumas, C. Flammarion, Benoit Germain, S. de Brazza, Abbé Grande, J. D. Faucher, and others. Being written by Frenchmen for Frenchmen, and in full harmony with the national interests, feelings, idioms, and style, these extracts will be eminently suitable for distribution at the Exposition, and, indeed, elsewhere in France.

TALK not of wasted affection, affection never
was wasted;

If it enrich not the heart of another, its
waters, returning

Back to their springs, like the rain, shall fill
them full of refreshment.

—Longfellow.

FASHIONS IN LEATHER.

KANGAROO leather is one of fashion's favorites, according to the *New York Sun*. It was first used in the manufacture of shoes about twelve years ago, since which time it has gradually grown in favor. As it has won public favor entirely by its merits, it will doubtless retain its popularity for some years. It has the virtue of being both durable and very easy to the foot. Its strength is so great as to defy the power of ordinary men to tear. The kangaroo was first hunted for sport. The Australian considered that his visiting English cousin had not "done" the country if he returned without enjoying the excitement of a kangaroo hunt. The kangaroo is now hunted for profit, the hide being worth, delivered at the seaports of Australia, from 75 to 85 cents a pound. As shooting injures the hide the killing is usually done by clubbing.

During 1888 upward of 750,000 kangaroo hides were imported into the United States. Add to this the number of hides consumed in Europe, and it seems no wonder that the Australian government is now discussing the advisability of limiting the annual slaughter of kangaroos.

Patent leather is one of the things of fashion's fancy. The better grades of patent leather shoes are made from patent calf. It may be surprising to many to learn that no patent calf is made in this country, but it is all imported from Germany and France. Some few years ago the tanners here spent considerable money in trying to make a patent calf that would compare favorably in quality with the imported article, but were unable to do it. Patent leather and patent calf must not be confounded. Of the former large quantities are made here, it being tanned from cowhide, while the latter is from calfskin. Small calfskins of fine fibre are selected. During the process of tanning they are stretched, else the japan would soon crack. The process of laying the japan followed in Germany and France is a secret the American tanner has not yet learned. A first quality patent calf, if not exposed to sudden change of temperature, will wear quite as well as the ordinary calf. The quality may be judged by the brilliancy of the jet black. If the japan has a bluish cast, depend upon it the quality is not first-class, and let not the smoothest tongued shoe salesman deceive you.

Cordovan has taken the place of alligator for wear in wet weather. This, too, is largely imported from Germany. It is made from certain parts of the horse hide, and is a very durable leather. It is impervious to water, and has a very smooth surface. It is not imported in sides, as are most kinds of leather, but comes blocked to the shape of the vamp. Unlike calf, it does not stretch in wearing, but retains the shape of the last until the shoe is worn out. A few years ago it was very expensive, but recently the tanners have conquered many of the difficulties in preparing the hide, and, with reduced cost, it is now quite popular.

THE world is never dark when it is seen in the
light of God's countenance.—Rufus Ellis.

STIMULANTS AND THE VOICE.

TOBACCO, alcohol, and fiery condiments of all kinds are best avoided by those who have to speak much, or at least they should be used in strict moderation. I feel bound to warn speakers addicted to the "herb nicotian" against cigarettes. Like tipping, the effect of cigarette smoking is cumulative, and the slight but constant absorption of tobacco juice and smoke makes the practice far more noxious in the long run than any other form of smoking. Our forefathers, who used regularly to end their evenings under the table, seem to have suffered little of the well-known effects of alcohol on the nerves, while the modern tippler, who is never intoxicated, is a being whose whole nervous system may be said to be in a state of chronic inflammation. In like manner cigarette smokers (those at least who inhale the smoke, and do not merely puff it from the lips outward," as Carlyle would say) are often in a state of chronic narcotic poisoning. The chief objection about the slowness of the poison may seem applicable here, but though the process may be slow there can be little doubt that it is sure. Even if it does not kill the body, it too often kills gradually in part the victim's working efficiency and usefulness in life. The local effects of cigarettes in the mouth must also be taken into account by those whose work lies in the direction of public speech. The white spots on the tongue and inside of the cheeks, known as "smoker's patch," are believed by some doctors with special experience to be more common in devotees of the cigarette than in other smokers; this unhealthy condition of the mouth may not only make speaking troublesome, or even painful, but it is now proved to be a predisposing cause of cancer. All fiery or pungent foods, condiments, or drinks tend to cause congestion of the throat, and if this condition becomes chronic, it may lead to impairment, if not complete loss, of voice. The supposed miraculous virtues of the mysterious possets and draughts on which some orators pin their faith, exist mainly in the imagination of those who use them; at best they do nothing more than lubricate the joints of the vocal machine so as to make it work more smoothly. *Sir Morell Mackenzie in the Contemporary Review.*

A RAILROAD IN AFRICA.

NEW YORK, June 17.—Collis P. Huntington, President of the Southern Pacific Railroad, has, it is stated, signified his willingness to subscribe \$50,000 towards building a railroad in Africa from the lower falls of the Congo river to Stanley Pool. It is also expected that other American capitalists will become interested in the enterprise. It is reported that the way was paved for sending American capital to be expended in African railroads through the friendship between Mr. Huntington and Mr. McKinnon, the great Scotch shipbuilder. The latter is a friend of the King of Belgium, whose interest in African affairs is well known. The Belgian government, it is said, has agreed to put \$2,000,000 into the scheme, and a syndicate of Belgian capitalists has offered an equal sum.

Mr. McKinnon is interested to the extent of \$100,000. Surveys of the route of the road have been made and the fact ascertained that there are about three thousand miles of navigable water above Stanley Pool. The length of the road will be 262 miles. Maps and plans are now on their way from Europe to this country.

JOHNSTOWN RELIEF FUND: ACKNOWLEDGMENTS.

PHILADELPHIA, Sixth month 18, 1880.

Editors FRIENDS' INTELLIGENCER AND JOURNAL:

The following contributions for the Johnstown sufferers, have been received by Friends' Book Association:

A. B. C.,	\$1 00
Cash,	1 00
Girls' Department, Friends' Central School, 15th and Race streets,	122 00
Boys' Department, Friends' Central School, 15th and Race streets,	21 05
Friends' Primary School, 15th and Race Ss.,	26 81
Friends' Kindergarten, 15th and Race Ss.,	4 90
Special Department, Monthly Mtg. Schools, 15th and Race streets,	9 35
Girls' Inter. Sch'l., 15th and Race Ss.,	7 33
A. F.,	5 00
Cash,	2 04
A boy,	50
R. F. M.,	5 01
S. T. C.,	5 01
A Friend,	10 00
John R. Williams and Magdala W. Seaman, David W. Bradson, Stevens St., Va., who says it has been handed to him in "small amounts by persons in limited circum- stances,"	15 00
A Friend,	10 00
Cash,	2 00
Sympathy,	1 00
Cash,	2 00
Amount,	\$275 27

In addition to the above we have received some packages of clothing, etc., which have been forwarded.

FRIENDS' BOOK ASSOCIATION,
15th and Race streets.

NEWS AND OTHER GLEANINGS.

—According to the *New York World*, the President's wife said not long since to a friend: "It may be that after a time I shall get used to the unpleasant features of my present position, but just now I am not in a contented frame of mind. I don't like the White House as a residence, I detest the publicity which pertains to our home life, and I regret that I am obliged to see so little of my husband. Is it not absurd that my father and the babies should be gossiped about all over the country? My husband is President, but that is no reason why the rest of us should be made public characters."

—At Valentine, Neb., a full-blooded Indian is earning an honest living by carrying the hod.

—In the battle of the boots the French seems to be losing its grip, and the common-sense shoe now vaunteth itself. The heels have come down and the soles have spread out. Observation on Broadway on a windy day will display two common-sense shoes to one French heel, whereas a medium style or compromise between the two

extremes adorn the feet of the great majority. On Fifth avenue and from Thirty-third street to Fifth, where the daughters of wealth and luxury most appear, the extreme type of common-sense shoe makes the sidewalk by a large majority.—*Shoe and Leather Facts.*

—A writer in the New York Tribune suggests the raising of canary birds as an occupation for girls or women, and says: Good birds always bring good prices, and even the poor ones are worth something. There is a good rabbit amusement, too, to be derived from the care of hares by one who is fond of pets, and the cost is next to nothing after the parent birds and a cage are once purchased. The rules for success are simple. A big, roomy cage, a wide, shallow nest and cleanliness are requisites. Paper spread on the floor of the cage, sprinkled with sand, is easily removed and renewed. A bird of light color is best mated with one of darker hue, or the offspring will look either washed out or too dingy. If the male canary is a good singer, a cross with a linnet will produce the best results. Let the birds alone as much as possible. Do not fuss over them. Do not be alarmed if they fight a little at first, they soon settle upon which is to rule the roost. Err rather on the side of too little than too much food. Be careful to give nothing salty or greasy. One pair of birds will raise several broods in a year. The little ones are perfect frights at first, but grow fast. At four weeks they begin to squeak. Their first efforts are positively painful, but in two weeks notes should be distinctly audible if the bird is to be a singer. The writer had a hen bird that died when her brood was a week old, but the widower raised the whole family, and beauties they were.

CURRENT EVENTS.

A SENSATIONAL report was sent out from the neighborhood of the Mille Lacs Indian Reservation in Northern Minnesota, on the 13th inst., saying that the Indians (Cheyennes) had risen and attacked the white settlers, killing six of them. Inquiry showed that one white man had been shot, and that the trouble was in part due to unjust treatment of the Chippewas, and in part to drink.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

The agreement between the United States, Germany, and Great Britain in reference to the Samoan Islanders, has been concluded, and was signed at Berlin on the 15th inst. It is representative as doing justice to the Samoans, and as being substantially on the lines proposed by the American Commissioners.

THUNDER have been frequent local storms, with severe thunder and lightning. One of unusual severity passed over New Jersey on the afternoon of the 15th inst. New Jersey was singularly visited, and much damage was done by lightning. In Passaic, the spire of a new church was shattered, and several residences were damaged. In Jersey City two fires were caused by lightning, the losses aggregating \$50,000. In Newark, two churches and several buildings were struck by lightning. Damage by electrical storms is also reported from New York and Maryland.

NOTICES.

* Quarterly Meetings in Sixth month occur as follows
29. 1890. December, N. Y.

PUBLISHERS' NOTICES.

* As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

* Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance may be used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day and must be sent to press at noon of the day preceding.

* We particularly ask that when money is forwarded to renew subscriptions, care be taken to give us the name of the person to whom the paper is now being sent. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Association of Friends to Promote the Education of the Colored People of the South.

HOWARD M. JENKINS, Chairman, 921 Arch Street, Phila.

SARAH J. ASH, Secretary, 1717 Vine Street, Phila.

LYDIA A. SCHOFIELD, Correspondent, 1717 Vine St., Phila

HENRY M. LAING, Treasurer, 30 N. Third St., Phila.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall Doylestown, Pa.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly to raise funds. These are sent to the support of two schools for colored youth in South Carolina, — the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School near Charleston, in charge of Abby D. Mauro.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

NOTES OF A TRIP TO CLEARFIELD AND FISHING-CREEK.

THE last notes closed just as we were leaving Tyrone the morning of Sixth month 12th for Curwensville, Clearfield county. We had a delightful trip,—the mountain scenery so fine as we wound our way around the steep ascent. We had not known of the Horse Shoe Curve on this road, which being closely surrounded, seemed more splendid than the one above Altoona, so renowned; it is about half way up the mountain, winding around a deep ravine. It was raining most of the way, though we were favored to escape it in an early carriage ride to Tyrone. We reached the highest elevation at Sandy Ridge before coming to Osceola. There are great coal mines in this section, and we saw many cars loaded on their way to market. The general conversation still seemed to be concerning the Johnstown disaster; we met some who had witnessed the scene, others who had friends and relatives there, from some of whom no tidings had yet come,—and may never so far as the material garment is concerned. We passed Phillipsburg about half way, which has great lumber and coal interests. The expanse of stump land gave some evidence of the quantity of timber removed. By the accumulation of *d'bris* the mountain streams seem to have been very turbulent; we found bridges gone over Clearfield creek and again at Clearfield. At the latter place and at Woodland there were extensive fire-brick works, also large tanneries at Clearfield and Curwensville. We found great havoc by the flood when we reached our destination at Curwensville, where we were very glad to find Thos. W. Moore waiting for us, and also to rest in their pleasant home.

In the afternoon Joseph Spencer, who lives at Bridgeport, one and a half miles above, came in. Great destruction was done about his home, by the flood in Anderson's creek. Nathan Moore, from Grampian Hills, also arrived, with whom we went to his hospitable home.

Fifth-day morning. An appointed meeting at Grampian Hills. It was not large, but trust we were favored to feel the over-shadowing wing of Divine love to be over us. It was cheering to see several little boys and girls present. The realization of the universal love of the Father called forth expression of thankfulness, lending an influence of comfort and encouragement, in view of the close relationship we should bear to the Source of all strength. We went home with Lewis and Alice Keetes,—he originally from Fishing Creek,—made a visit to Elijah and Ann Wales, and lodged at Jonathan Kirk's. The next day we visited Elisha and Catherine Davis; their son Nathan was one of the two young men who reached the Quarterly Meeting at Fisherstown, through great difficulties. Elisha has been engaged in attending meetings in the interest of the "Amendment." They are all, so far as met, deeply interested and hopeful, believing that although seeming defeat may follow their efforts, in the end they must be crowned with success. Nathan and Ann Moore met us there and on our way home we made a pleasant visit to Joseph and Elizabeth Davis, he a brother of Elisha. There is certainly material among the Grampian Hills to make a live meeting. May the fire of love kindle a flame that shall make a light to gather and strengthen God's children.

Seventh-day morning. Raining; quite a thunder-storm last evening. We made no visits, but rested indoors. It rained some through the night.

First-day morning. Cloudy, but it did not rain. Attended the First-day school. It is a mixed one, composed of different religious sects, yet the only deviation from our custom was a hymn sung after a chapter read from the Bible. They use the Lesson Leaves; different interpretations were given regarding the subject treated. They have an adult class, led by Elisha Davis, and several junior classes. The superintendent is not a member of our Society, but interested in the work. There seems to be a kindly feeling, and if they bear with each other in love, clothed with that charity which thinketh no evil, good will prevail and no compromise of truth be required therein.

The meeting was large, the whole school quietly remaining. As so many had assembled the week before from the announcement that visiting Friends were to be present, we had not anticipated such a full attendance now. Close attention was given to the spoken word, after a refreshing season of silence, opening with the text "This is life Eternal to know Thee the only true God and Jesus Christ whom thou

hast sent." The unspeakable blessing of a true knowledge of the Divine attributes and our nearness to the Father was dwelt upon; and God made manifest in the flesh for every son and daughter, led by the noble example of the well beloved Son. Joseph Spencer spoke of the importance of having a knowledge of the nature of the work unto which we may be called, ever receptive to the inspeaking word. Nathan Moore repeated, "Who so blind as the Lord's servant?" and the need for a close reliance upon the Divine guidance. We parted from the Friends among the Grampian Hills with grateful hearts for the privilege of mingling with them in social and religious fellowship.

We went with Joseph Spencer to their comfortable home on Little Anderson Creek which has spread desolation so recently around them, leaving evidence of its power on every side. We had enjoyed the ride up from Curwensville very much, such a display of laurel, and the rhododendron so plentiful, which will be clothed with beauty some weeks later; and such extensive beds of fern lining the road, so charming in their variety. We returned by a different road over the hills, having an unobstructed view of cultivated farms. The sun shone very hot between the floating clouds, but our umbrellas shielded from its rays. We forded the stream near J. S.'s injured dam where the bridge had been washed away, and were soon resting, kindly welcomed by Joseph's son Vincent and his wife who had returned before us. Jesse Way came to meet us while at dinner. We started on foot over a rough, stony way where had been a smooth road before the flood—stepping from stone to stone, until we reached the stream which we crossed on a temporary footpath, mounting to the farther abutment of the lost bridge, where the wagon was waiting for us. Many of the mill hands' homes were inundated (as was J. S.'s partially) and some of them undermined. J. S. accompanied us to Chestnut Ridge school house, where a meeting was appointed at 4 o'clock. It was about three miles distant, but seemed quite five of our home travel. The road was rough and billy, but as we ascended the atmosphere was delightfully pure and bracing, and the view grand behind us, with glimpses of Allegheny's highest slopes. The meeting was not large, but we felt it to be a very good one, receptive minds among the young and old. Some Orthodox Friends were in attendance, and the little boys cheered and strengthened us by their quiet, interested attitudes. Such opportunities often seem more blessed than our regular meetings. And the few Friends there are so far removed from meeting.

We called at Jesse Way's home a few minutes. They have an interesting family. He, with some of the children took us on to Thomas Moore's in Curwensville, where we were glad to rest.

Second-day. It rained some in the night and was cloudy in the morning. We left at 4.50, and just as we were seated in the car it poured, and continued to do so for some time. We again enjoyed the ride over the mountain and reached Tyrone in time to have quite a wait for the Bald Eagle train which was due at 8.10 but was late, as our experience has mostly

been. We felt tempted to step off at Unionville and see the kind friends there, but warned by the threatening weather, and many delays, pushed on. Owen Underwood, however, and Ellwood Griest took the train there for Bellefonte, which was a pleasant surprise. The scenery was very fine, losing nothing from being seen a second time. The cultivated slopes interlacing each other in the distance crowned with wooded heights made a peaceful scene, restful to behold,—and yet there was much to sadden nearly all the way. Lock Haven is a scene of desolation, its board walks swept away, lumber piled up on every side, and the sand and refuse that has been washed into their city is, they say, fearful. So many houses were inundated, the cellars full and next floor up to the ceiling, and many carried away. We saw corn, wheat, and oat fields flooded, and great piles of logs and timber in the midst of these, it seeming wonderful the power which could have carried them so far. The destruction seemed greater than we had yet seen, as we followed the Susquehanna, and on the other hand for a distance Bald Eagle Creek. Many buildings were turned over and barns washed far away. Wrecks of bridges appeared, and acres of land were covered with logs; quantities of lumber were piled high in some places.

Williamsport has also suffered greatly; apart from the loss of life, it does seem as though this section had suffered almost equally with Johnstown and vicinity.

It commenced raining hard as we reached Lock Haven and continued most of the way. The streams were turbulent, and the waters seemed everywhere. We reached Watsonstown after 2 o'clock p. m. and waited until after 7 o'clock for a train on the railroad built since I was last here to Millville. We were quite surprised to find Robert Hatton and George Haines and S. Sharp get off the Philadelphia train which we were waiting for. Robert thought he had never seen so much water in any day's ride. It is mostly a freight train and we were a long while on the way, glad at last to reach our destination, and to find Joseph W. Eves waiting for us, who brought E. J. and self to Reuben Wilson's, where we were at home with old friends, rest and kindly comfort being very grateful after a full day.

Third-day morning. Bright and lovely. We waken with the thought of all the hopes which centre in the day, when the result of the rare privilege of sweeping away a great evil from our land and sanctioning it by law, is to be tested. Our aged friend Reuben Wilson was taken early to cast his vote—there is great interest manifested here on the subject. The great need is for us to have such unbounded faith in the might of truth—that there shall be no unhealthy reaction, if the majority of votes is cast against this forward movement or the indifference of many has brought defeat and consequently deep sorrow to thousands of women in our land and men as well, banded in a common righteous cause.

Sunderland P. Gardner arrived this afternoon, also Isaac Hicks. We learn that the Susquehanna is very high from yesterday's rain, and the bridges we came over are again in danger. Our sympathies go

forth to those along the line who have already suffered so much from the floods.

Fourth-day morning. Cloudy. Attended the monthly meeting. Testimony was borne "that life was worth living," whatever the trials and discouragements may be. Robert Hatton thought a religious organization could not prosper without often recurring to its foundation principles. Isaac Hicks called us to the efficacy of the Inward Light, and felt there was cause for encouragement.

In the business meeting, after the state of the Society had been considered, we met in joint session to hear the Educational report read. It was interesting, and while their school is not entirely self-supporting, the general spirit was one of encouragement; some expressed a hesitancy to be dependent upon the Yearly Meeting—but one Friend said that so long as we could not pay expenses she was very willing and grateful to receive help.

We dined at Joseph W. Eves's, and met at 3 p. m., in meeting for Ministers and Elders, where there was a free expression of sentiment and excellent counsel given. We spent the evening at Wm. Masters', very pleasantly. S. P. Gardner homes there. We missed the mother, who had always welcomed us in former visits.

Fifth-day morning. Somewhat cloudy—but the sun shines, promising warmer weather. The Half-Year Meeting was quite large. As we were slowly gathered into silence, S. P. Gardner arose with the query: "What shall we do to be saved?" remarking how general with all thinking people this query had been, and that this had been largely answered by calling to a belief in certain doctrines, to a dependence upon an outward ministry, rather than a life of purity and obedience. He spoke of Paul's life, when he thought to be doing God's service, yet had never come under the converting power of the Holy Spirit, that he was not converted by any outward instrumentality, but the light of truth shone clearly in his soul, leading him to see the error of his persecuting spirit. "That which is known of God is manifest in man." He gave a very clear idea of the mission of Jesus, and his close relation to the Father: "God so loved the world that He gave his only begotten Son that whosoever believed on him might have everlasting life." And how receptive Jesus was to this Son and sent of the Father, this Christ of God, an emanation of his Holy Spirit. Christ is God revealed in the flesh. He spoke instructively of the parable of the Prodigal son, emphasizing the love of God, and a time when it shall cover the earth as the waters cover the sea.

In the meeting for business, after the queries and answers were read, Isaac Hicks made a visit to women's meeting. He first supplicated for the Divine blessing, then addressed the young feelingly and earnestly, cautioning against pernicious reading, wasting their sympathies on imaginary ills, also undue love of dress and outward adorning—rather than the culture of the mind and spirit. He extended encouragement to mothers, whose mission is such a sacred and important one. His visit was very acceptable, and under the covering of love we separated.

Dined with Chandler and Mary Eves. Robert

Hatton in company with us. John Eves took us to call on some friends before going to his home, a new one since I was last here, pleasantly situated among the great trees upon the hill. An appointed meeting in the evening by Perry John; quite a large gathering. Perry arose early, hoping we would have a favored opportunity, expressing the love he bore these people, which had existed so long and the hopes that centred among them, calling to a consecration of life and obedience to the voice of God in the soul. Sunderland P. Gardner followed in a most earnest and eloquent discourse, inciting to a practical religion rather than a traditional one, cautioning against the religious excitements or revivals which often gain converts through fear rather than an intelligent understanding of truth—leading to purity of life through a love of all things true and God-like; and how little a mere profession of faith would have power to save or ensure happiness. He addressed the young earnestly and tenderly, inciting to uprightness of life—that their character should be so established that their word would be as good as their bond. And if they started out in life with earnestness of purpose to make the very best use of their talents and opportunities, there would always be an opening for them, honesty and skilled workmanship being ever in demand. The young women were reminded of the great responsibility which devolved upon them,—to develop the graces of true womanhood,—thus, affording an example of the dignity of their high calling, by the purity and self-denial of their lives, and how the love of God would rest upon them like the dew-drop upon the tender branch.

The province of woman as mothers of the race was spoken of as greater than that of any king, emperor, or president. Those of middle age were counselled not to have their affections placed upon worldly riches. But the attainment of these through honest toil, without oppression, holding them in the sense of good stewardship to help their fellow-men, he esteemed a great privilege. The aged like himself, drawing near their departure from this earthly scene, were affectionately encouraged to be of good cheer, while concerned to do the Father's will, trusting wholly in his goodness and love. It is impossible to give an intelligent conception of these communications. We wished for a skilled phonographer to preserve them for the encouragement of others.

After the meeting, we accompanied Rachel Eves to the pleasant home of the sisters,—where we were glad to rest and be refreshed for another day.

Sixth-day morning. Bright and promising. Gathered for the Youths' meeting at 10 o'clock, which was large. The little babes and young children were present with their parents, which has always been one of the features, and an encouraging one, of Fishing Creek. After a call to a receptive spiritual condition, and the great need of being nourished in our immortal nature and understanding our relation to the Source whence all strength cometh, and to our fellow beings, Sunderland P. Gardner arose with the language that "Jesus Christ came to save sinners," and spoke of the wrong interpretation placed thereon. It was to call the people away from a tra-

ditional religion, from a dependence upon an outward law to one written in their hearts. He did not come to do their work for them, but to teach them how to do their work.

As they waited for the light of truth, it would show them what their duty was and lead them as it had him to do the work unto which he was called. It was true religion, manifested by works, which he taught. "Whatsoever ye would others should do to you, do ye even so to them." It was all summed up in that simple expression. In all his teachings, moral works were more emphasized than any other. He quoted the Good Samaritan as an example of this practical religion; how the church dignitary and high professor passed by, for moral goodness was lacking. How beautifully he set forth the coming into this condition of righteousness, the necessity of self-denial, to know of the government of every propensity in the two classes addressed: "Come ye blessed of my Father," and they knew not what they had done to deserve this; "inasmuch as ye did it unto the least of these my brethren ye did it unto me." On the other hand they who did it not, were not prepared to enter into the enjoyment of the righteous. We are told that we must look to Jesus, to the blood shed and its merits, in order to be reconciled to God; Jesus never taught such a doctrine. We must take up our cross and depend upon the grace of God which hath appeared unto all men, teaching that "denying ungodliness and worldly lusts we should live soberly, righteously, and godly in this present world." Jesus said "I have finished the work thou gavest me to do." How contrary to the idea given of a "scheme of salvation." "To him that overcometh will I grant to sit with me on my throne, even as I also overcame and am set down with my Father on his throne." And when he was taken away they were to be true to the same power to which he had directed them; they had not made much advancement while he stayed with them. Peter had little idea of the call of God as he went to the centurion. He learned something which Jesus had not been able to impart, that God was not partial. The nature of the religion of Christ is as Jesus found it to be, an acquaintance with Divine love, "to preach deliverance to the captive, to preach the gospel to the poor, to heal the broken hearted, and to set at liberty them that are bruised." Though we may not be called to preach, the pure, unspotted life is the loudest of preaching.

Jesus told his disciples they should have equal privileges with him if they were faithful. Our religion must be one of experience, leading us into that state wherein there is dominion over all that can hurt or destroy. This religion cannot be bought with gold or silver; it is as free as the outward sun; we are only benefited by it as we break loose from all that harms or hinders the good work. We may pass through this probationary state without the stain of sin upon our garments and without grief or sorrow into what has been called the dark valley of death. The fear of God is spoken of. This my friends is not the position to stand in; in all fear there is torment. "Perfect love casts out all fear." All who come to know

God, love Him. This should be our language, not fear, like the child and the parent, as love manifested it reacts upon the child. How wrong to represent our Heavenly Father as a tyrant, like the slave who was afraid to return to his master for fear of punishment. God is love: He in us and we in Him. "Lo I am with you always even unto the end of the world," —not the man, but the spirit of the Father. The time approaches when we must separate; it is not probable at my advanced age we shall ever meet again in this earthly life. It is not needful to go far to know the will of God, but in your own hearts. Remove the noxious plants of error, cultivate the good seed, and the growth will be fitted to promote reforms in the world farther than they ever have been.

The meeting closed under a precious covering, and we separated soon to return to our homes. We dined at Dr. and Susan Heller's, the Doctor taking us to call on several friends. Robert Hatton had an appointed meeting in the evening, but we did not feel equal to attending. It is reported a good one. Robert expected to be at Roaring Creek on First day. We left Reuben Wilson's early Seventh-day morning, very grateful for the kindness received and the privilege of mingling with Fishing Creek Friends. We had a pleasant journey home; parted with S. P. G. and companion at Watsontown, who were on their way home. Thomas Garrigues and other friends were with us. We reached home that evening, having enjoyed the fine scenery by the way, the fertile country giving promise for the harvest.

L. H. P.

Germantown, Pa., Sixth month 23.

For Friends' Intelligencer and Journal.

JOHN HUNT.

APPLICATION having been made by some near relatives for a copy of the Memorial of the beloved Friend whose name heads this article, I believe to many others also it will be equally welcome.

From the recent memoirs of Hannah A. Price, (late of Fallston, Maryland), though "prepared for the relatives and friends of the subject," I take the liberty of taking an extract of preface to the Memorial, as it introduces very interesting circumstances, of which H. A. P. was a witness, while attending the Yearly Meeting of New York, in 1851. It was at the Meeting for worship on First-day, Fifth month 25th. She says: "Attended Hester Street Meeting, where several had gospel service, and there seemed to be a oneness of spirit, as if the same Power had baptized them and sent them forth in His name. Again, in the afternoon, I thought it was very remarkable, dear John Hunt spoke most powerfully, until he seemed faint, and took his seat; when Richard Cromwell rose, began where John left off, spoke a few minutes beautifully, sat down, when John again rose, taking Richard's words like one continued strain. O! the beauty and excellency of such meetings! How we should prize them!"

SAMUEL B. HAINES.

New York, Sixth month 12.

At the Yearly Meeting of Friends, held in Philadel-

phia, by adjournments from the 15th day of Fifth month to the 19th of the same, inclusive, 1871.

A Memorial of John Hunt, a Minister in the Society of Friends.

He was the son of John and Rachel Hunt, of Darby, in the State of Pennsylvania, worthy members of the Religious Society of Friends, who endeavored to train him in the nurture and admonition of the Lord; but yielding to his strong natural passions, he was in early life hurried beyond the safe inclosures of parental restraint and holy Christian discipline.

He took of the inheritance that was given him, and departed afar off, spent his substance, lost his right of membership with Friends, and sought to make up for the enjoyments of an innocent life by an indulgence in the pleasures of sin.

From manuscripts he has left, and frequent acknowledgments in his public testimonies, it appears that during this disconsolate and forlorn state, Divine Mercy continued near, and by chastisements in love, would often remind him of his father's house that he had left, where there was bread enough and to spare, when aspiration would be raised for deliverance. One of the many evidences of this is found in a short manuscript of his, which appears to have been penned during his prodigal career, as follows:

"Thou great, eternal, Source of light,
Who rules creation by thy might,
And governs by thy power;
Who fills all Heaven, earth, air, sea;
And sees through all eternity,
Be pleased to hear my prayer.
Oh God! Most Holy, just and true,
My heart, my soul, aspires anew,
And breathes to Thee above;
Oh! come, pronounce my darkness light,
And fashion me to please thy sight,
Most honored God of love.

"Thy presence sweetens all my woes,
Thy Grace can conquer all thy foes
That rage within my heart;
Thy power is over death and hell
With all their offspring which rebel,
And from thy law depart.
Then, Oh! Supreme, Eternal Lord,
Vouchsafe thy all-creative word
That framed the Heavens above;
Spare not adversity's keen rod,
Till all doth bow to Thee, oh! God,
In reverence, fear, and love."

The prayer thus breathed was not without a merciful response. Visitations of grace and of adversity were vouchsafed from time to time, until, in his own language, he could say, "Every bone in his body had been broken."

And thus yielding himself as clay in the hands of the potter, to be moulded and fashioned according to the Divine Will, he was prepared for service in the Ministry of the everlasting Gospel. He was reconciled to his friends, and again received into membership, and soon after appeared in public testimony at Salem Quarterly meeting, held at Woodbury, in the 50th year of his age. And at a proper time his gift in the Ministry was acknowledged by Darby Monthly Meeting.

Having wasted of his temporal as well as spiritual substance in early life, and having a large family of children looking to him for support, he had much to humble him, and prove his faith in the Divine Power. It was to this he was accustomed to look, having confidence in the declaration that "the name of the Lord is a strong tower, wherunto the righteous flee and are safe."

He soon found himself called beyond his own particular neighborhood to declare the glad tidings of the Gospel to others; and in this service he made visits, with the approval of his friends, to parts of New York, Pennsylvania, New Jersey, Maryland, and other states.

In the year 1850, he removed with his family on a farm he had purchased, on the north bank of the Rancocas River became a member of Burlington Monthly and Rancocas Preparative Meetings, steadily attending them as they came in course, when at home and in health.

His mission often extended to those of other principles and professions of religion than Friends, and especially to the laboring and sea-faring classes, towards whom his labors of love were frequent, and attended with marked appreciation.

He was endowed with ready utterance and much earnestness of manner, in the delivery of his messages to the people; and oftentimes Truth, through him, would be in eminent dominion, to the humbling admiration of himself and his hearers.

The doctrine he preached was the Free Grace of God; its sufficiency and universality; its adaptation to the conditions of all; bringing them, as they yielded to its teachings, into fellowship and harmony with itself; making all who are obedient, members of the one true Church; breaking down partition walls and removing sectarianism; maintaining there was no sect nor division in Christ; but that the Church, in the language of Scripture, is verily made up of all nations, kindred, tongues, and people.

He continued faithful in his public ministrations, both at home and abroad, to the comfort and edification of many, until his physical strength was prostrated by a cancerous affection, at times excruciatingly painful, and occasioning the loss of an eye, but leaving the mind in possession of its faculties, and which, perhaps, helped to make him, in his last days, a fit subject to magnify that Power which had plucked him as a brand from the burning, and from the miry clay, and placed his feet upon a rock.

It is not known that a murmur ever escaped him because of his affliction, but he appeared to receive all as visitations of Divine Mercy, for his further purification and refinement.

To some Friends, being with him, he took a somewhat extended retrospect of his life, more particularly of his latter years, bringing in remembrance the gracious dealings of the Almighty in his many trials, and in his preservation; rejoiced in the power vouchsafed to discharge the mission assigned him, and in the glorious assurance of the reward of "well done" which he believed awaited him.

During his sufferings he continued in a state of entire resignation to the Divine disposal, saying that

"his enjoyments in this world were done, but that he had a joy which the world knew not of, the blessed presence of his Maker." On another occasion he said, "I feel the presence of my dear Saviour daily; and what are all the sufferings compared with the joy that is meted out to me day by day?" In an address to his children, among other things, he said: "Keep God always in your hearts, dear children." To one of them, who came to his bedside, he said: "Ah, thee sees me in my last conquest!" At another time he said: "Dear children, pray for me, that my patience may hold out to the end, and my faith fail not," and shortly after, "I feel nothing but sweet peace." To his wife he exclaimed, "O, what would this bed of sickness be if it were not for my blessed Saviour! He is around me; I feel his presence." In reply to the question, whether anything could be done for him, he answered, "You, dear ones, have done all for me that can be done; I desire nothing but peace with God, and that I have." To a Friend who remarked, thou finds thy God to be a kind and merciful Master, he replied, "Yes, kind, merciful, and gracious." Speaking of his intense suffering, he said: "I deserve it all, and would not turn my hand to have it otherwise." When near his end, and offered something to take to promote his strength he replied, "I want no strength but that which God gives."

These, with many other like expressions, with a meek and quiet spirit, and state of resignation, proved that his rule of life had not been "a cunningly devised fable," but ordered of the Lord; and great was his peace.

In this state he continued, gradually declining, until the Fourth-day of the Tenth month last, when he said: "I perceive my breath to be failing me," and desired the windows to be opened to give him air, saying, "The end is near;" took his hands from that of his wife, laid them on his breast, composed his body, with a smile upon his countenance, and a look of recognition upon each of his family who surrounded him, closed his eyes and mouth, and his departure was so quiet as scarcely to be perceived.

Thus closed the life of this devoted servant of God, in the 79th year of his age.

Read and united with, by Burlington Monthly Meeting, held at Old Springfield, Second month 6th, 1871, and signed, by direction thereof, by

DAVID FERRIS,

From The Friend (Philadelphia).

SOME ACCOUNT OF THE FIRST PLACES OF WORSHIP OF FRIENDS IN PHILA- DELPHIA.

THE few Friends who had settled on the west side of the Delaware river previous to the arrival of William Penn in 1682, attended the Monthly, Quarterly, and Yearly Meetings of Burlington, etc., the former being held at various places to accommodate the more distant members. Thus by a minute of Burlington Monthly Meeting we find stated, "At a Monthly Meeting held at Upham (Chester) at the house of Robert Wade the 15th of Ninth month, 1681," etc.

The adventurers under the patronage of William Penn set up the first Friends' meeting in his colony in the Third month, 1681.

The first meetings for worship and business held in the County of Philadelphia were kept at Shackamaxon, in the house of Thomas Fairman, where it was continued for more than a year.

A six weeks' meeting for the accommodation of these Friends, and those of "Pine Point" was established in 1682, viz.:

"At a general meeting held at Salem, in the province of West Jersey, the 11th of Second month, 1682, it was ordered that a six weeks' men's and women's meeting for the ordering of the affairs of the church be kept the 24th day of the Third month at William Cooper's (at Pine Point) and the next six weeks at Thomas Fairman's at Shackamaxon, and so in course."

This meeting, however, did not continue, for "Soon after the arrival of William Penn at the intended site of Philadelphia in 1682, it was ordered that notice be given to Friends the next First-day, that as many as can conveniently, may meet at Shackamaxon, in order to appoint other meetings where it may be thought meet." Accordingly, "Friends belonging to the meeting in Philadelphia, in the province of Pennsylvania, being met in the fear and power of the Lord at the present meeting-place in the said city, the 9th day of the Eleventh month, the Third-day of the week, in the year 1682, did take into consideration the settlement of meetings therein, for the affairs and service of Truth, etc., and did then and there agree, that the first Third-day in the week in every month shall hereafter be the monthly meeting day for the men's and women's meetings for the affairs and service of Truth in this city and county: and every third meeting shall be the quarterly meeting for the same."

The next subject considered was for "a fit place to build a meeting-house in this city, as also the manner and form of building; being taken into the consideration of Friends, the whole was referred to the care and management of Thomas Holmes, John Songhurst, Thomas Wynne, and Griffith Jones, or any three of them, and that the charge thereof shall be borne by this meeting, consisting of Friends belonging to the said city."

Richard Townsend, a primitive settler and public Friend, writes: "Our first concern was to keep up and maintain our religious worship; and in order thereto we had several meetings in the houses of the

inhabitants, and one boarded meeting-house was set up near the Delaware."

The subject of a proper place, and suitable houses for worship, was one that exercised the early settled Friends in no small degree, as is evidenced by the foregoing. In order to show their care and concern still further in that direction, and the progress made, copious extracts have been made from the early minutes, viz.:

"Second meeting [held] the 6th day of Twelfth month, 1682. The overseers appointed for the building of the meeting-house brought their answer, that according to order, men were already set to work in order to that building."

At the Quarterly Meeting held the 5th day of Fourth month, 1683, the following minute was made. "Proposed by Friends that the meetings of the county be settled. Agreed that there be a publick First-day meeting of Friends at Tackony, and a First-day publick meeting at Poquessin, and that they both shall make one Monthly Meeting. Agreed that there be a First-day publick meeting at Philadelphia, and a First-day publick meeting at Skuykill. Agreed that two meetings be continued in Philadelphia every First-day, and one publick meeting every Fifth-day. Agreed that every other First-day there be a publick meeting of Friends for the worship of the Lord at the house of Thomas Duckett, on the other side of Skuykill, and that the meetings in these two places make one Monthly Meeting, which, quarterly, with the other Monthly Meetings, shall make up a Quarterly Meeting.

"Agreed that Thomas Duckett give notice at Skuykill, Thomas Fairman at Tackony, and Samuel Allen at Poquessin, to the Friends there of the Quarterly Meeting's resolutions for the service of Truth in those parts, that all things may be done carefully and savourily to the glory of God and the welfare of his people."

On the 3d of Fifth month, 1683. "Agreed that the Friends appointed to take care for the building of a meeting-house do immediately request the Governour to advise with Friends touching a convenient place whereon to build the same. Agreed that £60 be raised towards the building of the said meeting-house, and the residue to be paid in goods, and that John Songhurst, John Day, and Henry Jonson be the carpenters appointed to undertake the building of the said meeting-house."

Second-day of Eighth month, 1683. "Agreed and concluded that Thomas Lloyd, Christopher Taylor, Griffith Jones, and John Goodson be the undertakers for repairing the present meeting-house of Friends, and to pay the workmen, the meeting promising to reimburse them their charges. Christopher Taylor, whose the present meeting-house is, refers himself to the discretion of Friends, as touching his satisfaction for the general use of it. Agreed that Henry Jonson and John Day do take an account of the timber fallen for the building of the new meeting-house, and mark and number it."

Second-day of Eighth month, 1683. "The meeting having consulted with the Governour touching a burying-place, it was by him appointed (and by the

meeting adopted) that the burial-place shall be in the middle of the city, in the same ground where the meeting-house is appointed. Agreed and concluded that Christopher Taylor, Thomas Lloyd, and Thomas Wynne do undertake to see the ground for the meeting-house and burial-place forthwith surveyed."

First-day of Eleventh month, 1683. "Agreed that for the convenience of Friends on this side of Skuykill there be a publick meeting every First-day at the house of Francis Fincher or Henry Lewis."

At the Quarterly Meeting held the 5th of Eleventh month, 1683. "A Women's Meeting was proposed and unanimously agreed upon. Agreed that a place be appointed for women Friends to meet at, and that it be for the present at the house of Christopher Taylor, it being his own offer."

In the Monthly Meeting held the Sixth-day of Third month, the subject of building the meeting-house was again brought up and several Friends appointed to take the matter into consideration; and in the Quarterly Meeting following, it was again mentioned and referred. "The Governour was pleased freely to contribute towards the said building 2,000 feet of boards and 3,000 cedar shingles, as also the stone already dug up at the quarry."

Fifth-day of Sixth month, 1683. "Agreed that the said meeting-house be builded at the centre, being the middle way betwixt Delaware and Skuykill, according as it is already designed and pitched upon, and the building to be of brick. Its dimensions being in length 60 feet, in breadth 40 feet, and the height referred to further consideration." Agreed and concluded that the persons formerly appointed for the supervision of the building of the meeting-house should take care that with all speed a shed be built in the city, at the centre, of the same dimensions as the meeting-house."

JOSEPH W. LIPPINCOTT.

(To be Continued).

We sometimes think our work is wasted, because no results appear. We put a Bible in a careless home, and it is thrust aside on some out-of-the-way shelf, and is never read. "A waste of effort and of money," one says. But, by-and-by God touches the heart, and it yearns for guidance. Then the patient word comes forth to comfort and to help. We teach a boy in Sabbath-school. He seems heedless of all our words, and at length goes from us as indifferent as ever. But years after, the Lord quickens him and the seed we planted springs up and bears fruit. So patiently waits the grace of God. All his influences wait their time, and then enter the heart and bless. While we are rejecting or distrusting his grace, he is patiently waiting to be gracious. However long men delay, when they come and ask him, he "giveth to all men liberally, and upbraideth not."

THERE is one topic presumptuously forbidden to all well-bred, to all rational mortals, namely, their distempers. If you have not slept, or if you have slept, or if you have headache, or sciatic, or leprosy, or thunder-stroke, I beseech you, by all angels, to hold your peace, and not pollute the morning to which all the housemates bring serene and pleasant thoughts, by corruption and groans.—Emerson.

PHILADELPHIA, SIXTH MONTH 29, 1889.

THE CHANGES AT SWARTHMORE.

THE retirement of President Magill from the principal charge of Swarthmore College was a surprise generally to those interested in the institution, and the announcement of it, at the Commencement last week, came almost in the nature of a shock to many of those present. The service of President Magill corresponds in time almost to the life of the College, and his devotion to its interests has been so earnest and steady that his name and its own have been always identified in the closest manner. Called to the charge of the institution when it had but fairly entered on its career of usefulness, he has been intimately connected with all the successive steps by which it has come to its present development. The enlargement of its work, the additions to its buildings, the progress towards a distinctive college institution, have all had the aid of his remarkably energetic and persevering efforts. It will be gratifying to all that he will continue as one of the faculty, in a position where the duties and responsibilities are less exacting, but where the college will still have the benefit of his long experience as a teacher and governor of youth.

For the coming year the College will have for its Acting President Professor William Hyde Appleton, one of the best known and longest in service of the Faculty. Prof. Appleton is a graduate of Harvard University, of the class of 1864. After graduation he was for two years tutor in Greek, at Harvard, and later he studied at German universities for two years. He has repeatedly visited Europe since that time, having spent a year in Greece recently upon leave of absence from the College. His connection with Swarthmore dates from 1872, since which time he has been Professor of Greek, and of English Literature. While he is not in membership with Friends, he is in earnest sympathy with the Friendly character which Swarthmore desires to cultivate, and his kindly and courteous temperament and manner make him a congenial co-worker with those of our faith.

A VERY large majority, no doubt, of those Friends who voted at the recent election in Pennsylvania gave their support to the proposed Prohibitory

Amendment, and their disappointment and regret over the adverse result are keenly experienced. It may be opportune to recall the attention of all to the need of that conviction upon the subject of Temperance which is most valuable and most enduring,—the conversion from within. It is the interior strength which alone can be depended upon to the end. Whatever degree of importance we may attach to outward ordinances, and however we may be disappointed when we see them fail either in enactment or execution, Friends must believe, as they always have done, that the sound character moving from within is the one great need, and that a community made of such individuals has a more enduring force for good than that which builds upon the changeable and shifting legislation of the outward world. There should be no pause in the endeavor of Friends to become clear, as to themselves, of all responsibility for intemperance, and to spread abroad in the world, as well concerning this as in other particulars, the purpose of the higher and worthier life.

THE "Swarthmore Notes" which have been printed during the past session of the college have been furnished us by a correspondent there, one of the undergraduates, who has been very attentive, and has kept our readers informed of the various movements and labors of the students. In last week's issue of the paper, the paragraphs at the conclusion of the account of the Commencement, giving details of the class gathering, "Class-Day" exercises, etc. were sent by our young correspondent, and in them some names were given, (of friends who provided entertainment, etc.), which with more careful oversight we should have omitted.

MARRIAGES.

BLACKBURN—RUSSELL.—At the residence of the bride's parents, on Fifth-day, Sixth month 13th, 1889, under the care of West Branch, Pa., Monthly Meeting of Friends, Allen C. Blackburn, of Fishertown, Bedford county, Pa., son of Hiram and Mary A. Blackburn, and Ardele Russell, daughter of John and Eliza Russell, of Cleveland, Ohio.

BETTLE—GRISCOM.—Sixth month 20th, 1889, at Dohobran, near Haverford College, Pa., the summer residence of the bride's parents, by Friends' ceremony, Samuel Bettle, and Helen Biddle, daughter of Clement A. and Frances C. Griscom.

JAMES—MOSHER.—At the residence of Edith C. James, West Philadelphia, by Friends' ceremony, Sixth month 20th, 1889, Alvan T. James, son of Thomas and Elizabeth James, of Byberry, Phila., and Helen Louise, daughter of Eugene and the late Hannah L. Mosher, of Rochester, N. Y., both of Philadelphia, Pa.

DEATHS.

ALBERTSON.—At Norristown, Pa., Sixth month 17th, 1889, J. Morton Albertson, in his 64th year.

BRADWAY.—At the residence of her son, Isaac C. Bradway, at Tabor, Pa., Sixth month 19th, 1889, Rachel

Ann, widow of Isaac Bradley, late of Philadelphia, in her 74th year.

DILLINGHAM.—On Fifth month 31st, 1889, Ruth B. Dillingham, in the 82d year of her age. She was the daughter of Smith and Lucy Borden, and was born in Rhode Island the 24th of Ninth month, 1807. When quite young her parents moved with their family to Easton, Washington county, N. Y. On the 13th of Eighth month, 1816, she was married to Abraham Dillingham, of Granville, Washington county, N. Y., at which place she lived until her death.

She retained all her faculties, her mind being perfectly clear even unto the last. She was an example worthy of being followed in every respect, and so closely did she follow the teachings of her Divine guide that it may be truly said that she "walked with God."

She was a Friend in the truest sense of the word, ever adhering, not only to the letter, but to the spirit of the doctrines and principles laid down by Friends.

Those who knew her long and well, looked up to her with reverence, and those who had known her but a very short time felt as they expressed it, that "she was such a good woman," yet no one could be more truly humble and unpretending, thinking so little of any good she had done, ever striving to do more and better. It was plainly seen by those who lived with her and loved her that she had "received the seal of the living God."

To the last hours of her life her thoughts were for others. May those who so dearly loved follow in her footsteps that they may meet her in that home where death can no more enter and destroy. L. J. M.

HARVEY.—Sixth month 20th, 1889, William T. Harvey, of Columbus, N. J., in his 49th year. Interment at Mansfield.

JANNEY.—At Jenkintown, Pa., Sixth month 18th, 1889, Gertrude Kimber, aged 11 years, 10 months, youngest child of Emmor K. and Mary C. Janney, members of the Monthly Meeting of Friends of Philadelphia.

JONES.—Sixth month 15th, 1889, at Gwynedd, Pa., Mordecai Jones, in his 91st year. Interment at Gwynedd meeting burial ground.

SMITH.—At his home near Canandaigua, Michigan, Sixth month 14th, 1889, Joseph H. Smith, in his 82d year. He was an elder of Battle Creek Monthly Meeting and formerly a resident of New York City.

SCRIPTURE LESSON No. 25.

SEVENTH MONTH 7TH, 1889.

SAMUEL CALLED OF GOD.

GOLDEN TEXT:—"Then Samuel said, Speak; for thy servant heareth."—1 Samuel 3: 10.

READ 1 Samuel 3: 1-14.

Our lessons now go back to the turbulent times that succeeded the settlement of the people of Israel in their home in the land of the Canaanites. After the death of Joshua, and under the judges who ruled after him, there were many lapses into barbarism and idolatry; and wars and cruelties of the most ferocious character were perpetrated with little if any thought of their enormity. Yet there was ever some man of God to call the people back to their allegiance to Jehovah, and the Tabernacle or Tent of Meeting set up by Joshua at Shiloh was resorted to by the faithful ones, who went up at the yearly sacrifices to seek the Divine blessing. At the date of our lesson Eli, of the family of Ithamar, one of the sons of Aaron, was the high priest. The account of the

birth and infancy of Samuel is a tender and beautiful picture of home life and devotion to duty in that far distant time. His name signifies Asked of God; or Heard of God. All Hebrew names had some special significance. His mother, Hannah, was a prophetess, and devoted this her first-born to the service of the Tabernacle. When he was old enough to wait upon Eli his parents took him to Shiloh, and left him to the care and training of the high priest. It was while he was ministering to Eli that he became sensible to the Divine call.

The word of the Lord was precious, etc.—was scarce or seldom heard. This indicates the low spiritual state into which the nation had fallen. They did not seek direction from Jehovah, but offered sacrifices upon altars dedicated to the gods of the heathen nations around them. The voice of the Lord was seldom heard among them,—this is the sense in which the word *precious* is here used. The open vision which they formerly enjoyed was withheld because the people were no longer willing to be led and instructed by Jehovah.

The Lord called Samuel. Here we have a testimony to the doctrine of immediate Divine Revelation, as the method by which God in the earliest time held intercourse with his human children. The language accords with the archaic or primitive manner of expression that prevailed then, and for many ages afterward. This fact is the central thought of our lesson,—the thought to which as Friends we believe the record testifies, and which gives to the seeker after a knowledge of God the convincing evidence that his method of communicating his will to his earthly children is the same now as it was in the beginning of their history.

Eli perceived that God had called, etc. In this we see how necessary to the right development of the spiritual life is a kind and faithful friend and teacher who, having gained the confidence of the young, is able to direct them in the proper understanding of those divine impressions which are made upon the mind often in very early childhood, and may become the dominating influence in the formation of character, if the thought is turned to regard them as coming from our Heavenly Father.

Every responsible soul has known something of this spiritual calling within the heart to seek what is good and true. And outside of our own individual experience there is much testimony to the truth of this, which leads us to the comforting conclusion that our Heavenly Father does not neglect his children. All who enter into the spirit or condition of mind manifested by Samuel when he answered, "Speak; for thy servant heareth," may, in the progress of time, find for themselves openings such as unfolded to Samuel a future of usefulness and greatness.

We find in a printed sermon of John Jackson, delivered Third month 10th, 1850, in Friends' Meeting, Philadelphia, Pa., an extract which illustrates very clearly this beautiful view of the spiritual manifestation of God to the human soul: "I am reminded of the testimony given by an Indian, which I heard in this house some years ago. When relating the ex-

perience of his early life, he declared that before he came within the pale of human civilization, before he had ever heard the name of Jesus, or known the Scriptures, he felt and knew the operation of the Holy Spirit; he was conversant with the voice of truth in his own breast, and to his great astonishment, when he came to read the experience of others as recorded in the Scriptures he found it ran parallel with his own, and that other minds had also felt the same impressions of goodness and truth leading them to love God and to do good to man."

An incident in the childhood of Theodore Parker may also further explain the golden text of this lesson—of his going to his mother, like little Samuel to Eli, and asking her the meaning of that influence that restrained his arm from an act of cruelty? The mother, like unto the aged priest, explained to the young mind *whose voice* it was that had spoken unto him.

NOTES ON THE LESSON.

We now enter upon a very important period in the history of the Hebrew nation. After the death of Joshua who succeeded Moses in the leadership of the people, there was a decline in the religious life of the several tribes, and a want of united action which added to their demoralization. They lapsed into the worship of their Canaanitish neighbors who still had a strong foothold in the land, and Baal and Ashtaroth became familiar names in the households. Not only were the people given over to the heathenish practices in worship, but their priests and leaders were debased and shared the general decline of worship. The high priest, Eli, had been weak and irresolute, and now in his age and infirmity seems to have had no power to restrain the evil impulses of the vicious and depraved; his own sons, who should have succeeded him in the priestly office, were flagrant examples of wickedness and there seemed no hope for Israel,—the beginning of whose history was so full of promise. Yet the great Arbiter of the fate of nations, upon whose divine word, as revealed to Abraham, that patriarch who had left the false gods of his fathers on "the other side of the flood" (Josh 24:3) and found a home in the land of promise where the worship of the God of the whole earth might be established forever,—this Power to whose worship he had dedicated himself and all that he possessed, would not in the hour of their extremity desert his children for whose preservation so much had already been accomplished.

There were true and godly representatives of faithful Abraham still among his descendants,—in the quiet places, among the verdant hills and fertile valleys, away from the strife and the revelry of the degenerate multitude, they tended their flocks and planted the fields, and their lives were blameless in the Divine sight. Of these were Elimelech and Naomi, Boaz and Ruth, Elkanah, and Hannah the childless wife, who craving motherhood, a son was given her, and in her gratitude for the favor she dedicated him to the Lord. These give evidence that reverence for God and his worship was still a precious thought to the true Israelite.

We get a clue to the vices that were common

among the people from the suspicions aroused in the mind of Eli, by the appearance and demeanor of Hannah as she prayed and was in bitterness of soul in the sanctuary at Shiloh. The charge of drunkenness coming from the high priest shows that not only men but women were accustomed to appear in the sacred place under the influence of strong drink, and at the yearly sacrifice were an abomination to the Lord. Then, as now, drunkenness and depravity were linked together, and became sources of the ruin and fall of individuals and of nations. The child Samuel, thus consecrated before his birth, could hardly fail of a true and noble life. Even in his boyhood he gave evidence of a dedication which prepared the way for the most exalted service to his nation.

What encouragement is here afforded to parents, in the training of their children, to begin the work in the very infancy of life,—that they seek for Divine wisdom to direct them and early teach them to listen for the voice of God, which to the attentive ear will make known his will and give ability to follow its directings.

CLOSING EXERCISES AT FRIENDS' CENTRAL SCHOOL.

THE closing exercises of Friends' Central School, 15th and Race streets, Philadelphia, took place in the meeting-house, as usual, on Sixth-day the 21st inst. There was a large attendance of interested friends of the school and the students. Essays and addresses were made by members of the graduating class, as follows: "Natural Law in the Social World," by William Emley Walter; "A Wider Range of Vision," by Eliza Evans Hibberd; "An Ideal School," by Virginia Elmira Kinsey; "Plainness of Speech," by Howard Nicholas Eavenson; "The Individual in History," by Erskine Wright; "An Old-time Heroine," by Marion Booth Smith; "Advance," by Walter Isaac Cooper, read by Frederick Taylor Pusey; and Recitation, "Press On," by Emily M. Wills.

A brief address was made by Alfred Moore, and the diplomas were distributed. A. M., addressing the graduates, congratulated them upon their success in their studies. "To-day," he said, "marks the completion of your education as children. To-morrow as young men and young women, you will assume new duties and responsibilities. Some of you will desire to know more of the lore of the ancient philosophers; others will tread the paths of the fairy land of science; some will seek the busy marts of trade and commerce, and others will find rich compensation in those fields of labor which tend to elevate society and to promote the welfare of mankind. It is scarcely to be expected that all of you will reach the goal of your ambition, realize the full expectations of your high ideals, or attain distinction among your fellows; but all of you may so live that, by the simple and honest discharge and performance of duty, you will command their respect and admiration, and in passing from amongst them they will realize that the world has been better because you have lived."

Following is the list of graduates: Mary Watson

Bosler, Walter Isaac Cooper, Sallie Stanley Daniels, Ellen Stephens Davis, Emily Evanson, Howard Nicholas Evanson, Frederick Fairlamb, Herbert Payne Fisher, Sarah Flowers, Alice Fussell, Henry Huddy Garrett, Howard Leroy Goldsmith, Howard Burkhardt Green, Sarah Ashley Guest, Laura Eleanor Hanson, Maggie Gibbons Heyburn, Eliza Evans Hibberd, Bertha Longshore Knowles, Adele Carpenter Levering, Blanche Adele Leith, Caroline Hall Lister, Frank Lund Long, Letitia Macanlay, Patience Alvine Marshall, Gertrude Comly McMillan, Aralene Paul, Josephine Whitaker Pennypacker, Florence Peterson, Frederick Taylor Pusey, Minna Louise Rosenthal, Clarence Sill, Eliza J. Smith, Marion Booth Smith, Benjamin Frank Taylor, Caroline Williamson Thomas, Sarah Phillips Thomas, Joseph Jeanes Walker, William Emley Walter, Emily M. Wills, Erskine Wright, Frances Corson Yocom. Classical Course, Alice Pennoek Mode and Elizabeth Nichols. Literary Course, May Thatcher Harlan, Virginia Elmira Kinsey, and Elsie Oakford.

COMMUNICATIONS.

THE SITUATION OF THE TEMPERANCE QUESTION.

EDITORS INTELLIGENCER AND JOURNAL:

THE result of the recent voting in Pennsylvania and Rhode Island upon Prohibition, seems to demand the serious consideration of Friends.

The argument is strongly urged that Friends can have nothing to do with any legislative enactment which recognizes the right of any one to manufacture or sell spirituous liquors; and acting upon that idea many of our members so strongly oppose any laws in the shape of high license or local option, as to defeat all efforts to restrain or hold in check the iniquitous traffic.

The recent expression of public sentiment in the States named must open the eyes of those whose cry has been "Prohibition or nothing" to the fact that unless some middle ground can be found upon which all friends of temperance and good order can stand, it must be "nothing" for years to come; and it is in the earnest hope that some such middle ground can be found, that these lines are written.

The Philanthropic Committee of the various yearly meetings have had under consideration for several years many interesting subjects,—Temperance, Arbitration, Education of the Colored People of the South, Prison Reform, Use of Tobacco, etc. So far as my observation goes there has been no hesitation whatever to urge legislative action upon any of the above subjects where it was thought a benefit would result.

Notably was this the case in our last Yearly Meeting in New York when the subject of prison reform was before the meeting. The question was whether the Yearly Meeting should petition the Governor to sign a bill which had passed the Legislature and which was known as the "Fassett bill." It was strongly urged that although the measure was not such as Friends would desire, it was a "step in the right direction." The only reason the Yearly Meeting did not petition the Governor as requested, was

that no Friend had seen the bill as finally passed and it was thought it would be acting in the dark to ask to have a bill signed, the contents of which were unknown to the meeting. And yet a large number of Friends wished the meeting to forward the petition, so anxious were they that no opportunity should be lost to take a "step in the right direction," although in this case it was admitted that no one knew exactly what the step was.

Friends have joined in movements looking to a reduction in numbers of the standing armies of Europe, in the interests of Peace.

Friends have petitioned Legislatures to make it a penal offense to sell cigarettes to boys under a certain age.

A strong argument could be cited in the action of the Philanthropic Committee of New York Yearly Meeting upon a subject which I do not care to discuss, and which the meeting very properly withdrew from the further consideration of the Committee.

With these precedents, can we not unite upon some course of action looking to the general enactment by the different legislatures of laws similar to the excellent license law of Pennsylvania and the local option law of Maryland?

Brooklyn, N. Y., Sixth mo. 21.

CONSTITUTIONAL PROHIBITION.

EDITORS INTELLIGENCER AND JOURNAL.

Will the editors allow me to correct an error of fact in the communication of their Norristown correspondent in their columns of the 1st instant? He says that the statement that "such a provision [as prohibition] has no proper place in a constitution," "has been considered and answered in our highest judicial tribunals,—the Supreme Court of the United States,—and in the highest courts of the States that have thus far adopted Prohibition Amendments." In this he is certainly mistaken. I know of no such decision, and do not see how it could be had. A clause once properly adopted in a State constitution, is not subject to review by any court, for any other purpose than its proper interpretation. There is no other way in which such a clause could get before a court, except on a claim that it was in conflict with the constitution of the United States, and this the Supreme Court of the United States, alone, could decide. It is a class of wholly different questions to which your correspondent refers.

I regret the want of amenity in your correspondent's letter, but have no wish to reply to his criticism; but for his information let me say that in writing the idea that I was taking part in the Pennsylvania campaign had hardly occurred to me, from the conviction that I did not see how an intelligent, observant person could think it possible that the State would vote in favor of prohibition. I wrote for the reason that there had been published in the columns of the INTELLIGENCER AND JOURNAL, communications and papers favoring constitutional prohibition, generally, in all States, and I felt that the other side had a right to be heard.

SWARTHMORE NOTES.

PRESIDENT MAGILL, with his wife and daughter, will sail for a year's absence in France at the close of the Eighth month. Meantime, all letters should be addressed to him at the college, where he will remain until Prof. Appleton returns from his vacation, and enters upon his duties as Acting President.

—The Matron's summer address will be at her home, Florence, Massachusetts.

—Prof. Beardsley is spending the vacation at his home, and is busily engaged in working out and preparing plans and estimates for the new School of Mechanic Arts. He wishes it located near Whittierfield, to the south-west, and it will be a fine addition to the group of buildings occupied by the college, if completed according to the plans. It can be built, and properly equipped for the work of the department for about \$25,000.

—Prof. Cunningham will spend most of the summer engaged in her favorite work in the Observatory.

—Prof. Smith will be at Chautauqua through most of the vacation, engaged in teaching, and showing the best methods of instruction in the various departments.

—Dr. Day is in Washington, and will spend his vacation chiefly in the office of the Geological Survey, engaged in the preparation of the Annual Reports.

—Superintendent Hall will spend the summer at his home, near the College, preparing the buildings and grounds for the reopening in the fall. He will enter upon his duties as Postmaster at Swarthmore, (to which place he has recently been appointed) the 1st of Seventh month.

—Prof. Bancroft will spend some time on a coasting vessel, studying new types, and will doubtless bring back some interesting specimens of art.

—Prof. Price will be absent for a year, and Profs. Rolfe and Weaver for the summer, all in Europe, and none of them will be idle, but will bring back to the College increased ability for their respective duties, as the result of their visit abroad.

—New entries are coming in, mostly for the Freshman Class, and the prospects of the College are good for the coming year.

CAROLINE KING, a young artist of Boston, recently gave an unusual proof of principle. She was earning a fair income, but was anxious to make enough in addition to enable her to visit Paris in the interests of her art studies. A New York firm was so pleased with her work that they sent on a man to make a contract with her for a series of designs representing the various industries of women. The arrangements were made; and Miss King received an order for \$300, which would enable her to take the coveted Paris trip. Then it occurred to her to ask for what purpose her designs were wanted. Being informed that they were to be used to decorate cigarette packages, Miss King felt that she could not conscientiously furnish them. She gave up the three-hundred-dollar order, and with it her European trip.—*Woman's Journal.*

THE IMMODERATE SPIRIT FOR DEFENSIVE ARMAMENT.¹

GATHERED as we are to-day, beneath the sheltering arms of friendship, of peace, it may seem inappropriate to allude to a subject so foreign to our thoughts, our surroundings, our seeming interests.

Human nature permits questions of unpleasant associations to drift from the mind—a happy state—for were we to live beneath sorrow we must needs yield to it. We should not permit ourselves, however, to become oblivious of wrongs lying beyond the arena of our gaze.

"Pleasures admitted in undue degree,

Enslave the will, nor leave the judgment free."

and it is a duty we owe humanity, ever to raise our voices in the cause of right.

Advanced as we are to-day in civilization, is it not a deplorable fact that we still resort to that relic of barbarism—war? Earnest voices, valiant pens, have directed their energies to prove the ills of war, to show the results which might be attained through measures of arbitration; but still we are forced to ask ourselves the question, Does the situation of affairs prove that in any way, we are nearing the golden age of peace? George Eliot says:—

"Truth has rough flavors if we bite it through."

In the prevailing spirit for war preparations, we must needs find the "rough flavor," we must assert that measures for conducting warfare are advancing in cruelty, in destructiveness. Among all nations we hear of improvement in the methods of warfare. Men are employed in the manufacture of deadly implements, every corner of the globe, yea, the very depths of the earth are being searched for new devices by which one nation may be prepared to destroy another. The construction of devices of cruelty for times of war has become a scientific study, nations vie with each other in this field. Enormous torpedoes, improvement in guns, projectiles, and various forms of explosives are the absorbing products of inventive genius, wars henceforth would appall the stoutest hearts, civilization would stand aghast at the awful spectacle. Do we realize, can we realize, the curse for which we seem to be providing?

That huge sea monster—the Vesuvius—recently constructed for the United States government, and priding herself on her destructive weapons, is but one of the many death-dealing vessels which have been constructed by the various governments of the world, and which to-day sway impatiently to and fro, as they lie at anchor, watching, waiting, yearning for the sound of a war-note.

Our immortal Washington, one of the greatest generals the world had ever known, he, who perhaps, above all others, held a position which would warrant his upholding war as just, and as a grand and glorious means of settling disputes, he who experienced war in all its phases, who was the flattered recipient of honors and favors from the hands of rich and poor alike, who if any one ever saw the laurel side of war, surely did; yet this same Washington,

¹Graduation thesis at Swarthmore College, Sixth month 18th, 1889.

in his famous "Farewell Address," gave utterance to the following words:

"Let nations avoid these overgrown military establishments, which under any form of government are inauspicious to liberty."

That one nation devotes her millions of money and men to strengthening her armament is no reason why another nation should follow in her footsteps. This spirit of rivalry is all wrong, it but makes nations zealous for war. At the slightest provocation they fly to arms. The present Samoan question is but an illustration of this vicious practice. "The desire that our country should surpass all others would not be criminal, did we understand in what respects it is most honorable for a nation to excel; did we feel that the glory of a State consists in intellectual and moral superiority, in freedom and purity."

The English claim that they possess the strongest navy in the world, yet the English are always frightened when the invasion of their country is threatened, and have been so since the time of William of Normandy. From official statistics we learn that in 1885-86 England expended on her navy alone over twelve million pounds. This enormous amount does not include the vast sums devoted to the maintenance of her armies. Consider the good which this same money would accomplish if used for purposes conducive to the educational and moral advancement of the English nation. Other nations devote a proportionally extravagant sum to the maintenance of their armies and navies. England but furnishes a glaring instance of the evil.

However it may have been in the early years of weakness, it has become more and more evident, as our nation has grown more powerful, that its traditional attitude of neutrality is not the result of fear. The American government by accepting and supporting those principles of international law which have seemed in accordance with abstract justice and natural law, has done much towards the amelioration of the intercourse among nations.

Our ordinary sympathies seem to desert us when war is named, simply because from youth, false notions of chivalry and true courage are instilled into the mind. A gentle effort at that time suffices to lift the enormous weight of succeeding years. Consider the number of youth of the country who daily aspire to lead a military, a naval life. They cannot when they enter the standing army thus mean to signify that they sanction such wholesale slaughter as war brings with it, we cannot credit our youth with such inhuman feelings. They think of war only as the poet, the orator paints it,—in glowing colors,—when the brave young hero is returning with laurels from the field of victory, to the luring strains of martial music. They think not of the awful realities attending these brightly-tinted pictures. "There is equal scope for displaying courage and magnanimity in blessing as in destroying mankind." When we consider the vast amount of good, which the thousands who join the armies of the world might accomplish in other fields of labor, when we consider the immoral tendencies of war, when we consider the demoralizing influence which we in this present gener-

ation will exert upon succeeding generations, then and then only, can we realize the importance of taking active measures in checking this great curse of humanity. The historian, then, has it largely in his power to direct into new channels the thoughts, interests, and opinions of the rising generation. Let him not fail to appreciate the weight of responsibility resting on his shoulders.

Our present attitude towards the Indians is a burning shame, it is, a reliance upon the might of arms. How unfeelingly we drive them from spot to spot! Just when they have become settled in their new homes, and their future begins to assume a more promising outlook, the United States government, in no generous thirst for fame—"that last infirmity of noble minds"—but from an ignorant and ignoble passion for new territories, seizes their lately flourishing gardens and fields, only to push them further away, only to limit them to narrower confines, only to crush in them all spirit, all hope, all love of home which burns likewise in the breast of the savage. That they are capable of friendly dealings and friendly intercourse is proven by the peaceful, mild, satisfactory dealings our great ancestor William Penn had with them.

The amount devoted to the pursuit of war, as compared with that bestowed on the culture of the people is a startling commentary. Let us compare the amount of money devoted to the construction of only one vessel of war, with the entire sum ever expended up to the year 1845, upon that great seat of learning—Harvard University—a place where sons from all parts of the Union are educated. At that time the whole available property of the University, the various accumulations of more than two centuries of generosity, amounted to \$703,000. At that time there was swinging idly at her moorings a war vessel costing \$835,000—which casket will you choose—the brazen one of war, or the golden one of learning? At the present day the balance sways as unevenly twixt the funds devoted to educational advancement and that which provides a means of human destruction as it did in 1815.

"Were half the power that fills the world with terror,

Were half the wealth bestowed on camps and courts,

Given to redeem the human mind from error,

There were no need of arsenals and forts;

The warrior's name would be a name abhorred!

And every nation that should lift again

Its hand against a brother, on its forehead

Would wear forever more the curse of Cain."

Some nation must take the initiative in this matter—why not the United States, a free nation, where no young man pursues a military career but from choice. Why not form an invincible phalanx, oppose the bitter adversary—war—and win the greatest battle which has ever been won; return the grandest, proudest, most honored victims.

In Germany, where military service is compulsory, the youth regard it oftentimes as a burdensome grievance. They chafe under the weight of the exaction, yet with all the drill, with all the time and money devoted to this cause, does Germany's present condition tend to urge upon the world the importance of such measures? Far from it.

Let all the world abandon the system of preparation for war in time of peace, "as irrational, unchristian, vainly prodigal of expense, and having a direct tendency to excite the very evil against which it professes to guard. Let our battlements be schools, hospitals, colleges, and churches; our arsenals libraries, our navies, peaceful ships on errands of perpetual commerce; our army, teachers of youth and ministers of religion." This is truly the best, noblest, and only righteous defense of nations.

Now is the time when the noon-day sun of civilization seems to be standing still in the heavens to do away entirely with war, and to settle all discords by means of arbitration.

The Greeks tell a story of how there was one small spot—the isle of Delos—dedicated to the gods, and kept at all times sacred from war. Here the citizens of hostile countries met and joined in common worship. So let the whole world unite in dedicating its fair fields to the worship of Peace. "Let the bugles sound the Truce of God to the whole world forever."

ELSIE D. STONER.

For Friends' Intelligencer and Journal.

SIDNEY LANIER.

"THERE is a sort of nature of persons I have compared to little rills of water, fresh from perennial springs—persons not so very plenty, yet some few certainly of them running over the surface and area of humanity, all times, all lands."—(Walt Whitman.)

These words, written by a famous poet concerning Elias Hicks, could, as well, have referred to Sidney Lanier. His was a nature so pure and true and loving; so patient in his affliction and so Christ-like, that the comparison would be an excellent one.

Sidney Lanier was born in Macon, Ga., in 1842. At the age of fourteen he entered Oglethorpe College, and graduated in 1860. At his graduation he was called to a position as a tutor in the college, which he accepted and held until the breaking out of the war. In 1861 he joined the Macon Volunteers, remaining in service until the close of the war. Three times promotion was offered him, which he refused, feeling that it was his duty to remain with his brother. They were separated in 1864, however, having been placed in charge of different blockade runners. Upon one of these excursions Sidney was made a prisoner by the Union forces and was confined for five months in Point Lookout prison. "The free life in the saddle and under the stars" suited his disposition thoroughly, but the "tyranny and Christlessness of man" were most oppressive to him.

From this time onward his life was a series of bright and gloomy seasons. In 1867 he married Mary Day, of Macon, and soon after the foe that he had been dreading for so long, seized him. Hemorrhage followed hemorrhage, and weaker and weaker he grew, but yet he did not lose courage. From Texas to Florida, from Pennsylvania to North Carolina he went, still hopeful that he would find a new life, would recover health "from pine heaths and clover blossoms." When he was able to hold his pen he wrote, his whole soul passing out and into his verse;

his love of God and of nature, his faith and love of mankind, finding a perpetual utterance in his strange rhythmic compositions.

One of the most beautiful productions from his pen is entitled "A Ballad of Trees and the Master."

"Into the woods my Master went,
Clean forspent, forspent.
Into the woods my Master came,
Forspent with love and shame.
But the olives they were not blind to Him,
The little gray leaves were kind to Him,
The thorn-tree had a mind to Him
When into the woods He came.

"Out of the woods my Master went,
And he was well content.
Out of the woods my Master came,
Content with death and shame.
When Death and Shame would woo Him last,
From under the trees they drew Him last:
'Twas on a tree they slew Him—last
When out of the woods He came."

Sidney Lanier had nothing in common with the petty wranglings of the churches. His love for God could not abide with them, as the following prose note will show:

"I fled in tears from the men's ungodly quarrel about God. I fled in tears to the woods, and laid me down on the earth. Then somewhat like the beating of many hearts came up to me out of the ground; and I looked and my cheek lay close to a violet. Then my heart took courage, and I said:

"I know that thou art the word of my God, dear Violet:
And Oh, the ladder is not long that to my heaven leads.
Measure what space a violet stands above the ground:
'Tis no further climbing that my soul and angels have
to do than that."

The poem "Hard Times in Elfland" will show his love for children, as deep and as true as his love always was.

And this great soul, this true man, battled bravely with consumption, lecturing at Johns Hopkins University, when "those who heard him listened with a sort of fascinated terror, as in doubt whether the hoarded breath would suffice to the end of the hour,"—and dictating to his wife until even that was impossible. But in 1881 the manly struggle drew to a close, and one of the greatest poets this country has ever known passed to the new life.

The genius of Sidney Lanier has never received the recognition that it deserves. Bayard Taylor, E. C. Stedman, and others of equal judgment accepted the poet as a poet, but the world has failed to recognize him. They laughed at his Centennial Cantata, and they would hear no good of him, but times are changing, and it will not be long before his name will have gained its proper position.

JOHN RICHARD MEADER.

Our fellow-creatures can only judge what we are by what we do, but in the eyes of our Maker what we do is of no worth, except as it follows from what we are.—*Coleridge.*

"THE law of Christianity is eminently and transcendently called the word of truth."—*South.*

THE ELECOMPANE CURE FOR HYDROPHOBIA.

EDITORS INTELLIGENCER AND JOURNAL:

I HAVE been a reader of your good paper for quite a number of years. I noticed several years ago an article on hydrophobia, but the issue containing the article got misplaced. The cure was Elecampane and new milk. I forget the particulars. If it is considered a certain cure by the medical faculty, please insert the same again and oblige your present readers.
Beloit, Ohio. J. H.

[In order to respond to the above inquiry, our friend Robert Shoemaker, of this city, (well known, for many years, as the head of a large wholesale drug house), furnishes us a printed slip of communications sent to Philadelphia journals, some years ago, giving the *recipe* asked for, and details concerning its efficacy. In a note enclosing them he says that "in the very many cases where the Elecampane has been used I have yet to hear of a single failure of its efficacy in preventing an attack of hydrophobia."—EDS. INTELLIGENCER AND JOURNAL.]

EXTRACTS FROM PRINTED SLIPS SENT BY R. S.

My attention was drawn to *Elecampane* many years since as a preventive of hydrophobia. The active medical principle of this plant is found in the root, and is called *inulin*. From my experience, I believe this *inulin* neutralizes the virus or poison of hydrophobia. Allow me to give a few instances where this simple remedy has been used. My own nephew, then a small boy, was bitten badly in the face by a dog unmistakably mad. This occurred within a few miles of this city. The father of the lad came immediately to town to obtain medical advice. We called on an eminent physician (now deceased) who at once prescribed the plant named. The root was obtained and administered as hereinafter directed. No symptom of hydrophobia appeared, and the lad, now a hale, hearty farmer in Montgomery county, lives to show the scar of the wound in the face.

The physician above referred to related to me a number of instances in which the remedy had been used, and *always with success*. He, in fact, remarked, "I never knew it to fail when properly administered." I will give but two cases. First: Two men living near this city were bitten in the hand by the same dog, and within fifteen minutes of each other. The dog, a stranger to them, was secured and imprisoned to await an owner. The next day he showed unmistakable signs of madness, and finally died with hydrophobia. Alarmed for their safety, both men came to the city and waited on the physician quoted above. He prescribed *Elecampane* Root. One of the men remarked, "that is an old woman's remedy," and refused to take it. This man, returning to his home, placed himself under the care of his own doctor, who cauterized the wound, and administered medicine to salivate him. On the ninth day he was seized with spasms and died in agony. The other and more fortunate man took the *Elecampane* as prescribed, and never suffered in the least degree from the dreaded disease.

Second: A number of cows feeding in a pasture were all bitten by a mad dog. The circumstances coming to the knowledge of those who had heard of this *Elecampane* remedy, thought it a good opportunity to give it a trial. The cows were accordingly separated—to one-half the number the root was administered (in form of decoction), and not one of the cows suffered from hydrophobia; whilst all of those not so treated took the malady and died from its effects or were shot. In quite a number of cases coming under my own observation of persons bitten by dogs supposed to be mad, I have recommended the use of the *Elecampane*, and have yet to learn of the first case of hydrophobia resulting from such bite where the root was used.

Having said this much, allow me to give the mode of using the remedy. To one and a-half ounces of good, sound *Elecampane* Root, bruised in a mortar, add one pint of new milk, boil to half pint, strain off, and when cold, take a dose, in the morning, fasting. No food should be taken for from three to five hours afterwards. Repeat the dose on the third morning, allowing one morning to intervene, and again on the fifth morning. The above quantity is for an adult; for children given in proportionate doses, say to one of 12 years, half the quantity.

The writer of this article believes that the *Elecampane* will cure the disease after violent symptoms have been manifested. I would say that I have never known a case where it was used after a full manifestation of the disease, but should, most certainly, strongly urge its use, particularly so, as no physician has any knowledge of a cure for the awful malady. When a person is bitten by a dog, mad or otherwise, great care should be taken to avoid talking about it, or doing anything calculated to excite the imagination.

For Friends' Intelligencer and Journal.

"HOW MUCH MORE YOU, O YE OF LITTLE FAITH!"

AMONG the hoary Adirondack mountains

That lift their aged foreheads to the sky,
Where from their deep, fern-hidden source, the
fountains

Dash crystal-clear and restless, tossing lie
Among the rugged rocks and wild obstructions
Of mossy logs, dead boughs, and driftwood bare,
Seeming to shun all flattering seductions
To smoother course in valley meadow fair,

Where rocky precipice high towered o'er us
And rocky gorge yawned deep beneath our foot,
Where nature's wild magnificence before us
Had held us breathless, thro' a violet sweet
Amidst this grand profusion nestling lowly
Down by the roadside dared to raise its head;
Nor precipice, nor gorge, nor landslide slowly
Rotting its sand grains, caused the flower to
dread.

"O violet! How canst thou bloom serenely
So near these mighty rocks, this torrent bold!
How canst thou raise thy modest head so queenly
And venture thy blue petals to unfold?"

Think of the grandeur of these rock walls hoary;
Think of the heights and depths sublime so near!
How darest thou to tell thy simple story,
To sing thy hymn of praise, and show no fear?"

All sweetly, silently, the flower listened
All sweet and silent was her soft reply,
While on her cheek a shining spray-drop glistened,
A tear of thankfulness to Him on high:

"Even a flower's wish the Father heareth;
Nor rain nor sunshine e'er hath failed me yet;
And He who made and placed me here, He careth
Even for one small blue-eyed violet."

A. L. D.

THE CONGO RAILROAD TO BE BUILT BY NATIVES.

BRUSSELS, June 18.—It is not expected that a single laborer will be taken to Africa to build the Congo Railroad. The roadbed will be graded and the track laid by Africans themselves, just as the Portuguese are employing native labor to build the Loando-Ambaca Railroad. When this railroad project was first discussed several years ago native labor was hardly thought of, and it was seriously suggested that the best plan would be to employ Chinese laborers to grade the road. To-day no one talks of employing anything but native labor. The Africans now in the service of the Congo State include hundreds of men from widely separated regions. *Le Mouvement Geographique* thus describes them:

"First are the Krooboys from Liberia, who are the best workmen on the Loando Railroad, many of whom were digging on the Panama Canal until its collapse. The Congo State and commercial houses have long employed them to do heavy work around the stations and on the steamboats. Their wages are from fifteen to twenty cents a day besides rations. Some Veys, also from Liberia, are in the service of the State. They are faithful workmen, and can be obtained in large numbers for the same wages paid to the Krooboys.

"The Haussa, who are recruited on the slave coast, where they come from their famous country south of the Sahara to earn money, have been employed by the Congo State chiefly as soldiers and in laying out the ground for stations. The results have been highly satisfactory. Their pay is about 25 cents a day.

"But it is in the Congo region itself that the State finds most of its army of employees. The Loango and Cabinda of the coast are employed in the factories and stations of the lower river. They are good workmen, have the advantage of being able to talk with the thousands of natives surrounding them, and their wages vary from 10 to 20 cents a day. Then come the Bangala cannibals of the upper river, who are now employed in large numbers by the State as soldiers, steamboat hands, and station workmen. They do good work with the shovel, and have been largely engaged making terraces at the stations. They eagerly seek service, and the wonderful story of their transformation from idle savages to fairly industrious workmen is well known. Their pay is one and a half brass wires a day, worth in Europe only a few cents. There is now a fair prospect that their wages will soon be raised.

"The natives of the cataract region, where the railroad is to be built, have as yet been employed only as carriers, but there is no doubt that they can be utilized at other sorts of labor when other work is offered them. They are eager to earn trade goods. Several thousand of them are now in the carrier service. It is said that under competent superintendence most of the carpenter work, masonry, and blacksmithing can also be done by natives imported from the gold coast, who have learned these trades. The Congo State has employed a large number of them, and has generally been well satisfied with their work. Their pay is from \$15 to \$25 a month.

"It is therefore expected that the laborers who are to carry out the manual part of this great undertaking will be found in Africa herself, and that a large part of them will be natives of the Congo."

AN EXPERIMENT IN FISH-CULTURE.

LAST spring about half a million young shad were placed soon after hatching in a large pond in Washington, and were carefully tended and fed and protected from enemies during the whole of the period which the young shad spends in fresh water. The young fishes prospered and grew rapidly, and nearly all of them were still alive when the time for migrating to the ocean came in the fall. The gates of the pond were then opened one morning, and all day long the silver stream of young shad poured out through them and started on their long journey down to the sea. All naturalists will look forward with the greatest interest to the time when these fishes return, bringing back with them to the fishermen of the Potomac the wealth of food which they have gathered in the ocean. In the meantime we may indulge the hope that the strong constitutions which they have acquired during their carefully nurtured youth will enable them to excel their less favored brothers, and that when they reach our market they will have some of the excellence of our improved garden products.

But this is not all. These shad were reared from selected eggs. The adults which enter our waters first in the spring are most valuable to the fishermen, since they are put upon the market at a time when fresh fish are scarce and high priced. Our experience with garden vegetables justifies the expectation that the eggs of early shad shall themselves give birth to early shad. Now, all the young fishes which were put into the Fish Commission pond were hatched from eggs taken from the earliest shad of the season, and, if this process of selection be pursued for a few years, we may feel confident that the Potomac river will soon abound in shad of extra quality at the time when fine shad are hardest to get and most valuable.—Prof. W. K. Brooks, in *Popular Science Monthly*.

WE are to know that we are never without a pilot. When we know not how to steer, and dare not hoist a sail, we can drift. The current knows the way though we do not. The ship of heaven guides itself and will not accept a wooden rudder.—Emerson.

**THE PROGRESS OF EDUCATION AMONG
THE COLORED PEOPLE.**

[The following extracts from an article in *Harper's Magazine* for Seventh Month are of great interest, because of their authorship. The writer is Atticus G. Haygood, of Georgia, who has been since 1883 the General Agent for the disbursement of what is known as the "Slater Fund." (This, \$1,000,000, was left in 1882, by John F. Slater, of Norwich, Conn., "to aid in the Christian education of the lately emancipated race and of their descendants in the South.") It is in the hands of a Board of Trustees, and A. G. Haygood attends to the details of the disbursement, visiting the several schools that are aided, and reporting on them to the Trustees. We know of no person who is better qualified to write upon this subject, or whose testimony is of more value. He is a Southern man, having been born in Georgia, in 1830. In 1859 he became a preacher of the Methodist Episcopal Church, South, and in 1876 he was made president of Emory College, (at Oxford, Georgia), which place he retained until 1881, when he had become Agent of the Slater Funds. His earnestness in the work, his tact and good judgment in avoiding unnecessary controversy, joined with his firmness in insisting upon the necessity of honestly and really educating the colored people, are reasons why so much interest and importance attach to his published articles on the subject. And it is a cause for great encouragement to all sincere lovers of our country, and to those who cherish hopes concerning the general progress of mankind, that there should appear in the South men of culture and ability, so just and so kindly in their attitude toward the colored people. With them in the work, it cannot be doubted that in the long run good progress will be made, and the children of the Captivity will enjoy, as other Americans, their rights to life, liberty, and the pursuit of happiness.—H. M. J.]

The most unique and altogether wonderful chapter in the history of education is that which tells the story of the education of the negroes of the South since 1865.

The friends of the negro's education really began during the war. The work was taken hold of with a vigor the world never saw before as soon as hostilities ceased. The government expended through the Freedmen's Bureau large sums; Northern benevolence poured many millions of dollars into the South to teach, enlighten, lift up, and better christianize the emancipated people. Presently most of the Southern States began to make appropriations of public money to institutions that best prepared colored men and women to teach in the common schools. The churches of the North organized great societies to raise money and carry on the work of education among the colored people. Counting all the higher schools, whether called universities, colleges, institutes, or seminaries, there are about one hundred and fifty able to prepare men and women to teach in the common schools, some of them fitted to do thorough college work. In these institutions, working on small salaries, I have met many times men and women "of whom the world is not worthy,"

graduates of the foremost schools in America—Harvard, Yale, Princeton, Colby University, the University of Boston, University of Michigan, Oberlin, Wellesley, Vassar, Mount Holyoke, and the best of them all. Among these teachers some of the best are colored men and women who were taught during the first decade of this great Christian experiment.

There has been some prejudice excited by the over-naming of the institutions established for the colored people. Many are called "university," but not one does university work, nor is there now occasion for such work; many more are called colleges, but the least part of the work they do is college work. I had occasion to look carefully into this matter. In 1883-4, in the schools receiving aid from the "John F. Slater Fund," there were employed 303 teachers, and enrolled 7,273 students. They were in colleges, universities, institutions. An actual count, as the catalogues classed the students, resulted in the following conclusion: "The percentage of the whole number engaged in classical studies, the higher mathematics, and other college studies preparatory to admission to the college classes, was less than five per cent. of the whole number." The ninety-five in each hundred were learning just what they should be learning; they were fitting themselves to be intelligent men and women, and to teach in the public schools for their people. The president of one of the best of these institutions tells me that "more than 1,000 of his former students have taught in the public schools."

In connection with some of the best of these institutions are professional schools. The negro preacher has abundant opportunity to use his gifts. The negro lawyer has not much encouragement. The negro doctor is rapidly winning his way. There are three really admirable medical schools for colored men in the South: Medical Department, Howard University, Washington City; Meharry Medical College, Nashville, Tennessee; and Leonard Medical School, Raleigh, North Carolina.

No people were ever helped so much in twenty-five years, and no illiterate people ever learned so fast. The most painstaking and long-continued investigations justify me in making the following statements, using the round numbers nearest the actual facts:

1. There are in the South, in 1889, 16,000 common schools conducted by colored teachers; in these schools about one million colored children receive elementary instruction from three to four months per annum at public expense.
2. Not less than two millions of the colored people can at least read.
3. In higher education the best ones succeed as well as other people with the same sort of preliminary training.
4. The African churches in the South are fired with commendable zeal to do what they can in the education of their people. In some enterprises they have done notably well, justifying the firm persuasion that some day they will be capable of conducting their own institutions.
5. The introduction of industrial training into

all the leading institutions for the colored people has been an unmixed blessing. It has helped scholarship, discipline, and the building up of self-reliant, self-maintaining manhood and womanhood.

6. There is a growing friendliness toward the cause of negro education. Grants of money are made with less reluctance; the States and cities are putting every year larger sums in the work of educating the negro, and those who teach him are beginning to receive something like Christian recognition.

7. The white churches of the South are beginning to move in the actual work of teaching the negro. What they have begun they will carry on.

8. There is substantial progress. Investigation in every available direction, with the best helps I could get from the highest official sources in each of the twelve States specially considered in this paper, led to these results, comparing 1882 and 1888: Total colored school population, 1888, 2,057,990, an increase from 1882 of fourteen per cent.; total colored enrolment for 1888, 985,522, an increase of thirty-four per cent. This is hopeful; the gain in numbers at school is relatively more than the gain in the population.

Comparing the case of the white people with the case of the negroes in these respects, we find: For 1888, total white school population, 3,383,618, an increase from 1882 in six years of nineteen per cent.; total white enrolment, 1888, 1,997,558, an increase of thirty-seven per cent.

9. What the higher-grade institutions for colored people now most need is endowment sufficient to secure for many years to come thoroughly efficient instructions.

A marked feature in recent discussions in the South as to education has been tool craft in connection with training with books. Georgia has stepped ten paces in front, and has established a technological school of high grade in the city of Atlanta, placing at its head a man eminently fitted for his work, the Rev. D. I. S. Hopkins, the late president of Emory College. Mississippi has established at Columbus a school for girls that unites industrial training to education in books. The success of the experiment has challenged attention throughout the entire Southern country.

In this connection it should be said that the higher institutions for negro youth in the South have, almost without exception, introduced industrial training as part of the course of study. The late John F. Slater, of Norwich, Connecticut, in 1882 gave one million dollars, [to aid schools for the colored people.] He desired that the interest of the money he gave should be used to make more efficient the work of schools established by others. It was intended to help as many, and to help them as rapidly as possible, so as to help them truly. So, in carrying out the founder's wish, those institutions have been aided that were known to do such work as made their students good teachers, and the agent was instructed to "prefer those schools that joined to instruction in books some form of industrial training." The result is that every important school for negro youth in the South has adopted industrial training,

and with the most beneficial and every way gratifying results.

The South is beginning to awake to the perils that lie but partially concealed in the ignorant classes, both white and black, that make up so large a part of the population. It is time to awake; there is reason to be alarmed when the tenth census reports in the twelve States under consideration in this paper 332,733 white voters and 886,905 negro voters as "unable to write." If in a union of States like ours, which binds all into one, this alarm should not extend to States more fortunate than these twelve Southern States, it would indicate an indifference to common interests and common dangers more alarming than ignorance itself.

A DREADED TASK.

A TASK never grows smaller or lighter by sitting down and lamenting that it must be done, and there is an old maxim that teaches us that a thing "once begun is half done."

A farmer friend of mine has a boy of fourteen years, named Billy, who is like a good many other boys of my acquaintance. His heart is heavy, and a cloud immediately overspreads his mental horizon when he is asked to make himself useful.

"Billy," said Mr. H., one day when I was out to the farm, "why don't you go to work on that little patch of potatoes?"

"Aw," whined Billy "there's so many of them taters I'll never get them hoed."

"You won't if you don't begin soon."

"I hate to begin."

"How are you ever going to do the work if you don't begin?"

"Well, I'll begin pretty soon."

His father walked away, and I heard Billy exclaim, in a tone indicating great mental distress:

"*Plague on them old taters!* It makes me sick to think about them."

"Why do you think about them then?" I said, laughingly.

"I've got to," he replied, dolefully, with a sorrowful shake of the head. "I've been thinking about them ever since I got up this morning."

"How long, now, Billy, will it really take to hoe them?"

"Well, at least an hour."

"And you've been distressed about it ever since you got up?"

"Well, I hate to hoe taters."

"And you've been up a little more than five hours?"

"Well, I, I—" Billy began to grin, took up his hoe and said, "I never thought of that!"

And the potatoes were hoed in just forty minutes. He doubles a task who dreads it.—*Golden Days.*

"TRUTH is a stronghold, fortified by God and nature, and diligence is properly the understanding's laying siege to it; so that it must be perpetually observing all the avenues and passes to it, and accordingly making its approaches."—*South.*

FARM-LIFE IN CHINA.

A FARMER may be hired by the year for from eight to fourteen dollars, with food, clothing, head shaving, and tobacco. Those who work by the day receive from eight to ten cents, with a noonday meal. At the planting and harvesting of rice, wages are from ten to twenty cents a day, with five meals; or thirty cents a day without food. Few landowners hire hands, except for a few days during the planting and harvesting of rice. Those who have more land than they and their sons can till, lease it to their neighbors.

Much land is held on leases given by ancient proprietors to clansmen whose descendants now till it, paying from seven to fourteen dollars' worth of rice annually for its use.

Food averages little more than a dollar a month for each member of a farmer's family. One who buys, cooks, and eats his meals alone, spends from one and a half to two dollars a month upon the raw material and fuel. Two pounds of rice, costing three and a half cents, with relishes of salt fish, pickled cabbage, cheap vegetables and fruits, costing a cent and a half, is the ordinary allowance to each laborer for each day. Abernethy's advice to a luxurious patient, "Live on sixpence a day and earn it," is followed by nearly every Chinaman. One or two dependent relatives frequently share with him the sixpence.—*1. de M. Fields, in Popular Science Monthly.*

CURRENT EVENTS.

THE vote upon the two proposed amendments to the Constitution of Pennsylvania, on the 18th inst., was largely adverse in both cases. On the amendment prohibiting the manufacture and sale of intoxicating liquor, the majority in the negative was 189,020; and on that making certain changes in the qualifications for voting, 235,850.

Twenty-nine counties voted for Prohibition, nearly all in the central and western section of the State, or along the New York line, only one, Chester, being in the eastern section; and 38 counties voted against it, the latter number including the cities and boroughs of Philadelphia, Pittsburg, Allegheny, Reading, Lancaster, Harrisburg, Scranton, Wilkesbarre, Pottsville, York, Erie, Easton, Allentown, and Nerristown. Excluding nine counties.—Philadelphia, Allegheny, Berks, Lancaster, Lehigh, Montgomery, Northampton, Schuylkill, and York,—the remaining 53 counties were equally divided for and against, and showed 5,000 majority for the Amendment.

THE largest majorities for the Amendment were: Mercer, 3,856, Crawford, 3,501, Venango, 3,502, Bradford, 3,412, Fayette, 3,005, Lawrence, 2,796, Indiana, 2,399, Blair, 2,281. Philadelphia county gave 92,495 adverse majority. Allegheny 26,188, Berks 19,269, Schuylkill 12,310.

THE question of removing the Prohibition clause from the Constitution of Rhode Island was voted on on the 20th instant, and resulted in the affirmative by about 5,000 more than the necessary three-fifths vote.

LUCY WEBB HAYES, the wife of ex-President R. B. Hayes was stricken with paralysis at her home at Fremont, Ohio, on the 21st instant, and died on the 25th. She was about 56 years of age.

NOTICES.

* Circular Meeting in Calu Quarter: at Bradford, Seventh month 7, at 2 o'clock p. m.

* A portion of the Philadelphia quarterly Meeting's Committee to visit the smaller branches, will attend the First-day morning meeting held at Radnor, Sixth month 30th, at 10 o'clock.

Train leaves Broad Street Station at 8.15 a. m. for Radnor Station. Returning leave Radnor Station at 12.33 and 2.33 p. m.

* Friends are invited to attend the religious meeting at the Home for Aged Colored Persons, First-day next at 3 p. m.

*Association of Friends to Promote the
Education of the Colored People
of the South.*

WORK OF THE ASSOCIATION.

The work of the Association is chiefly to raise funds. These are sent to the support of two schools for colored youth in South Carolina, the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 Wall-St., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

KINDNESS.

THE blessings which the weak and poor can scatter
Have their own season. 'Tis a little thing
To give a cup of water; yet its draught
Of cool refreshment, drained by fevered lips,
May give a shock of pleasure to the frame
More exquisite than when nectarian juice
Renews the life of joy in happiest hours.
It is a little thing to speak a phrase
Of common comfort which by daily use
Has almost lost its sense; yet on the ear
Of him who thought to die unmournd 'twill fall
Like choicest music; fill the glaring eye
With gentle tears; relax the knotted hand
To know the bonds of fellowship again;
And shed on the departing soul a sense
More precious than the benizon of friends
About the honored death-bed of the rich,
To him who else were lonely, that another
Of the great family is near and feels.

—Thomas Noon Talfourd.

NOTES OF A SERMON BY ISAAC WILSON.¹

He said in substance: As I saw with my outward eye, and welcomed the gathering of this company, I thought that with my inward eye, I could discover a feeling that we were Heavenward bound, and that our steps had been turned this way not out of idle curiosity, but with a desire that we might be strengthened by thus meeting together, under the fostering care of the Father's love. There seemed to be a special case, a heart that had formed a fresh resolution under the encouragement of the exercises brought forward during the week. There are no instructions better or more profitable than those which were given forth in the time of Jesus, and those truths are just as sufficient now as they ever were. He used the parables of the mustard seed, the corn, and the leaven, showing the development of each. He spoke also of a man who had two sons. I want to get very near some mind in the spiritual meaning of this parable. The younger,—*the less matured*, the one least able to judge for himself said: "Give me my portion, and I will go away." The father granted the request, as all parents should do, thus throwing their children on their own resources, experience being the best teacher, yet not withdrawing the parental care, and no doubt there was an anxious thought in that father's mind. As there is no sex in spiritual things, the son or daughter becomes responsible for anything that may happen to them after

¹At Green St. Meeting House, Philadelphia, Fifth-day morning of Yearly Meeting week.

they have divorced themselves from the Father's care, and have thus created the heaven or the hell in this pleasant life. Humanity was not all lost in that wayward boy,—there came a time when there was nothing for him to live upon, while the servants in his father's house had enough and to spare. The question came, whose fault was this? My own: so I will arise and go to my father (the memory and recollection of all he had left, induced him to try to get back to the state of feeling he had left.) We are not *all* prodigal sons, some other application may be for us, but if there is one such here, who has the living memory of the Everlasting Goodness, and who has turned his face homeward, what do we find as the result of this faith? a sweet feeling of peace follows this resolve, which shows it is a right one; and the father,—does he wait till his son stands before him? He asks no questions, he knows he is sorry, and while he was yet afar off, he ran and embraced him, exclaiming "This my son was lost and is found." He was ready to be reconciled to him. He took him home, and there being many servants in the father's house, each of whom had something to do to assist in the work, and the ring was put upon his finger, showing encircling love, also the best robes were put upon him; these robes were those of Love, Charity, and Righteousness in abundance. And one was sent out to bring in the other son, he did what he could, and what was commanded of him, but the eldest son would not come; he made inquiry when he heard the rejoicing in the house, and was informed that his brother had returned, and instead of rejoicing he was angry. He had flattered himself that he was a pretty good son, but when the father went out, they reasoned together, and if he could have seen it as his father wished, there would have been no missing link; the father said, "Son thou art always with me." How wonderful would have been the result if he could have been made to see it from the spiritual instead of the human standpoint; his father simply left him there. We do not condemn him; just as soon as we believe in God, and his son Jesus Christ, we are made responsible,—and enabled to partake of that heavenly reunion.

The prodigal after returning showed compliance with his father's commands. That other son may be found in the professing Christian; when he discovers others who have not seen things in the same light as himself, a feeling of jealousy creeps in, and if we are not inspired with true faith, the question arises "Can any good thing come out of Nazareth?" When a brother asked this question: what was the result? Behold an Israelite indeed in whom there

is no guile. If we all could only remember the needs of the spiritual life—first the blade, then the ear, after that the full corn in the ear,—the young man, then the grown man, is enabled to perform the manifold duties of love; the child cannot perform these, for it is only by an increase and growth in love and charity that we become true sons of God, using these gifts that he has bestowed on us, not waiting until he shall call us hence.

"Greater things than these shall ye do." The one thing that we have to do is to overcome sin. The prodigal said the sin was in my own heart, it was yielding to my own evil devices. "To him that overcometh will I grant to sit with me on my throne as I also overcame and am set down with my Father on his throne." Read it slowly, and ponder well the meaning, "Where I am, there shall ye be also." In this simple way we may be able to read the glories that will be ours. Do I hear the question of criticism? If this is all there is in religion, why should I have been wrapped up so long in the memory of the suffering and the cruelty to Jesus. If he had not died the world would have remained in sin. Even in the pulpit, we will find there is very little difference between us. I believe in the sacrifice, I believe in a risen Saviour. That He truthfully expresses it, "It is expedient that I go away, if I go not away, the Comforter will not come." Some of us feel if Jesus would come, we would leave all and follow him.

The Christ power that always was, is, and always shall be, was not crucified. The only saving power is the power of God. Why speculate then that which pertains to religion must be the life of Christ, and not the blood of Jesus. We have the choice, we have the Christ power, which will effect the reconciliation. But the human must first be swallowed up in the spiritual; it may have to wait in the quiet, when the soul life will grow, and will come to know that this was of God, and the Son of God.

THE MINISTRY AMONG FRIENDS.¹

IN contemplating the theme which you have assigned me for this afternoon, it has been a matter of interest to me to review the early ministry of George Fox—to look for the germ of the system of ministry that is one of the distinguishing characteristics of Friends. We need to bear in mind that George Fox lived in a time when men were struggling against the tyranny and the corruptions of the church. The power of the Romish church had been contested, and replaced by the scarcely less arbitrary denomination of the Church of England. The established church, under the leadership of Elizabeth, attempted to enforce complete conformity to the rites and ceremonies which she had preserved from the legacy of the mother church. The inevitable result of this tyranny in the name of religion, was the violation of conscience on the part of many of the clergy, and the deterioration of character among them, until many of them were despised by the drunken and licentious troopers even, who desolated parts of the country under their orders. One result of the Reformation

begun by Luther, had been the translation of the Bible into the language of the people, thus opening to many its simple, but peaceful precepts concerning the religious life. It was inevitable that these precepts should act as leaven among the people whom they reached, quickening the conscience and clearing the spiritual sight, and strengthening the nobler purposes. Into this time when the corruptions of the church were conspicuous and the tyranny of the church was grievous to be borne, was born George Fox. That his father was a man whose integrity and virtue won for him the appellation of "Righteous Christy," that his mother was a woman eminent for her piety and whose ancestors had been numbered among the early martyrs, may indicate the law of destiny that made him to be the man to see clearly that "the Truth is to be sought by listening to the voice of God in the Soul;" and equipped him with that earnestness and robustness of nature necessary to leadership. His mission as a religious reformer was early indicated in the seriousness of his habit of thought, in his absorbed study of the Bible, and in his endeavor after faithfulness in all things, "inwardly toward God and outwardly toward men." In times of doubt and almost despairing perplexity, he turned in vain toward the religious teachers of his neighborhood, for they were men who did not live up to the principles which they professed; and so their teaching was dead to his deeply exercised soul. Thus he was driven much to solitary meditation, and like many another seeker after truth, the fields and forests drew him away from the temples made with hands. Like many another soul reaching after God, the blade of grass whose mystery of growth is yet the secret of the most High, the solitude of the forest, or the broad sweep of the sky ministered to his need as could no word of man. In one of these seasons of meditation it was clearly shown to him that God who created the world did not dwell in temples made with hands, "but that he dwelleth in the hearts of his obedient people,"—"that the christian religion is wholly and solely a spiritual religion—an affair between the soul of man and his Maker, who has declared that he will not be mocked by forms and ceremonies, but will be worshipped in spirit and in truth." Thus it was that he and those who accepted his teaching "abolished all ceremonies, and nearly all forms from their system of worship, and made it to consist simply of a humble and patient waiting in silence, for the assistance and guidance of God's Holy Spirit in their hearts." Do you see what a revolution in religious thought and religious practice was involved in this new doctrine of spiritual worship? Do you not see that it made absolutely unnecessary the whole, vast machinery of the established church? It needed no bishop, no priest, no curate, in whose presence to lift up the soul in thanksgiving and aspiration to the Father of souls. The soul cannot if it would, withdraw from the Eternal Goodness; it has only to open itself in silence and it will be illumined and refreshed by the Heavenly Spirit.

At another time, while meditating in the fields one morning, it was clearly "opened" to him "that

¹Address by Elizabeth Powell Bond to Swarthmore College students, Sixth month 9, 1889.

to be trained up in the universities, and to be instructed in languages, and the liberal arts and sciences, was not sufficient of itself to make any one a minister of the Gospel."—"that all the learning of the schools could not bestow the gift of the Holy Ghost, without which he saw that no man could be truly called to the preaching of the Gospel." In this "opening" to the mind of George Fox, do we find the germ of the system of ministry among Friends.

Two hundred years have passed since those seasons of illumination of this great religious teacher; since those days of disorder and persecution. The religious liberty which we enjoy was bought with a price. It is ours, at a cost to George Fox and his early associates, of imprisonments, and scorn, and sometimes of death. The spiritual worship of which they bore witness, whose simple forms they left as a legacy to the world, is still a living fountain. More and more the world thirsts for the assurance of spiritual realities. More and more the world listens to hear every message delivered to the inmost soul. And more and more will silent waiting upon the Lord to hear his whispered voice become acceptable to the seeking souls of men.

But, as it has been in the past, so it will be in the future, there will always be some among us whose gift, whose privilege, whose duty it is to break the silence of meetings for worship, in witness to spiritual verities, in words of cheer to the sorrowing, in words of encouragement to the doubting or despairing. And it is as true now as it was two hundred years ago, "that to be trained up in the universities, and to be instructed in languages, and the liberal arts and sciences, is not sufficient of itself to make any one a minister of the gospel"—"that all the learning of the schools cannot bestow the gift of the Holy Ghost." It is true that instruction in the languages cannot insure that largeness and tenderness of heart which cries out as did Jesus of Nazareth, "O Jerusalem, Jerusalem, which killeth the prophets, and stoneth them that are sent out unto her! how often would I have gathered thy children together, even as a hen gathereth her chickens under her wings, and ye would not!" It is true that instruction in the liberal arts and sciences is not sure to gain that firmness of will that can walk steadfastly in the revealed path. It is true that not all the learning of the schools can bestow that purity of heart that sees God; "that not all the learning of the schools can bestow the gift of the Holy Ghost,"—that vital sense of relationship with the Heavenly Father that allowed Jesus to declare "I and my Father are one," "Hitherto my Father worketh, and I work."

When, however, a life of obedience, or a life of faithful effort to obey the Divine voice, makes a soul, the fit instrument in the Divine hand, for the delivery of instruction, or exhortation or comfort, then it is that the training of the schools may supplement the training of the obedient life, and greatly increase the service of the exercised soul. We know that the better the physical conditions, the more satisfactory is the doing of any physical service. And so it is with intellectual gifts that are a part of the equipment of the human soul. It is in the province of

these intellectual gifts to bring to the service of truth, all that history has to teach concerning the past experiences of men, of their failures and their triumphs; all that science has to teach of the laws of God revealed in the material world; all that art can teach of other laws of God pertaining to harmony and beauty. To my mind, it seems that a living ministry, a vital ministry, requires that all the approaches to the soul, through right physical conditions and active intellectual life, be kept wide open and unobstructed, that according to the measure of the ministering soul, be it lesser or greater, the messages committed to it may be passed on with power to those who wait their light and strength. I believe wholly in what is termed the free-gospel ministry of Friends. I believe wholly that the *spoken service of religious truth* requires at men's hands only that which can be given in connection with their daily work of bread-winning. This absolute pecuniary independence leaves the ministering soul free from any thought of personal popularity; free to report to what the poet has called a "heedless world" every "accent of the Holy Ghost."

One thought of mine is at variance with the general view of Friends. It was manifested to George Fox "that the Most High dwelleth not in temples made with hands," but that "He dwelleth in the hearts of His obedient people." To my mind it seems clear that the messages from the Most High do not always wait the assembling of the people at stated times and in stated places. I believe that there are seasons of spiritual illumination whose message may be conveyed through the written, rather than the spoken word. The ebb and flow of the ocean's tide can be computed, and tabulated for the almanac; not so with the ebb and flow of the tides of spiritual life. We do not know when a chance word from another soul, or a flower, or a glimpse of sky or mountain, may open our eye to heavenly visions spread before us, or quicken our ear to hear the Divine voice. And it may be our privilege, it seems to me, to share with others in the written word, the lesson of these unforeseen moments of clearer insight and quickened hearing.

The significance of such a life as that of George Fox is lost to us, if we content ourselves with accepting his view of things as final, as all there is of truth to be revealed. It is his *attitude* toward truth that is the very vital lesson for us. He did obey that which he did learn; and this was the secret of his power. The conditions of the world change somewhat from century to century. The Society which is his legacy to the world, will maintain its original vigor, will make its silence eloquent praise, and its free gospel ministry for the healing of the nations, only in proportion as its members bring to it the earnestness and sincerity and faithfulness of its founders.

What then, is to be the source of its ministry? That which has always been—the obedient people of God. And to these beloved young people, may it be given to see that they have "a charge to keep,"—that a pure, sweet service waits at their hands.

Dear friends, I would not have presumed to lay this subject before you. I have answered to your bidding, as it has been given me to see.

From The Friend (Philadelphia).

*SOME ACCOUNT OF THE FIRST PLACES OF
WORSHIP OF FRIENDS IN PHILA-
DELPHIA.*

(Continued from last week.)

It seems difficult to determine at this distance in point of time, whether the "boarded meeting-house" alluded to was the same as the house belonging to Christopher Taylor or not, although it seems probable, as the First Assembly convened in Philadelphia the Tenth of First month, 1683, "at the boarded meeting-house;" but in any case it is plain that Friends were poorly accommodated, as indicated by the following minutes:

Twenty-first Meeting, Second-day of ye Seventh month, 1684. "Agreed that in regard to ye straightness of room in ye present meeting-house, there be a meeting at the Governour's house every fifth day of ye week in the forenoon, about the ninth hour."

Twenty-third Meeting. "Friends being met in the feare of the Lord in the Governour's house, and waiting awhile, proceeded to business the 4th of the Ninth Month, 1684. Friends having considered about a place whear the Quarterly Meeting should be kept; and at present not knowing of a place convenient, do appoint Thomas Lloyd, Ralph Howell, (and others) to provide a place."

At a monthly meeting the fourth of Third Month, 1685. "William Frampton acquainted this meeting that he is going to divide his house, and desires Friends that some other place be considered of, and provided against the Quarterly Meeting. The meeting appointed John Songhurst, William Frampton, (and others) to consider of and provide a place, and make it public to Friends against next meeting."

"Friends taking into consideration the business of the old meeting-house by Thomas Hooton's, and seeing that it was fitted for the Assembly, it was afterwards made use of for a Court; for the use and charge of fitting up thereof Christopher Taylor doth demand five pounds, of which this meeting is willing to allow forty shillings; the rest they leave for the Court to defray, and those Magistrates who are members of this meeting are desired to take notice of the same when the County assessment is laid."

Friends were now in good earnest to have the meeting-house erected at the Centre Square, Broad and High (Market) Streets, as already concluded upon, as we observe by the succeeding minute of the Monthly Meeting held, the 4th of Fourth month, 1685. "It is unanimously agreed by this meeting that there shall be built with all expedition a meeting-house in the Center, of brick, to be 50 foot long and 36 foot wide. The timber work whereof Andrew Griscom offers himself to do, and William Preston the mason and bricklayer work."

6th of Fifth month, 1685. "This meeting doth appoint Thomas Duckett and John Redman to join with William Preston in carrying on the brickwork of the meeting-house in the Center, and also doth appoint Samuel Carpenter (and others) to go to the Center with the workmen above said, and get the place where the meeting-house shall stand set out, and to get bricks and stone to the place to begin

work. This meeting agrees that the meeting-house in the Center shall be 50 foot long, 35 foot wide, and 10 foot high."

5th of Eighth month, 1685. "It is advised that all Friends that have subscribed towards building the meeting-house in the Center do answer the same, that the meeting-house may be finished before this winter. Andrew Griscom hath undertaken to carry on and finish the carpenter work—that is to say, the floor, roof, and to cover it."

2d of Ninth month, 1685. "Phillip England is desired to speak to Thomas Duckett to finish the well at the Center, least for want of doing it, it may be unfit for use."

Although the work on the building had been pushed forward as rapidly as possible for a time, it appears to have been suspended entirely for some months, probably for want of funds; we find that one Friend subscribed one pound, and another one bushel of corn, towards the building.

At a Monthly Meeting, 27th of Sixth month, 1686, it was "Agreed that the Center meeting-house be now taken care of. Barnabas Wilcox offers to speak to workmen that are fit to be concerned, to cover the Center meeting-house. Griffith Jones offers to give credit to provide shingles, and B. Wilcox the nails, and is desired to speak to Thomas Duckett that he go on with the brick work of the meeting-house."

29th of Eighth month, 1686. "Thomas Fitzwater hath undertaken to send a man to the Center meeting-house to be an assistant to Thos. Marl for the carrying on the boarding and shingling the roof."

At our Monthly Meeting on Delaware side, 31st of Tenth month, 1686. "At the request of Andrew Griscom [the following] Friends were pitched upon: Thomas Bradford, John Masters, John Day, and Thomas Jaques, to take a survey of the carpenter work on the Center meeting-house, and give their judgment of the value thereof."

25th of Twelfth month, 1686. "Whereas John Redman proposed the buying of the timber of the old meeting-house at the Center, Friends have left to Anthony Morris to dispose of the same to him."

25th of First month, 1686-7. "According to an order of last month, Anthony Morris hath sold John Redman the wood of the old meeting shed for 25 shillings."

24th of Fourth month, 1687. "Ordered that William Southerly and John Jones do agree with a workman about making forms, and doors, and a seat for public Friends, at the meeting-house in the Center."

From the foregoing extracts the "Center Square meeting-house" appears to be finished; and it is evident that to build such a place of worship, in those times and with such surroundings, was indeed a great work. We have no positive information as to the exact time when meetings were first held therein. It is plain, however, that meetings had been held upon the ground for some time in the meeting shed above alluded to, that was directed to be built "with all speed," in 1684. The minute of the Quarterly Meeting, held 7th of Tenth month, 1685, says: "It is agreed that the meeting at the Center on First-days begin between the hours of nine and ten."

Although this house was erected in what was designed to be the centre of the city, its location there seems to have been a mistake, and is one of those rare instances in which Friends made an error in judgment in such matters. It was then supposed that the city would expand from the centre toward both rivers, but it was soon found that the commerce of the Delaware engrossed all.

Watson says, "This house was so far in the wild forest, that a Friend by the name of Morris stated that when they used to go out to Center Square meeting she had often seen deer and wild turkeys cross their path. At that time they had a resting-seat under a fine shade, at the corner of High and Sixth Streets, then so far out of town that they called it the half-way rest."

Eighth month 28th, 1687. "Ordered by this meeting that Samuel Carpenter and Robert Turner do make inquiry if there be anything to be found by the surveyor or any other means, to have a title to be made to the ground belonging to the Center meeting-house, and if there can be no good title made at present, then for the same persons to write to England to Governour Penn in the behalf of this meeting, for a confirmation, in order to a patent for the same."

The committee reported the next month, that "at present they can give no satisfactory account as to Title."

JOSEPH W. LIPPINCOTT.
(To be Continued.)

SCRIPTURE LESSON No. 26.

SEVENTH MONTH 17TH, 1859.

RESTRAINT.

GOLDEN TEXT:—"He restrained them not."—I Samuel 3: 13.

READ I Samuel 1: 1-18.

SAMUEL is acknowledged as the prophet of the Lord, but does not assume the control until after the death of Eli, who is now ninety-eight years old, and has been a Judge for forty years.

We are not told that the revolt against the Philistines was made by direction of Eli and Samuel, but may believe that the yoke of these cruel oppressors, who in the later years of Eli had gained the ascendancy, was very burdensome. These Philistines appear to have settled in Canaan before the migration of Abraham. (Gen. 21: 32-34.) They were a formidable tribe, and continued to trouble Israel until the time of David, when their country was consolidated into the kingdom.

The Elders of Israel—literally the old men. They are first mentioned in the time of the Exodus; their authority was undefined, and extended to all matters of public welfare. They retained their influence through all the changes in the government of the nation, and in the time of Jesus exercised judicial authority in connection with the chief priests.

The Ark of the Covenant. This was the chest of Shittim (acacia) wood, overlaid with and without with pure gold, in which were deposited the two tables of stone, containing the Decalogue, or Covenant. The pot of manna and the rod of Aaron were probably kept in it. The Ark occupied the most

holy place in the Tabernacle. It was to them the visible symbol of the Divine presence, and the Elders in proposing to take it with the army as Joshua had done at Jericho (Joshua, 6th chap.) hoped to win the favor of God; but they sought not God, nor were the priests that accompanied it worthy men, and they were defeated. There is a lesson for us in this, as in many other of the wars of the Israelites. No symbol or emblem, however blessed or beautiful or costly it may be, can bring victory to the soul in its warfare with the enemies of its peace. Only as trust and confidence is placed in God himself, and in the power that this reliance gives, can we meet and vanquish our foes. This is the highest and holiest truth concerning the warfare each one must wage, and making it the law of our daily life we will know of the overcoming that brings peace and rest to the soul. There is yet another lesson drawn from the sorrowful fate of Eli. He was a good man, but very weak, and this made him unfaithful to the great trust committed to his keeping. It was his duty to watch over those in authority and see that they exercised their office for the welfare of the people but he failed in this, and was charged with not restraining his sons who were leaders in wrong-doing and in corrupting the people, and his weakness and irresolution were largely responsible for the degeneracy of the nation. No individual can escape the consequences of failure in the occupancy of a trust. The most significant parables of Jesus were illustrations of this common delinquency of men. "Ichabod" has often to be written of those from whom the world has a right to expect better things. (I Sam. 4: 21.)

We can well imagine the sorrow and trouble that the wickedness of his sons must have caused Eli, and when the condemnation was fulfilled upon them and their father's house, and the cherished Ark of the Lord fell into the hands of their enemies, it is not strange that his heart was broken.

This contains an impressive lesson for us, that "no one sins to himself alone." Our parents, our friends and companions, and the principles which we profess, all suffer when we fail to live righteously. If the end could be seen from the beginning many would be deterred from entering upon a life of sinfulness; but the first step is such a slight departure from the path of rectitude that it is scarcely noticed and is readily condoned, and the next is still more easily taken.

Blessed are they whom the hand of the parent checks ere it is too late, and how much to be condemned is that parent who, either from mistaken kindness or weakness of character, allows his child to grow up without that wholesome restraint that moulds the character and enables it to resist evil. It would be impossible to lay too much stress upon the necessity for parents to teach their children self-restraint while they are young, for the power of habit and the dominion of passion are difficult, nay, almost impossible, to overcome in after life.

Because of the inconsistencies of professing Christians, many stumble and truth is made to suffer. To

"love our neighbors" as ourselves," to observe the golden rule, to "judge not," to "speak no evil one of another," to "bear one another's burdens," all require us to *restrain* our natural selfish desires. No one can be a perfect Christian without possessing the ability thus to do, nor can he enjoy that peace which passeth all understanding.

It is the little affairs of everyday life that prove us. If we can check the cross word under provocation, drive out the unkind thought when we have been, as we think, unfairly treated, if we can "return good for evil," and not let the "little foxes" plunder us of the fruit of the Spirit, which is love, joy, peace, etc., etc., then we may be assured that we will be strong when heavy trials and temptations assail us.

NOTES ON THE LESSON.

We find no mention of Eli previous to the incidents connected with the birth and childhood of Samuel. He was a descendant of Aaron and filled the office of high priest. At what age he entered upon its duties we have no knowledge, but he became judge when he was fifty-eight years old. The condition of the people was not very much improved under his administration. It was said of them that there being no king, "every man did that which was right in his own eyes" before Eli became judge, and we may conclude from the scant record concerning him that little change for the better followed; doubtless some check was held over the warlike Philistines, but there were constant outbreaks and the Israelites were no match for their adversaries. At the time of our lesson they had met with defeat after defeat and the chains of subjection were about to be firmly riveted. The elders remembered that at the capture of Jericho the Ark of Testimony had been carried before the army, and, with no inquiry as to the Divine will in so important a matter, they sent to Shiloh and had Hophni and Phineas, the degenerate sons of Eli, bring it into the camp. The rejoicing was very great,—they were sure of the favor of Jehovah, forgetting entirely that they had in the ark only a sign or symbol, which was without power to aid them except as He, to whose worship it was dedicated, was with them. This mistake has been repeated over and over again,—some ceremony or performance has been relied upon as having saving virtues, only to end in a miserable failure.

The Ark, precious as were all the associations connected with its history, had no power within itself to save. It held the sacred treasures of the nation, which were preserved that they might be a constant reminder of the One Source from which all their help must come.

As they were faithful and obedient, the same Divine Power that had led their fathers would enable them to overcome their enemies, but would not deliver them while they were leading lives of sin and uncleanness.

There is another lesson in the example of Eli who seems to have been right at heart and to have possessed many estimable qualities, but he was weak and irresolute, and lacking in that force of character

so essential in one called to the high office of priest and judge. His sons were not trained into the service of the sanctuary, they associated with wrong doers, and were not restrained in their evil ways, though they had charge of the Ark and were in the line of succession to the office of high priest; their lives were vile and profligate, and they became a scandal and reproach to the whole nation. "He restrained them not,"—is the testimony. All that was good and worthy in himself was neutralized by this lack of parental authority, and not only himself but the whole nation were made to suffer on account of his weakness.

For Friends' Intelligencer and Journal.

A LESSON ON FILIAL GRATITUDE.

Those who mingle freely with little children, and who are sufficiently familiar with them to gain their confidence and to share their enjoyments, have opportunities for deep instruction.

One of my most intimate friends, who is now at a sea-side resort with his family, recently had a little domestic experience which to me seemed so instructive that I feel inclined to let others have the benefit of the lesson.

The father had been in the city during the day, and on returning to his family in the evening he said to his eldest child—a boy of six years—"H—— I have brought some little tin pans with me; they are for you to play with, in the sand; you will find them in that package." Of course it was to be expected that the child would eagerly rush for the package, and with the least possible delay get possession of his new treasure. Such, at least, would seem to be the natural impulse of a healthy, vivacious boy. But no; he looked earnestly into the face of his father, and—with a mingled expression of surprise and pleasure on his countenance—exclaimed, "You brought some tin pans for me?" On receiving an affirmative nod he ran to his father, threw up his little arms, and said "I will kiss you, papa."

After having thus evinced his gratitude and his affection for the *giver*, he was ready to seize the gift, and to enjoy it with all the heartiness of childish glee.

This simple incident conveys a lesson of great value, and of two-fold application. First, the debt of gratitude that children owe to their parents, and the satisfaction to both parties that its *prompt* payment would afford: and second, that debt which lies so heavily upon all of us, but which we are so heedless about paying. The sacred obligation that we should feel to render gratitude and praise to the Dispenser of our gifts—even before we enjoy them—is one which we are too apt to overlook, and hence, by a series of omissions, to be continually increasing its weight.

In our *trials*—like the children—we run to our Parent for succor; but when favors are showered upon us we receive them as a matter of course; too often being unmindful of the Source whence they come.

But the whole matter is so plainly illustrated by

the little incident referred to, and the application of it is so simple, that we can all take it to ourselves, and endeavor to profit by the lesson.

THE PATTERN.

SEE that thou make all things according to the pattern shewed to thee in the mount, was said to Moses when he was about to make the tabernacle, after he was instructed during the forty days and forty nights he remained in the mount, called away from every earthly strife and care, and shown in every particular by the Most High how to do,—which is beautifully described in the book of Exodus.

Deeply interesting is this account represented in the 8th chapter of the epistle to the Hebrews, as example and shadow of heavenly things; which has arrested my attention with the thought, that if we are willing to enter into the closet of our own hearts, shutting out every hindering thing, and wait for the direction of Best Wisdom, we too shall in our measure be shown the path of duty, and if faithful, know that of having a sure foundation to stand upon which cannot be shaken by adverse winds.

Happy will it be for all who are faithful to the unfoldings of light and truth shown to them in the condescending love and goodness of the Heavenly Father, which preserves them from the snares and temptations of this life and prepares them for eternal felicity in the life to come.

THE FIELDLARK AND SOME OF ITS RELATIVES.

It is rather disappointing to the reader of English literature to find that many of the birds whose praises the poets have sung, are not found in America. It is true that the common names of several of our birds correspond to those of English songsters thus celebrated, but upon investigation they turn out to be very different birds.

For instance, our robin, the rather greedy bird which, as Lowell says, "has a bad reputation among people who do not value themselves less for being fond of cherries," is a thrush (family *Turdidae*) while the English robin of which we hear so much is a smaller bird and belongs to the warblers, the only similarity being the red breast.

The blackbird, too, appears in various forms. The blackbirds we know so well are by no means noted for the beauty of their song; but turn to an English work on birds and you find that the blackbird is a thrush and one of the sweetest singers in England.

Then, when we read Shelley's Ode to the Skylark we cannot help regretting that we do not know the bird of which he says,

"Sound of vernal showers
On the tinkling grass,
Rain-awakened flowers,
All that ever was
Joyous and clear and fresh, thy
music doth surpass."

But though we do not have the bird which "sings as he soars," we have a fieldlark, a very delightful vocalist, though he does not belong to the true larks at all, but to the *Icterids* or American starlings. He is an interesting bird notwithstanding the fact that he has missed being immortalized by Shelley, and he and some of his near relatives are making the fields and sloughs about here melodious these early summer days.

The family *Ictridæ* is divided into three groups—the orioles, the crow blackbirds, and the marsh blackbirds. The beautiful Baltimore oriole, or golden robin, is a type of the first group. Its plumage, flaming orange and jetty black its curious pensile nest and its sweet song make it one of our most attractive birds. It is rather rare here, though we generally see one or two each summer. But it is a woodland bird, and will probably become more common as the artificial groves of this prairie country grow older. It is scarcely more than a decade since the first robin gladdened the hearts of those who had emigrated to Iowa from wooded regions, and now each year brings us more birds than the last.

The crow blackbirds, as may be supposed, ally the *Icteridæ* to the crow family. They have large, strong feet, adapted to walking, and spend much of their time on the ground. Their voices are harsh and unmusical.

The third division, the marsh blackbird group, is the one to which the fieldlark belongs. In low, swampy ground, where the sedges and cat-tails grow, we may find a familiar example of this group, the red-winged blackbird. The cowbird too, which, like the European cuckoo, lays its eggs in the nests of other birds, belongs to this group and is found in the same locality. The fieldlark, however, though similar in many respects to these birds, inhabits higher ground. Down among the grass in the open field it builds its nest, laying from four to six spotted eggs. It is a migratory bird, disappearing from this region in the fall and coming back with the early spring.

In color the fieldlark differs widely from its relatives, the blackbirds, the prevailing color of the back, head, and wings being a grayish brown mixed slightly with black. Its breast is yellow, set off by a black crescent on the throat. Its bill is long and of a peculiar shape, the lower mandible having the appearance of being bent downward just where the feathers end. It is one of our most common fieldlarks and its sweet song makes it a welcome visitor, while its coming is hailed as one of the many harbingers of spring.

ANNA L. NICHOLES.

State Centre, Iowa.

It is quite true that each man is a single and indivisible personality; and yet there are two sides to this one personality which are often in conflict with each other—the *lower* side which Paul calls "the flesh" and sometimes "the carnal mind," and the *higher* side, which he calls "the spirit." What the one side wants the other condemns; and what the man will be in his practical character depends on which side rules his life.—*Selects*.

THE GIFT OF CHOICE.

In the bountiful provision made for the sustenance of human life upon the earth, and for its enjoyment also, by the great Giver of all good, there is such an endless variety that His great wisdom is made manifest in bestowing upon man the gift of choice as to what is best adapted to his own needs. In civilized life the cultivation of the mind in the direction of invention, and the improvement upon nature in food supplies, has so added to this variety in producing both essentials and non-essentials, that increased wisdom in the matter of choice becomes a necessity.

It is not for any one person to revel in all of these good gifts, else variety in individuals, which adds so much to the charm of living, would disappear; very early in life should this fact be impressed upon the tender mind, so that Content, "that sweet maid from Heaven sent," may early make her abode in the heart of the child and ever after impart her blessing.

The experiences of mature life soon makes known the necessity of wise choosing, first, as to the uses of time, not for maturity, but the proper division of it for the child, that into its life shall be instilled a regard for the passing moments, that these be wisely spent. Bacon says, "there is no greater wisdom than well to *time* the beginnings and onsets of things;" hence those who think well, and plan in accordance therewith, are most sure of success in life be the chosen occupation what it may; and happy will be whose well timed hours embrace therein opportunities for the development of the variety of powers, physical, mental, moral, and spiritual with which he is endowed.

Then the exercise of choice as to companionship is a point where wisdom is so essential and should be constantly sought, for our future good comes largely from associating with those who have the power to elevate us by contact with their fine qualities of heart and mind. Here again the guardianship of age, or at least maturity, is needed in guiding, not forcing, —for "where there is force there is no choice" and nature's laws suffer infringement,—childhood and youth into the right channel; surround these with companions in the home, in the school, from amongst whom they can with little danger choose

such as will bless their lives with friendships good and true. Friends as a society have ever regarded this guardianship as a religious testimony of the highest importance, and though there have been instances of too much restriction lapsing into narrowness, the right balance of such a testimony should ever be kept most prominent.

Greatly to be esteemed is the privilege to choose our life work, that it shall be of such a nature as to enoble and not degrade character, and each one should carefully examine as to his innate resources that these be allowed opportunities for growth in the direction towards which God has already implanted the impulse, always believing that unto every created being some talent has been committed for cultivation. All along the lines of life one must choose from amongst the vast stores presented of food for body, mind, and spirit, that which will nourish and not overload, and here is where moderation and simplicity present themselves as absolute essentials in the living of a good, true life. We are so apt to tax ourselves with a superfluity of things in this productive age. Benj. Franklin says, in his moralizing way, that "we tax ourselves twice by our idleness, three times by our pride, and four times by our folly," in the misuse of our time and for the things we fancy are essentials in our pursuit of happiness. Shall we not then cultivate wisdom in our choosing, that our lives may not be robbed of the sweetness that true simplicity in living will give to us, so that mind and spirit may be enriched and grow into such enjoyment here as can be perpetuated hereafter? In the exercise of this God-given gift of choice between the good and the evil, let all the effort be for the good alone.

MARRIAGES.

PIDGEON—DUVALL.—On Sixth month 19th, 1889, at the residence of the bride's grandmother, Mary E. Jackson, Frederick county, Va., Charles M. Pidgeon, son of Samuel L. Pidgeon, and Katie Duvall.

DEATHS.

BARNES.—At her residence in the town of White Plains, Westchester county, N. Y., on the 9th of Sixth month, 1889, Martha T., widow of Elias Barnes, in the 66th year of her age; an esteemed elder of Purchase Monthly Meeting. This dear Friend was first attacked with paralysis in the autumn of 1857. The winter following her husband was removed by death from the family circle. Her disease rendered her unable to attend her religious meetings. She often gave utterance to the hope that she might again be able to mingle with her friends in that capacity. This she was never more able to do. She was ever ready to extend the hand of benevolence to the needy, and sympathize with the afflicted. When the time came for her spirit to be released, she quietly passed away without a struggle, leaving the assurance that she had entered the rest that awaiteth the righteous.

B.

BURGESS.—Sixth month 24th, 1889, Edwin K. Burgess; a member of the Monthly Meeting of Friends of Philadelphia.

RING.—At his residence near Wakefield, Lancaster county, Pa., Sixth month 10th, 1889, Thomas P. King, aged 64 years, 10 months, and 21 days; an esteemed member of Little Britain Particular and Nottingham Quarterly Meetings.

For a period of five, or more years this dear Friend was afflicted with an incurable disease, but he bore extreme suffering with Christian fortitude. Regular in his attendance of meeting, his place was seldom vacant. It was through his instrumentality that the First-day school at Penn Hill was organized and kept up. He continued his interest in it and attended it and meeting until Ninth month, 1888, when he became unable to sit in meeting any more. His life among his fellow men was exemplary in every particular. "Blessed are the dead which die in the Lord from henceforth; yea, saith the Spirit, that they may rest from their labors, for their works follow with them."

LUKENS.—At Jenkintown, Pa., Sixth month 28th, 1889, Ellen, widow of Charles H. Lukens, aged 56 years.

ROWLETT.—Sixth month 22d, 1889, at his residence, Bridgewater, Bucks county, Pa., John Rowlett, in his 87th year; a minister belonging to Abington Monthly Meeting.

SCHOFIELD.—Sixth month 23d, 1889, Joseph Schofield, of Washington City, in the 77th year of his age.

VERREE.—At his residence, Verree's Mills, Philadelphia, Sixth month 27th, 1889, John P. Verree; a member of the Monthly Meeting held at Green street, in his 73d year. He was formerly a Member of Congress, and otherwise prominent in public affairs.

For Friends' Intelligencer and Journal.

SAN DIEGO: THE OLD AND THE NEW.

"Is this train for San Diego?" inquired a middle-aged, portly lady, as she emerged—red-faced—from the waiting-room of the Sante Fe depot at Los Angeles, and just as I was about to betray my ignorance thereof, the train-dispatcher shouted "Rodonda Beach!" and the crowd of pleasure-seekers were soon borne away to plunge into the cooling waves of the sea.

We too were bound for the seaside and for the Hotel del Coronada, and were soon whirled out into the Santa Anna valley, and through a charming panorama one hundred and twenty-five miles in extent, of valleys, mountains, rivers, and ocean. When scarcely beyond the city limits, we have a fine view of the little town of Whittier, at the foot of the sloping green bluffs to the southeast, some nineteen miles away. This town has had its marvelous growth in the short period of eight months. It was laid out by a company of "Orthodox" Friends, and now contains three hotels, several stores, a bank, post-office, college building, meeting-house, school-house, etc., and about one thousand inhabitants. After passing a succession of flourishing towns, half buried in orange groves and eucalyptus trees, the most important of which are Anaheim and Santa Ana, we reach Capistrano, about sixty miles south of Los Angeles, a small hamlet, more than half Mexican in its character, a collection of adobes, with a slight intermingling of more modern dwellings, situated together in a little

valley just below the picturesque ruins of the Old Mission of San Juan Capistrano.

This was one of the series of Missions established by monks of the Franciscan Order, over one hundred years ago, extending along the Pacific Coast from the southern end of the Peninsula of Old California, northward to the Bay of San Francisco, at intervals of about forty miles. They were generally located on slight elevations, overlooking the broad fertile plains over which roamed vast herds of cattle, horses, and sheep, that constituted their wealth.

The Mission of San Juan Capistrano was founded in the year 1776, and was thirty years in building. It consisted of a large quadrangular court, adjoining the Church, and squares or enclosures of smaller buildings for the lodgment of the Indians, for whose sole benefit these Missions are supposed to have been established. The church was built entirely of stone, with walls of immense thickness, and a vaulted ceiling also of stone. This led to the state of future dilapidation in which it is now found for it could not withstand the throes of Mother Earth to which California has at times been subjected. In 1812, while filled with worshipers, it was almost entirely thrown down, and thirty-six persons were killed. No effort has been made to restore the main edifice, and a portion only is left standing. The surrounding corridors, built of adobe and brick, still remain, but are fast going to ruin. Owls and bats make their nests in the crevices and nooks, and a rank growth of weeds covers the *débris* of crumbling walls and fallen tiles. One little corner only has been reclaimed. The cleanly swept brick floor, under the corridor porch, freshly whitewashed walls, green blinds, and potted plants, attested the occupancy of this portion. A priest lives here, who has charge of the old ruins, and holds occasional service in the rooms, while his constituency extends over many square miles of the surrounding hills and plains,—mostly a primitive Spanish-American grazing country.

Continuing down the valley some three miles, with the prospect seaward cut off by a low range of hills, we suddenly debouch upon the coast at the little station romantically named San Juan-by-the-Sea. This is an excursion point and bathing place, and it is also one of the places particularly described by Richard Henry Dana in his "Three Years before the Mast;" and the bold, rocky headland, a mile or two up the beach is now called "Dana's Point."

From here we run about twenty-six miles in sight of the sea, until we reach Ocean Side. Six miles east of the town, and over a fine road that follows the San Luis Rey, we came to the Mission of that name. The view as we approached is a grand one. The luminous valley, at the head of which stand the ghastly walls of the ancient pile, are enclosed by rounded bluffs, covered with luxuriant grass, and in the misty distance seen over the tops of many lesser peaks are the snow-covered summits of the Southern Sierras.

The San Luis Rey Mission was amongst the latest founded, not having been commenced until 1798, and it was one of the finest and largest of all, and is

still in a fair state of preservation, and yet about it is an air of abandonment and inevitable decay. The walls of the church with its single tower in which one lone bell now remains are yet intact, but the adjoining buildings are almost roofless, and there is but little left except the long rows of graceful arches which line the corridors of the cloisters; they, being formed of the peculiar tile-like brick of the builders, have withstood the inroads of encroaching years. This was once the wealthiest of all the Missions in the State, and had at one time between three and four thousand communicants, mostly Indians. Bull fights were held in the great Court, which was some four or five acres in extent, and surrounded by an adobe wall twelve feet high and half the thickness. Near by the main edifice a small house has been built from the bricks of the ruin, in which lives a Mexican family who have charge of the place. It requires a fee, *cuatro reales* (50 cents) to secure entrance to the interior.

A short distance below Ocean Side, the road leaves the immediate shore-line of the coast, and strikes up over the hills, crossing innumerable deep *barancas*, which have cut their way through the soft sand rock, carving it into many fantastic shapes. After passing these we come out into the valley at the mouth of the San Diego river, on the farther edge of which is the town of Old San Diego and three miles beyond, the present new town of the same name, which like many others in the Great Far West, have sprung up at short notice. Previous to 1886 it boasted of but twenty-eight hundred inhabitants, but in that year came a "boom," and three years later the figures increased to the remarkable number of thirty thousand. Long before we reached the City proper, we saw a great massive pile with its towers and steeples and rounded domes and flags thrown to the breeze, crouched down by the sea. This was the Hotel del Coronada, away over on the extreme edge of the peninsula which extends far out into the Bay. At the arrival of the train the 'busses are in waiting to carry the passengers across the ferry, and we are driven to the hotel over what but a couple of years ago was almost a treeless plain. But ample means and man's energy and facilities for irrigation are converting the whole into a garden spot, and a few years will find the concrete roads circling through groves and under bowers of California's semi-tropical trees and shrubbery.

But we are in the shadow of the stupendous hostelry, and take in the imposing style of architecture, then enter the great hall, or office, and are conducted to our room opening on a square court, around which are four or five galleries, one above the other. In the court are palms and ferns and gorgeous flowers, almost like a fairy scene, with silvery sprays falling from ever-playing fountains. The Coronada, said to be the largest hotel of its kind in the world, is built in the form of a parallelogram, and the total floor area covers seven and one half acres. The dining hall, with its lofty, dome-like ceiling, seats one thousand persons and we enjoy our dinner while sweet strains of music comes from an orchestra nearly concealed in a little balcony. The hotel is

built directly upon the beach, and at high tide the waves lave the very foundation. A large gallery enclosed in glass, permits the invalid to enjoy the grand ocean expanse, undisturbed by the chilling sea breezes.

Here we are at the southern extremity of California, and only twenty-one miles from the boundary line of Old Mexico, and yon tall, decapitated cone-like mountain, looming up in the purple distance, has its base in the home of the Montezumas.

As it is the Artist's purpose to leave none of the Old Missions unvisited, we are soon *en route* for that of San Diego, which is situated at the head of Mission Valley. To reach it, we climb University Hill, opposite the city, from whence the outlook is a superb one over the blue rippling bay with its bristling forest of masts. San Diego Bay has the finest deep water harbor along the Pacific coast. Here the deep sea ships and trains of cars come together, greatly facilitating commerce. In the days of Mexican rule, this city was the commercial centre of the State of California, and to-day ships are arriving from Australia, loaded with coal, while regular lines from European ports and the Atlantic coast are bringing various commodities to be distributed through the interior. Over one-half of the ports of the commercial world are tributary to the port of San Diego.

Plunging down the winding road through the cañon we emerged into Mission Valley, some twelve miles in extent, and drove through rich verdure lining the sloping hillsides, and past orchards of limes and walnuts, figs and olives, until we came in sight of the Old Mission at its head, which we soon reached. We found it the most dilapidated and demolished of any we had seen. A group of mules stood stamping at the flies, sheltered from the hot sun by the few remaining walls. Near by, a pair of stately fan palms had defied the ages, and olive trees some one hundred and twenty years old, were as fresh and green as when planted by the hands of the Mission fathers.

From here we retraced our steps, and at the northern extremity of the valley came out into the town of Old San Diego, so enthusiastically described by "H. H.," and drove to the old tile-roofed adobe, where Alessandro and Ramona were supposed to have been married, and near which were the old bells hanging from a cross-beam between two white posts planted in the ground. These bells were taken from the tower of the Old Mission, and preserved as sacred relics.

Up over the velvety hills again, we catch sight of the sun wheeling its flaming disc down into the ocean, while a ship, phantom-like and far at sea, glides between, penciling its outlines on the golden back-ground.

EMILIE PAINTER JACKSON.

Fifth month, 1889.

TRUTH is a stronghold, fortified by God and nature, and diligence is properly the understanding's laying siege to it; so that it must be perpetually observing all the avenues and passes to it, and accordingly making its approaches.—*South*.

SCHOFIELD SCHOOL ANNUAL REPORT.

THE annual report of the Schofield Normal and Industrial School, at Aiken, S. C., has been issued from the press of the School, and makes a neat pamphlet of 16 pages. It states that there were enrolled during the term 340 pupils, 179 girls and 161 boys. Of these, 29 were in the Normal department, preparing to become teachers. All in the first class attended the county examination for teachers in Fourth month last, and received certificates, some second, the others third grade. "Owing to the fact that a large majority of our older pupils can only be in school during the three winter months their progress is not so rapid as we could wish, but the eager desire of many to learn all they can while here is very encouraging. We find that our boarding students who receive well disciplined manual training can do better work in the school room than the day pupils who do as much work but without putting any mind into it. White mind controlled slave labor, and it will take time to make the brain direct the hand."

"Printing, carpentry, cobbling, sewing, and painting are the chief industries. Boys have cut all the wood used at Carter Hall and the school-house; made garden, planted trees about the grounds; laid 560 feet of plank walk 2 feet wide; made 61 panels of fence and type stands for printing office; repaired chairs and benches; built a woodshed and pantry at Carter Hall; made double iron gates to the fence in front of the school-house; painted the kitchen and all out-buildings. Repairing in the shoe-shop was conducted by one of the students. Out of school hours the boarding boys do extra work, for which they receive compensation.

"All the girls are taught sewing, having their sewing classes while the boys are engaged in other work. The boarding girls have extra sewing classes on Saturday, when they generally do some work for which they receive pay. Besides mending sheets, pillow cases, and other articles in the sewing-room, over a hundred garments consisting of under-clothing and children's dresses, were cut and made by the girls. In addition to this they were taught to make cushions, mats, and various fancy articles from things which have come in barrels. One lady sent us samples of table linen; from these the girls made many nice little bureau and table covers. Another lady gave pieces of fine fancy white goods. These we utilized by teaching the girls how to use them as collars, and also to make them into baby bonnets. The boarders were delighted to make and carry some of these bonnets home to the younger members of the family. The clothing made in the sewing room finds ready sale in our store."

The financial statement of the year shows total receipts of \$5,079.97. Of this sum \$3,145 was "voluntary contributions," \$310.94 interest on endowment, \$500 from the John F. Slater Fund, \$200 from the Public School Fund of Aiken county, \$275 from students, for tuition, \$421.35 income of printing office; and the remainder minor amounts from various sources. The expenditures were: salaries of instructors \$3,796.50, addition to endowment fund

\$100, industrial department \$200, printing office \$421.35, expenditure on buildings \$132; student aid \$200, and other smaller items. Of the \$3,145 of voluntary contributions, \$1,237 came from Pennsylvania, \$1,238 from New York, \$225 from Illinois, \$50 from Connecticut, \$130 from New Jersey, \$100 from Rhode Island, \$90 from Indiana, \$105 from Massachusetts. In the Pennsylvania amount are included the \$150 given (1888) by Philadelphia Yearly Meeting of Women Friends, and \$500 collected and forwarded by the Philadelphia Association for Promoting Colored Education, etc. The New York amount includes \$450 sent by the Philanthropic Union subcommittee of the Yearly Meeting, through Samuel B. Haines, Treasurer.

The endowment fund, as stated in the report, is \$7,515. This does not include the \$5,000 bequest of the late Robert Willets.

THE LIBRARY.

THE First-day school workers of Richmond, Ind., have gathered into a neat pamphlet of 73 pages the Tributes to the memory, and some of the sermons, of the late S. A. E. Hutton. As an incentive to know the "gift of God" in order to be made "whole," such evidences of a true life are well worthy of study. As many who knew this Friend, and some who did not, may desire to obtain copies we are informed these can be procured at 10 cents per single copy, and \$10 per hundred of Benj. Stratton, Richmond, Ind.

Henry Longstreth, 740 Sansom St., Philadelphia, announces that he has issued an edition of William Pollard's collection of lectures on "Old Fashioned Quakerism," at twenty-five cents per copy. The work had not before been reprinted, we believe, in this country.

PERSONAL.

AMONG the passengers who sailed by the North German Lloyds steamship *Fulda*, from New York, on Seventh-day last, was our friend Thomas Foulke, of New York, in company with his son, William Bradley Foulke, of Richmond, Ind., and his family.

—Our friend Lydia H. Price, who has recently made an extended and somewhat difficult trip amongst Friends in the Pennsylvania mountain region, has gone this week to visit New York and Long Island.

CORRECTION.

DEAR EDITOR: In the INTELLIGENCER AND JOURNAL of Sixth month 22, I am represented as saying in Notes from Centre Quarter that the buildings at Bedford Springs are in a dilapidated condition, which is not the case, and doubtless occasioned by the bad writing in the manuscript. The grounds were greatly injured by the late flood and were being renewed; some repairs were also being made in buildings.

L. H. P.

OFTEENTH times when thy body complains of trouble it is not so much the greatness of trouble as the littleness of thy spirit that makes thee to groan.—
Jeremy Taylor.

YES, THE QUAKERS ALSO.

To the Editors of *The Christian Union* :

In your issue of May 9 is an editorial entitled "An Instructive Contrast," in which, after presenting an interesting contrast between America and France you add : " We may go further and say that this instructive contrast suggests the fundamental truth that religious character is at the foundation of national well-being. The founders of America were the God-fearing Puritans of New England, Presbyterians of New York, Roman Catholics of Maryland, Episcopalians of Virginia, Huguenots of the Carolinas." Acknowledging your fundamental truth, permit me to ask if the Quakers of Pennsylvania and New Jersey had nothing to do in founding the religious character of this nation? Where in the history of the world shall we find a better example of a people whose long-suffering in the jails of England for conscience and religious liberty's sake did more to break the bonds imposed by religious bigotry and give us that religious freedom which you and I so highly prize?

Did their fair dealing with the Indians, which established a confidence and a friendship that still live, do nothing toward forming our religious character? Is the grand example of Christian non-resistance toward a people termed savage, inducing them to hold sacred the obligations of a treaty for seventy years, to go for nothing? While our common Christianity falls so far short of the example and the precept of its Founder, who commands us to love our enemies, shall we ignore this most remarkable example of Christian love upon the untutored red men of the forest?

Bancroft says: "The rise of the people called Quakers is one of the memorable events in the history of man. It marks the moment when intellectual freedom was claimed unconditionally by the people as an inalienable birthright. The Quaker doctrine is philosophy summoned from the cloister, the college, and the saloon, and planted among the most despised of the people. The mind of George Fox had the highest systematic sagacity, and his doctrine was distinguished by its simplicity and unity."¹

Johnson City, Tenn.

J. S. WILSON.

SHUT IN.

[The author of these lines was an invalid for thirty years.]

"Shut in!" did you say my sisters?

Oh, no. Only led away
Out of the dust and turmoil—
The burden and heat of the day
Into the cool, green pastures,
By the waters calm and still,
Where I may lie down in quiet
And yield to my Father's will.

Earth's ministering ones come round me
With faces kind and sweet.
And we sit and learn together—
At the loving Saviour's feet;
And we talk of life's holy duties,
Of the crosses that lie in the way.

And they must go out and do them,
While I lie still and pray.

I am not shut in, my sisters,
For the four walls fade away,
And my soul goes out in gladness,
To bask in the glorious day.
This wasting, suffering body
With its weight of weary pain
Can never dim my vision,
My spirit cannot restrain.

I wait the rapturous ending—
Or, rather, the entering in
Through the gates that stand wide open
But admit no pain or sin;
I am only waiting, sisters,
Till the Father calls, "Come home."
Waiting with lamp all burning
Till the blessed Bridegroom comes.

—Bella Cook

HOW I CONSULTED THE ORACLE OF THE
GOLDFISHES.

I WATCH you in your crystal sphere,
And wonder if you see and hear
Those shapes and sounds that stir the wide
Conjecture of a world outside;
In your pent lives, as we in ours,
Have you surmises dim of powers,
Of presences obscurely shown,
Of lives a riddle to your owu,
Just on the senses' outer verge,
Where sense-nerves into soul-nerves merge,
Where we conspire our own deceit
Confederate in deft Fancy's feat,
And the fooled brain befools the eyes
With pageants woven of its own lies?
But are they lies? Why more than those
Phantoms that startle your repose,
Half seen, half heard, then flit away,
And leave you your prose-bounded day?

The things ye see as shadows I
Know to be substance; tell me why
My visions, like those haunting you,
May not be as substantial too.
Alas, who ever answer heard
From fish, and dream-fish, too? Absurd!
Your consciousness I half divine,
But you are wholly deaf to mine.
Go, I dismiss you; ye have done
All that ye could; our silk is spun:
Dive back into the deep of dreams,
Where what is real is what seems!
Yet I shall fancy till my grave
Your lives to mine a lesson gave;
If lesson none, an image, then,
Impeaching self-conceit in men
Who put their confidence alone
In what they call the Seen and Known.
How seen? How known? As through your
glass
Our wavering apparitions pass
Perplexingly, then subtly wrought
To some quite other thing by thought.
Here shall my resolution be;
The shadow of the mystery
Is haply wholesomer for eyes
That cheat us to be overwise,

¹ See Bancroft's United States History, pages 326 to 342, for his views concerning the Quakers.

And I am happy in my right
To love God's darkness as His light.

—James Russell Lowell, in *Atlantic Monthly*.

CASCO BAY.

If e'er you sail on Casco Bay
When fields are green and skies are sweet,
And watch the foam-capped waves at play
Where land and sea touch hands and greet
As friend with friend, in rude delight,
Your soul, like birds at break of day,
Will rise for many a joyous flight
Midst summer isles of Casco Bay :
Of Casco Bay ! Sweet Casco Bay !
Where life is joy and love at play
Midst summer isles of Casco Bay.

Oh, wild and glad and circling far,
The ripples sparkle from your prow
As silver laughter from a star
When Venus decks the evening's brow ;
And where the islands stand apart
The ocean waves roll in to pay
Some tribute from the sea's great heart
To gentle, queenly Casco Bay :
To Casco Bay ! Dear Casco Bay !
Your soul imbibes the salt-sea spray
And sings with lovely Casco Bay.

Down smiling channels shadows run
And shimmer on the green-blue tides ;
And, booming like a far-off gun,
Where Harpswell sea from sea divides,
You hear the breakers' sullen roar
And watch the waves ascend in spray
While all around, behind, before,
The white sails swell on Casco Bay :
On Casco Bay ! Fair Casco Bay !
The white sails fill and bear away
The happy ships on Casco Bay.

—Benjamin S. Parker, in *The Century*.

WASHINGTON CITY AS A PLACE FOR STUDY.

WASHINGTON is a National Chautauqua. It is an assembly always in session and ever engaged in disseminating new, useful, and interesting information concerning every feature of public affairs, and all that pertains to the development of the material interests of the country. It is, indeed, a comprehensive Government university, whose many departments are continually open and free to all comers. The city as a whole is a study of our nationality. The Capitol and the department buildings swiftly grow in the minds of the beholder into an embodiment of the powers (and the greatness) of the Nation. The white dome of the Capitol seems to dominate not only the city but the District, and is the central object in all landscapes near or remote in which the city is included. There is an educating power in the daily sight of this Capitol, of the great War, State, and Navy Departments, and in daily acquaintance with the other public buildings. In a short residence one can take a practical course in Government. Here all the coordinate branches regularly perform their work ; and the relations of each to each, and the independent and coordinate work which each per-

forms, soon become familiar matters to the daily observer. The purposes to which the immense buildings are devoted become clear, and set forth the wonderful extent and growth of the Nation's business. They epitomize the country. The countless divisions of the public service and the methods of performing each, unfold themselves before the student of National affairs, and the vast machinery of the Government thus studied can be comprehended in a brief time as in no other way.

It is a city within which to learn of every feature of National enterprise and to become acquainted with the individualities of every section of the land. The diversified agricultural interests of the continent can be rapidly studied in the museum of the department devoted to that subject. In this collection are the best products which the various districts of the country produce, and everything connected with their production and care can be investigated in whatever detail the student may desire. The various textile fabrics, their growth, the methods of their manufacture, their present and prospective value, the fruit and grain productions of every section of the country—in fact, every element which bears upon our wonderful and diversified agricultural development can be examined and studied here, either in general features or in the minutest details. To those who wish to learn the trees and shrubs and decorative plants of the entire country, Washington presents every facility. There are 140 miles of flourishing shade trees in the streets, comprising fifty varieties, both home and foreign, thus placing before the observer the best results in shade-tree culture to be found in any city of the world. In the grounds of the Agricultural Department are gathered specimens of every tree and shrub that grows within the limits of the Union, which, at the same time, can be made to flourish in the latitude of Washington. The many parks are filled in like manner with almost every decorative shrub known to any part of the country, which can be raised at the Capital in the open grounds, or which, by care in the green-houses during the winter, can be made to thrive in these grounds during the summer months. To this immense collection of American flora is added a great variety of foreign trees and shrubs, until there have been gathered in our Capital city as numerous a collection of this kind as can be found anywhere.

The great and growing museums bring not only every department of the country's life into small space before the student, but present prehistoric times in wonderful detail and richness, and also set forth in miniature the characteristics and dress and something of the daily life of every known tribe and nationality of the earth. The museum of the Smithsonian Institution presents the animals of prehistoric times in great variety ; the wonderful bird life of this and other lands is shown by well-nigh countless specimens. The rich collections gathered by Government exploring expeditions in all parts of the globe are here arranged for intelligent study, as are also representations of the best forms of industrial art which the work of modern nations shows. Through the wonderful collections and painted representations

of Indian life in the Smithsonian and the National Museum, the habits, the language, the looks, the dress, and everything illustrating the daily life of American Indians are preserved in the minutest detail for future generations. As a race they are fast disappearing; but their history is here; and all their characteristics exhibited to the eye from the days when white men first began to explore the region beyond the Mississippi, and found there, and carefully observed, the mighty Indian nations of that day. Here is a wide, varied, and deeply interesting field of study. The National Museum might better be called international, since its extensive and well-ordered subdivisions bring the world in its arts and its industries before the student. It is, in and of itself, a great university with countless exhaustive courses of study pertaining to the material interests, the natural philosophy, the science, and the art of all countries. The Army Medical and Surgical Museum leads the world. In it are collected countless specimens setting forth every form of wound and casualty known to camps, campaigns, and battles.

The Fish Commission with its wonderful and most successful work, reveals the wealth of the seas in its food fishes, and enables an observer to have before his eyes the processes by which the lakes and rivers of the continent are being successfully stocked again with many varieties of valuable food. The Patent Office is a comprehensive college of technology. In its models and drawings there is displayed to the eye the growth of industrial art in the Republic. To study it with care is to take a full college course in the subjects which the marvelous exhibitions embrace. The libraries of the Capitol afford far greater facilities than those of any American university. The archives of the Government from its foundation are accessible in the various departmental libraries. Everything that the Government has ever printed can be found readily. The Congressional Library is open to all with its 400,000 volumes, and its immense collection of newspaper files running back to the first journalistic ventures of the country. The libraries of the several departments are not only general in their character, but are also very full in the special subjects which engage the attention of each. In one sense there is a large and rapidly growing attendance on this National university. The company of literary men established here grows rapidly. The libraries attract them, and now swarm with them. As is seen, the opportunities for research in every field are almost boundless.—*H. V. Boynton, in The Chautauquan.*

TALK of life as we may, trample upon it, despise it, reject it, still it is wonderful. There is something about it that bears the impress of greatness. There is something about the reality of the soul more awe inspiring than all the gorgeous splendors of the skies. There is a grandeur in its very repose that bespeaks its kinship with the infinite and the eternal. God made it, and looked upon it with a smile, and dignified it with his own glorious likeness. We cannot trifle with life without incurring guilt and the deepest shame. It is God's rarest and most wonderful gift.—*Selected.*

THE BOY IN THE HARDWARE STORE.

"We have had a good many boys with us from time to time," said Mr. Alden, the senior member of a large hardware establishment in Market street, Philadelphia, "as apprentices, to learn the business. What may surprise you is that we never take country boys, unless they live in the city with some relative who takes care of them and keeps them home at night, for when a country boy comes to the city to live everything is new to him, and he is attracted by every show window and unusual sight. The city boy, who is accustomed to these things, cares little for them, and if he has a good mother he is at home and in bed in due season. And we are very particular about our boys—and before accepting one as an apprentice we must know that he comes of honest and industrious parents.

"But the best boy we ever had is now with us, and a member of the firm. He is the one man in the establishment that we couldn't do without. He was thirteen years old when he was apprenticed to us, and he was with us for eleven years, acting for several years as salesman. When he first came we told him that for a long time his wages would be very small, but that if he proved to be a good boy his salary would be increased at a certain rate every year, and as it turned out, when according to agreement we should have been paying him five hundred dollars a year, we paid him nine hundred, and he never said a word himself about an increase of salary. From the very outset, he showed that he had an interest in the business. He was prompt in the morning and if kept a little overtime at night, it never seemed to make any difference with him. He gradually came to know where everything was to be found, and if information was wanted, it was to this boy, Frank Jones, that every one applied. The entire establishment seemed to be mapped out in his head and everything in it catalogued and numbered. His memory of faces was equally remarkable. He knew the name of every man who came to the store to buy goods, what he bought, and where he came from. I often used to say to him 'Jones, your memory is worth more than a gold mine! How do you manage to remember?'

"'I make it my business to remember,' he would say. 'I know that if I can remember a man and call him by name when he comes into the store, and can ask him how things are going on where he lives, I will be very likely to keep him as a customer.'

"And that was the exact case. He made friends of buyers. He took the same interest in their purchases as he took in the store, and would go to no end of trouble to suit them, and to fulfill to the letter everything he promised.

"Well, affairs went on in this way until he had been with us eleven years, when we concluded to take him into the firm as a partner. We knew that he had no extravagant habits, that he neither used tobacco, nor beer, nor went to the theatre. He continued as at the beginning to board at home, and even when his salary was the very lowest he paid his mother two dollars a week for his board. He was always neatly dressed, and we thought it very prob-

able that he had laid up one or two thousand dollars, as his salary for the last two years had been twelve hundred dollars. So when we made him the offer to become a partner in the business, and suggested that it would be more satisfactory if he could put some money into the firm, he replied:

"If ten thousand dollars will be any object I can put in that much. I have saved out of my salary nine thousand four hundred dollars, and my sister will let me have six hundred."

"I can tell you that I was never more astonished in my life, than when that fellow said he could put in ten thousand dollars, and the most of it his own money. He had never spent a dollar, or twenty-five cents or five cents for an unnecessary thing, and had kept his money in bank where it gathered a small interest. I am a great believer in the Bible, you know, and I always kept two placards in big letters up in the store. On one was this text: '*He that is faithful in that which is least, is faithful also in that which is much;*' and on the other: '*He that is diligent in business, shall stand before kings and not before mean men.*' And Frank Jones' success was the literal fulfillment of those two texts. He had been faithful in the smallest things as in the greater ones, and diligent in business. That kind of a boy always succeeds," concluded Mr. Alden.—*Mary Wager Fisher, in Wide Awake.*

DEATH OF TWO DISTINGUISHED WOMEN —LUCY WEBB HAYES, MARIA MITCHELL.

THE death of Lucy Webb Hayes, the wife of ex-President R. B. Hayes, was briefly noted last week. A notice of her life in an exchange paper says: "Her maiden name was Lucy Ware Webb. She was born on the 28th of Eighth month, 1831, at Chillicothe, Ohio, and was the youngest child and only daughter of Dr. James Webb and Maria Cook. Her grandfather, Judge Isaac Cook, came from Connecticut in 1781. Her father died during the cholera scourge in Lexington, Ky., in 1833. Her mother, Maria Cook Webb, was a woman of great force and character and deep religious convictions. She removed to Delaware, Ohio, to have her sons educated at the Ohio Wesleyan University, and her daughter received the benefit of the same instructions and afterwards was graduated at the Wesleyan Female Seminary at Cincinnati, in 1852. She was married December 30th, 1852, and at the breaking out of the war of the rebellion her family consisted of her mother, her two brothers, and her four little boys. Her husband and both of her brothers immediately entered the army, and from that time until the close of the war her home was a refuge for wounded, sick, and furloughed soldiers, going to or returning from the front. She spent two winters in camp with her husband in Virginia, and after the battle of South Mountain, where he was badly wounded, she hastened East and joined him at Middletown, Maryland, and later spent much time in the hospital near Frederick City. After the close of the war she accompanied her husband to Washington, while he was a member of Congress. During the four years of her life at the White House she was distinguished by a graceful cordiality with

which she received all who came to her. Her well-known earnestness of conviction with regard to the subject of temperance was inherited from her maternal grandfather. The inherent feeling was fostered throughout her school-girl days both during the six years of her education, while her two brothers were college students, and later in the Wesleyan Female Seminary in Cincinnati, where she completed her school course and was graduated. To her deep and inborn conviction it was her nature to be true through all the circumstances of her life. This high loyalty shaped simply and naturally, and, therefore, consistently, through all her years, the ways of her home life, the manner of her hospitalities and her custom in society, while she moved through them all as the wife of a private citizen, and during the twenty years of her husband's public life.

Her success at the White House was marvelous, and was due to a combination of qualities, rare as it is delightful. A striking, brilliant face, a keen mentality, and a gentle heart made up a personality that weighed against political prejudices, and undoubtedly won for her husband at times consideration for what in his administration may have been offensive to persons or to factions of his own party. It was this magnetic personality that conducted her safely, and with honor to herself and the nation, through all the diplomatic and social pitfalls of her high position; a kindly, cordial nature, of an unfeeling sweetness and ready sympathy which transcend all the acquired graces of earth, and grapple friendship with "hooks of steel." The lustre of her public life, the loveliness of her home life and family relations, were the reflex of an uncompromising conscience, a broad charity, and an unquestioning reliance and submission to the law that is more just and wiser than man's.

—

Maria Mitchell, the astronomer, died in Lynn, Mass., on the morning of the 28th ult. She was the daughter of William Mitchell, well known as an astronomer and mathematician, and for many years overseer at Harvard University.

She was born at Nantucket, Mass., August 1st, 1818, and early gave evidence of her mathematical powers, and it is recorded that, at the age of 11 she took the time of a lunar eclipse while her father was at the telescope, and fifty-four years later performed an exactly similar service, but with her pupils in her father's place. She was educated by her father and by Charles Peirce, becoming the latter's assistant in the Nantucket school. Later she was made librarian of the Nantucket Athenaeum, a post which she held for many years. During this time she devoted herself to astronomy and especially to examination of nebulae and the search for comets. Her first comet was discovered October 1, 1847, and she was presented with a gold medal by the King of Denmark and a copper one by the little Italian Republic of San Marino, in honor of the event. She has been employed in the compilation of the American Nautical Almanac from its inception. In 1858 she visited Europe and was received with marked honor, being the guest of Sir John Herschel and Sir George B.

Airy during her stay in England, and visiting Le Verrier, in Paris, and Humboldt, in Berlin. On her return she was presented with a fine telescope by the ladies of America.

In 1865 she was elected Professor of Astronomy at Vassar College, a post which she has filled with honor ever since. In January of last year she tendered her resignation, but the Trustees, instead of accepting it, held it under advisement, and gave her an unlimited leave of absence. In June, however, at her urgent request, her resignation was accepted.

While she taught she continued her studies, devoting herself to the satellites of Jupiter and Saturn and to the study of sun-spots. She has been made LL. D. by Hanover and Columbia, was a member of many of the scientific societies of both this country and Europe, and was a constant contributor to scientific journals.

ENTERTAINING.

"I WOULD like to have a little company once in a while," plaintively remarked a friend, happy in the possession of a small and attractive, though simply furnished house of her own; "but everywhere I go they have such elaborate things to eat, served so beautifully, that I can't make up my mind to ask people to our simple fare and tiny house." The Spectator shook his head. "That's all wrong," he said; "though it does take some courage to offer bread and butter on a crockery plate in exchange for *petit de foie gras* on Dresden china. Nevertheless it can be done, and done successfully, if the bread is good, and the plate is clean, and the spiritual verities sufficiently recognized." "Spiritual verities!" laughed his friend; "what have they to do with lunch or dinner parties?" "Everything," answered the Spectator, almost fiercely, for he was on one of his hobbies—"or they ought to have. Of course, as we have a basis of animal existence upon which we must build, that must be provided for in a seemly manner; but cleanliness, well-cooked if simple food, and good order are sufficient to meet all material demands. The real thing, that for which society exists, is the stimulating and broadening effect of the contact of mind with mind. This is to be obtained over a cup of tea quite as satisfactorily as over terrapin and French cooking. Every one who recognizes this fact, and bravely carries it out in action, does something, in the words of George Eliot, 'to widen the skirts of light and make the struggle with darkness narrower.' Every one who does not recognize it in each event of their social lives does just so much to hinder the coming of the kingdom of God. It is curious to note that many thoughtful and religious persons cherish the conviction that with social occurrences God has nothing to do. This is often true enough, more's the pity, but it should not be so. We ought to feel that a dinner, a tea, or a lunch where we are to meet and talk with our fellow-beings is as helpful, as inspiring, as good in its way as a charitable visit or a class in a mission school. If we carry with us, wherever we go, the atmosphere of pure thoughts and a gracious life; if we are kindly and generous in our judgments, loving good things so enthusiastic-

ally that we have hardly leisure to hate anything, much less anybody; if we dare to be sincere, then we shall give the spiritual verities their true place in the world, and no matter where we are or what we are doing, we shall be among those who make God manifest."—*The Spectator*, in *Christian Union*.

WHAT do you think the beautiful word "wife" comes from? It is the word in which the English and Latin language conquered the French and Greek. I hope the French will some day get a word for it instead of that dreadful "femme." But what do you think it comes from? The great value of the Saxon words is that they mean something. The word wife means "weaver." You must either be housewives or housemoths; remember that. Whenever a true wife comes, home is always around her. The stars may be over her head, the glow-worm in the night-cold grass may be the fire at her foot; but home is where she is; and for a noble woman it stretches far around her, better than houses ceiled with cedar and painted with vermilion, shedding its quiet light far for those who else are homeless. This I believe to be the woman's true place and power.—*John Ruskin*.

—The issue for Sixth month of the magazine *Lend-a-Hand* contains an interesting letter from the Pundita Ramabai telling of her work in India. She gives a pathetic account of one child-widow who finds a refuge from a sad and cruel experience in her school. Referring to her enterprise Ramabai says: "People are criticising me from all parts of India; they prophesy the failure of my attempt; are quite sure that no high-caste widow will come here, 'but the world do move'; even the high-caste women don't seem to be very much afraid of such a monster as this school. Six out of the eight pupils already enrolled are of the Brahman caste, and the rest are of the Vaishya, or the third high-caste." Mrs. Grace R. Moore contributes a sketch of Ramabai entitled "An Unselfish Life." Those who would like to know in detail of the work of the Ramabai Association are invited to address Miss A. P. Granger, Canandaigua, New York.

ST. PAUL said: "I pray you keep your whole soul, body and spirit, until the coming of Christ. Christianity is the only religion which claims the body as well as the mind and spirit. Your body is the temple of the living God. One man gives up everything to gratify the body's desires, another lives in dreams and cravings after the unknowable. Each fasts from that which will most hurt his body, intellect, or soul. Nothing can be attained without fasting or a struggle. You are made in the likeness of God, and why, then, will you disgrace your manhood and drag down another soul with your own? You may try and win your struggle for yourself, but without God you will find it hard to proceed."

"SOME men are spoiled by the years of plodding among dry classic roots and the profound of mathematics. They appear to lose all the juice which God has given them, and go about giving the hungry sheep dry tongue, and wonder that their brethren, not half so learned, double and quadruple them in the best fruits of the ministry."—*Lutheran Observer*.

MUNICIPAL WOMAN SUFFRAGE IN KANSAS.

THE woman suffrage experiment in Kansas came to its crucial test in the recent municipal elections in that State. The women voters prepared for this election with more intelligent care, and they went to the polls in larger numbers than ever before. Their vote made a gain in numbers of at least thirty per cent. The enthusiasm was of a rational sort—not manufactured by a few hot-headed zealots, but the healthy outgrowth of an earnest interest in affairs and faith in the ballot. The women were more successful than on previous occasions in electing the candidates of their choice; they went more generally into the primaries, and their effect on the election was distinctly stronger. They fully sustained their reputation for voting more uncompromisingly than men on the right side of moral questions, and they made evident their determination to compel the election of a better class of men to municipal office. Given men of equally good character for opposing candidates, and the women of each party will earnestly support the candidate of their own party; but let the nominee of their own party be a man of known immoral life, and the nominee of the opposing party a man of clean record, and the women flock to the support of the latter regardless of party fealty; and nominations are made with respect to that fact by all parties. Whether the women vote at every opportunity or not, the fact that they may vote has a salutary effect on elections.

All this is not to say that women voters make no mistakes, nor yet that every woman votes from the purest motives; but it is to say that the majority of the women of the cities of Kansas have voted on the right side of moral questions. They have made mistakes in men and in measures, and repented in time to make partial amends at the next election, but they have not been in the wrong as often as they have been in the right. Some women voted from ignoble motives, but more women voted with high purposes. A bad man, whose name was Wrong, was nominated for mayor by the Republican party; a Republican woman was opposing his election on moral grounds. A henchman of Mr. Wrong visited her, and said: "Your support comes from your daughter, who is a teacher. If you don't support Mr. Wrong, I will use my influence, which you know to be powerful, to prevent your daughter from securing her school for another year." The small, quiet woman rose, and said with gentle dignity, and an air which forbade further discussion: "Your candidate is wrong by nature as well as by name. I will not vote for him. Good morning, sir." Everybody likes to know how things come out, and it is pleasant to add that the twice wrong man was not elected, and the daughter had a better position offered her. On the other hand, a lady who thought it was a scandalous thing for a woman even to register, voted for a man of questionable character because she expected thereby to secure his assistance in getting a post-office position. The compensation was just—she didn't get the place.

When women began to vote, their leadings in this direction betrayed them into error. With their eyes fixed upon the moral fitness of men for city office, they, in many instances, forgot to consider other qualifications. The experiences of that first election taught women that, to be an efficient officer, a man needs not only to be good, but good for something; that along with the best intentions in the world there must go executive ability to prosecute those intentions, and that business sense, as well as moral sense, goes into the make up of an effective city official.

One of the most hopeful features of this experiment in woman suffrage is the evident capacity of the women voters to learn. Their mistakes are prophecies of more thoughtful effort and better-laid plans further on. The disposition to pit the woman vote against the male vote has almost entirely disappeared, and certain male voters have rapidly unlearned their inclination to regard women voters as enemies and usurpers, and have come to look upon them, not as taking men's places, "trying to be men," but as performing their legitimate part in the world's work.

Women vote with considerable independence. Few people, few suffragists expected such independence to develop thus early in the women voters, but the truth is that women do more, and men do less, of their own thinking than is generally supposed. It is safe to say that Kansas women vote no more like their male relatives than Kansas men vote like their male relatives. Wives vote no oftener like their husbands than sons vote like their fathers.

All classes of women are represented at the polls; every type of woman votes. But the large majority of women voters come from the ranks of thoughtful, Christian women. The best women of the city are the ones who lead the way to the polls. The action of the women is recognized as a salutary influence in city government, and is thoroughly respected in the State, and proves that woman is worthy of the full ballot, and will use it for the betterment of the government of the State as she does for the city.—*Laura M. Johas, in Boston Globe*

Some Christians so live that their lives are a credit to the cause of Christ in the impression which they make upon others. Of such persons Paul speaks as "the glory of Christ." (11. Cor. viii: 23.) Christians of this stamp are a moral power among men.—*Independent.*

A loving spirit is its own reward. Its love may not be returned, but its love cannot be lost. The gain of loving and its reward is—in loving.—*Schlesh.*

Be not deceived with first appearances of things
..... give thyself time to be in the right.—
Wm. Penn.

EVERY myth some truth doth hold.

Like the fabled sage of old,

Love, the cunning Alchemist,

Turns our leaden lives to gold.

Mica Williams Brotherton, in the Independent.

NETS AND OTHER GLEANINGS.

—The close relations between the Friends of the advanced Orthodox Yearly Meetings, and members of the other "evangelical" churches, was indicated at the recent session of New England Yearly Meeting, at Portland, Me. "Fraternal greetings" were received from the Maine Conference of the Methodist Episcopal Church; then a delegate appeared from the Maine Congregational conference, Pastor Bayley of the State Street church, Portland; and lastly the Christian salutations of the Baptists were presented by the Rev. Dr. Small. Pastor Bayley made the Friends smile by reading a minute from the old parish records about a day of fasting and prayer, ordered "because the Quakers are increasing," and told them that they couldn't have John G. Whittier to themselves because he belonged to the whole church.—*Exchange*.

—The San Francisco *Evening Post* states that \$1,000,000 has been subscribed for the proposed cable between Honolulu and San Francisco, and that the work of laying the cable will begin within eighteen months.

—Another part of the old city wall by which London was surrounded has just been brought to light in the neighborhood of Ludgate Hill. If not actually of Roman construction, it is largely constructed of Roman materials, and it probably formed part of a bastion or tower at an angle of the city wall.

—"The Government's endeavor to promote the study of medicine by women is proving most successful," says the correspondent of the London *Times* at Calcutta. "At the last examination of students in Calcutta ladies carried off numerous prizes and honors. A native girl, Rajai Mitter, ranked highest in the first M. B. examination, and carried off two prizes; Misses Sykes, Dissent, and Pereira, obtained certificates of honor in surgery; Miss Woods a special certificate of honor in anatomy; Miss Mitchell secured the Viceroy's medal, a certificate of honor in ophthalmic medicine and numerous prizes; Miss Muller took a gold medal in *materia medica* against all competitors, and a special certificate in anatomy; Miss Smyth won a gold medal in dentistry, and Miss Fox a certificate of honor in anatomy."

—"Thibet," says the *Illustrated Christian Weekly*, is now the only known country on earth not open to missions. It has an area of 750,000 square miles, about as large as the United States east of the Mississippi river. The greatest length from east to west is 1,500 miles, and the population is estimated at 8,000,000. It is the stronghold of Buddhism. Lhassa, the capital, is the Rome of the Buddhists, and the Dalai Lama, is the Buddhist pope. He is supreme in both temporal and spiritual things. One monastery has about 5,000 Buddhist priests, and there are about 60,000 in the country.

—The German Methodists of California, at their annual conference, held in Stockton, Cal., discussed the question, "Should women be admitted to the General Conference as Delegates?" The Rev. A. Lemkau distinguished himself by his opposition, declaring, "That such a question should arise is symptom of dangerous disease, and that so many preachers voted for their admission must give every true Methodist preacher the greatest concern." To the question, Should women be admitted? Rev. Mr. Lemkau replied: "No, a thousand times no," and the majority of the conference agreed with him, that if women were admitted they would soon become preachers.—*Woman's Journal*.

—The Boston *Journal* learns that certain engineers in Switzerland are devising an aerial railway by which they propose to connect two of the peaks of Mount Pilatus with

wire rope about 2,000 feet long, and to send tourists from summit to summit in cars running on the wires.

—Hannah J. Bailey, of Winthrop, Me., National Superintendent of the Peace Department of the Woman's Christian Temperance Union, has had "Peace" literature translated and printed in the French language, and has sent thousands of pages to the Paris Exposition at her own expense.

—It is quite common for persons to feel faint and to become pale immediately after drinking a glass of ice-water. They attribute these effects to heat or over-exertion, or to some other cause which has nothing to do with the result, not knowing that they have so weakened the heart as to prevent its sending a due amount of blood to the lungs and brain, and that, had the water been a little colder, life would possibly have been extinguished altogether. Direct experiment with instruments especially devised for the purpose of measuring the force of the heart's pulsations establish the fact that there is no agent of the *materia medica* more powerful with some persons as a depressant of this organ than a large draught of ice-water. Under certain circumstances it acts with all the force and rapidity of prussic acid.—*Dr. Wm. A. Hammond*.

—The oldest pieces of wrought iron now known are probably the sickle blade found by Belzoni under the base of a sphinx in Karnac, near Thebes; the blade found by Colonel Vyse, imbedded in the masonry of the great pyramid; the portion of a cross-cut saw exhumed at Nimrod by Mr. Layard—all of which are now in the British Museum. A wrought bar of Damascus steel was presented by King Porus to Alexander the Great, and the razor steel of China for many centuries surpassed all European steel in temper and durability of edge. The Hindoos appear to have made wrought iron directly from the ore, without passing it through the furnace, from time immemorial, and elaborately wrought masses are still found in India, which date from the early centuries of the Christian era.—*Engineering and Mining Journal*.

—John G. Whittier wrote the following lines to be read at the recent dedication of the Library building of the Gammon Theological School, in Atlanta, Ga. They should be engraved upon the building as the perpetual motto of the institution. They could cut themselves into sandstone; they would outlast the granite which crumbles now:

"Light, Freedom, Truth, be ever these thine own:
Light to see Truth, Freedom to make it known.
Our Work God's Work, our Wills His Will alone."

—It is estimated that considerably over 3,000,000 penny meals have been served at the one-cent coffee-stands in New York.

—While Indian men who have taken farms and separate homes are responding to instruction and becoming industrious and successful farmers, the women are not advancing proportionally, owing to lack of training. There certainly is as much necessity of instructing Indian women in practical household duties as in teaching the men how to farm.—*The Red Man (Carlisle)*.

CURRENT EVENTS.

AN express train on the Boston and Albany Railroad was dethatched just outside the city limit at New Haven, on Saturday. Three persons were killed, and fourteen injured. Among the killed were Mary A. Brigham, an eminent teacher of Brooklyn, N. Y., who had recently accepted her election as President of Mount Holyoke College. (This institution, long known as a Seminary, has recently been incorporated as a College.) It is thought the railroad

accident was caused by either a broken wheel, a broken journal, or the dropping of a brake beam.

THE wife of President Harrison, with her grandchildren, who have been staying for a fortnight at Cape May Point, returned to Washington on the 29th ult., and will leave, soon, for Deer Park, on the Baltimore and Ohio Railroad, where they will remain during the hot months.

SIMON CAMERON, for many years U. S. Senator from Pennsylvania, died on the 26th ult., at his country home in Lancaster county, aged 90 years. His son, J. Donald Cameron, now one of the United States Senators from Pennsylvania, was absent in Scotland, but is on his way home.

THE Commissioners to negotiate with the Sioux Indians for the sale of their Dakota reservation are still engaged in that work. At the Lower Bronte Agency, on the 1st instant, a dispatch says, a number of signatures were obtained. All the old chiefs now know that lands in severalty means the loss of power and prestige; therefore the conservative and non-progressive among them oppose the bill. The young men see that a change in the manner of their lives will be a necessity in the near future.

Two very important decisions were made public by the Supreme Court of Pennsylvania, on the 28th ult., in reference to licensing breweries, wholesale dealers in liquor, and "bottlers." The gist of the decision is that the discretion exercised by the License Judges in Philadelphia, in refusing licenses to persons of bad moral character, even where no remonstrance had been filed, was an error. This greatly impairs the value of the "Brooks Law" so far as wholesalers are concerned, and in Philadelphia many licenses that had been refused will now be issued.

NOTICES.

* * * The Visiting Committee of Abington First-day School Union expects to attend Warmister Friends' meeting on First-day, the 7th of the Seventh month, in order to hold a Conference at the close of the meeting with the members thereof.

CHAS. BOND, Clerk of Committee.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

* * * Acknowledgments. The following additional contributions for the Johnstown sufferers have been received by Friends' Book Association and paid over to Drexel & Co.'s Special Department Monthly Meeting:

Schools, 15th and Race, additional,	\$ 1.00
Friends of Mullica Hill Meeting, N. J.,	69.00
People of Elam, Del.,	8.00
	60.00
Previously Acknowledged,	257.27
Amount,	\$317.27

Friends' Book Association acknowledges receipt of the following contributions to Children's Country Week Association:

M. B.,	\$1.00
S. K. Vandegrift,	3.00
	JOHN COMLY, Supl.

* * * Circular Meetings during Seventh month occur as follows:

- 7. Frankford, Pa., 3 p. m.
- 7. Bradford, Caln Quarter, Pa., 2 p. m.
- 21. East Branch, N. J., 3 p. m.
- 21. Gunpowder, (old house Md., 10 a. m.
- 21. Chestnut Ridge, Pa.
- 21. Roaring Creek, Pa., 2 p. m.

* * * Circular Meeting in Caln Quarter: at Bradford, Seventh month 7, at 2 o'clock p. m.

PUBLISHERS' NOTICES.

* * * AS a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

* * * WE particularly ask that when money is forwarded to renew subscriptions, care be taken to give us the name of the person to whom the paper is now being sent. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a new subscription, please say so, and this will also to help avoid mistakes.

MOTHERS.

ONE mother, once, when her encircling arm
Grew powerless to shield her child from harm,
Wove a frail basket of the trembling reed,
And, strengthening it with loving art, she laid
Him helpless, thus, beside the river's brim,
Trusting that God would keep and care for him.

Since then all mothers, taught by her, have known
God's care is larger, better than their own.
They weave their trembling faith into an ark,
And strengthen with their prayers the tiny bark,
And trust their growing children thus to him
Who saved the lad beside the river's brim. . . .

—*Sunday School Times.*

YEARLY MEETING ADVICES.

SOME advices given forth from time to time by the Yearly Meetings of Friends for New Jersey and Pennsylvania, held alternately at Burlington and Philadelphia.

1694. We are willing and free for the good of all and for the opening of the understanding of youth, to give a hint of some things, that we know by our own experience, that Truth's Testimony is against; as challenging each other to run Races, Wrestling, Laying of Wagers, Pitching Barrs, Drinking to one another, Riding, or going from house to house to drink Rum or other Strong Liquors to excess, to Jest or talk Idly. And it is also unbecoming those who profess the Truth, to go from one Woman to another, and keep company, and sit together; especially in the Night Season, spending their precious time in Idle Discourse, and drawing the Affections one of another, many times when there is no reality in it; as one said in his day: These things make more like Sodom, than Saints, and is not God's moving, therefore we exhort all to be careful in these weighty matters, and that both Males and Females be clear of one before they be concerned with another, and first take the advice of Parents or Guardians; for disobedience to Parents was Death by God's Law, and must needs bring Death now upon the Innocent Life in those that are found in such Practices, and it is also unsafe for any to conclude Marriage wholly between themselves, before they acquaint the Monthly Meeting, it being usual and orderly, to propose their intentions with the consent of Friends.

1694. And it becometh all Parents, Masters, and Mistresses to be good examples in their families, and to watch over them for good. For it is a great grief to many of us, to hear and see Friends' Children as well as others who profess Truth, so frequently to use

the World's language, as You to a single Person, and amongst one another, which is a certain token that they are not so much as brought up in the form of Truth, which is our Duty and ought to be our Care; and also in reproving and bearing testimony in the Wisdom of God, against that, and all other evils, and to bring them up in the way of Truth for that is well pleasing to God, as may be seen concerning Abraham. But it was not so with Old Eli, who had a sort of easy way of reproving his sons, but did not restrain them, when he had power, which brought the wrath of God upon them. (1. Sam. 2d.)

1701. Advised, That all that have the charge of Families be careful to keep a good Dominion and watchful eye over them, that all virtue may be encouraged and Vice suppressed.

1706. Advised, That Friends be careful not to put their children Apprentices to such as are not Friends, whereby they are often led away, through evil examples; but as much as in them lies to bring up their children and all under their care in the fear and nurture of the Lord that none may be blameworthy in a thing so greatly necessary.

1714. Recommended, to the Quarterly and Monthly Meetings that all heads of families respectively take care of their Youth, and particularly caution them, at such times (*i. e.* of public concourse) and restrain such from Fairs as much as may be, who have not urgent business there, and that every Monthly Meeting as they respectively may fall, do some little time before Fairs, or Yearly Meetings, take what measures they can find proper to prevent all disorderly behavior, hard riding or other indecencies at all such times of concourse, or gatherings of the People.

1723. Recommended, That such Friends as are concerned in the affairs of the Church, at Quarterly Monthly, or Particular Meetings, be careful to act therein in the Wisdom of God, whereby they may be exemplary to the young, who may be esteemed members thereof, and attend the same, and as such young persons are found to be qualified with a real sense of Truth on their spirits, and subject therunto, and thereby made capable to come up to a service in their respective meetings. Friends are desired to encourage, and bring them forward, therein, whereby they may be helpful to the Antients. By the foregoing it may be observed how young people ought to be qualified to act in our Meetings for Discipline. It is the advice of this Meeting, that parents and guardians watch over their children, and train them up in the fear of God, and bring them to Meetings of Worship cautioning them to be

have themselves orderly therein, and when they arrive at a capacity of acting in the affairs of the Church, let them be encouraged to come up to the service.

1723. And to such young people as have been educated in the way of Truth, or make profession with us, if they do not continue in well doing, but frequent scandalous, or Tippling Houses, and delight in vain and evil company, and communitation; or shall use gaming, or drink to excess, or behave rudely, or such like enormities, or shall decline our plain way of speech, or imitate the vain, antick modes and customs of the times, the men with their extravagant wigs and hats set up in three corners, and the women in their immodest dresses, and other indecencies mentioned in the Epistle of caution against Pride, etc. It is our advice and earnest desire, that parents and guardians, while such youths are under their tuition, do restrain them, and not indulge, nor maintain them in such pride and extravagance. But if they will not be reformed, then the overseers and other Friends shall use their endeavors to reclaim them, and if they cannot prevail, let the offenders (after dealing and admonition) have notice to be at the next succeeding Monthly Meeting, in order to be further dealt withal, in the Wisdom of Truth according to our Discipline.

1724. Recommended to all parents, and such as may have the care of children, that they so far as in them lies, carefully inspect, and narrowly inquire into the manner of their conversation; that where counsel or reproof be wanting, it may in the Spirit of Love be given. And on this occasion, it was again desired that Parents or Guardians do not make earthly riches a chief view, or cause of consent in marriage.

"HIGH PURPOSES BETTER THAN LEARNING."

Editors INTELLIGENCER AND JOURNAL:

A RECENT sermon by David A. Swing contains so much food for thought that I have made extracts for use in your paper, if acceptable. His assertions seem perhaps more sweeping than we may think just, but in the main it is true, I believe. I wish our young students might read and ponder and learn, that they may better serve their fellows, rather than for self gratification or for the name and fame of it.
Chicago, Sixth month 27. H. A. P.

"Ye shall be children of the Highest."—Luke 6: 35.

Those who once thought that all men would be better when they knew better have generally confessed their error, and have ceased to expect information to be a saviour of the world: so many instances occur in which knowledge is attended by no good result. It would seem in the abstract that each man would obey his information, and that the more learning the nobler the conduct; but whoever observes society or reads history will be compelled to note what an unreliable force information has proven.

A large part of all the historic mischief has been committed by the learned and intellectual nations. If man was a universal truth-seeker more might be

hoped from information. All writers and speakers have asked us to mark how man will journey to the north pole and nearly freeze to death daily, for two or more years, that he may learn something regarding an open polar sea. So will he study electricity or galvanism or geology until his eyes are nearly worn out by night vigils. Many a German professor will seek truth all his life if he is permitted to do it among Greek verbs. What a world of information many a traveler or reader carries. "A walking encyclopædia." But this man stands related to life only as a museum stands related to a great past. But ask this "walking Thesaurus," what is the highest truth regarding the use of liquors, or regarding the use of money, or of morality, or religion, and he will reveal a wonderful calmness over the search after that kind of learning, and instead of burning midnight oil over these problems he is rather glad that the real facts are to be learned by some subsequent generation. His willingness to wait is greater than that of Sir John Franklin, or Humboldt, or Hugh Miller. It thus appears that man is a great truth seeker only when he is permitted to select the field of his research. The love of knowledge would be the ground of wonderful hope if civilization would come from a classification of plants, animals, and rocks. But Christ loved the lily and the sparrow before they had been classified by the seekers of truth. The love of truth may be only a diversion of the mind, an intellectual play not much different from the games of chess or cards.

No one can examine the mind deeply to know why surprise or newness of combination can give such a pleasure. The fact alone is sure. There must be in the kingdom of man, departments of thought and action so high that they differ from the fields of the curious as widely as a philosopher differs from the common gossip.

Truth seeking reveals its magnificence when man is seeking the truths of well-being and conduct. It must have afforded great pleasure to old students when they first affirmed the equality of men, but beyond their pleasure remains the truth, and upon it the fabric of society seems to stand. Man possesses a taste for knowledge which if followed in one path will make him only a gossip; if followed in another it will make him a child of the Most High.

To analyze a violet and not analyze a falsehood or a crime is to make study an absurdity.

Many church assemblies have met and adjourned this year without uttering any truth regarding the duties of Christians as to temperance or monopolies, or the accumulation of wealth, or the treatment of the labor question. As in our South the Church courts assembled for a hundred years without seeking or finding knowledge or wisdom on the slavery question, thus the churches of the North pass over moral questions of great moment with eyes closed. At times the eye opens as though aware that something should be said at least, if not done.

If the liquor question is cited as an example, it is at once seen that the business interests have been growing up in it and through it and around it for a century. The customs of the dinner-table, the power of habit, the revenues which come to the church

from the men who drink wine and pay large pew rents, combine to preempt the mind, and to make man, the truth-seeker, wonderfully willing that ideal truths should be hidden until the next generation. The men who would sit all night to learn whether there is a tide in Lake Michigan, or who would dig in the ground to learn how deep that grub went which came up again as a singing locust, suffers no anxiety regarding the absolute truth about the duties of temperance and benevolence. He sleeps sweetly in the hope that the next generation will be temperate and generous. In the dear olden time, when evening came the mother or the most trusty child covered up a bed of coals with good ashes that in the morning the first one to rise could rake out the hot embers and kindle a roaring fire again. In morals it seems to us always evening. Each heart acts as though its day of duty was closing, and each hand covers up coals with the thought—to-morrow will rake these out and build a great bright fire. When we find a truth we put ashes on it to keep it for the future.

A learned mind, a well read mind, will not be half so happy as an emancipated mind. The intemperate man is not a free soul, but a soul in bitter-slavery.

It is thought that amid all the out-pouring of truth the ambition of the young men is not so high and noble as it was fifty years ago. Has not the revenue of each pursuit intervened to dwarf that pursuit itself. All the great professions are robbed of the best minds by those pursuits which can picture the greatest income upon the canvas of the future. It is almost certain that while knowledge is daily increasing, life is daily losing some part of its once lofty impulse.

It may be accidental that we are not producing any great writers, any great poets, any great lawyers or statesmen or preachers, and remarkable Christians. One may well fear that our age is so studying the surface of the ground, the wealth in it, and the pleasures to be found upon it, that the eyes of the young and the old do not note the matchless beauty of that which is most high. Christ came not to bring science, or art, or universal knowledge, but to bring one element of power, without which all else was vain, namely a lofty moral ambition. The heart was to be full of the thought that man was divine and immortal. The earth was given him not for a prison and then a grave, but to be the arena of ever-growing greatness, kindness, and goodness, as though he was destined at last to ascend to the Most High.

FAITH AND WORKS.¹

I AM aware that I have nothing to present upon this subject that is essentially new; nothing that each of you has not, in one manner or another, thought out for himself. My apology, if one be necessary, must lie in the fact that Truth bears repetition.

Faith and works! Why is it that one of these words calls to mind the other? And why do we associate the ideas for which these words stand? It is custom, perhaps; but there is always a cause behind a custom. Is there a necessary connection

between the two? We naturally think the relation ought to be that of cause and effect. There are some who do not make a connection. Here is a man whose entire creed can be summed up in the promise, "Believe and thou shalt be saved." That is all. He may fold his hands. The work has been done for him.

Another says: "I cannot believe in a Divine Father; I do not believe in His Son whom men profess." But this man keeps the law; he loves his fellow-man; he lives a pure, just life. Who shall cast the first stone? Who shall judge of the relative "saving" merit of faith and works? We do not know the future of the so-called "moral man," nor that of the man who professes only when entering the shadows of death. Why discuss it?

"We can but trust that good shall fall

At last,—far off,—at last to all."

But there are others, and they are indeed the light of the world, whose religious faith finds expression in both word and deed. "Show me thy faith without thy works and I will show thee my faith by my works." This is as much as man can do, this living in accordance with our faith, or our highest convictions. What a strange history this thing we call religious faith has had! In all ages of the world we find man looking up to something higher than himself. Whether this power dwelt in a block of wood or stone, in fire, in the sun, on Olympus' height, or in some far off "hunting ground," it was always a power which could *help men*, and one to whose will their lives must conform. The conception of this power, and the conception of a righteous life steadily grew with man's growth. Imperfect as these changing creeds were, there was always about them some uplifting influence, some germ of truth that helped the world until it was ready for a higher truth. Long before the Christian era, there came a teacher, regarded as their savior by his countrymen, who gave in his code of ethics, the commandment: Do nothing to any man that you do not want done to you. Afterward, in the fullness of time, there came among the Galilean peasants, a teacher who gave a rule we call the Golden, no longer negative, but positive: Do unto other men what you wish them to do to you. This was the Man of Nazareth, whom we call divine. We of to-day believe that the advent of this teacher marks the climax of the growth that was mentioned. He taught truths new to his followers. The God whom you worship is a spirit and must be worshipped in spirit and in truth. He is a Father. He is love. He so loved the world that he sent this teacher, His Son, to tell men of his love, and to give them an example of a perfect life. And to those who would bring their wills into harmony with the Father's will, he brought the promise that they too might be the sons of God. We believe there can be no Faith higher than the one he taught, no religion better than the one he lived—the religion comprehended in love to God and our neighbor. There remains for us no higher work than to extend this Faith,—extend it not by talks like this so much as by showing it in our daily lives with one another. We can best serve our Heavenly Father, and further

¹An essay read at the First-day School Quarterly Conference at Richmond, Indiana.

His kingdom upon earth by serving our brother here. To this end we need constantly to strengthen our wills, and to follow our Guiding Light within, the Christ, the Comforter which abides in thee and me forever.

It occurs to me that our beloved Whittier has expressed the belief that we all hold upon this subject :

"We live by Faith, but Faith is not the slave
Of text or legend. Reason's voice and God's,
Nature's and Duty's never are at odds.
What asks our Father of His children save
Justice and mercy and humility,
A reasonable service of good deeds,
Pure living, tenderness to human needs,
Reverence and trust and prayer for light to see
The Master's foot-prints in our daily ways?
No knotted scourge, nor sacrificial knife,
But the calm beauty of an ordered life,
Whose very breathing is unworded praise!
A life that stands as all true lives have stood
Firm-rooted in the faith that God is good."

From The Friend (Philadelphia).

EARLY MEETING-HOUSES OF FRIENDS.

(Continued from last week.)

THE Bank meeting-house on Front Street was especially designed to be for an afternoon meeting; and although there was some diversity of opinion about the use to be made of it when completed, the Quarterly Meeting decided that was to be its use.

At a monthly meeting held 1st of Second month, 1684. "Agreed and concluded that every first day of the week, that there be two meetings at the public meeting-house in Philadelphia: the morning meeting to begin about the ninth hour, and the afternoon meeting about the third hour, so to continue until otherwise ordered."

14th of Fourth month, 1685. "Some Friends proposing that some place be prepared on the front of Delaware for an afternoon meeting on First-days, the meeting did condescend that the said Friends may prepare a place accordingly."

In the same year a frame building was erected for the purpose on the west side of Front Street, north of Mulberry (Arch) street, situated on an elevated plateau overlooking the river. One writer says the advantages for prospect, and river scenery must have been delightful, there being nothing to obstruct the view.

Robert Turner, in a letter to William Penn, says, "beside the brick meeting-house at the Centre, another one 50 by 38 feet is going on, on the front of the river."

12th of Seventh month, 1685. "Forasmuch as a difference hath arisen, more especially about the meeting-house and burying-ground, to set it open, to the dissatisfaction of many good Friends, which hath caused grief and trouble that there should be any cause of strife among the Lord's people . . . therefore, from this meeting, for the time to come, we have considered the use of the aforesaid meeting-house on the Front Street of Philadelphia, to be for afternoon First-day meetings; and further, as shall be ordered from time to time by the monthly and quarterly meetings. The morrow week is agreed upon as the

beginning of the service at the place (20th of Seventh month, 1685), the meeting to begin between the hours of two and three in the afternoon."

5th of Second month, 1686. "John Goodson, Benjamin Chambers and Thomas Fitzwater are desired to procure a title for the land belonging to the meeting-house on front of Delaware, from Thomas Holme to John Goodson, Benjamin Chambers (and others) in behalf of this meeting, who will consider a way to raise money to pay for the same."

The building above alluded to seems to have been hastily and poorly built, and soon requiring repairs, etc. It was without a cellar, for we find directions given some three years later, to have it "under-pinned and secured."

3d of Third month, 1686. "The weakness and insufficiency of the meeting-house on the front of Delaware for want of supporting and bracing, was spoken of, and considering there was a present necessity for doing something about it, the meeting proposed the strengthening of it, to John Parsons and Thomas Bradford."

5th of Fifth month, 1686. "This meeting proposed that there be a general subscription by Friends belonging to this meeting to pay for the meeting-house ground on Delaware side; likewise for paling it in, and that Thomas Fitzwater (and others) do go from house to house among Friends belonging to said meeting, and receive their contributions for that purpose."

A few months later that committee reported that Friends had subscribed, and they hope to have effects in order to clear the same by next meeting."

It appears that both monthly and quarterly meetings were regularly held in this house for some years, for minutes read "at our Quarterly Meeting, held at the meeting-house upon the front of Delaware, etc., and our Monthly Meeting on Delaware side" and "the front of Delaware, at our usual place," etc., until about 1694, when for some cause they were held at the house of Robert Ewer until 1696.

It seems probable that Friends found it inconvenient to attend the Centre Meeting on First-days, for by a minute of 27th of Eighth month, 1693, "It is agreed that there be one meeting upon each First-day during the winter, or as long as the meeting may see occasion; beginning betwixt ten and eleven in the forenoon, on the front of Delaware. It is desired that henceforth the monthly meeting gather precisely at the eleventh hour, and that Fifth-day meetings may begin at the same hour." And on the 24th of Second month, 1696. "This meeting agrees that there be two meetings on First-days: one at the Centre, and the other at the Bank meeting-house; to begin at the Centre at the ninth hour in the morning, and at the meeting-house on the bank, to begin at the third hour in the afternoon.

After the completion of the Market street meeting house in 1696, and the transfer of the afternoon meetings to that place, the Bank meeting seems to have been abandoned, as will be observed by the following minute of Sixth month, 1698: "Whereas the old Bank meeting-house is much decayed, and in great danger of falling down; this meeting hath

taken the same into consideration, and it is agreed that William Soutterley, Anthony Morris (*et al*) do endeavour to get it sold at a public outcry, sometime between this and the next Monthly Meeting."

In the Eighth month following, they reported, "we have sold the old meeting-house to James Cooper for £16, 5 shillings, and he is to take it off the ground in three months."

In the Eleventh month, "John Austin proposed to this meeting that he had a mind to rent the ground that the old meeting-house stood on; whereupon the meeting hath this day let the said ground for three years, he to pay 30 shillings yearly."

There now seemed to be but little use for the Centre meeting; so that Friends looked forward to its entire abandonment, as we find by a minute of 7th of Tenth month, 1700: "It having been sundry times desired that the Governour might be consulted with about disposing of the Centre meeting-house, this meeting appoints Edward Shippen, Nathan Stanberry, Anthony Morris, and others, to view and appraise the same, and to dispose thereof to the best advantage, for the service of Friends."

31st of Eleventh month, 1700. "The committee to view and value the Centre meeting-house, report they have done it, and find it to be no more than £100, for which sum they have sold it to our Governour; which sale this meeting doth unanimously consent to and confirm."

During the following year Friends were fearful lest they could not accommodate the Friends attending the Yearly Meeting, and again looked toward the Centre meeting-house; and two Friends were "desired to view, and see whether the Centre meeting-house be in condition to entertain a meeting, and if it be, that they endeavor to obtain it of the Governour, if the Quarterly Meeting approve." But it did not appear to be in a suitable condition, as we learn by the Quarterly Meeting's minute of First month 2nd, 1701-2: "Philadelphia Friends laying before this meeting, that it will be much more for the service of Truth, and Friends, to have the Centre Meeting-house, which is ready to fall, taken down and set up in the city, on the lot belonging to Friends on the Front Street, where a meeting-house formerly stood, this meeting gives its concurrence."

At the following Monthly Meeting a subscription was begun "towards moving the Centre Meeting-house and setting it up on the lot in town belonging to Friends. Edward Shippen and John Kusey are desired to agree with the workmen and oversee the work."

"Some Friends being appointed to speak with our Governour William Penn to know if he was willing to resign the Centre Meeting-house to Friends again, he readily consented thereto, judging it might be much to Friends' advantage to have the materials to be used towards building another meeting-house."

(To be continued.)

WHATEVER in love's name is truly done
To free the bound and lift the fallen one
Is done to Christ. Whoso in deed and word
Is not against him labors for our Lord.

—Whittier.

SCRIPTURE LESSON No. 27.

SEVENTH MONTH 21ST, 1859.

SAMUEL THE REFORMER.

GOLDEN TEXT.—"Cease to do evil, learn to do well."—

Isaiah 1: 16, 17.

READ 1 SAMUEL 7 1-12.

The defeat of Israel and the loss of the Ark was a most grievous disaster to that people, who were subjected to the rule of their conquerors, and became their servants. But grave calamities befell the Philistines who charged all that came upon them as the result of having the Ark in their possession. It was moved from one city to another, until none of the people were willing to have it brought within their gates. After seven months' stay in the land, it was sent back to Israel with an offering, and set up, not at Shiloh, but at Kiriath-jearim, where it remained in the custody of Abinadab, a Levite, for twenty years.

This brings us to the date of our present lesson, and to the work of Samuel in restoring the worship of Jehovah. He was now the judge as well as the prophet of Israel. The subjugation of the people to the rule of the Philistines had been complete. They were not allowed to work in metals lest they make weapons of war for themselves. They had well nigh forsaken the God of their fathers. Samuel had gone among them and preached the word of the Lord, exhorting them to put away all the evil and wrong doing of their lives.

Put away the Baalim and the Ashtaroth. These were the supreme male and female deities of Canaanite nations, and the Israelites in their degradation had turned to these gods and to offer sacrifices on their altars, which were erected all over the land.

Gather all Israel to Mizpah. This was one of the three holy cities in which Samuel met the people as he went his round to judge them. The other two were Bethel and Gilgal. The origin of the sanctity of these cities is not known. Here the people were summoned, and in coming hither they were to prepare their hearts and serve God only.

Drew water and poured it out before the Lord. This was done as confirming their vow of consecration to the service of Jehovah, and was one of the usages of the Eastern nations on taking an oath. It symbolized the weakness and the penitence of the people.

They made confession. This was the most important part in the transactions. To acknowledge their sin and humble themselves before Jehovah was what they had not done in this public manner for a whole generation. It was in secret that Samuel had gone among them as their prophet and judge, and the influence he had gained over them prepared the way for this solemn covenant, and their return to the worship of their fathers.

The Philistines were not willing to give up their supremacy without a struggle, and the Israelites were without weapons of war. Samuel trusted that God would come to their help in this extremity, and while he yet prayed and offered sacrifices the deliverance came in a most unexpected manner. The Philistines in their terror fled, and it is recorded they came no more against Israel. This defeat was on the same

spot where the Israelites were defeated twenty years before.

It is a serious task to reform anything after it has once been fashioned. A carpet, a garment, a piece of furniture, or a written essay, after being made or formed, is hard to reform into another shape. Usually this can only be done with a great loss of material, and the result is a much smaller object.

So in our lives, as in material things, when we wish to reform the character, the work is serious and difficult. But the result is very different. Using reformation in its generally accepted meaning, we have as the outcome of a reformation of character, not a loss of parts cut away, but an enlarging, a purifying, and ennobling. In the change everything good has been increased, and what is gone is only evil and destructive.

We have here again, as we have had many times before, an illustration of the difference between material and spiritual things, and the strong encouragement such difference gives us to choose that which is spiritual. Where material things perish, spiritual ones revive. The more grace we use, the more we have; the more love we give, the more we receive; the more bad habits we cast off, the less temptations there are to resist; the more we try to be God's children, the more we become like him.

Let us take this encouragement and strive to cast from us our evil practices, whatever they may be, and in their place take beautiful virtues. By ceasing to do evil, and learning to do well, we shall be constantly striving to reach the high aim given us by Jesus when he said, "Be ye perfect, even as your Father in heaven is perfect."

NOTES ON THE LESSON.

The occurrences of the present lesson took place probably twenty years after the defeat and the subjugation of the Israelites to the Philistine rule, which, as we have seen, was very severe, and calculated to crush out every effort at resistance or revolt. The Ark, containing the sacred relics of the deliverance from Egypt, and the stone tablets upon which the Decalogue was engraved, became a source of great trouble to its captors, and they were very glad to send it back into the territory of the Israelites who had so mourned its loss. Why it was not taken to Shiloh, and restored to its place in the "tent of meeting," is a question that has remained unanswered; the most probable reason is that Shiloh was abandoned because of the demoralization brought upon it by the dissolute sons of Eli. No further mention is made of the tabernacle, or "tent of meeting," until the reign of Solomon, who brought it from Gibeon, and restored the Ark to its place in the sanctuary, which was then set up in the temple at Jerusalem. The town of Kiriath-jearim (city of forests), where the Ark found a temporary home, was in a wooded district on the border of Judea and Benjamin; a modern village, about ten miles west of Jerusalem, has been identified as its site. Sannal took up his residence at Ramah, the home of his parents, and gave himself diligently to the spiritual welfare of his

oppressed people, who seem to have lost all desire for the Divine favor, and given themselves over to the worship of the gods of their conquerors. Samuel was the acknowledged prophet and judge in Israel, and for twenty years labored to bring the nation to a sense of their condition, and to restore the worship of Jehovah among them. There was no high priest, no ritual, and no place set apart for the offering of the annual sacrifices; even the family of Aminidab, in whose custody the ark was kept, was not of the priestly order; we can scarcely conceive of a more deplorable condition for a people who had been so signally favored of Jehovah, and whose past history was so full of hope and promise. Nor can we fail to realize the moral heroism of Samuel, as, year after year, he made his journey through the land, not doubting that Jehovah would incline their hearts to seek after him, and help them to rise out of the degradation into which they had fallen.

And the prophet was rewarded, as are all others who give themselves unreservedly to the true uplifting of the down-trodden and debased. The God in whom he trusted, came to his help. The people were aroused, and a longing arose for a return to their allegiance. It is at this juncture that Samuel summons them to meet him at Mizpah. Here, as their prophet, priest, and judge he exhorts and directs them and makes the offerings which in those early days were believed to be essential to make binding whatever contract or covenant was entered into. We must not compare the usages of the time we are studying with our own in a spirit of condemnation. They were influenced by the prevailing customs of the age, and while to their prophets and leaders a sense of spiritual obligation to God as the head, the invisible ruler of their nation, was permitted far beyond what was known among the other nations, the great mass of the people were very little raised above the rude barbarisms by which they were surrounded. And in the signal deliverance which through the elemental strife that waged with such fury as to bring consternation to their enemies, and change them from advancing foes to fleeing fugitives, let us not be too critical of their interpretation that God sent the storm for their deliverance and the destruction of the Philistines; doubtless the latter were brought to the same conclusion and ceased from thenceforth to make war upon the Israelites.

This idea of Divine interposition in behalf of one part of his human children as against another part, has always prevailed even under our clearer Christian thought of the Ruler of the Universe, who Jesus declared was the Great Father of all, dispensing his bounty to all alike, sending his rain upon the just and the unjust, without favoritism, and extending his mercies without stint, to all the families of man upon the earth.

The general diffusion of knowledge that now prevails and the scientific inquiry that it awakens, enables the intelligent mind to reach more rational conclusions concerning the phenomena of nature, and the physical laws by which they are regulated, than was possible in the earlier ages of the world's history.

THE NAMING OF PENNSYLVANIA.

We hear much said of the truth of history, but half the time the truth of history, when inquired into, is resolved into historic doubts. We presume that there are but few of our readers who do not believe that Pennsylvania was so called by William Penn, and called, too, after himself. Not only are both of these suppositions incorrect, but the origin of the name is really involved in some obscurity. Many years ago, being moved to inquire when and from whom and under what circumstances the State received its name, we consulted "Day's Historical Collections of Pennsylvania," a very good compilation, and found only this simple memorandum: "By the king's order, much against Penn's inclination, the new province was to be called Pennsylvania, in honor of the services of his illustrious father." No particulars were given, and no proof of the statement was cited. We then opened a book of more research, and found the particulars recorded, with the authority given. It was Hazard's "Annals of Pennsylvania," a work which contains, we believe, the only authentic and circumstantial account of the naming of the province on record. And now see how true is history:

Hazard quotes from official records to show that when the privy council of Charles the Second submitted to him the draft of the charter of the province, "there being a blank left for the name, their lordships agree to leave the nomination of it to the king." The day after the charter was granted to Penn, that gentleman writes a letter to a certain Robert Turner, in which he gives the particulars of the naming of his province. The essential parts of that letter we quote *verbatim* as follows:

"Know that after many waitings, watchings, solicitings, and disputes in council, this day my country was confirmed to me under the great seal of England, with large powers and privileges, by the name of Pennsylvania, a name the king would give it in honor of my father. I chose New Wales, being as that a pretty hilly country; but Penn being Welsh for a head, as Penmanmoire, in Wales, and Penrith, in Cumberland, and Penn, in Buckinghamshire, the highest land in England, called this Pennsylvania, which is the *high or head woodlands*; for I proposed, when the secretary, a Welshman, refused to have it called New Wales, *Sylvania*, and they added *Penn* to it, and though I much opposed it, and went to the king to have it struck out and altered, he said it was past, and would take it upon him; nor could twenty guineas move the under secretary to vary the name, for I feared lest it should be looked on as a vanity in me, and not as a respect in the king, as it truly was to my father, whom he often mentions with praise."

At first sight the reader will probably conclude, as we do, that to the king do we owe the *whole* of the name of Pennsylvania, but a second look will convince him that we are indebted to Penn for the "Sylvania" portion of it. So much seems to be clear and unquestionable. Now, from whom came the prefix "Penn." That is not so clear. Penn, having at first stated with much positiveness that "the king would give" to the province "the name of Pennsylvania," and having subsequently stated

that he proposed "Sylvania," we naturally hesitate to receive the remainder of his statement without a careful analysis of its meaning. Failing to obtain the adoption of the name of "New Wales," Penn, as we have seen, proposed "Sylvania," and immediately afterwards remarked that "they added Penn to it." To whom does the term "they" refer? There are three considerations which point to the secretary and his assistant as the persons meant. First, if Penn had meant the king it is to be presumed that he would have said so; second, the term is plural, not singular; third, Penn offered to bribe the under-secretaries to omit the prefix, which he would hardly have done if the king had ordered it to be inserted. So far the evidence points from the king. But Penn straightway proceeds to give evidence on the other side, as follows: "For I feared lest it should be looked on as a vanity in me, and not as a respect in the king, as it truly was, to my father."

And this is the history of the naming of Pennsylvania. That the king's privy council, in submitting to His Majesty the draft of the charter of the province, left to him the selection of a name therefor Hazard expressly states and proves before giving the Turner letter; but that the king exercised the privilege is not proved from that letter, nor from anything else in Hazard's book.

We add a remark or two appropriate to the general subject. Inappropriate and unphonious as would have been the name by which Penn first proposed to call his province, namely, New Wales, there was, nevertheless, ample precedent for its use. The impulse to prefix the word "new" to the names of provinces and towns was a strong one with our colonial forefathers. There were New England, New Netherlands, New Amsterdam, New York, New Jersey, New Sweden, etc. Why not New Wales and New Welshman?

The charter of the province of Pennsylvania was granted to William Penn in consideration of a debt of £16,000 due by the king to his father at the time of his death. Sir William Penn, the father, had been an admiral of distinction in the British navy and a warm personal friend of His Majesty. The son therefore in reality paid nothing out of his own pocket, as we say, for his province, except the sum it cost him to make the celebrated elm-tree treaty.

Penn's fear that the name of Pennsylvania would be attributed to a desire on his part to perpetuate his own name in that of his province has been realized in the popular opinion of the day. But how many pioneers of civilization who build towns and found cities in these latter days—there are no longer any provinces to be chartered!—reflect the modesty of William Penn?—*Bulletin of the Iron and Steel Association, [Philadelphia]*

Each one of us is bound to make the little circle in which he lives better and happier. Each of us is bound to see that out of that small circle the wisest good may flow. Each of us may have fixed in his mind that out of a single household may flow influences that shall stimulate the whole commonwealth and the whole civilized world.—*Dean Stanley*

THE WORD THAT ENDURES.

WE all like to be the possessors of things that are lasting, we like to feel the assurance that we own something which has a permanent value, upon which our calculations for the future may be based; there is a comfort, a satisfaction in knowing that while this or that, upon which we have placed our reliance is liable to failure, there is one thing that is entirely and permanently ours. Things that are transitory and vanishing please for a time; we know they will soon give place to other trivial allurements, and they take no hold upon our lives. It is on the enduring things which in our calm and thoughtful consideration of the here and now, and of what constitutes the real source of comfort and human enjoyment, that we place our best reliance, and in the measure in which this is done do we show our appreciation of what will give the most lasting pleasure.

In this we show our wisdom concerning the things that belong to the present world, but we may have this treasure of wisdom and be nothing profited in the things that make rich towards God.

The apostle Peter, writing to the brethren scattered throughout the nations of the East, when he would illustrate how little there is in earthly things upon which our trust and confidence can be reposed, cites them to the prophet Isaiah who declared,

"All flesh is as grass,

And all the glory thereof is as the flower of grass,

The grass withereth and the flower fadeth,

But the word of the Lord abideth forever."

To which he adds, "and this is the word that we preach." This then is the one thing that endures, and its endurance is based upon the nature of the word. It has God for its authority while the enduring things of this life are in the keeping of man, and depend for their continuance upon his sense of responsibility to his fellow man. In a thousand unforeseen ways he whom we trust may be frustrated in his very best intentions, and left without the power to fulfill his word. Or, he may be wholly unworthy of confidence and have no intention of keeping his word towards us. Not so is it with this enduring word; there is no possible failure in the transactions between the soul of man and its Divine Author;

what he promises is yea and amen forever, it is ourselves who fail and thus come short of the glory of God, as revealed in the Christ.

"The Lord is not slack concerning his promises, as some count slackness," wrote the same honored apostle; one who was among the very first to hear and accept the testimony of the Beloved Son, as it related to the Divine promises and their permanency. And the record of Peter has the greater value, in that it is based upon his own experience of the long-suffering of the Christ which reached after him in pitying love, and when he was made sensible of the magnitude of his sin, and of his need of pardon, gave him the assurance of forgiveness and restoration to Divine favor. And it is this which abideth forever—the enduring word speaking to the inner consciousness, that never fails the soul which accepts its guidance, its leadership. It has been the abiding word since man first recognized a power above and beyond himself, which controlled the visible world, yet was seen and felt only by his own inward perception. Crude and undeveloped as were his first conceptions of this word, he accepted it as fully as his infantile condition permitted, and the "Thus saith the Lord," as he understood it, became his law of action, whether spoken directly to his inward ear, or given to another whom the Divine Being made his mouth-piece. A recent writer on this subject has the following, which we commend to the thoughtful reader: "The childlike confidence of the true, simple-hearted believer rests upon a sure and enduring foundation. He has every reason to 'stand fast in the faith,' not allowing himself to be driven about by every change of wind in doctrinal novelties devised by men. Amidst all the contentions forced upon the true church by the assaults and machinations of error, his mind and heart can rest in the comforting assurance that 'the Word of the Lord' is his everlasting truth; and in spite of the most subtle or violent hostility of error, it shall endure forever."

MARRIAGES.

HOOPEES—CLEAVER.—By approbation of Dunning's Creek Monthly Meeting on the 23d of Fifth month, 1889, in Friends' meeting-house at Fishtown, Pa., Dilwyn Hoopes, son of Albert and Deborah Hoopes, of Deer Creek Monthly Meeting, Maryland, to Lydia J. Cleaver, daughter of Thomas W. and Ruth M. Cleaver, (the latter deceased) of Fishtown, Bedford county, Pa.

THOMPSON—CROFT.—At the residence of the bride's sister, Emerson, O., Fourth-day, Fifth month 22d, 1889, under the care of Short Creek Monthly Meeting of Friends, Anna Croft, to Rezin Thompson, of West Branch, Iowa.

DEATHS.

HOOPEES.—In West Chester, Pa., on Seventh month 3d, 1889, Sarah P. Hoopes, in the 83d year of her age; a member of Birmingham Monthly Meeting.

KNOWLES.—In Wrightstown, Bucks county, Pa., Sixth month 30th, 1889, John Knowles, in the 84th year of his age; a member of Wrightstown Monthly Meeting, and for about forty years previous to the spring of 1888, the care-taker of the meeting-house and graveyard.

McGUIRE.—In Philadelphia, Seventh month 1st, 1889, Henry G. McGuire, in his 65th year.

POWELL.—On Sixth month 17th, 1889, at her residence in Easton, Talbot county, Maryland, after a lingering illness, Sallie A. Powell, in her 65th year; a member of Southern Quarterly Meeting.

Now is the harvest time, the sheaves are ripe, the sickle is keen! stay not the hand that strikes the blow, for it is good that the ripened grain be gathered. When the Reaper with infinite wisdom gathers unto himself the matured of earth and says "Blessed are the pure in heart for they shall see God," how glorious must be that harvest! To that earth-bound spirit imprisoned in a broken and shattered vessel, racked with pain and tortured by disease, death must be an ever-welcomed guest. And so it was with the spirit of one so recently borne across the tide to the realms beyond. To her the messenger was most welcome. Sallie A. Powell, was a life-long member of Third Haven Monthly Meeting of Friends held at Easton, Md., being born and raised within the limits of that meeting. Stricken with disease in the early part of the year 1858, she became a great sufferer until the close of her life on the 17th of Sixth month, 1889, aged nearly 88 years. A most devoted mother and Christiana woman, ever living up to the highest sense of duty to all with whom she was associated; beloved for those qualities which adorn the meek and gentle, she wings her flight to a higher sphere where pain and sorrow enter not, but where eternal rest and peace abide with weary souls from earth set free.

W. M. T.

SMITH.—In Upper Makefield, Bucks county, Pa., Sixth month 29th, 1889, Hannah F. Smith, in the 70th year of her age. She was the daughter of the late Jonathan and Jane Fell, of Buckingham, Pa., and widow of the late Thomas Story Smith. She was a valued member and elder of Wrightstown Monthly Meeting.

Hers was a life not devoid of trials, but her implicit faith in the love of her Heavenly Father enabled her to bear these with true Christian fortitude, and to set an example worthy of imitation. She was a true "mother in Israel."

THOMAS P. KING.

On the 19th of Sixth month, 1870, a little band met at Penn Hill Meeting-house [Lancaster Co., Pa.], for the purpose of organizing a First-day School, there being thirty-four children and a few grown people present. This meeting was the outcome of a deep concern felt for years by my lamented father, Thomas P. King, who departed this life 10th of Sixth month, 1889; he feared the young of our Society were growing up in ignorance of the Bible and Friends' principles. The school prospered and at the close there were forty-five enrolled with an average attendance of twenty-nine. He was untiring in his energy and perseverance for the cause, for truly with him it was a work of self-sacrifice, for very few of our friends aided, and some did not even approve of the First-day School, thinking the children disturbed the quiet of our meetings; they were not far-sighted enough to see that if we did not have patience and love to train the children there would be no one to take up our standard when we passed from earth; other Friends approved of the work, but could not find time to be active workers.

He not only established the school, but for a period of twelve consecutive years he was its Superintendent; then for two years he was relieved of this office, but still continued his interest in it, attending when health permitted, seldom allowing anything to prevent his being with the children at 9 a. m. on First-day mornings. In 1881 he was again chosen Superintendent and acted as such perhaps half of the year 1885, for I find he made out the minutes as long as Eighth month 9th, stating in one place, "Sometimes Neal Hambleton was Superintendent and sometimes myself."

The hand of disease was heavy upon him, but he continued to attend and take part in the exercises until he was able to do so no more. He attended and was a member of the adult class in 1887, and perhaps in 1888, but not after Ninth month, 1888. He loved the Society, he loved the children, but he could be with them no more.

He strove in his teachings to inculcate a love for the Supreme Being, for virtue, temperance, peace, non-resistance; he was opposed to oppression and every form of wrong-doing. He was firm in the right, making no league with wrong or wrong-doers. Surely the *whole* of the good man's creed could be applied to him, for he was

"Faithfully faithful to every trust,
Honestly honest in every deed,
Righteously righteous and justly just."

He was very particular as far as lay in his power to have the children behave well in meeting and to have them *all* in their seats punctually at the meeting hour, and often said he was aided greatly by Alice Fite, a teacher now deceased.

I remember once when the subject of oppression was before the school, he spoke of one form of oppression—condemning the custom of employers not paying employes when the work was done and the money due, thus necessitating mechanics to sometimes spend more time in collecting their money than they were in earning it. He was very careful to pay as soon as the work was done.

He was a firm believer in non-resistance, and said one should never make any provision for what one would do when the hour of trial came, for he believed a way would be found, a deliverer would be sent, the Supreme Being who rules the Universe, who does not let a sparrow fall to the ground without his notice, would be there to protect; and often spoke of instances where there seemed no way but to resist. The last book he presented the First-day school, entitled "Golden Gleanings," contains many such instances of the interposition of Divine Providence in time of supreme danger. Once he was put to the test in a strange city, during the time of the Civil War. He was accosted by a drunken soldier who pointed a deadly weapon at his side, he being in a very critical position for some time, when a deliverer came,—a stranger,—but he always looked upon him as being sent for the purpose.

On the 9th of Seventh month, 1876, he read at the opening of the school the 118th Psalm, remarking that he felt it was particularly appropriate that morning as it rendered praises to God to whom it was due for the bountiful harvest which had just been gathered, and for many other blessings, not the least of which was the privilege of coming there to meeting and First-day School. His mind was clear, though his body was racked with pain. Had he lived until the 19th of Seventh month he would have been 65 years old.

I have written this by request, and could say more, but remembering it is a daughter writes of the father she loved, I refrain.

L. A. K.

Sixth month 25.

NEWS OF FRIENDS.

ROARING CREEK MONTHLY MEETING.

HAVING been informed that we could reach Catawissa, where the monthly meeting is held four times in the year, by stage and railroad, and probably by a few minutes after 11 o'clock, the hour for meeting, S. Sharp, of Camden, and George F. Haines, of Haddonfield, and myself, took stage at Millville, to sit with Friends there. The road follows the valley of Little Fishing Creek, crossing the stream several times. In some places the mountains closely enclose the stream, rising almost perpendicularly, possibly 500 feet, closely covered by pine and hemlock forest. It is ten miles to Bloomsburg, the seat of Columbia county, a pleasant town of some 5,000 inhabitants. We waited here half an hour, then took omnibus two miles to Rupert Station. The time had been changed several minutes, and the cars were behind, so we did not reach Catawissa (three miles from Rupert), any too early. By inquiry we found the meeting-house, probably a century old, built of logs, and we surprised the Friends gathered, who had no thought of strangers coming in. A precious feeling prevailed, and was ample reward, being like the small coin of gold, not requiring a large bulk to compensate for labor. Only about a dozen members were present. Their business was transacted in joint session, after which the meeting for minister and elders was held. If I understand correctly, only one member, a woman over eighty, now resides at this place, and for her attendance the meeting meets quarterly here. On our return to Millville, we had the company of Perry John, Ruthanna Kester, and others, being also joined at Bloomsburg by Isaac Hicks, who came by the Delaware, Lackawanna & Western Railroad. A Friend, Elwood Heacock, resides in Bloom, the short name applied to it.

The Half Year's Meeting having been described by L. H. P., I will not add to her narrative, but proceed to Seventh-day, when about 12 o'clock Thomas Wilson kindly called with conveyance for Ruthanna Kester, her sister, and myself. At Bloomsburg we were greeted by an elderly man, who joyfully exclaimed, "We found it! We've got it!" and held up my valise, which had been overlooked on our return on Third-day, occasioning some inconvenience and apprehension lest it had been lost entirely. Taking Perry John into company we proceeded by way of Catawissa, through a beautiful valley country, having Catawissa Mountain on the south and east, and the Little Mountain on the south, to the residence of R. A. Kester, about twenty-five miles southward of Millville. Her farm is at the foot of that stupendous pile of stone and earth called Little Mountain, which rises several hundred feet, in many places very abruptly, and extends some fifteen miles in nearly direct line to the pass called Bear Gap, the course being a little south of west.

On First-day, at 10 o'clock, the married children of this friend, (R. A. K.) her brother, and some few more, came in, and under a living sense of the abounding love of the Great Shepherd, we were comforted in realizing that where the few are gath-

ered the Head of the church may be as truly honored as in the crowded assembly.

This precious friend, who is a "widow indeed," has witnessed "that in this world" there are many tribulations allotted. A son of much promise as a stay in the later years of earthly pilgrimage suffered for years from disease, and is permanently incapacitated for manual labor, but manifests talent in working toys in wood. A single daughter and a motherless granddaughter complete the family of four.

In the afternoon T. Wilson took P. John, T. Elwood Kester, and myself to the Roaring Creek Meeting-house, situated about six miles southeast of Catawissa. A carpenter's mark with chalk records 1796 as the date of its erection. A meeting has been appointed here at 2 o'clock on the First-day succeeding each monthly meeting, and at this time, in some twenty minutes after the hour, the house was pretty well filled. A woman Friend of more than three score years (I would think) whose name I did not retain, and who had suffered from rheumatism so as not to get out for three years, got to the door and crawled into the house, on her knees and hands. Being helped, she walked with crutches to a seat. The sight awakened lively feelings of sympathy, and quickened the sense of religious duty. A number of mothers with their dear and interesting charges were present. The Great Crowner of every rightly gathered assembly was not wanting in solemnizing our hearts together, so on parting we could truly desire to have many more such meetings. Thomas Wilson now returned homeward, and I accompanied Perry John and sons nine miles westerly to his residence near Bear Gap. The Meeting-house called Shamokin is three or four miles north of the village at the Gap, and six or eight from the town of Shamokin. Bear Gap is a narrow break in the mountain, affording a passway for a road to the town of Shamokin some three or more miles distant and to the coal district. Coal is sold to the farmers at about two dollars a ton. We reached the house of this humble-spirited Friend near sunset, and were interested in his four motherless granddaughters. In viewing the surroundings of this Friend, now advanced in life with little of former vigor physically, I was introduced into serious consideration of our Answers to the second Query, as presented to our Annual Meeting. Did love truly abound as becomes the followers of him who calls us to love our neighbors *as ourselves*; would a brother whose life has borne evidence of attachment to the Truths we profess, be left to want the comforts, while we enjoy even the profusions of life?

On Second-day morning, we left them early, and being fortunate in meeting the express train at Harrisburg, arrived at 2.30, in Philadelphia.

R. HATTON.

OUTWARD trials are suffered to come and prove us, whether they will dislocate our minds from that which ought to be their centre.—*Richard Shackleton.*

TRUE generosity remembers benefits received, and forgets those it has conferred.—*Selected.*

COMMUNICATIONS.

EDITORS INTELLIGENCER AND JOURNAL.

THERE is lamentation amongst the members of the Society of Friends all over the world because of the defeat of their great and cherished testimony in the late struggle in Pennsylvania.

As our fathers were repeatedly thrown back in their struggle for emancipation, so we may expect to be, in our struggle for Prohibition.

As the snowflake falls gently upon the mountain, beautifying the verdure and the fields, so will the little ballots of the people of Pennsylvania flutter quietly to their place at the bottom of the ballot-box. The number will grow from year to year, and the liberties and homes of the American people will be purified and preserved. Then will our indispensable testimony shine forth to the world.

I have clipped the following from the *Baltimore American* of a day or two ago, and offer it to our Friends of Philadelphia and others who have come out of the late fight for high license.

HENRY JANNEY.

Baltimore, Seventh month 6.

EXTRACT FROM "BALTIMORE AMERICAN"

PHILADELPHIA, July 2.—The License Court reconvened to-day and granted wholesale bottlers' and brewers' licenses to all applicants refused at the regular session of the court. In explanation the judges filed a statement, in which they say:

"Some of these applicants were of notoriously bad character, among them being convicts and common drunkards, who for years had led the most abandoned lives. Others had violated the laws regulating the sale of liquors while holding licenses in 1888, and maintained places of resort that were frequented by degraded women, habitual drunkards, and discharged inmates of the house of correction. Nevertheless as no remonstrances raising an 'issue' as to the moral character or habits of sobriety of these applicants were filed, it becomes our duty, under the ruling of the Supreme Court, to grant all the licenses applied for."

PERSONAL NOTES.

A PRIVATE letter from Canada says: "On last First-day, (Sixth month 30), we had the great pleasure of seeing and hearing Darlington Hoopes at Yarmouth. His face and voice seemed much as they were twenty years ago."

—Mallon K. Paist, and his wife, Harriet W. Paist, well known Friends of Philadelphia, intend leaving next week on a tour to extend as far as Alaska. They will go by way of the Northern Pacific railroad, to Tacoma, (stopping on the way to see the Yellowstone Park), and there take steamer for Sitka, about the 12th of next month. They wish to be in San Francisco by the 11th of Ninth month, as the National Convention of Charitable and Penal Institutions, to which Harriet is a delegate, will meet in that city at that time, and they then purpose visiting Southern California for a few weeks.

—Our friend Aaron B. Ivins, of Philadelphia, is now absent from the city, intending to be at Bar Harbor, Maine, until Ninth month. As many persons interested in educational work, etc., frequently

desire to consult with him, when at home, the information of his absence may be of service to them.

—John Knowles, of Wrightstown, whose death is announced elsewhere in this issue, had, as stated, served for about forty years as caretaker of the meeting house and graveyard. In that long period he had attended to the interment of the remains of more than 1,400 persons. The old ground is now nearly occupied and the Monthly Meeting has lately secured by purchase an addition of about three acres adjoining, which will be enclosed and used for burials.

THE GUILD OF WORKING WOMEN.

We have received copies of several issues of *The Working Women's Journal*, a small, but sprightly and readable monthly paper, now in its second year. It is issued as the organ of the New Century Guild of Working Women, which is an outgrowth of the New Century Club, and has its headquarters at 1132 Girard Street, Philadelphia, with Eliza S. Turner, president. *The Journal* gives prominence to all the efforts made by the Guild in behalf of working women. Every branch of industrial art in which women have found employment, is represented, and from the examination we have been able to give to the paper, we believe its influence will be healthful and uplifting to the class it endeavors to aid, and indeed to all who are interested in the progress of the working people, and especially the opening of new fields of remunerative labor for women. It is issued every four weeks, except during the summer, and the subscription price is 25 cents a year.

In an article in a recent number, urging the establishment of a "Trades' College for Women," E. S. Turner says:

"In this city about 100,000 women are compelled to earn their own bread; how are they to earn it? They cannot all be house servants, or stand behind counters. Is there any apprenticeship for them? Is there any high road to dressmaking, cooking, millinery or other trades of women? Besides the thousands whose husbands are the sufficient bread winners, there are many thousands who must feed themselves or die. Without knowledge of some trade or profession, they must attempt to do it by unskilled labor; unskilled labor does not, as a rule, pay enough to keep the soul in the body. When poor women go hungry, they too, like men, may become paupers or criminals. And are hordes of women, living outside the barriers of self-respect, less dangerous to themselves or to the whole community than men?"

"But what, says a citizen, opening his eyes a little, are we to do about it? What is it you women want?"

"We want you to realize that every one, of either sex, who is forced to labor, ought to have a chance to learn how; that there is at present no place in this city where a woman of little or no means can learn a trade, and that this is not an individual, but a general calamity. We want citizens who recognize that their wealth is in part a stewardship, and are looking out for ways to fulfill it, to know that the dream

of the New Century Guild of Working Women is to establish, in connection with their other educational work, what might be called a Trades' College, not for training in general manual dexterity, but for the thorough teaching of specific trades. The Guild has a board of managers known to be competent to such an undertaking, but our present house is crowded with our present enterprises, and such a school would mean more money for appliances and technical instruction, and more room for classes. In short, we should have a building from which we could not be dislodged, and which could be fitted up to suit our special needs.

"A thing so obviously needed is sure to come, but we, who daily see the need, are ready for it now."

For Friends' Intelligencer and Journal.

RAMBLES IN PIKE COUNTY, PA.

TWENTY miles above the Delaware Water Gap, in Pike county, is a land of cascades. The first of these is Bushkill, then come the Sawkill, and the Raymondskill, Dingman's Creek, Decker's Creek, and Adams's Creek, all indulge this rush of waters to a greater or less extent, with a vast amount of picturesque, sometimes rising to grandeur. One comes upon these cascades with startling suddenness; the lower mile or two of the course of all these streams is peaceful, but as we ascend, the hills grow higher and steeper upon each side of the river, which begins to rush over boulders and push its way through thickets, and by and by the sound of falling waters is heard. A struggle with rhododendrons and kalmias, with brambles and trailing vines, varied by sundry leaps from rock to rock, and we are at the foot of the cascade. Some of the brooks take their leap at once, prefaced perhaps by a rapid or two, but others prefer to descend easily by a succession of huge, slippery steps, each differing from its neighbor in height, in width, in the faces of the rocks which surround it, and even in the character of the vegetation which clothes its sides. The big Bushkill is the first considerable affluent receiver from the east by the Delaware north of the Lehigh; it is formed by the union of three creeks one of which, the little Bushkill, falls into it within a mile of the Delaware, two or three miles further up its course the Bushkill receives the waters of Saw Creek. The latter rolls over a ladder of six cascades, the uppermost consisting of three falls of some fifteen feet each, while the third and fourth are near each other and are the highest of the group. The four upper falls are close together and are readily accessible, but the two lower, separated from them by half a mile or so of deep ravine; the descent of the six falls is much greater than that made by the little Bushkill, the much visited cascades of which consist of two leaps in close proximity to each other, situated about two miles from the village of Bushkill. Frowning, castellated cliffs fringe the ravine around the upper of these last named falls, and from their summits the scene is most striking, even more so than that which may be gained by descending to the base of the falls and looking upward at the height, down which, as report says, once fell a too venturesome girl, breaking ribs

and limbs, yet surviving through the aid of a friendly tree which stopped her descent.

Among the least visited of the falls in the neighborhood of Bushkill, are those of Band Run, yet for that reason they are among the most interesting—here are no formal walks, no fences, nothing to mar nature, yet for the comfort of pedestrians there are no places where life or limb need be risked. Band Run takes its origin, like the Mississippi, in a couple of lakes, one beyond the other. It is true, these lakes are nothing but ponds, nevertheless they serve to keep some water in Band Run during a season which has dried up many streams with a longer course. The road leaves the little Bushkill to the right, ascending through woods of scrub oaks, chestnut, etc., with an undergrowth of sweet fern, buckleberries, and other shrubs, to the summit of a lofty hill, whence an extensive view of the Delaware valley and the opposite hills of New Jersey, can be obtained.

A little further on, the path becomes a trail leading to the creek, which here glides onward; further on the trail enters the woods, and the sound of water tempts us to seek the depths of the commencing ravine and to descend the face of the first fall into a grotto overhung by rocks clothed in ferns and mosses. Soon the brook makes a second and greater descent among rocks of fantastic form. The ravine is here bent upon itself, and the waters dive under an overhanging cliff, the remnant of a ledge over which they leaped in bygone ages, when this rock met across the ravine and the water ran over the edge. We descend a rocky stair, and with the help of a broken hemlock reach the pool below, and see the course taken by the tortuous waters. At the foot of this fall, the most showy of all the vegetable beauties are the rhododendrons, which make no show upon the lone hills around Philadelphia, but in the mountains clothe the banks of every stream with its great white or pale rosy heads of flowers; the kalmia, or mountain laurel, and the rhododendron, keep up a succession of lovely blossoms from April to July, aided by the andromedas and the sheep's laurel, and accompanied by the white bells of the creeping wintergreens, which are abundant in wet and bowery spots. These streams flow into the Delaware from the frequent cascades, for more than twenty miles along the mountain, until within a few miles of Port Jervis, New York. At that place we visited the Laurel Grove Cemetery, which is located on a peninsula, on which stands the monument erected as the corner-stone of the three states, New York, New Jersey, and Pennsylvania. The monument first set up is on a rock at the water's edge, where the Delaware and Neversink rivers come together, but being subject to overflow at times, a new monument was erected in 1882, on a higher point of rocks. It is six feet high, one foot thick, and two feet broad, and the base is three feet by two wide, and is beautifully engraved, and the site is well chosen.

T. H.

A DEVOUT Arab woman, who was asked how she bore so much pain, replied: "They who look on God's face do not feel his hand."

REST.

My feet are wearied, and my hands are tied,
My soul oppressed—
And I desire, what I have long desired—
Rest—only rest.

'Tis hard to toil, when toil is almost vain,
In barren ways;
'Tis hard to sow, and never garner grain,
In harvest days.

The burden of my days is hard to bear,
But God knows best;
And I have prayed, but vain has been my prayer,
For rest—sweet rest.

'Tis hard to plant in spring and never reap
The autumn yield;
'Tis hard to till, and when 'tis tilled to weep
O'er fruitless field.

And so I cry a weak and human cry,
So heart oppressed;
And so I sigh a weak and human sigh,
For rest—for rest.

My way has wound across the desert years,
And cares infest
My path, and through the flowing of hot tears,
I pine for rest.

'Twas always so; when but a child I laid
On mother's breast
My wearied little head; e'en then I prayed,
And now, for rest.

And I am restless still; 'twill soon be o'er;
For, down the west
Life's sun is setting, and I see the shore
Where I shall rest.

—Father Ryan.

WITH NATURE.

I LOVE at quiet eventide
Far from the city's noise to stray,
To climb the brow of rocky hill,
And watch the light of parting day,

To see reflected on the clouds
In red and gold its colors glow,
Or watch the lengthening shadows fall
On field and valley far below;

To hear the quail's low, plaintive call
At intervals the stillness break,
Or sprightly sparrows' cheerful note,
That memory's pleasing fancies wake.

Faint rises on the tranquil air
The tardy insects' droning song,
Which still amid the closing flowers
The busy work of day prolong.

O'er swamp and meadow stretching far,
The evening shadows stealthy creep,
Till all the darkening landscape round
Is wrapt at length in slumber deep.

I seem more near to Nature's heart,
And feel that I her secrets share;
The noisy world forgotten is,
With all its tumults, toil, and care.

Another, better life I live,
A life to worldly minds unknown,
Which Nature to her votaries gives,
Enjoyed and prized by them alone.

—Jones V'ery.

THEORY AND PRACTICE.

SIR Isaac Newton had two cats,
A mother and her kitten,
And in connection with the three
There's been a story written,
And handed down to us as true,—
We give it in a rhyme to you.

These cats, unlike most of their kind,
Demanded much attention;
Where one would go the other would
(Which we need scarcely mention);
What troubled good Sir Isaac sore
Was so much scratching at his door.

When he'd sit down to meditate
On one theme or another,
His feline pets were sure to come
And put him to the bother
Of getting up to let them in,
And oft he'd lose his subject clean.

A happy thought at last arrived
That would adjust the matter,
'Twould please the cat, the kitten too
(Especially the latter),
He made two holes, one large, one small,
Through which his favorites might crawl.

And now the great philosopher,
Intent on observation,
Was to behold his wondrous plan
Put into operation;
Through the large hole the old cat came,
The kitten following through the same.

—Good Housekeeping.

EXCRESCENCES ON THE ROOTS OF WATER PLANTS.

In the *Proceedings* of the Academy of Natural Sciences of Philadelphia for Fourth month is an interesting communication from Prof. W. P. Wilson, giving the result of studies among the trees and plants growing in swampy places around Lake Butler, South Florida. The bald cypress, *Taxodium distichum* (Richard), is described as producing excrescences on the roots, called knees. These knees vary in size, in height, and in number in accordance with the depth of water or amount of moisture existing under the trees. When the water for a part of the year is deep the knees grow correspondingly high. If the ground is simply overflowed and kept saturated with moisture most of the season these knees grow low but multiply themselves in great numbers. Fifty to one hundred may be produced from the root-system of one tree. If the overflow is considerable in depth the knees may exceed eight or ten feet in height. They are strictly root productions, as will be shown later both by their development and anatomy.

The development of these knees is by two very distinct methods.

First, if the seed germinates and the plant begins

its growth in a very wet place, many of the small roots which are only six or eight inches below the soil grow upwards towards the surface at slightly varying angles of from 20° to 85°. Upon reaching the surface these same roots turn and go down into the soil at about the same angle. Some of them may, if the soil is very wet, or if under the water for a part of the season, repeat this method of growth several times in the course of six or eight feet. At each point where the root comes to the surface begins later the development on its upper side of the so-called "knees."

A remarkably rapid increase of cells on one side takes place at this point, which results in the constant elongation of the club-shaped body, the knee.

The second method of knee formation takes place on old roots either horizontally or otherwise disposed to the surface. If the tree requires from inundation or other causes more aerating surface than can be readily or rapidly produced by young and growing roots, then either the whole upper surface of the root in question may become more active and rapid in its growth or the places of growth may be limited to certain definite points.

In the first case the whole root becomes widened, ribbon-like and corrugated in general appearance. In the second, separate and distinct knees are formed. All knees cannot, however, be explained from these two simple methods. The cypress roots seem to have a very great tendency toward natural grafting. Whenever two roots cross each other, and later, through increase in diameter, press upon each other, they develop a natural union. In many cases when the ascending and descending part of the root which forms the basis of a knee approach parallelism they become later, through increasing diameter, wholly consolidated in the formation of the knee. It may happen that several knees begin their development within a few inches of each other. In such cases they may later become consolidated into one. The external parts of the knee above the soil in such cases may give little or no evidence of such consolidation. In the first mentioned method of knee formation the root passing from the tree to the "knee" is always less in diameter than the one leaving the knee. On the root descending from the forming knee there generally develops a cluster of roots, these often become consolidated later with the "knee." Roots which branch from the ascending part of the forming "knee" develop new "knees."

The location and occurrence of the knees indicate beyond a doubt that they are for purposes of aerating the plant. Given conditions of sufficient dryness and plants of *Taxodium distichum* may be produced without a sign of these excrescences. The same or other plants may be placed under conditions of extreme moisture when after a time the "knees" will appear on both old and newly formed roots. The *Taxodium* seems to prefer swamps and inundated locations, and in such places always produces the "knees." When cultivated in gardens and parks in dryer soils, where it readily grows, it never produces them.

The possibility of causing the development of

these aerating organs of the cypress or, by changed conditions, of making them fail to appear at all, naturally leads one to examine other plants which from choice inhabit similar locations. There are numbers of trees and smaller plants which when flooded part of the season or grown in too wet soil will either form knees something like the cypress or send their roots up into the air above the water.

One of the most striking cases in which the roots are sent up above the surface of the soil and water may be found in one of the sour gums, the Water Tupelo, *Nyssa aquatica* L., of the Southern states. This tree sometimes grows in water holes associated with no other tree, thus resembling a Cypress head. In such cases the base of each tree was enlarged to double the diameter five to eight feet from the ground. Around the base of each tree, extending six or eight inches above the high water line, was a compact mass of roots, each one growing vertically up out of the water and after making a sharp bend growing down parallel with the upright part into the water again. There were sometimes dozens of these roots surrounding one tree closely appressed to its base. These roots varied in size from that of the finger to several inches in diameter.

The genus, *Sonneratia*, and also *Avicennia* L. both furnish interesting trees which, growing in soils or ooze always saturated with water, have contrived to send up vertical roots for purposes of aëration.

Avicennia nitida grows in our own tropics and along the southern shores of Florida. These vertical roots, which extend up above the soil from 6 to 10 inches are always in the air at low tide. They are covered with numerous lenticells, through which the air enters the plant when they are flooded.

There is no doubt but that all swamp plants and others growing between tide waters which are flooded during a part of the day have provided themselves in one way or another with means for root aëration.

MANUAL TRAINING IN SCHOOLS.

At the meeting, in Brooklyn, N. Y., last week, of the New York (State) Teachers' Association, Prof. McAlister, superintendent of the Public Schools of Philadelphia, spoke on manual training. From a report in the New York Times we extract as follows:

Prof. McAlister was listened to with marked attention. Form, color, and language, he said were fundamental studies. Manual training was a most important branch of education, and Dr. Leipziger was right when he said education was valuable only when it was practical. Each of the three branches—the kindergarten, drawing, and manual training—claimed the distinction for itself of being the most important branch of the reform policy of education. By these claims educators had been somewhat misled and disconcerted. The fact was they were so intimately related that they were inseparable, and, although it was true that their incorporation into the elementary school system of the country would be a revolutionary proceeding, it was bound to come. The progress of the three branches has not been rapid until within the last few years, in which the whole education of the whole child has come to be demanded.

The physical training and development of the physical as well as, and in harmony with, the intellectual training of the child was demanded by every humane, patriotic, and moral consideration. In this all these three things—the kindergarten, drawing, and manual training—agreed. The education of the human being must begin, not end, in the development of the perceptive faculties. The spirit of man is related to all the universe around him. His functions are to come into harmonious relationship with his environment. And here the kindergarten furnishes him his first elementary steps in education, dealing primarily with the perceptive faculty.

All elements of education should also recognize the self-activity of the child. Formerly the energy of the school was applied to the suppression of the activities of the child; this hadn't quite disappeared yet. But the best accepted thought now demanded the training of the child's energies in proper channels. This was the work of the kindergarten, drawing, and manual training. It was not the business of manual training to make blacksmiths and carpenters, but to make men and women of broad and cultured intellect and strong constitutions, developed evenly in every natural faculty.

There were two transcending problems before the people to day. One of them was the education of the masses, and the other was the organization of the working masses. When every schoolboy was trained as well and systematically to principles of manual labor as he is now to principles of thought, the whole race would be a working mass, every man would be in industrial sympathy with every other man, and the trouble about class distinctions and conflicts between labor and capital would be ended.

THE PUPILS AT HAMPTON.

REFERRING to recent charges that some of the Indian pupils at Hampton, Va., had been cruelly treated, when refractory, by confinement in a "dungeon," a letter in the *Boston Journal* by "Gail Hamilton," says:

"But I do believe what I have myself seen. I went to the Hampton School entirely unexpected. No company was there but my own party, who had strolled over from Old Point Comfort. It was not company day, but we were allowed free entrance and the closest inspection. One of the elder pupils was detailed to escort us—a soft-voiced, gentleman-like negro. General Armstrong was not there, and I had then never seen him.

The dungeon I did not discern, I confess, but we were allowed to enter the dining-room in time to see the pupils march into dinner. The table was neatly and comfortably spread, and I was especially struck by the rude abundance set before the Indians. All the explanation needed was because there was so much, not because there was so little. The huge joints of roast beef were enough to take away an ordinary appetite. I was assured, however, that the Indians seemed to require it, and no more was provided than would be allowed them by the Government if they were roaming wild in the reservations.

One Indian was detained after school hours by his

female teacher. He looked very sour and surly, though she said she was entirely ignorant of the cause. He rested his head on his arms, and, apparently, gave her no attention. Occasionally, she said, they would be untractable and incomprehensible; not often. If such an one should be put into the cell, he could walk out whenever he chose to assume good behavior. This one looked as if he could sculp his teacher on the spot, but he showed no sign of insubordination except stolidity.

Every other Indian appeared interested. I saw them not only at dinner but at study, at work, at play. I saw the shops where they were building wagons and making harnesses and learning trades. I saw the houses that they had erected, the homes they had established, the families which some of the elder pupils, who had married and chosen to remain there, were rearing in civilization and Christianity.

I do not say that their hog and hominy, or their roast beef, was appetizing, though it was thoroughly wholesome; and they ate it with silver forks and carved it with murderous knives, peacefully wielded. But I came away from Hampton, as from Carlisle, feeling that no better missionary work or patriotic work can be done than heroic Christian men and women are doing in those places without the least profession of heroism—on the contrary, with an air of enjoying it.

One thing is certain: If General Armstrong, with his missionary ancestry, with his Christian reputation, with his engaging personality, cannot be trusted to do honest work under our very eyes, it is idle to send missionaries to the other side of the world.

PROFESSOR MARIA MITCHELL.

ALTHOUGH Professor Maria Mitchell achieved her widest fame as astronomer at a time when women were comparatively unknown as students in science, and lived through an age remarkable for the development of woman's higher education, she was always a unique figure among others to whom the world's approving notice is due. Never having received a college education, she was preeminent in a woman's college, the most prized and brilliant member of a carefully trained Faculty; without the training of scientific institutes, she has not been surpassed by others of her own sex in science, and her name to-day, as it was forty years ago, is a type of highest feminine achievement. One of many famous women of a prolific age, her place was always that of the leader. There is no doubt that Maria Mitchell's success in maintaining her position was due not only to her thorough work in astronomy but to a strong individuality. No one who has met her at the many receptions given in her honor, in the college class room, or in her private parlor could forget her terse and witty expressions, her original opinions given with frankness and decision. She was a strong woman, and her strength was felt not only in her work but in social intercourse.

The reluctance with which her resignation was accepted at Vassar College, when it was made imperative by illness and the infirmities of age, and was caused in part by the regret at losing one whose in-

fluence over young girls was as wholesome as it was potent and inspiring. How her wit sparkled at the Dome parties! How she drew students about her by her understanding of character! With what enthusiasm her name was always received before college gatherings! Maria Mitchell as the source of scientific inspiration had been missed since her retirement but Maria Mitchell's influence over character has left an impression that cannot be effaced while those who have known her methods continue their development at Vassar College and in general society.

On the afternoon of the 30th of last month the funeral services of Maria Mitchell took place in Nantucket. The services were simple as were her own desire and were conducted by Dr. James M. Taylor, President of Vassar College. He paid a warm and loving tribute to her character, less as a distinguished scientist than as a great-hearted woman whose emphatic characteristic was genuineness and whose ennobling influence has been the inspiration of so many young women who have gone forth from the Vassar life. He spoke of her well known intolerance of shams and dwelt on the fact that all her life she had been an earnest seeker after truth in religion as in science.—*Boston Journal*.

BALLOTS AND BAYONETS.

The theoretical dilemma of the women's votes turning the scale in favor of a law which they could not enforce with bayonets, is purely theoretical. In dozens of Kansas cities, the votes of women, added to those of the better class of men, have defeated city governments that winked at violations of the liquor law, and put in city governments that have enforced the law. There has never been any attempt to dispute the matter by violence, not even in Elk Falls, where the election was decided in favor of the law and order party by one vote, that of a lady eighty-years old, Mrs. Prudence Crandell Philleo.

In like manner, in several Southern States, practical prohibition has prevailed for years, because no liquor saloon can be licensed within some miles of a church or school house unless a majority of the men and women in the district petition for it. There has been much grumbling by the liquor men, but no armed uprising. Experience thus far has borne out Col. Higginson's prediction, that "when any community is civilized up to the point of enfranchising women, it will be civilized up to the point of sustaining their votes, as it now sustains their property-rights, by the whole material force of the community." If this has been found true in communities not particularly law-abiding, and in the case of the liquor question, which is perhaps of all others the most irritating to the lawless classes, we need not have much fear of what will happen elsewhere.—*Alice Stone Blackwell, in Woman's Journal*.

What ground, alas! has any man
To set his heart on things below?
Which, when they seem most like to stand
Fly like an arrow from a bow.

—*Thomas Ellwood*.

HOPEFUL PRISON LEGISLATION.

THE State of New York, after suffering for more than a year from evils brought about in prison legislation, has now passed a bill which embodies some of the best features of modern penology. The bill reflects the experience and judgment of such an acknowledged expert as Mr. Z. R. Brockway of the Elmira Reformatory, and was drawn up by Prof. Collin of Cornell University, who was for some years the teacher of ethical science at Elmira. Perhaps the most important feature of the new law is the extension of the indeterminate sentence to the prisons of the State. It has hitherto been applied only at Elmira. With it is also associated the parole system. The prisoners are also to be classified into three grades, and the labor of prisoners is to be governed by the grade in which they are placed. Another excellent feature of the New York Prison Law is a provision for the payment of wages to convicts, not to exceed ten per cent. of the earnings of the prison in which they are confined. Money thus accumulated by prisoners may be assigned to dependent relatives during their term of confinement. It is also held during their parole, and is forfeited in case the parole is broken. Certain fines and deductions are imposed according to the behavior and standing of the prisoner, and the fine money thus accumulated goes to a fund for aiding discharged convicts. The balance, on the final discharge of the prisoner, is paid to him. This system, with some modifications, has been in operation for some years in the Eastern Penitentiary, Philadelphia, where prisoners are allowed, after completing their task for the State, to work over time. A prisoner may thus be able to afford substantial help to his needy family during his imprisonment. It was from these accumulated earnings that the prisoners of the Eastern Penitentiary subscribed over five hundred dollars for the Johnstown sufferers.—*Christian Register*.

KEEPING DOWN TO THE ROOTS.

IN order to labor availingly in the cause of moral reform, there is required a degree of the seasoning virtue of truth imbuing the mind of him who engages in the work, and inducing a religious qualification to labor for the benefit of his fellow-men. When John Woolman was laboring with those Friends who held slaves, he says, "I often saw the necessity of *keeping down to that root* from whence my concern proceeded." The Lord singularly blessed his efforts, and no doubt made them conducive to his own spiritual growth, as well as to the promotion of a testimony against slavery. One good result of dependence on the Lord in efforts to promote the general good, or to check particular evils, will be to preserve those so employed from all acts of doubtful propriety, and especially from everything clearly wrong. For want of this godly care, a degree of unscrupulousness has crept into political movements, which is so contaminating that upright and honorable men are almost ashamed to be connected therewith—and the word "*politician*" has nearly become a synonym for a man who will sacrifice truth to the success of a party.—*The Friend, (Phila.)*

WILL THE INDIAN WORK?

I HAVE heard the question often asked, Will the Indian Work? Anyone who shall visit the Hampton Normal School, under the energetic direction of Gen. Armstrong, will have a satisfactory object lesson in answer. One hundred and forty Indians are there under training for an industrious and useful life. They are wisely taught to do hard work on the farm and in the industries of the workshop. When they return to their people, for the present at least, they will not be able to avail themselves of the use of machinery as we can here at the North. It is also of great importance that they should be able to repair the tools they may have to use. The Hampton school is strictly an industrial school.

Farming is of course one of the industries into which all the boys and young men are at once inducted, and the girls into flower and vegetable culture. Carpentry, blacksmithery, wheel and carriage making are also chief industries for the Indian on the plain. Harnessmaking and shoemaking are acquired by them with great success. A wealthy lady from Boston was so much pleased with a set of carriage harness for two horses that she purchased it, and for a long time kept it unused to show to her friends its skill and taste. I saw an Indian sewing, stitching together very heavy leather for traces, the heaviest I ever saw. He put life and muscle into the work, and nothing could exceed the workmanlike appearance of the result. Let alone the Indian for making his own harness on the plains or anywhere else.

In one building there are three shops for the blacksmith, wheelwright, and painter. I went into these shops repeatedly to see Indian work. I have often done small jobs at blacksmithing myself, but I could never weld two pieces of iron together so that the eye would not at once detect the inexperience of the workman. The Indian will do it in that shop so as to justify, if compared with my work, his conscious superiority to the white man. I saw an express wagon made entirely by an Indian—every part of it except the hubs and the steel axle. The iron braces and straps and bolts and nuts were all made by him. The work was well done. The spokes and felloes of the wheels were very well made and better finished than the wagon body. It was easier to sandpaper it down and give it a polish. But when the Indian student shall have sandpapered and painted the whole, as he will do, he may justly be proud of his achievement. I should give him the most brilliant red which the art of painting has produced, and let him touch it off lightly with green and gold.

The Indian is not to be condemned for laziness. He has been banged about by white men, he has been supported in idleness, and cheated and robbed if he worked and tried to be a man. With some few honorable exceptions, the Indian agents appointed by government have been cruel, greedy, grasping, and defiant of law and humanity. This has poisoned the Indian's temper toward the white race. He would be a fool to work when he knew the fruit of his labor would be seized by his hated oppressor.

This state of things and of feeling we may hope is

passing away. Let the Indian feel assured that his rights will be safe guarded, that he will be equal to the white man before the law, and his tough, enduring muscle will be given to energetic, productive work. The Hampton Institute is solving the Indian problem by a most interesting and satisfactory demonstration.—Cyrus Hamlin, D. D., in *The Advance*, (Chicago.)

THE RAIN WHICH CAUSED THE FLOODS.

MANY very interesting and important facts bearing upon the awful Pennsylvania floods are now being made public in a definite and authoritative way, which permits a more intelligent study of the great calamity than has hitherto been possible. For example, the State Weather Service has published a topographical map showing the quantity of water which fell in the forty eight hours before the bursting of the South Fork Dam in all parts of Pennsylvania. In the extreme northwestern corner of the State and in a dozen counties along the eastern border the rainfall was less than one inch. A rather narrow strip just west of the Delaware River region mentioned, and a large territory in the western third of the State, perhaps 30 per cent. of its total area, received from an inch to four inches of water. In the great central belt, comprising probably 40 per cent. of the State, the rainfall was from four to eight inches, and in some limited districts, including the upper part of the Conemaugh Valley and the region around Williamsport, on the Susquehanna, it even exceeded the higher figure. The floods did their deadly work when the heaviest fall of water occurred. The bursting of the South Fork Dam followed a strain the like of which it might not have been subjected to again in a century, and if the dam had not given way the flood would probably have still been disastrous throughout the fatal valley. It is not remarkable that the floods did great damage in other parts of Pennsylvania, but only that such fearful rains were not more destructive.—*Cleveland Leader*.

EXAMPLE.

I SUSPECT the force of example is much too largely credited to *conscious* influence. For instance, much is said about example by the temperance advocate. To decline the wine at the dinner party when the host offers it, or at the evening party when the partner brings it, or to refuse the beer at the club-room lunch, does good, perhaps, to the one or the few who happen to notice the refusal. "I'll take what father takes," said the boy to the waiter at the hotel table, and the startled father sent back his ordered glass of wine. Yea, example tells. But if you abstain always, and from the simple motive, "For their sake,"—abstain, that is, because you want to count one on the side of the strugglers and the victims as against the side that makes the straggler and the victim,—because you wish to bear their burden with them instead of adding one atom to their burden by a bit of private pleasure,—if this fact and the reason for it should get known, it is apt to tell for much, instead of little, good. But in this attitude towards drink you are hardly conscious of "example," and you are not act-

ing for example's sake. Out of simple brotherhood or sisterhood you are giving up a pleasure to yourself, that is a deadly danger to many; giving it up because to them it is a stumbling-block that trips to easy ruin. Sheer Pauline chivalry is the motive. And that motive once active in a man or woman, works, unconsciously to them, far beyond the single drinking-question. It is the Jesus-spirit, and not your mere example with the beer mug, that begins to radiate from you.—*W. C. Gannett.*

A pious frame of mind is the most precious acquisition that can be attained in this world. It is as much superior to the general religion that is current as the health of a sound constitution is to the bitter days and feelings of a man in a deep decline, or the regular order of sound intellect to the lucid moments of the deranged; but this happy state of mind is not generally attained without much previous spiritual exercise and praying without ceasing, nor is it retained when possessed without much watchfulness, prayer, and constant strivings against the corruptions of the heart, the influence of circumstances, and the various temptations of life. But whatever may be the privations and difficulties attending its possession, they are infinitely overbalanced by the fruits of joy and permanent consolations it produces. In this state of mind only is it that a person is prepared to meet the various storms and trials of life, and can look forward with a well-grounded composure to the close of the present state; it is walking in the light.—*Selected.*

"But God himself is truth; in propagating which, as men display a greater integrity and zeal they approach nearer the similitude of God, and possess a greater portion of his love."—*Milton.*

NEWS AND OTHER GLEANINGS.

—Helen Gladstone the daughter of the "great old man," who has been at the head of the movement for the higher education of women for many years, and is the president of Newnham College, Cambridge, says that she is convinced that the "full cultivation of women's intellectual powers has no tendency to prevent them from properly discharging domestic duties."

—The widening of the Suez Canal has been undertaken, the width of 22 metres being increased to 65, 75, and 80 metres. The depth is also to be increased, as well as the number and breadth of sidings for vessels passing each other. Navigation by night is facilitated by luminous buoys and tow-paths; and vessels using the electric light are now able to traverse the canal in 20 hours, the time hitherto varying from 35 to 40 hours.—*Exchange.*

—The London Linnean Society's gold medal, awarded for distinguished services in botany and zoology alternately was conferred this year upon Alphonse de Candolle, the botanist. In speaking of M. de Candolle, the President of the Society said: "His philosophical treatment of the geographical distribution of plants has greatly advanced this department of science, and his codification of the laws of botanical nomenclature has been of the greatest practical service." Candolle's greatest work has been the carrying on of the work begun by his father on the Dicotyledonous

Phanerogams and the Gymnosperms, embracing catalogues and descriptions of nearly 60,000 species.—*The American.*

—The Legislature of Minnesota has passed a law that makes drunkenness *ipso facto* a crime, and punishes it by imprisonment or fine for the first two offenses, and by imprisonment for not less than sixty and not more than ninety days for every subsequent offense. The law assumes that drunkenness is not simply a disease, but an offense against public order.

—The exhibition of the Verestchagin Exhibition at the Academy of Fine Arts, has closed. From Philadelphia the pictures go to St. Louis, thence back to Europe, to be finally hung in a gallery especially built for them by M. Verestchagin in his native city of Novgorod. He has willed that after his death all his pictures and trophies of travel shall be gathered in this building and given to the city as a permanent exhibition, to be called the "Verestchagin Studio and Museum." There is to be one free day in every month, and the admission at other times will be ten copecks, a sum equal to 7½ cents of American currency. The income derived in this way will form a charitable fund, which is to be distributed quarterly among the widows and orphans of Novgorod, whose husbands and parents lost their lives while fighting Russia's battles.—*Exchange.*

—A petrified tree was recently unearthed at Farmingdale, N. J., 16 feet below the surface.

—At a children's party in London, a number of the guests were seized with curious symptoms, which could not be traced to the infection of any particular food or liquid of which they had partaken. Attention was then drawn to the candles used on the Christmas tree many of which were green; and these, when submitted to analysis, proved to contain arsenic which was diffused through the atmosphere and inhaled as the poisonous candles burned.

—A beautiful flower, called the rice lily, grows thickly in parts of southwest Georgia. It is extremely sensitive to the light. The blossoms fold up at night, but open in the morning. At night, while the lovely white blossoms are closely enfolded in their purple covering, and the flowers are asleep, if a lamp is placed near them, they will gradually open and turn toward it. If a strong light is placed on one side of a vase containing them, the half of the bouquet that faces the lamp will be unfolded, while the other half that is in the shadow will remain tightly closed.

—It is not often that American delegates to any convention in Europe are compelled to cross the ocean as steerage passengers on account of the smallness of the sum of money that is put at their service. But those who witness the onward bound steamships in these times can often see men in the steerage who are going abroad as delegates from workmen's organizations to the International Labor Congress that is to be held in Paris this month. A large number of delegates to this body have been elected from the United States, and few of them have enough means at their disposal to pay for a cabin passage.—*Exchange.*

—There is a note by Dr. Charles Waldstein in the London *Athenaeum* of June 8th which will no doubt attract much attention. Dr. Waldstein states that recently while in Constantinople he was shown photographs by Hamdy Bey of the sarcophagi discovered some time since at Sidos, and he is of opinion that the discovery is one of the most important made in this century, and moreover that excepting the Elgin marbles, and the Hermes of Praxiteles at Olympia, "no works of ancient Greek art have been found of greater artistic interest and merit." One of the sarcophagi contains a portrait of Alexander. Hamdy Bey

does not positively assert that this is the tomb of Alexander, but Dr. Waldstein thinks he will be justified in pointing to the possibility of such being the case. —*The American.*

CURRENT EVENTS.

The wife of Charles Kendall Adams, President of Cornell University, died in Ithaca, New York, on the 5th instant. She was deeply interested in all work for the amelioration of suffering and the banishment of intemperance.

A VERY bad railway accident occurred on the Norfolk & Western road, 30 miles south of Lynchburg, near a place called Thaxto, last week. A train ran into a washed-out culvert and several cars being broken up then took fire. The loss of life is estimated at thirty. Many were burned beyond recognition, and the bones representing the remains of what, it is supposed, were fourteen or fifteen persons who perished, have been buried in two coffins in the City Cemetery at Roanoke.

ONE hundred and five members of the North Carolina School Teachers' Assembly sailed for Europe on the 6th instant on the steamer *State of Nevada*. Major Eugene G. Harrell, Secretary of the Assembly, has charge of the party. The excursionists will visit the principal places of interest in England, Scotland, and Ireland, and will spend six days in Paris.

THE Fairmount Park Commission have resolved to execute an agreement with William Wharton, Jr., to construct a gravity railroad in the Park. The Commissioners at the expiration of twenty-five years have the right to purchase the railroad at cost.

LEEDS, July 9.—The Corn Millers' Association here has made a further advance of one shilling a sack in the price of flour. This action has been taken on account of bad reports of the crops in Russia, combined with a decrease in foreign arrivals.

HEAVY rains caused a flood at Johnstown, Fulton county, New York, on the 9th instant, and three big dams were swept away. Nine bridges were carried along by the torrent and a number of people standing on one of them were thrown into the water. Several were drowned. Three factories and some other buildings were also destroyed.

THE Legislature of Rhode Island met in special session on the 9th to enact a law for the regulation of the liquor traffic. A committee was appointed to report a license bill on the 16th inst., to which date the Legislature adjourned. Before adjourning, a license bill was introduced in the House, which includes among its provisions, local option with the license to manufacture or sell fixed at not less than \$1,000, and the retail license at not less than \$200.

THE Commissioners to negotiate with the Sioux Indians for the surrender of their reservation in Dakota are still holding councils with them. They were at the Crow Creek Agency, on the 9th inst. The leading chief replied to the arguments of the Commissioners, claiming that the Government had failed to treat them properly. They said that "they formerly owned a vast territory, and that their lands had dwindled without their getting anything for it, until they had but little left, and now were asked to sell part of that. They did not have enough for themselves and their children who would come after them." At the conclusion of the conferences those in favor of the bill began signing, but it was doubted whether the requisite three-fourths could be obtained.

NOTICES.

* * * *Friends' Almanac*, 1890. It is desirable to have this as nearly correct as possible, and in order to have it so NOW

is the time to send word of any needed amendment, and not after it is issued. Address Friends' Book Association, 1500 Race street, Philadelphia.

* * * A Conference on the subject of Temperance, under the care of Concord Quarterly Meeting's Committee, will be held at Friends' meeting-house, Stanton, Delaware, on First-day, Seventh month 21st, 1890, at 3 o'clock p. m. Friends and others interested and cordially invited.
MARY MCALLISTER, Clerk.

We have General Agency for sale of Securities of **DES MOINES LOAN & TRUST CO.**; also offer Debentures, School and County Bonds.

BENJ. H. SMITH,

LOANS AND INVESTMENTS,

119 S. Fourth St., Philadelphia, Pa.

offers for sale Denver, Colorado, First Mortgage Loans, bearing 8 per cent. interest net to the investor. Interest notes payable at the office of THE GIRARD LIFE INSURANCE, ANNUITY AND TRUST COMPANY OF PHILADELPHIA, and may be collected through any bank. These loans are selected by Charles Hallowell, Investment Banker of Denver. A residence of many years in that prosperous city has made me familiar with real estate value there, and my knowledge of the great care always exercised in the selection of the loans offered, enables me to recommend them as safe and first-class in every respect. Loans on hand from \$1,000 and upwards.

The use of the INTELLIGENCER AND JOURNAL as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement. When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.

Spring, 1889.

WE are still at our old established place of business, 915 Spring Garden Street, and are prepared to furnish on shortest notice all our well known specialties in Ladies' Fine Hand-sewed Shoes.

Our Spring stock of Ladies fine shoes is in every way calculated to meet the demands of our patrons, in completeness, quality, and style, and our prices are the lowest possible, commensurate with a first-class article.

Outing and Suede kid shoes, made to order after the latest designs.

We respectfully solicit your inspection of our stock, before ordering your spring and summer shoes, thoroughly believing our style, and the known durability of our goods, will sell them against all competition.

TAKE HEART AND BEGIN AGAIN.

YESTERDAY now is a part of forever,
Bound up in a sheaf, which God holds tight,
With glad days, and sad days, and bad days, which never
Shall visit us more with their bloom and their blight,
Their fullness of sunshine or sorrowful night.

Let them go, since we cannot re-live them,
Cannot undo and cannot atone;
God in his mercy receive, forgive them,
Only the new days are our own;
To-day is ours, and to-day alone.

Every day is a fresh beginning;
Listen, my soul, to the glad refrain,
And, spite of old sorrow and older sinning,
And puzzles forecasted, and possible pain,
Take heart with the day, and begin again!

—Susan Coolidge, in the *Christian Union*.

SERMON BY ELIAS HICKS.¹

A SERMON PREACHED IN FRIENDS' MEETING-HOUSE,
TWELFTH STREET, PHILA., ON THE MORNING OF
TWELFTH MONTH —, 1822. BY ELIAS HICKS, TAKEN
IN SHORT HAND.

LOVE, pure and undefiled love, is the cement, and it may be called the divine cement, which binds God to his people, and which binds them together in him. This binds all that is good in the whole creation of God, in heaven and in earth, and is derived solely from him.

All good comes from God our Creator; and we are told by the evangelist that although the world knew him not, all the living children of God knew him, and know in their own experience that all good comes from him. Of this they have the evidence in themselves that God created all things for good,—whatever was derived from his holy workmanship. So, as his reasonable creation was created in unity with him they were fully capable of remaining so,—of remaining in the love in which he created man and united him to himself.

It is true, however, that we have departed from this love, and have caused a separation between God and ourselves. We have become estranged so as to pass into such a state as to feel nothing of this divine influence: we are, therefore, left in a state of alienation from God. But on his part he was never broken, the extension of his love continued to all

¹NOTE BY THE EDITORS. This sermon of Elias Hicks has been preserved in manuscript for many years in a Friend's family and is handed to us for publication. We are not aware that it has ever been printed. The precise date in Twelfth month, 1822, when it was delivered, is not given in the manuscript.]

through successive periods of time, as it appears upon record, and as it appears also in the language of his Son, who declared that "he caused his sun to shine upon the evil and upon the good, and caused his rain to fall upon the just and upon the unjust."

We are called upon to act in our several stations according to this extension of the divine harmony, and not to divide nor scatter in the heritage of God. This is required also, according to the Christian example and precept, towards all mankind; and the obedience of our conduct is the proof of the existence of that divine love in ourselves, and of the manner in which we live under it. Without depending upon any return from others, this disposition is required from us to all, even our enemies: "If thine enemy hunger, fed him; if he thirst, give him drink." The influence of this conduct even corrects in others an inimical disposition and hatred towards us. It is a sort of mutual test by which our actions are examined by others as well as ourselves. It evinces by what love we are governed, and what rule is the guide of our lives in our intercourse with each other as rational and accountable beings.

There is, however, besides this love which comes from and unites us to God, a self love, existing as it regards ourselves. This is of an animal nature, and lowers man in comparison, according to the affections of the animal creation; for, in man, as in the inferior animals, this kind of love is but a gratification of the lower orders of sensation. It is an attribute of the brute creation, rightly given them by God for the preservation of their species while young, and without which they could not take care of each other. It causes them to venture their lives for their young. But this love is only continued for a particular period in the course of nature, because as they are reared and grown up they dismiss their young, turning them off to shift for themselves.

This kind of animal love or affection, can never be depended upon. It is brittle, and can never bind in the unity of the brethren, in the bond of peace. It rises and ceases with our affections. It leads to gratify all our self desires, and looks for a reward in the estimation of popular actions; while often in these we do not act from pure motives, as we are not led to perform that strict justice in our conduct which we claim for the acts we show to the world. And it is in this disposition that we are led to be kind to the poor, and to be among the charitable, because it is popular to be so. But while this arises from interested motives, it is the same animal or self love, and operates to the ambition of a name, to gain the esteem of our fellow creatures, and not

that disinterested spring of action arising from a pure motive of love to God. Our Lord, on the mount, declared: "If ye love those who love you, what reward have you? do not even sinners the same?"

But divine love, pure and undefiled, binds every one in one uniform band; and because "God is love, and those who dwell in him dwell in love," we become all united in him, and while we abide in it nothing can separate nor destroy, "neither heights nor depths, things present, nor things to come." If the scriptures are true, how can a man say he loves God while he hates his brother; "how can he love God whom he hath not seen, and hate his brother whom he hath seen?" Yet men are disposed often to profess they love God, not considering the importance of the assertion, nor the necessity of consistent conduct in their uniform intercourse with their fellow creatures through life. But this profession, although popular and consistent with traditional religion, is detected by our actions. If we do love God it must be shown in our conduct, by obedience to his precepts in our hearts, and will be felt in the extension of his Spirit and influence toward others. No opposing spirit can break this bond of love; it proceeds from God as a centre, fills the soul, and induces our prayers to him to be united to him and to our fellow creatures in him; as we ought to know no man under any other idea than as a part of the rational creation of God. And as the sun in the outward creation, is the centre of light and heat, and diffuses his rays throughout the whole system, giving support to animal and vegetable life; so the love of God, in the inward, is shed abroad through every heart to support the inward and spiritual existence of the internal creation.

It was said, "thou shalt love thy neighbor and hate thine enemy; but I say unto you love your enemies"—know no one during your passage here, but as fellow pilgrims on the earth. And why? "That ye may be the children of your Father which is in heaven, who causeth his sun to shine on the evil and on the good."

In the inward examination of our own hearts we are enabled, by the Spirit of Truth, to discover our just relation to each other in this respect, free from the influence of an outward profession. It is compared to a light, or a candle lighted, by which we may see the nature of our conduct, and whether we are right in the sight of God, and in our love to each other. By this we can see in what manner and how far we have separated from that state of pure and undefiled love.

The Lord lights this candle in every heart, and it is in his mercy we witness it, and its object is for us to see our ways. It is written: "the candle of the wicked is put out;"—now his candle could not have been put out if it had not been lighted. But this candle in the conscience which the Lord hath often relighted is a blessing and is the only means by which our states are known. Here the state of Jacob is shown, and similar to him those who wish to be "led in the way that they go," in distinction to Esau who went abroad in his own way; which is a type of the natural man, roving at large out of the divine

law, living by his own wanderings and inventions and self-gratifications out of the truth, and not returning to the heavenly Canaan.

Now the candle of God, I have said, has been often lighted, and it is in his mercy; it is left to our will, as man is a free agent, and it is in our will it is put out. Yet in his continued mercy it is given to be a light to the actions of every day, and to view all our pursuits by; and the plea of custom, which often for a time reconciles our actions, is done away by their being brought to the true light, and an uneasiness is felt, knowing that they are not consistent with the evidence of truth. It is a merciful favor thus to teach us in what we have erred, and to lead us to make our peace and reconciliation with God, the great business of all our lives. Nothing is so important while we are passing our time here as sojourners on the earth, as to know every hour that our immortal souls are at peace with God, as we know not the certainty of one day nor even one hour. And I recommend you to this immediate and important consideration. How awful is it for a soul to be out of the favor of its God! Dare any one lay down his head on his pillow without knowing his peace made with God, not knowing at what moment he may have to render his account? I dare not. Without experiencing this peace and the favor of God, without an evidence of his saving help and his presence, which the Lord Almighty affords as a witness of reconciliation with him, I should not allow myself to lay down my head at rest one night on my pillow. This makes the true Christian, and is in conformity to the pattern set us by the Christ, to know ourselves at peace with our brethren, and in conformity with whose example will be our justification.

The Lord Almighty has never exercised his power over his rational creation to *oblige* them to seek after and come to him, for this would have abridged man's right of free agency. But he has taught them that their happiness consisted in this, as is evidently the case, both here and hereafter. But he has always left them the liberty to choose. No happiness nor joy was ever felt in a departure from God; nothing but mortification,—and especially by those who have been partly guided by his law. The way of these is embarrassed and their purposes frustrated; their way is made straight so that there is no turning to the right hand or to the left; but, like Balaam, when they have every temptation offered they are brought into trying difficulties, and have often to give up, as their own strivings will not carry them through. Man cannot carry on the work in his own way: by attempting to do so he brings ruin on himself.

God has freely called all mankind by the extension of his love. We have had this in our experience; this holy influence has often been felt by us in younger life, opening and contriving our hearts. I know I have often felt it when a child, when very young, and the softening contrition of it upon me, improving me when I was not willing to acknowledge it. This was God's loving kindness to me; and it was often felt to show me the sinfulness of sin. I was induced to dwell in secret with it, and it has since often appeared as a guide to me. It is by this

we are led in our advances in life, and its cementing influence is often felt to unite us together in the bands of Christian society in love to God and our fellow-creatures, as by this it is he designs to bring all to himself. This affords a feeling of Christian charity, and prevents us from complaining one of another; for we have a diversity of gifts and views tending to the same end. But as with travelers in the same road, those who are ahead have continually new objects presented which cannot be seen by those who are behind till they are further advanced; so, in the spiritual journey some are more advanced than others. And as those who may have got ahead in the same way may have views opened further to them than those who are behind, these should not complain nor judge until they become more advanced, but mind well the manifestation they have already received, and by making good use of it, keep on their way, with fidelity in the various stations allotted them.

Even in our outward affairs we have often different views and act differently, yet without destroying the harmony or causing any trespass upon each other,—each one going according to his own views in his own affairs. Thus one man ploughs his fields one way and another another way. It is so in things of a spiritual nature. In religious societies as well as individuals, there are different views, and different states of advancement, many pursuing very seriously the same way, but not having the same views at the same time. Such ought not to be judged by the views of others, without allowing for a just opening in their own minds. From this persecution has its rise from our pressing our own views of things upon others further than God has enlightened their minds. This mode of conduct springs from a wrong source, from acting in our own will, and does not take its rise in him. We cannot make our own faith. No man believes voluntarily, or because he chooses to believe a thing, but because the evidence is such as commands the assent of his mind.

We see, therefore, how impossible it is to form rules for the faith of another; and hence we see the impropriety of creeds and confessions of faith in religious societies. For true faith, which is the gift of God, arises from no set of opinions furnished as articles of belief and practice, by the study and inventions of men; for nothing but a revelation from God can bestow it on us. I know it must be waited for in his own time; and the sanctification and cleansing of our hearts is effected by it, as we come to a true inward reliance upon God, and his will gets possession of us; and this forms our faith and confidence in him.

The children of men often fail in this respect, and fall into too much outward activity, setting up their own views of things. If the professors of Christianity had kept right, there never would have been but one creed in the world, and that would have been a belief in the Divine law written in the heart. But by departing from this and setting up their own views, the pure, quiet evidence of truth in the soul is lost, and they never come into the beneficial enjoyment of the rest and peace intended for them,—they do

not partake of the blessing designed for his children. Forsaking the right path designed for them, and being led by their own views, they become bewildered and the deviation is sensibly felt, though the love of God remains entire, and is extended to be as a light to lead them to see the error of their departure and to restore them to unity with him.

It is not by the outward profession of faith or belief that we are to judge of different religious societies or of individuals, but by the rule which Jesus Christ the Son of God has given us—by this we can judge of them—"By their fruits ye shall know them." For as every good work comes from him, and as our actions are declared to be so only by our abiding in him, I consider this as the just index to the true judgment. Thus while we can judge others we can judge ourselves, discarding all partiality and dealing out an equal degree of justice to all, "for with the measure ye mete, the same shall be measured to you again."

Instead, therefore, of separating upon points of faith, let us endeavor to be bound in love and charity to each other, to attend to the impressions we receive from God, and as we expect no other standing than that which is given us in the Truth, let us endeavor to draw all into the peace and rest he has prepared for his children, remembering that we are accountable to God and not to man for points of belief. All our actions ought to lead to this—to love and good works; and this love would be found an unshaken rod of confidence and capable of binding up together in one band in a different manner from any set of rules formed for an outward profession of faith and practice.

It is true it is an easy matter to get abroad from this principle of love and charity, and from the outward circumstances in life we are insensibly tempted to it. Man in his pride soars above it; his consequence has to be supported, and the true relation to his neighbor is not preserved,—and hence is the source of all the divisions in the world,—in societies and out of societies—and even the cause of enmities, wars, and bloodshed.

It is only, dear friends, by the mercy of God we are at times brought back to the true place of rest and peace, and it does not take place till a just mortification has been experienced for our departure from the truth from that love and charity he has given us to unite us to himself. Self-pride often comes in and continues to separate us from the divine harmony, and it is only under additional humiliation we are enabled to lay down all our self-will and in lieu of our own willings and workings and views of things, to receive from him that measure which is mete for us, and from which alone we can judge rightly of ourselves, or measure with truth to others.

Instead, therefore, of looking too much outward or hastening in our way by and a due measure which may be afforded us, let us from time to time wait upon the Lord in true silence, and we shall not be ignorant of his will concerning us. It shall not be said, my people err or perish for want of knowledge; but we shall be led on as his children from one measure and stature to another, advancing as he

may open the way, and in a gathered experience be brought nigh to see the divine excellency of his law in a way which books, no written books, could ever teach. For, as faith is the gift of God, there is no true faith but what is derived from him, and it is his illumination alone which can teach of his ways. Believe, therefore, the testimony of the apostle: "As no man knoweth the things of a man but by the spirit of a man which is in him, so no man knoweth the things of God but by the spirit of God."

Now, as only the spirit of God can teach the things of God, we see how vain is a dependence upon man, when the Lord alone should be our teacher. And here we see the vanity of an expensive preparation of study to qualify men to preach the Gospel. These become a burden upon society, for as there has been a great charge of education,—time employed, books, teachers, and years spent at schools or colleges,—it must be paid for; and thus demands are made for praying and preaching. There is no reason for such establishment and preparations. If it is the Gospel which is preached, it can only be received from God, from whom it is declared, "freely ye have received, freely give." And as he gives freely to his ministers what they have to hand to others, there is no more study and preparation necessary to qualify to preach the Gospel than there is to hear it preached. I find it so. I have been a preacher for many years and it never caused me any study to preach, nor has it now caused me any study and preparation, no more than in you to hear; of course I am no more entitled to any pay or reward. And if I have a little more labor in the execution required to speak to you, I have my reward in the peace and consolation I feel. I have had now nothing else in view but to deliver what I believed I was commissioned to do, not knowing when I first stood on my feet that I should have more than a few words to express; and thus I have felt it my place to utter things as they have been opened in succession upon my understanding. And I am sure it must be so with the humble and dependent minister: for it is the adherence to the letter which killeth, but the opening revelation of the spirit of God giveth life.

And instead of a reward or pay for preaching, I have now only, as formerly, to partake of my proportion of the offering. For as the priests who were appointed to wait at the altar were made partakers with the altar, even so now they are the partakers with the hearers. And I trust I partake with you of the sensible feeling of the love of Christ, which I value above all temporal favors, honors, or rewards. And this is the true recompense of his ministers. By this I have been supported in the labor of many years, while if I had been connected with any of the contrivance of man, or had made a trade of preaching, I should have acted inconsistent with what I conceived the light of Christ had led me, and should have shut out the witness for God.

In my steppings along I know the necessity of watchfulness, as expressed by the Apostle, that while I am preaching to others I myself may not become a castaway; and my mind is also often exercised lest I should add or diminish from that which is given

me to deliver. I feel, however, grateful to God and desirous of submitting to his will, in that he may have seen proper to make use of me as a ram's horn, through which to sound forth his word to the people, that I may be a faithful instrument in his hand and that his will may be done through me.

To him I desire affectionately to leave you, and to the word of his grace, which is able to build you up and give you an inheritance among all those who are sanctified.

From The Friend, (Philadelphia)

EARLY MEETING-HOUSES OF FRIENDS.

(Continued from last week.)

FRIENDS finding that the Centre meeting was inconveniently located for most of them, took into consideration the propriety of having a meeting-house in a more central situation; and afterwards took steps in that direction, which perhaps cannot be better followed than by some extracts from the minutes of the times, viz.:

"At a monthly meeting held at Robert Ewer's house the 28th day of the Tenth Month, 1694. This meeting requested Anthony Morris and Samuel Carpenter to speak to Governour Markham about his lot of land that lyeth on the High Street near the market place, and enquire the length and breadth; and if it may be thought convenient, to erect a meeting-house thereon."

The Friends reported that "they find him ready to serve Friends therein; and Friends agree to present him with fifty pounds, and acknowledge his kindness therein, which they are desired to pay the Governour for the ground to build the meeting-house and desire him to make a title therefor to Edward Shippen, Samuel Carpenter, and Anthony Morris, for the use of Friends as aforesaid. David Lloyd is desired to draw a deed to confirm the lot of land bought of Governour Markham, also another deed to declare the use of it."

Having secured another lot at the Southwest corner of Second and High (Market) Streets, they proceeded in the next year to make arrangements to build upon it.

Ninth Month, 1695. "The meeting taking into consideration the necessity of a new meeting-house, the said matter is left to the consideration of the next Quarterly Meeting."

2d of Tenth Month, 1695. "At a Quarterly Meeting held at the house of Robert Ewer, the matter of building a new meeting-house in Philadelphia was mentioned at this meeting and unanimously agreed to, and several Friends subscribed for the carrying of it forward, and further was recommended to the monthly meeting of this county for their assistance. The meeting desires John Lineham and Robert Ewer to get Friends about Philadelphia to subscribe towards the building, and desires Edward Shippen, Samuel Carpenter, John Line, and John Jones, to provide materials and agree with workmen to build a meeting-house 60 feet long and 40 feet wide, and as high as may be convenient in proportion to the length and breadth."

31st of Eleventh Month. "The deed for the lot of

ground in the Second Street, that was purchased of Governour Markham, was read in this meeting and delivered to Samuel Carpenter, Edward Shippen, and Anthony Morris, Trustees."

The building committee "doe report they have agreed with Thomas Duckett and William Harwood for the building of the said meeting-house, which is to contain 50 foot square, with cellars underneath; and they deem the charge to be about 1,000 pounds."

In describing this building, one author says, "It was built of brick and nearly square in shape; the roof rose on each side to a central lantern, which gave light to the interior." Another says, "It was surmounted on the centre of its four-angled roof by a raised frame of glass work, so constructed as to pass light down into the meeting below."

The construction was probably much the same as that of the "Great meeting-house" at Burlington, described in a former paper; a representation of which has been handed down to the present generation.

The house was near enough completion toward the end of this year for meetings to be held in it, but was not fully finished until some time during the next year, as the following minutes will show.

"At our Monthly Meeting held at the New meeting house the 29th day of Eleventh month, 1696-7, and at our monthly-meeting house in High Street in Philadelphia, the 30th of Second month, 1697, 'tis agreed by this meeting that henceforward there be two meetings at this place upon a First-day during the summer time: the morning meeting beginning at the ninth hour, and the other about two in the afternoon. Also it is agreed by this meeting, at the request of the Friends on Schuylkill side, that there be a morning meeting at the Centre meeting-house during the summer season, beginning at the ninth hour, and that John Lineham give Friends notice next First-day, that the Fifth and First-days' meeting following, be held at the Centre while this place is plastering."

Their next concern appears to have been to extinguish the debt, viz.:

Second Month, 1699. "Whereas several Friends are at Salem Yearly Meeting, this meeting thinks it convenient to defer a subscription for discharging the debt of the meeting house until the next monthly meeting, when Samuel Carpenter and Anthony Morris are desired to assist Pentecost Tague and John Buzby in getting subscriptions presented for paying the debts due for building the meeting house."

Friends desiring to hold the Yearly Meeting in Philadelphia, it was found that this house had not sufficient seating capacity, therefore they set about increasing it.

28th of Fifth Month, 1699. "It was proposed to this meeting the necessity of enlarging this meeting-house by erecting a gallery; upon which it is agreed that it be done between this and the next Yearly Meeting, and that William Harwood shall prepare stuff for the same."

The gallery was promptly erected at a cost of about £16. "The deeds for the ground wherein the meeting house stands are this day delivered into the hands of Anthony Morris."

The title to the lot of ground obtained of Governour Markham, at Second and High Streets, upon which the meeting-house was erected, was found to be imperfect; which gave Friends considerable uneasiness, as we may observe by the following minutes:

"At a Monthly Meeting held at our meeting-house on High Street to inspect the affairs of Truth, the 23rd of Twelfth month, 1704.

"David Lloyd, Richard Hill, and Anthony Morris, are desired to get a further confirmation of this High Street meeting-house ground; and the house bought for the use of the school."

The Committee reported in the following Third Month that, "They have been with the Commissioners about it, and their answer is, they are willing to confirm the ground that was bought of William Markham, but not as by right from him; but by the way of gift from William Penn.

"This meeting thinks it hard, that after they have bought and paid for it, it should come under the name of a gift.

"The Committee is desired to see if they can find any footsteps of William Markham's right: that if possible we may have it confirmed the right way."

29th of Fourth Month, 1705. "It is the sense of this meeting that the persons appointed endeavor to get a Patent with a l speed for the ground which was bought of William Markham; and that Friends concerned will give their obligation to the value of 40 pounds, for the use of Governour Penn, if he will not be satisfied without it; that so we may have the aforesaid lot confirmed by a patent."

In the Fifth Month report was made that "The Commissioners have done their part, and they are now ready for the seal. Also the patents for the Lots and Legacy that was given Friends by George Fox, are ready likewise."

The legacy of George Fox, alluded to, were a "Front Lot, a High Street Lot, a Bank Lot, and 20 acres of Liberty land."

The meeting house thus completed, and title thereto firmly secured, seems to have well answered the purposes of Friends for about half a century, when we find them considering alterations, additions, and repairs, and finally decided to build a new and much larger house upon the same ground, which in after times was long known as "the Great Meeting House."

A committee appointed to examine the house, reported in Twelfth Month, 1754, that "the lower floor should be wholly new, and the whole roof new shingled." And in the First Month, 1755, we find the following Report: "The Friends appointed to consider of a plan, and calculate the cost of a building proposed to be added to the west side of this meeting house," etc. In the following month they proposed "to take the old house down and build a new one, to extend as far as our ground westward." "This meeting agrees that a committee shall now be appointed, who shall have power to procure materials for the new meeting house to extend as far westward as our ground goes; and immediately after our general Meeting in the spring, to employ workmen

to get this house taken down, and be so expeditions in building the new one, as to have it ready for meeting in by the time of our Yearly Meeting in the fall.

"The new meeting-house to be 55 feet wide, and so contrived as to contain in the west end of it, on the floor, two apartments for holding our meetings of business in.

"The Committee is to agree upon a plan, and to collect money to defray the whole expense."

Third Month. "It is now agreed that the rooms designed for the meetings of business shall be placed at each end (of the house) as proposed by the Committee, and that during the time of building the new meeting-house, there be three meetings held on First-days at the Bank, and at Pine Street, and a meeting on Fifth-days at Pine Street meeting-house."

3rd of Tenth Month, 1755. "The Great Meeting-house having been ready for service and used at the time of our late Quarterly Meeting, it is now agreed that there be three meetings kept in it on First-days; one in the morning at the Bank, and one at Pine Street meeting-house in the afternoons.

"The meeting on Third-day to be held as usual at the Bank, and the meeting on Fifth-day to be held at this house."

Second Month, 1756. "It being agreed that it will be necessary to have some more convenient room to hold our meetings of business in, Anthony Morris (*et al*) are desired to meet in the Great Meeting-house to confer thereon,—(they) agreed to finish the room in the garret of the Market Street meeting-house for that purpose."

This plan does not seem to have been carried out immediately, if it ever was, for in the Eighth Month we find this allusion to the matter.

"The Committee appointed to direct the manner of finishing the chambers of the meeting-house on Market Street, report they have ordered the workmen to desist for the present.

"The cost of the Great Meeting House is found to be £2,145, 19s. 6d."

In course of time this commodious meeting-house became shut in by buildings, and the meetings so disturbed by the street noises of an ever increasing population, that it was deemed expedient to seek a new location.

Accordingly, in 1804 a new meeting-house was built on Mulberry (Arch) Street, below Fourth, upon a lot that had been used as burial place from near the commencement of the City, or since 1690.

The premises at Second and Market Streets were sold in 1808, for business purposes, and the "Great Meeting House," so long the centre of attraction for Friends, disappeared forever.

J. W. LIPPINCOTT.

(To be continued.)

MANY Christians who bear the loss of a child or the destruction of all their property with the most heroic Christian fortitude are entirely vanquished and overcome by the breaking of a dish or the blunders of a servant, and show so unchristian a spirit that we cannot but wonder at them.—*John Newton.*

SCRIPTURE LESSON No. 28.

SEVENTH MONTH 25TH, 1859.

ISRAEL ASKING FOR A KING.

GOLDEN TEXT:—"The people refused to hearken unto the voice of Samuel; and they said, Nay, but we will have a King over us."—I. Sam. 8: 19.

READ I. Samuel 8: 4-20.

RAMAH, the home of Samuel, was probably in the mountainous district of the tribe of Ephraim, a few miles northwest of Jerusalem. As there were several places in Israel bearing that name, its locality is uncertain and of little account in the study of our lesson; the main thought of importance to us is that Samuel maintained there the worship of Jehovah, for which he built an altar, as we to-day build our meeting-houses, and for the same purposes, our offerings and sacrifices being of ourselves, in that spiritual surrender or giving up of everything which through the Divine Spirit we know is required of us by our Heavenly Father, whether it be in service for the good of others, in giving up some practice or usage that is hindering the soul's progress, or in taking a more decided stand before the world in defense of the truth as it is revealed to our understanding.

The government of the consolidated tribes of Israel had up to this time been theocratic, and administered by judges who recognized Jehovah as the King or Supreme Ruler of the nation, and in all cases requiring legislation sought to know the Divine will; and as this was made known the decision was given. This idea of government was far in advance of any that then existed so far as leadership is concerned. It was a great thought for Moses, the illustrious law-giver, and if carried out would have cemented the civil and religious elements into a close and enduring bond. The social condition of the people and their frequent lapses into idolatry made such a rule impossible.

The Elders. These gathered at Ramah out of all the tribes, not, as in former times, that they might, through Samuel, ask counsel of Jehovah in a matter so important, but with a complaint and a demand, in which there was no appeal to God for direction.

Samuel prayed unto the Lord. If the elders were forgetful of their duty, this true servant of Jehovah, though greatly displeased with their proposal, failed not to seek after the will of God through prayer.

Hearken to the voice of the people. This was the Divine answer, recorded in the colloquial form, as were all such conclusions, as we find them in the Old Testament, and in a few instances in the New Testament. The answer of Samuel, which through Divine help he was enabled to make, was just what we might expect from one so wise and prudent, and so earnest for the welfare of Israel to which his whole life had been devoted. The results that will follow the appointing of a king are set forth in the most fitting words, but they are of no avail to alter the purpose of the people. Here we have a striking evidence of the persistency with which the human will insists upon its own gratification, with no thought as to the consequences that may follow. Men who are determined in their purposes can always find occasion, as

in this case they reminded Samuel that he was old and that his sons had shown themselves unworthy to succeed him. The real cause is not hard to find in the pomp and military greatness of kingdoms, and the feeling that having a king would give them higher rank among the nations.

"But the people refused to hearken unto the voice of Samuel, and they said, Nay, but we will have a king over us."—1. Samuel 8: 19.

The Israelites turned away from the direct guidance of God and asked for a human king, discontentedly preferring unknown serfdom to the liberty of a conscience-fearing people.

"Nay, but we will have a king over us," said the Church of the Seventeenth Century, when George Fox preached that the "light within" was the true ruler. And in our nineteenth century of progress there is still a large class of people who look for man's direction instead of God's unfilled plan.

We are led to think of the ancient Jewish people as we think of petulant, disobedient children, as all unworthy of the gracious favors bestowed upon them by a loving Father. And although our centuries of experience should have taught us how to direct our lives better than they, we can still read between the lines in the lesson before us to-day, and apply the childish error of discontent, asking that we may be shown how to correct the sin.

We are constantly seeking for something *supreme* in our lives, some positive, responsible thought, some great and urgent need, to guide and direct our actions. We fancy we see in the lives of others just the work we crave, the joys we miss; and we call life empty, and aims defeated, because our lines have not fallen in chosen places.

Thus discontent makes inroads in our natures, and paralyzes true effort. But it can be eradicated by adherence to a simple law.

"Live for some good, be it ever so lowly."

Wherever our lot is cast, God wills that we shall find our highest good in doing (and with no thought of self), doing daily, something for the comfort and happiness of—it may be—his smallest creature. And of whatever ills our hearts complain, we may be sure that if we search we may find a deeper woe in the heart of a brother, never forgetting that our Heavenly Father is ever ready to help us win our battles, and that his complete rule within our hearts will insure content and happiness.

NOTES ON THE LESSON.

The peace that followed the events of our last lesson had continued with increasing prosperity twenty years. The enemies of the nation returned the cities they had captured, and Samuel resumed his circuit as judge going from Bethel to Gilgal and to Mizpah, the three cities where court was held. Bethel was central, Mizpah directly south and both on the main route of travel. Gilgal was more distant in the north west, not far from the sea coast. These cities represented the more thickly settled parts of the nation. Josephus adds, that "one of his

sons was located at Bethel and the other at Beer-sheba, the extremes of the land," but no support is found for the statement beyond the fact that they were associated with their father in the administration of the government. The larger part of the nation north and south and the tribes living east of the Jordan river, were not as accessible to the courts of justice as the rest of their brethren, and this in connection with the corruption of the office by the sons of Samuel, may have influenced the elders in their desire to establish a government with a visible head, having officers under appointment from him in every part of the nation. They were not far enough advanced in spiritual or even moral development to rest their causes of difference, of whatever nature, to the arbitration of an invisible King, who ruled through a Judge claiming authority under the appointment of Jehovah, the Lord of the whole earth.

The ideal which Moses in his great wisdom and learning had worked out as the highest and purest form of government, was far in advance of the social condition of the whole people. Their four hundred years, experience under judges had not been fortunate or satisfactory. The union of the civil and sacerdotal power had not developed the strength or the spiritual force of the nation, and the Elders saw in the successors of Samuel, as they had seen in the sons of Eli, no prospect of an improvement after the government should pass into their hands.

While Samuel, of whose honesty and good intentions the whole nation was well assured, was yet with them, they wanted him to make choice of a king and assist in forming a stable government.

We have seen how grievous this demand of the Elders was to Samuel, although it was only the manner and not the matter of the asking that was at fault, as Moses had made provision for such a step (Deut 17: 14-20). In his retiring to ask Divine counsel the way was opened and he was enabled to wisely lead the nation through the crisis from a tribal confederacy to a regularly constituted monarchy, without strife or bloodshed. A recent author writes: "The Jews had an absolute monarchy and a hierarchy. These did for them what was done for other Oriental nations by their institutions,—subdued them to industry and order, and gave them a national life. But neither their kings nor their priests ever obtained, as in those other countries, the exclusive molding of their character. Their religion gave existence to an inestimably precious institution, the order of prophets. Under the protection, generally, though not always effectual, of their sacred character, the prophets were a power in the nation, often more than a match for kings and priests, and kept up in that little corner of the earth the antagonism of influence, which is the only real security for continued progress."

THEE AS WE SEE THEM, love them, adore them in the fields, where they are alive, holding their green sunshades over our heads, talking to us with their hundred thousand whispering tongues, looking down on us with that sweet meekness which belongs to large but limited organisms.—Holmes.

MAN'S INHUMANITY.

OUR readers, who are alive to the current events transpiring in the world around us, cannot but have noticed with pain and heart-sickness the recent developments regarding that horror of all horrors, the African Slave Trade. These revelations have been made known by several of the great explorers into that little known land, and the details of the traffic are so terrible we forbear to present them, and will only quote from Stanley. In summing up some of the barbarous results of this great iniquity of tearing men, women, and children from their homes and taking them to the slave market, he says: "that every five thousand slaves are secured at the sacrifice of at least thirty-three thousand lives."

Christian hearted people stand appalled at such cruelty, and statements of the incidents of the trade will have to be made known ere there can be created sufficient interest for the great work of its abolishment, which England, to her credit, was the first to begin. Other European nations are now joining in the work and appeals are being made to the United States to aid Europe in rescuing these poor Africans; and we should not be backward in extending a helping hand by carrying to them a civilization that can protect the weak and helpless. The traders themselves need civilizing to free them from their own brutality, and to be shown a system of trade, not in human flesh, that will not paralyze every kindly instinct to make men worse than brutes.

Just how this can be done is a grave question very difficult of solution; yet all wrongs to humanity have in the past been mitigated or made right by the influence of persons whom God inspired for the service when the time came that this work must be done. We are told that an archbishop of the Catholic church of Africa, Cardinal Lavigerie, has gone bravely to work, not without some success, and that he has with great force and vigor presented to all Europe the condition of these poor people, giving his experience as an eye-witness to the cruelties practiced, imploring help.

It is not for any to sit at ease in this the very threshold of the 20th Century, thinking we have reached a high grade of refinement and need not to labor as in

the past. "New accessions" teach the "new duties;" and we are not done with brutality even at our own doors, when men will fight each other for pelf and thousands will eagerly witness it.

We are justly proud of our advances in civilization, the result of cultivated brain-power, but this alone will not produce goodness, although it is a powerful instrument in elevating the ignorant and aiding them to resist the attacks of superior nations. But it is ever the old, old story, that we should never let culture harden the heart to the cries of the suffering, or our knowledge be allowed to obscure the fact of the preciousness of human life even if its possessors are of the most ignorant and debased of mankind.

The religion that Jesus taught, and which we profess to follow, pictures to us a possible kingdom of heaven upon earth, to be brought about by the spread of kindness, and a belief that God is the one universal father of all created beings. That it is by the revelations of his will to man and man's obedience to it, that will ever lead to this heavenly condition. Intellect is not to rule, but to be the mighty instrument to perform the commands of the Divine will, and go and subdue evil and make earth a Paradise. We seem very far from this state yet, but we can each do our part by living out and spreading these divine truths, giving our strength towards the right, acknowledging the leaders God has chosen to go forward to such service as this, giving them our sympathy and encouragement, not condemning their methods because they have not had our light, and cannot use our chosen weapons. It is not for us to say how God's plans are to be carried forward, only to watch for our chance to aid, and embrace it when it comes, that we too can help humanity to rise to a higher level.

MARRIAGES.

GARWOOD—CALEY.—At the residence of the bride's mother, Media, Pa., Sixth month 6th, 1889, by Friends' ceremony, Emson H. Garwood, son of Emeline and the late Allen Garwood, of Newtown Square, Pa., and Hanna R., daughter of Lucy C. H. and the late Samuel Caley, of Newtown, Delaware county.

CORRECTION. In the notice, last week, of the marriage of Rezin Thompson, the bride's name, Anna Craft, was printed, by mistake, Croft.

DEATHS.

BUNTING.—At Crosswicks, N. J., Seventh month 4th, 1889, Jacob M. Bunting, in his 77th year.

COATE.—At her residence, Medford, N. J., on First-day morning, Seventh month 7th, 1889, Esther Coate, in the 85th year of her age.

She was a diligent attender of meeting when health and strength would permit, and for many years an elder of Medford Monthly Meeting of Friends. She was as a sheaf

of wheat fully ripe, now gathered into the Heavenly garner. It can be truly said of this dear friend, "none knew her but to love her."

HUNT.—At her home near Jennerville, Pa., on Third-day, Seventh month 16th, 1889, Sarah Hunt, in the 92d year of her age; for many years a minister of the Society of Friends.

JOHNSON.—At Haverford, Pa., Seventh month 9th, 1889, Charles Johnson, in his 68th year.

PERCE.—Seventh month 7th, 1889, Rebecca H. G., widow of David Perce, aged 95 years. Interment from Moorestown, N. J., Meeting-house.

POWELL.—At their residence Sharon Hill, Pa., Seventh month 7th, 1889, Margaret R., wife of Joseph B. Powell, aged 64 years.

ROBERTS.—Seventh month 8th, 1889, John Roberts, of Abington, Pa., in his 85th year.

SWAIN.—Near Columbus, N. J., Sixth month 21st, 1889, Lydia A., wife of E. Randolph Swain, and daughter of Shreve and Emily Shinn, in the 41st year of her age; a member of Old Springfield Preparative, and Burlington Monthly Meeting, N. J.

For Friends' Intelligencer and Journal.

SUMMER DAYS IN AND ABOUT NEW YORK CITY.

DURING a social visit to New York City and its neighborhood, homing with our friend P. A. Thorne, on Madison Avenue, I found many resources for comfort at this heated season far exceeding aught before experienced. While the vast extent of building surface and pavement must store and reflect with power the heat, there has been almost continually a fine breeze which is exceedingly grateful. Central Park, in the midst of the great Metropolis, affords a refuge from the heated marts most refreshing and delightful, open alike to the inmates of crowded tenement houses as from more luxurious homes. It is such a comfort to see the vast number of citizens, including the little children who avail themselves of this privilege, and to watch the well-kept equipages, with their fine horses, contributing so largely to the pleasure. It is so restful to watch the changing shadows on the green sward, beneath the great variety of foliage, and after a bright sunset to see the stars come out and the quiet light of the moon. Truly nature and art combine to charm in these great centres of human life.

I attended monthly meeting at Rutherford Place, realizing how good it is thus to seek retirement from the social and business engagements, and together wrestle for the Divine blessing. The Queries were all read, though with answers only to part of them, a plan which seems to bring them to mind oftener than our custom, and may be profitable. Many members are out of the city, so that their meetings are smaller than usual. I called at Joseph and E. Bogardus', also John and Sarah Griden's, finding what comfortable homes there are in the "flats." They combine many conveniences, and the higher in the air they are the purer the atmosphere, and finer the outlook. The window flower-beds are also a great attraction, showing how space can be utilized and bringing glimpses of nature and beauty into the

home. I spent a day very pleasantly at the home of John Wm. Hutchinson and family at "Fordham Heights." Joseph McDowell and family were also there and Wm. M. Jackson. It was charming to find such a secluded rural district in the limits of the great city. In going up from the station not a building was to be seen; ascending a wooded hill, when a turn in the road disclosed several houses, in one of which we were glad to find shelter from an approaching storm. We could see the Palisades of the Hudson, and catch glimpses of the river itself, and a bright sunset after the rain gave us great delight. William took us a ride in the evening going through Fordham Village, with beautiful houses in its outskirts, also the cottage where Edgar Poe lived when he wrote "The Bells," and where his wife died. First-day we attended the indulged meeting at Sing Sing, on the banks of the Hudson, and rejoiced that the few Friends living there and others who enjoy mingling with them could have the privilege of a meeting.

We could but think, in the silence, of the many hundreds near by in prison cells and of all the varied circumstances which had combined to bring them there. Among these in early life, the want of self-control, and little indulgences of self which paved the way for greater. May increasing wisdom devise improved means to help restore these unfortunates to a better life. We dined with Hannah C. Bowron and sister, in their delightful home, shaded by trees and shrubbery, out of which we had glimpses of the Hudson and its scenery, so greatly enjoyed on our way up and returning. Many beautiful homes are on the bluffs, and the unpretending cottage, close to our track, where Washington Irving lived, nestles among the trees. We have also had a delightful ride through Riverside Park, by the tomb of Grant, and many points of interest and beauty, and over the Washington Bridge, opened at the late Centennial. It is a magnificent structure, bridging with its fine spans, high and broad, the Harlem River. Truly we are led to marvel at the skill and energy of man, the great difficulties that are overcome, and the skillful mechanism he brings to his aid. For the first time I visited a Catholic Church, Cathedral on Fifth Avenue, my friend leaving me to roam at will for an hour through its bewildering mazes. The old paintings and the illuminated windows with scripture scenes, the "holy water," the fine decorations and architecture, the immense candles, and burning incense, the costly statuary, representing the Virgin, Jesus, the Apostles, and Saints was indeed impressive, or I might say oppressive, as I saw the devotees here and there kneeling before these, crossing themselves and sprinkling with the water they deem holy. Involuntarily a feeling of pity arose for these idol worshippers, and it saddened me almost to tears. Then the query, Why? Which they are so happy in their faith, and a realising sense that the dear Father could see through form and symbol, the hearts of his children, that as they are faithful to the little, even though it seem to us as error, they will be prepared for greater things in the evolving movement of advancing truth.

In the heat of yesterday, the 9th, though fresh breezes met us in the door-way, we made a delight-

ful trip to Coney Island. The view of New York Bay was very fine, and it was cheering to see the varied facilities of travel over its surface,—up the Hudson, and away out to sea. We followed with interest a steamer bound for some foreign port, until she was lost to sight, thinking of their hopes and plans and their life on ship board—a home for many days. We saw the great statue of “Liberty enlightening the World,” and it seemed amid the many sails that here was Liberty indeed; yet the desire arose that in a deeper, broader, truer, wiser sense, with growing responsibility touching our world-wide relations, and the great privileges we enjoy, we may be so enlightened as to lend a beacon light that will show to the world wherein true liberty consists. It was a great pleasure to see how many hundreds are thus carried daily from the city to enjoy the coolness and restfulness of the surf, and be invigorated by the sea air. So many children were on board,—little infants, some of them sick, so sadly needing change of air. Staten Island was seen for the first time, and it looked very attractive, with its homes nestling in verdure and shade, surrounded by the Bay. We did not leave the boat at Coney Island, but watched the multitude come on, the children with their kettles of sand and shovels, having had a happy day on the beach. It will be a pleasant memory all through the summer to think of these outlets, and the healthful resorts and influences within easy reach of those who cannot leave the city for a length of time. We returned in the evening to find Samuel and Rebecca Haines awaiting us, John and Sarah Griffen coming later. So we had a pleasant closing of a very enjoyable day. Mention should have been made of the “Battery,” which I had never thought of in any attractive light; but it was clad with verdure, trees, and shrubbery, lending a charmed influence. Before Central Park was laid out it was a popular resort for citizens; now it is the Emigrant’s Station, or Castle Garden, where the great ships unload their human freight; and a pleasant spot it is to land in a strange country. We passed the Quarantine hospitals in the distance, also had a good view of the great Brooklyn bridge and the city to which it leads; with such great and improving facilities these thickly populated centres seem mingled into one.

Fourth-day morning we attended the little meeting at Rutherford Place. How precious are these quiet seasons of mingling together in religious fellowship! Afterwards I called to see Hester Wilson Dart, a niece of the late Elizabeth Starr, of Richmond, who is one of the managers of the Mutual Benefit Exchange for Woman’s Work, 134 West 23d street. Various interests are combined in the home; Hester is an artist quite talented in her profession, yet desirous to lend a helping hand to women who need help, many of whom have suffered from adverse circumstances. A great variety of articles are deposited for sale, including the culinary department, and good lunch is served daily. Classes in every branch of art, decorative, also modeling in clay, and orders for portraits in oils, etc. Took tea with our friends Samuel and Rebecca Haines, spending a very pleasant evening with them. Fifth-day morning we

rode over to Brooklyn, passing under the Centennial Arch, recently erected near Washington Square. There has been a suggestion to perpetuate it in marble as a memento of the Centennial and the interests which centered in it.

We met with Friends in their week-day meeting at Brooklyn, which was small. There were present, however, more men than in New York on the previous day. The hum of machinery close by reminded us of the busy world without, contrasting with the quiet waiting within. Nathaniel S. Merritt sat at the head of the meeting, with faculties bright and unimpaired although he is advanced in years; and the wing of Divine Love seemed to cover us. Surely it does not require great numbers to command the heavenly blessing. We lunched with Sarah J. Titus and her daughter Caroline,—the former a minister in our Society,—and enjoyed our visit with them. As we returned we again crossed the great Brooklyn bridge,—what an immense structure it is!—having a fine view of East River and the grand bay, alive with sails and steamers plying in every direction. The statue of Liberty was seen in the distance, and the great cities lay behind and before us,—twins they seem,—with only the river between, and closely related by common interests.

We rode up Fifth Avenue and entered Central Park, once more privileged to enjoy the restfulness of this charming retreat. We went to its farthest limits on our way to the home of Jacob and Jane Capron, where I parted with my friend for a visit with them and their family, of which I was glad to have the privilege. I returned this morning to the home on Madison Avenue which has so kindly sheltered me, grateful for the many blessings bestowed.

L. H. P.

New York, Seventh month 12.

THE FIRST-DAY SCHOOLS: MONTHLY RECORD—IV.¹

LIKE so many of this year’s First-days, Fifth month 26th was dull and threatening rain, and the school was small. The Willing Hearts numbered six, however, and the lesson leaf upon “Betrayal” was in use. The lesson having been read through, questions were asked upon it. All seemed to think it strange that after being so long upon such intimate terms with so pure a form of goodness as was shown by the Master, Judas *could* have done so base a thing as to betray him for money. He was one of those whom Jesus had taught to love their enemies and do good to those who hated them, and yet he did evil to his best and kindest friend. He must have had a very low order of spirit for such a thing to be possible. Yet we do frequently prove untrue to our deepest convictions, and like many who are wishing for “prohibition” dare not come out openly with our influence for fear public sentiment will not support us. “We depend too much upon public sentiment, do we not, without thinking that it may sometimes be mistaken?” “I do not think we need,” replied a girl, “it is nothing but cowardice to do so.” That is just it;

¹From the Secretary’s Minutes of a First-day School, Seventh month 1, 1889.

but how many of us are cowardly at times!" But the girl did not seem to agree that the brave were so few, and the teacher continued, "Standing up for your convictions does not mean that you are to thrust your opinions upon your elders. So much more notice is taken of children in these days than formerly, that they often forget that older people are at all to be considered. 'Oh! that old woman. She doesn't know much,' is apt to be the feeling, if not the expression." All the girls laughed, and one or two blushed a little. The wisdom and skill with which the woman's clerk harmonized two discordant elements during Phila. Yearly Meeting, upon a question which had elicited almost too warm an outspeaking on both sides, was brought up, and named by the teacher "divine tact." "We may be true to our best convictions, and yet not force ourselves disagreeably upon others. Too impulsive speaking often repels rather than convinces. Win. Penn's motto was a good one: Think twice before you speak, and you will speak twice as well."

After this followed a talk upon stolen fruits. "Do you find in your own experiences that stolen fruits are sweetest? Does an apple taste any better for being eaten behind a desk lid, or is there not always 'something within that pricks' and destroys a great part of the pleasure? Do you not know by the fact of your having to use a little deception that you are doing wrong?" "I know by whether the teacher's looking at me," answered an active spirit, quietly. "I don't think it is wrong to eat in school," said another, and a third girl added, "we *always* get hungry in school. I think it is a shame not to let us eat anything except at recess or noon." "I can never study well unless I am eating," announced a thoroughly nice, good, lovable girl; "I never can study in school half as well as at home where I can be eating." "When are you doing wrong?" asked the teacher. "When you think so." "I can't remember," said a girl, "whether I've been talking in school or not—or eating either." "Can't remember!" Why I do not see how one could possibly forget if she had broken a rule. But I think we really undertake too much. We would remember everything better if we did not try to do so many things at once. When you study put aside everything else and study with your whole mind on the lesson. That is the only way. Learn the art of concentration and study grows easy. Whatever you do, do it, and do not try to do something else at the same time." "That is just the trouble; I *can't* concentrate." "Yes, we are stronger than we think, and have more power than we ever take the trouble to use. Good is stronger than evil." "Oh! I don't think so," came from the girl who liked to eat and study at once; "I think there are a great many more temptations than helps in life." "More bad than good?" "Yes, I know I am." "And thee?" turning to the girl's sister; but the first replied for her, "Oh, A— is better than she is bad and so is H—, but I am worse than I am good!" "When a person is in that state the best thing she can do is to forget herself altogether, and think about others. Now I want you to try the next week and think how lovely everybody is. Look for the good

in those about you. There is always a great deal more good than evil in the world if you only would not shut your eyes to it."

The following week the hour was spent with a class of four little boys who all seemed to partake of their teacher's calm and restful ways. The lesson was a short reading and talk about Jesus. They had all heard of him, and were quite ready with their answers to questions upon the reading. "Who was nailed to the cross? Who was his mother? How many have seen pictures of his blessing little children? How many try to be like him?" All of them answered to this. "Do you try to forgive anyone that wrongs you?" This question drew forth only affirmative replies. "Do you know about Adam?" "I know when he was born," volunteered one—"a little before Eve." "Why were they put into the garden?" "To take care of it." "Why were they cast out?" "Because they ate fruit they were told not to eat." "Do you like bad boys?" "No." "Do you try to make them good?" "Don't know how." Another boy added, "some people won't learn to be good." "They will learn after a while." Continuing to read the story of the Nazarene's sufferings, and the reasons given by the book (with which however full agreement was impossible) the teacher asked "Could you be patient like he was?" "It would be pretty hard," said one little boy with a smile, and another expressed himself in boy dialect: "If any one was to hurt me on a purpose, I couldn't, but if they hurt me on an accident, I could forgive him!" As the time was not quite out the class was reviewed upon the story of Joseph, and to one scholar in particular it was a pleasure to listen. He told the story so well in words of his own, quietly, deliberately, without hesitation or self-consciousness, in a sweet, childlike, yet unusual way, a *gifted* way it seemed, and stirred the wonder, "What shall not that child be able to do in future?" This class strongly exemplified the idea expressed by a recent writer upon school government, that the spirit of the school reflects that of the teacher; and it was very pleasant to see these four little boys who without doubt were active and noisy enough on the play ground, sitting quiet and speaking in soft, low tones, by what appeared to be their own free choice. There was nothing constrained or unnatural in their conduct, there were plenty of smiles and some little asides to one another, but the general behavior was what one likes to see in a First-day School class. As the morning of the 7th found the "Seekers" without a teacher, the writer undertook that office for them, and was confronted with eight boys, aged from twelve to sixteen years. The spirit of fun had taken possession of two or three, but the rest of the class was well behaved and orderly. "Who can tell me about the Lord's Supper? What was it?" "Passover." "Was the keeping of the Passover a Jewish custom or a new one instituted by Jesus?" Both answers were given, and one or two boys were surprised to hear that it was a Jewish feast. "At what time of the year was it held?" "In the spring." "What is there in the Christian churches that corresponds to it?" "Easter." "Do

the Jews still celebrate it?" Again one or two were surprised to hear that they do. "What do they do at this feast?" "Kill a lamb." "What for?" "So that the smoke or part of it that was burned might ascend to God." "I don't see any sense in it," suggested one boy. "What is the meaning of a sacrifice in most religions?" After some thinking came the answer, "Something given away." "What is the Christian idea of sacrifice?" "Self-denial, sacrifice of self." "Just that? Is it of any use to make ourselves miserable for no good?" "For the sake of others." "Yes; and there have been numbers of people who thought they were doing right in merely torturing themselves. What did Jesus do at this feast?" After some thought, "Took bread and broke it." "Yes; gave his disciples an object lesson. What did he call the bread?" "His flesh." "Was it really his flesh or body?" "No, it was bread." "In what ways was it like it?" They could not quite answer this, so it was explained: "As bread nourishes our bodies, so his flesh and blood by which he means his *life*, nourishes our souls. As we eat bread and grow so we must take into our lives his life and grow strong upon it. There are churches that really believe that after the priest has blessed the bread it actually becomes the body of Jesus." At this statement eight boys opened their eyes and were silent. "But it does not, of course. He was only giving them an object lesson, something like that of the bread and cake. The Bible writers, and the eastern nations to which they belonged, used much figurative language; so that while their writings are true, the real meaning is often very much changed if the words are taken in too strict or literal a sense." After this came a review of an old lesson, and some talk upon the faults of untruth and of unkindness.

Upon the 16th, the session was very short. The time spent in the Perseverance class was chiefly devoted to the first two verses of the 15th chapter of I. Cor. The girls had each in turn brought forward a chapter from the Bible for consideration, but the one for this day was not determined by choice, but by chance, the girl selecting the chapter at which she happened to open. Though choice is far better than chance as a rule, yet a very good little lesson was drawn from the chapter. "What does 'gospel' mean?" "Truth." "Not quite, we do speak of 'gospel truth,' but gospel means 'good news.' What good news was it that Paul preached to them? What did he mean in the first verse by 'the gospel which I preached unto you?'" No one knew. "You must know what he preached in the 13th chapter of I. Cor.?" "Oh! yes; love and charity." "Charity means love; 'caritas' means love and charity. 'By which also ye are saved,' how does love save us? From what?" There was no reply. "Suppose your family cared nothing for you, and nobody ever showed you a particle of kindness, what effect would it probably have on you?" "We would be hateful, too." "Would you find it very easy to be good?" "No; it would be very hard." "Then how does the gospel of love save us?" "It helps us to be good."

Although many First-days during the past ten months have been unfavorable, and have in some degree affected the attendance and punctuality of pupils and even teachers in our school, yet it is beyond a doubt that the interest shown has been perceptibly deepening. There exists a closer bond of sympathy between teacher and pupil. The general good order has visibly improved, as a natural result of closer acquaintanceship and the interest manifested by teachers in those under their care. Ability to impart instruction and awaken thought has greatly increased during the past year; you are more sure of yourselves and of your powers, and dare more, safely. The children catch the spirit and show a willingness to be guided. Possibly, of more interest than all else is it to observe the individual development in certain scholars who seem to give beautiful promise of future good to the world. Though some in whom we hope may possibly disappoint us, many who seem dull and slow will yet outstrip them in the path of righteousness.

Let us separate for our vacation with thankful hearts that something real has been accomplished by our labors in the cause of truth and love, be it much or little, and look forward with hope and will to no smaller success in the year to come.

EDUCATIONAL.

FRIENDS' SCHOOL AT ABINGTON.

THE Friends' school at Abington has issued its circular and catalogue for 1889-90. It will reopen on Ninth month 9th, the students presenting themselves on that day, and the regular exercises beginning on the 10th. The academic year is divided into two terms of nineteen weeks each, the first beginning Ninth month 9th, and the second First month 27th. The school is in charge of a committee appointed by Abington Monthly Meeting. The corps of instructors includes eight persons, the Principal being Arthur H. Tomlinson. During the past school year 101 students were enrolled, of whom about 35 were boarders.

A correspondent at Abington writes:

"Two years ago Abington Friends' school took possession of its new building, and opened as a Boarding and Day-School for both sexes. The school was carefully graded, and a Course of Study adopted which enables its pupils to gain a full high school education, secure admission into any of our colleges or universities, or prepare themselves for the profession of teaching. The management was thoroughly imbued with the idea of making the success of the school depend upon its record for thorough, careful work. The constant receipt of more applications than could be accommodated, notwithstanding an important increase in the capacity of the building made during the first fall; the fact that the upper classes have remained in the school, raising the grade a full year's work each of the first two years, to be followed by a similar increase next year; the need of more class-rooms for additional teaching force—these and other facts as important have led to the construction of a new wing. When this is completed, this fall, the building will have a fine, large

school-room, whose capacity can be much increased when used as a lecture-room; ample class-rooms, a large dining-room, a reading room for girls, another for boys, comfortable lodging-rooms nicely furnished, good bath-rooms, etc. The teaching force will average one teacher to twenty pupils, and is composed of teachers selected with special reference to the work required of each one. All have had sufficient experience to demonstrate their aptness to teach.

"Not the least improvement is the entire reorganization of the Primary Department, and the employment of teachers who have spent years in fitting themselves for this kind of work. Already there are indications that even the increased capacity of the building will not be sufficient to accommodate all who will apply. The total number of pupils now enrolled is much in excess of the previous capacity of the building."

JOHN PAUL VERREE.

THE death of John P. Verree, on the 27th ultimo, removed from a large circle of relatives and friends one of those rare characters whose public and private life met most requirements. He was always governed by high principles in the many public and private positions he was called upon to fill. As a member of Congress during the most trying period of our national history, as a member for several years of our City Councils over which he presided; as Vice President and President of the Union League, and of various corporate bodies with which he was connected, his integrity of purpose and high sense of honor secured him the respect and confidence of all. His public life was marked by the purest patriotism. He had supreme contempt for, and was outspoken in his condemnation of, those who sought public position only for private gain, without regard of honor or principle. As a Friend he was sincere and steadfast, ever distinguished for unselfishness, candor, and uniform courtesy. He was born and educated in the religious Society of friends, and was governed by their principles, and in all his active, business, and public life, he was steadfast in their support. He never forgot his early training; for nearly 40 years he was a member of Green Street Monthly Meeting of Friends, and valued his membership in the Society as an inheritance from his ancestors. He was independent in his thoughts and judgment without regard to the opinion of others when he felt he was right. He leaves many warm friends won by simple merit and high principle. J. V. W.

AT SUNSET.

As the dying sun is shedding
His glory all around,
The Heaven-like gift of fancy
Seeks out its chosen ground.
The clouds above are sailing
Before the sky of blue,
Like the waves of ocean singing
Their old songs, ever new.

The pine-tree rings o'er me,
Give beauty to the scene,
And the winds among them whisper,
Of things that might have been.

The sun sinks lower, lower,—
Softly he goes to rest.
As a babe in the arms of his mother,
Drops, sleeping, upon her breast.

The balmy breath of the South-wind
Kisses the heated cheek,
Bringing tears of saddest longing
To eyes unused to weep.

As the calm of twilight settles,
More soft than the breath of May,
The heart's deep passion and longing
As softly passes away.

The dusk grows deeper and deeper
And the bird flies to the nest,
All the world around seems sleeping;—
Then the soul, at last, finds rest.

The trials of the day are over,
The weary thoughts have flown,
And the quieting breath of evening,
Finds the soul and God alone.

As the last red beam of sunlight
Drops lower, and fades away,
We learn that the peace of Heaven
Falls best at the close of day.

JOHN RICHARD MEADER.

For Friends' Intelligencer and Journal.

BOB-WHITE.

JUST see the pretty sheaf I've made:—
Well, as I gleaned amongst the wheat
"Bob-white, Bob-white," I heard our call,
The voice was loud but clear and sweet;
"I'm here," I cried, then hurried on
And soon close by my side I heard
Bob-white! Bob-white! No one was near,
Whirr went its wings, up flew a bird.

I did not mind his saucy tone,
Nor care if he was teasing me,
But how he knew so well my name
Is what I cannot, cannot see.

M. ALICE BROWN.

Cecil county, Md.

IN AN OLD GARDEN.

As fair the purple slopes arise
As tho' against these tender skies
Were set the hills of Paradise,
Lower, great beaches crowd adown,
And brows, that birch and hemlock crown,
Of stern, grey rock in sunshine frown.
At last a little knoll, and then
In haste to meet the steps of men,
A brook that rushes from the glen.
Beside that joyous-flowing stream
White walls and cheerful windows gleam,
And, red at night, the lamp's soft beam.
Along its belt of mellow land,
Knee-deep in clover, orchards stand
With murmuring hives on either hand;

And the long garden, steeped in sweet,
Lies basking in the summer heat,
And seems to wait for coming feet.

There, blooming on from year to year,
The sweet old flowers in turn appear,
Like friendly eyes, remembered, dear.

Coy April brings the daffodil
And silent violets, that still
The very heart with perfume thrill.

In childish glee comes wayward May,
When borders, all in trim array,
With lightsome, nodding beads are gay.

Brave June her lavish treasure shows
And over all the garden throws
The magic splendor of the rose.

In hot July the lily stands
And seems to bless with holy hands—
A virgin chaste, whose look commands.

So on the happy season moves,
Yet with each day its pilgrim proves;
Potent and faithful all their loves.

Meek children of the Earth, they run
A shining course from sun to sun,
And sink to rest when that is done

A fair and blameless company.
Here still her garden breathes: "O see
How pure one faithful life may be!"

—D. H. R. Goodale, in *Independent*.

FOREST PLANTING IN VIRGINIA.¹

FORESTRY, as practiced in Scotland, France, and Germany, treats principally of the oversight of artificial woodlands, and the further extension of such plantations. In America we have 400 million acres of natural forest, and none of artificial; 400 millions seems a large area—but of this, from five to seven million acres are annually burned over by forest fires, and the rest is being cut so rapidly and wastefully that it will all be gone before a new crop of trees of saw-log dimensions can be grown. . . .

Artificial forest development in Europe is the main feature. *Natural forest preservation* in America should be the main feature; planting being secondary.

Each man, however, who enters practically into forest work, must take it up as determined by the conditions surrounding the district in which he proposes to operate. . . .

In 1870, the senior of my firm, who had for a long life been a collector and planter of trees for ornamental purposes, till he had established a noted collection, conceived the plan of planting trees for forest purposes, on a large area of old farm land in Eastern Virginia, where, on the lower Chesapeake, we held about 5,000 acres. The meteorological conditions of the locality may be briefly described by stating that the annual rainfall is 49 inches. The relative humidity, both during summer and winter, 73. The maximum temperature 103°, the minimum 1° above zero. The wind in summer southwest, in winter from the north.

Of this tract about two thirds was in natural and

second growth Pine, with some hard wood interspersed. He decided to plant the open farm fields, and follow upon the stump land as the forest was cut off. Experience had made clear to us the wonderful reproductive capacity of the soil of tidewater Virginia, in reclothing itself with the natural Pine of that region—*Pinus taeda*—Loblolly Pine or old Field Pine, two variations of which are known to the wood cutter—the Rosemary and the Fox-tail. Still, we thought it might be profitable to establish forests of varieties, both evergreen and deciduous, not common to that section, which would promise to be more profitable than the ordinary Virginia Pine. The varieties of native deciduous trees found there comprise the Chestnut, Walnut, Ash, Oak, and many others, but rarely occurring in forests of one variety—always mixed; nature grows them that way. So we concluded to try the experiment of forest planting, which, if it were not profitable to us or our successors, might at least serve as a guide to outline the future course of others in that portion of Virginia. Accordingly, in 1870 we began operations, and in 1871 planted a field of 100 acres with the nuts of Black Walnut, depositing the nuts at one foot apart in open furrows drawn at 8 feet apart. We followed this by planting 8 acres with the nuts of Chestnut.

The next year, 1872, we continued planting both tree seed and seedlings. Of seedlings we purchased and set out the following: 30,000 Locusts—*Robinia pseudacacia*; 5,000 Cypress—*Taxodium distichum*; 5,000 European Larch—*Larix Europea*. These we planted in solid blocks, 4 x 4 feet apart, intending that they should prune themselves.

In 1873 we planted tree seeds as follows: 4 bushels Locusts, 12 bushels Chestnuts, $\frac{1}{2}$ bushel Larch.

In 1874 we continued the seed planting, putting in 150 bushels Walnuts—*Juglans nigra*; 10 bushels Hickory—*Carya tomentosa*; 22 bushels Chestnuts—*Castanea vesca*; 1 bushel Larch—*Larix Europea*; 10 bushels Catalpa—*Catalpa syriaca*; 3 bushels Poplar—*Liriodendron tulipifera*; 3 bushels Pecan—*Carya oliviformis*; 1 bushel White Oak Acorns—*Quercus alba*; $\frac{1}{2}$ bushel Italian Sumac. And of seedlings we set 2,000 Eastern Catalpa, 5,000 Western Catalpa, 75,000 Black Locust.

In 1877 we set out 10,000 Catalpa, 1,000 White Ash—*Fraxinus Americana*; 15,000 White Pine—*Pinus Strobus*; 1,000 *Abies Douglasii*.

In 1879 we set out 40,000 *Catalpa Speciosa*, 1,000 *Catalpa Japonica*, 150,000 *Catalpa bignonioides*, 10,000 *Ailanthus*, 3,000 *Abies Douglasii*.

Since the last date, 1879, we have set a large number of Catalpa, and this winter will have about 100,000 seedlings to plant.

Now what has been the result? Much disappointment. But we do not despair of some success.

We were first disappointed in the failure of the Black Locust plantations. The early groves reached a height of twelve feet, the later ones, of course, being less. . . . They gave promise of a fine Locust forest, just such as we had pictured, but hardly expected to realize. Alas! one September, the Locust Tree Borer—*Cycline Picta*—mysteriously descended in swarms upon our typical Locust groves, laying

¹Extracts from a pamphlet by Burnet Laudreth.

millions of eggs, which produced myriads of grubs, which by the next mid-summer had ruined every tree. We cut the trees down and pulled out the roots by oxen, the expenses of removal being \$25 per acre. We were done with the Locust. . . .

Next the Swiss or Scotch Larch gave out, piping of the trunks, the main stem breaking off about twelve feet in height. It did not promise well at any time, this tree doing best upon dry, rocky soils; ours was a sand with clay subsoil.

The next failure was with the Southern Deciduous Cypress. It disappointed us except in wet bottoms, so that we struck it off the list.

Of Hickory and Pecan, the nuts planted were, to a large extent, stolen by the squirrels, woodchucks, and field mice, and those that did vegetate made such slow growth that we ploughed them out and replanted the ground with Catalpa.

The Tulp Poplar was not a success, as the rabbits and field mice during winter ate off from the tender seedling the sweet, juicy bark, and destroyed nearly every plant.

The White Oak Acorns were largely stolen by squirrels, woodchucks, rabbits, and field mice, which ate the bark of the young seedlings, as they did of the poplar.

The Italian Sumac, planted for its leaves, still stands, but the percentage of tannic acid in its foliage is not greater than in the leaves of the Wild Virginia Sumac. So its cultivation does not offer much hope of profit.

Thus we have failed with Black Locusts and Deciduous Cypress, Scotch Larch, Hickory, Pecan, Tulip Poplar, Oak, Maclura, White Black Cherry, Ailanthus, Ash, Mulberry, and some others.

Our successes have been principally in determining which varieties were not profitable to plant. Certainly, in this respect, we prospered famously. Our other successes, such as they are, have been achieved with four trees: Catalpa, Black Walnut, White Pine, Douglas Fir. Two deciduous trees and two evergreens, and the two deciduous might be reduced to one, the Catalpa. Of this, the Catalpa, we have abandoned several tracts, and after most serious ravages by stray cows, half wild pigs, rabbits, squirrels, mice, and fire, have about 200,000 trees, ranging in height from two to twenty feet, according to the period of planting. They stand in rows six feet apart, many of the rows a quarter of a mile long, and promise to make, in time, fine forest studies if not eaten up, for the Catalpa has its insect enemies as well as other trees. Two years ago every tree was denuded of its leaves within a period of a month by the ravages of the Catalpa Sphinx—*Dicranura catalpæ*. They have gone, but they may come again, and may stay with us. Still, this contingency of destruction by insects unavoidably attaches to the culture of any forest tree. . . .

The second variety of deciduous tree which we have planted in large number is the Black Walnut—*Juglans nigra*. In tidewater Virginia it is found wild and of noble proportions. Our seedlings, however, have grown very slowly. For the first six or seven years they grow but a little more than four inches a

year, and it is only when they become very deeply rooted that they appear to start off vigorously. . . .

Our Walnuts, of which we have 150,000 trees left, after as many have been destroyed and others abandoned, do not impress us as of much value, and for the present we will not plant any more.

Turning to the evergreen family, we have of White Pine 14,000 a fine block of trees 12 to 15 feet high, and now growing at the rate of two and three feet a year, quite as rapidly as the native L. blooly Pine. . . .

The results of our plantations make it quite evident that the White Pine can be grown very successfully, the principal difficulty being in securing a stand in the first instance, as a large percentage of the seedlings die.

As the Catalpa is the best of the deciduous trees, I think the Douglas Fir is the better of the two evergreens; it is equally as rapid in growth as the White Pine, and if it reaches maturity and escapes the ills of forest life, it will be more valuable, one of its merits being in its early maturity; its long tapering and light wood trunk particularly suiting it for ship spars, while on the other hand older trees reach vast proportions, and form a trunk far surpassing the White Pine of Maine. *Abies Douglasii* for Eastern plantations should be grown from Colorado seed, as the Oregon type is not so hardy. I would recommend that the White Pine or the Douglas Fir be planted in alternate rows, so that in case of destruction of either variety by insect depredations or soil influences, there may be the chance of the remaining variety reaching maturity. Indeed, all plantations should be mixed, for the same reason, but they must be mixed judiciously.

After eighteen years of practical forest planting on a small scale I conclude that for the particular region of tidewater Virginia, and I think I may venture to say as well for tidewater Delaware, Maryland, and North Carolina, there are only four trees to plant; and I conclude, also, that it is very questionable if it be profitable in that region to plant at all, so long as the wild Pine will spring up in every field just as soon as annual cultivation ceases. How the seeds get there I do not know, for they will spring up in the centre of a one hundred-acre field simultaneously with their appearance upon its tree-fringed borders. This Pine will start without plowing, and it will grow under the most adverse circumstances. It will take care of itself in spite of wild hogs and stray cattle. Fire is its enemy. In twenty years it will make twenty cords of brick-yard wood to the acre, and for every year thereafter an additional cord or more, till at forty years it will cut fifty cords of first-class wood, the only expenses being the taxes, which, State and county together, do not equal *one-half of one per cent.*

The climatic and soil conditions upon the mountains of Pennsylvania, and in other regions of altitude in the various States, are different from what I have met with in my Virginia experience, and in each case the system of administration has to be considered separately; and here is a feature which I would like to emphasize, the necessity of a close study of climate, soil, and local influences, both as

respects the State and locality, and as respects the area of ground to be planted. These influences must be understood first or last to insure success. Forest plantations in every untried district must necessarily be experimental. The planter must take many chances, for even if the natural growth of trees of the section indicate success with certain varieties, still, the planter may locate them with bad exposure, with respect to subsoil, with respect to drainage, with respect to shelter from injurious winds. The grain farmer who experiments with an untried crop, and by reason of an uncongenial soil, insect ravages, or other physical causes, fails to make a crop, only loses one year's labor and expense. He can try something else next season. Not so with the forest-tree planter; if he makes a mistake, he only finds it out after a term of years, not less than ten—it may be after twenty years he finds he has to tear out and plant over.

CHANGES IN (ORTHODOX) FRIENDS.

IN an article referring to New England Yearly Meeting of (Orthodox) Friends, the Portland, Maine, *Transcript* discusses the changes which have been and are still taking place in that body. We copy from the *Christian Union*, which speaks of the article as "unusually thoughtful and careful," and says that "with a fidelity which can only come from a knowledge of the Society as sympathetic as it is thorough, it records the kind of change which is usually unrecorded—a change in spirit." The *Transcript* says:

It has not escaped the notice of those who for a series of alternate years have attended or looked in upon the public services of the yearly meeting of Friends, held in this city, that in some important particulars this Religious Society has undergone a great change in its methods of conducting public worship. And this change is one that is much regretted by many of the Friends, who cherish the faith and traditions of the early days of the Society. The quiet waiting for the moving of the Spirit, the impressive silences that prepare the heart of speaker and listener for the highest and truest utterances—this is missed in most of the Quaker meetings of the present time. It seems to many Friends as if the rush and hurry to occupy all the time with talk is destructive of the feeling of awe and reverence with which the soul ought to approach communion with the Divine Spirit. Real worship, they say, is not in the words uttered, either in exhortation or in prayer. "It is the secret, silent heart within which true worship is experienced by each particular worshiper," says Dr. Vaughan, "and without this the sound of loudest responses becomes at once a babbling and a nothingness." The very essence of prayer is in silence, and so also is it of praise. Quakerism, it seems to us, has no reason for its existence when it gives up this, its most impressive peculiarity, and adopts the noisy ways of evangelization practiced by some other sects. The organization of the Society of Friends may as well be merged in that of the Methodist, or of some other sect, if the very methods of these other sects that are in direct conflict with the methods of the primitive Friends are to be adopted—if perma-

nent pastors are to be appointed and supported, if worshipers are taught that every minute spent in silence is a wasted minute, and if the soul that is feeling its way towards the Infinite is to be distracted, even by the sound of sweet music, from the still, small voice of the inward monitor. Wesley himself, in one of his hymns, utters this admirably expressed caution in regard to the abuse of music in public worship:

"Still let us on our guard be found,
And watch against the power of sound
With sacred jealousy,
Lest haply sense should damp our zeal,
And music's charms bewitch and steal
Our hearts away from Thee."

We have the charity to believe in the use of each and all of the Christian sects. Each meets some pressing need of the human soul. There is room for Quakerism in the world, and it has a power for good that has been abundantly manifested in the past. But do not let it be frittered away by weak compliance with the usages of other sects that are not in harmony with its distinctive principles. It is perhaps too much to hope that the Friends as a body will return to the exact paths in which they walked when they won their greatest triumphs, but they can refrain from taking the steps that will lead them directly away from their ancient road to heaven. The sainted soul of George Fox, if it has cognizance of the tendencies of his nominal followers in these latter days, must be greatly exercised and disturbed to see the Society of Friends adopting the methods of worship against which he uttered his constant protest. Wesley, when he changed the methods of the Episcopal Church, founded the Methodist Episcopal Church. Those who are now changing the methods of the Society of Friends might take a leaf from his book and start a Methodist Quaker Church, leaving the old-fashioned Friends, who desire not the change, to enjoy their ancient forms, or rather lack of form and ceremony. We do not know that either side is talking of division, but it seems to an outsider to be inevitable.

ALWAYS the best thoughts are unexpressed. Something in the man is superior to the mind itself. It announces its presence like an electric spark, and fuses his ideas as though they were molten and run together, so that he is overpowered by their heat. For want of a better word, we say that we *feel*. But we cannot reduce the feeling to words, nor communicate it to another.

"Thought is deeper than all speech,
Feeling deeper than all thought;
Souls to souls can never teach
What unto themselves was taught."

EVERY man is the builder of a temple, called his body, to the God he worships, after a style purely his own, nor can he get off by hammering marble instead. We are all sculptors and painters, and our material is our own flesh and blood and bones. Any nobleness begins at once to refine a man's features; any meanness or sensuality to imbrute them.—*Thoreau*.

From The American, (Phila.)

THE RETURN OF THE INDIAN.

PERUANS in all the history of the migrations of mankind, the growth and extermination of peoples, there is nothing more strange than the survival of the American Indians, and the return of many of them, at the present moment, to till the very soil, here in south-eastern Pennsylvania, which their race gave up two centuries ago. Men of the lingual family who greeted William Penn are plowing, planting, and garnering in the fields which their people then surrendered. The Indian has returned to the Atlantic. He was pushed westward as a hunter and a nomad: he comes back as a farmer, and as an American citizen.

This is not rhetorical or figurative. It is definite and actual. The plan of "placing out" the young men and young women from the Indian schools maintained by the Government, has now been in operation for more than ten years, and has acquired, both as to the numbers so placed, and as to the measure of success realized, proportions which cannot be questioned. The Indian is capable of sustained, systematic labor. He is a good worker. He has traits of his own, but he has the general characteristics of mankind. Where he differs from the white man, the points of difference are not all to his discredit or his disadvantage. The inheritance he has of tradition and training includes many things which civilization itself demands, and excludes some things which have attached themselves to civilization in spite of its protests.

It was a favorite idea of Captain Pratt, now Superintendent of the Indian School at Carlisle, when in the years from 1867 to 1875 he served on the frontier with his regiment, that the Indian would work, and that the way to teach him practically and easily was to place the young people among the farmers of the East. While in charge of the Indian prisoners in Florida, from 1875 to 1878, Captain Pratt began the work, and in the two years succeeding he helped General Armstrong organize the placing out system at the Hampton school, securing places for some of the pupils in western Massachusetts, in the summer of 1878. Hampton continues the system, and has increased the number sent out. Last year it was about fifty. At Carlisle, however, the plan is more extensively followed. From that school sixteen were sent out in the summer of 1880, and, including that party, there have now been "outings," varying in length from a few weeks to a year or more, for 1,288 boys and 502 girls,—counting in these figures the repetitions of those out more than once. This summer there were out, at the beginning of July, 245 boys and 107 girls,—say in round numbers, 350. This is double the average of the ten years, and shows how favorably the system is regarded by the three parties immediately concerned: the Indians themselves, the white families who employ them, and the authorities at Carlisle. The steady increase of the number put out comes about naturally. The pupils desire to go. "During the latter part of the winter, and all through spring and summer, until they are sent out," says a competent authority on the subject, "Captain Pratt

is daily besought by the pupils to give them 'a chance to go out this year!' The opportunity to earn their own way is popular." Last year the number sent out was 225 boys and 101 girls, so that this year shows the usual growth.

These young Indians have been placed in all the counties of south eastern Pennsylvania, and in others of the interior,—Cumberland, Columbia, Luzerne, Juniata. Some have gone to New Jersey and Maryland, a few to Ohio and Massachusetts. A larger part of the boys, however, have been placed with the farmers of Bucks county, and many of the girls in Montgomery, Chester, and Delaware. (The two sexes are not sent to the same neighborhood, nor is it usual to place two of the same tribe in one family.) It is a common thing, therefore, to see, at this time, Indian lads and young men at work in the fields of Bucks county, and to find Indian girls cooking and waiting on table in farm-houses of the counties adjoining. Here are the Aborigine people returned! Here are Cheyennes, whose fathers, of the same Algonquin blood as our tribes of the Delaware, kept faith with them centuries ago, and, speaking a related dialect of the one language, held the same traditions and the same antipathies. But here, too, are a score of other tribes represented. In the family of the writer there have been, in three years, girls from the Cheyennes, Oneidas, Pueblos, and Pawnees. In neighboring families have been others from the Winnebagoes, Apaches, and Kiowas. And the list beyond these neighborhood examples is extensive.

There is some difference, of course, between the traits of the various tribes. But not very much. There is a general likeness. (I speak now of the girls more particularly, as I have not observed many of the boys.) Among the most patient, diligent, and tractable workers, no doubt, are the peaceful and agricultural New Mexico tribes, who dwell in their adobe pueblos when Coronado came among them, three and a half centuries ago, and who may justly regard themselves as of the old and settled stock of Americans, beside whom pilgrims from the *Mayflower* and the *Welcome* are but recent comers,—mere "carpet-baggers." These Pueblos have the inherited training of a long period of house-living, and perhaps they can more easily adopt the habits of white life. Yet what is to be said of the wild Apaches—the untamable idle nomads of whom Mr. Frederiek Remington gives an "impressionist's" idea in the current *Century*? Compared with the others, the Apache girls show no essential difference. They pursue their routine of household duties cheerfully and diligently. They follow instruction. They are neat, orderly, and modest. And so of all the rest. Here are the Cheyennes, as purely a nomadic tribe as any, yet adaptable, as well as the others, to the system of domestic labor. How far some of them have assumed the ways of civilization may be illustrated at this point. A year or more ago, a young Indian man, and a young woman, mature of years, who had been pupils at Carlisle, and had been "out" on the farms, were married, and are employed in southern Chester county, on a large dairy farm, as valuable helpers. One of these was a Cheyenne, the

other a Pawnee. Another marriage of like character is about to take place, each of the pair being a Cheyenne. The marriage, at the insistence of "the folks at home" on the reservation, is to occur there, but the couple will return East and settle as helpers to a farmer's family in Bucks county. The intending bride is the daughter of a chief,—a grave, steady, industrious girl, who spent several months in the family of the writer, in the summer of 1887. Here are two Indian families, then, soon to be settled amongst us! What would William Penn, or good old Hecke-welder, or honest Zeisberger, say to this?

The plan of hiring Indian men and girls was in the experimental years partly philanthropic. But it has now passed beyond that stage. People write to Carlisle for help, because they want it,—on substantial grounds of convenience and mutual accommodation. They find the young Indians possessing many excellent characteristics. As a rule their health is good. Of the five girls who have been in the writer's family none had a day's serious illness. They have a notable degree of physical strength. They work faithfully and continuously. They do not complain. Having few companions or acquaintances, they do not ramble about. (The Carlisle rules for out-pupils bear on these matters, of course.) They are particularly honest; no one could maintain a more exact idea of *meum* and *tuum* than those I have observed. They are faithful, they form strong attachments, and they have long memories of their friendships. Their manner is grave, and they have a decided sense of personal dignity. It is from this, indeed, that some of their apparent deficiencies result. Their movement is deliberate, they have not a quick response to directions or remarks,—perhaps no response at all. It is sometimes a matter of uncertainty whether they have heard and understood you.

Their deficiencies, however, are in no instance vital. They are such as belong to the Indian character itself, measured by the white standard. Perhaps the most serious is that they are apt to follow implicitly and mechanically the instructions given them, not making an intelligent allowance for change of circumstances.

The degree to which the Indian Question will be solved by this demonstration of the capacity of the Indian young people to do their share of the world's work is not yet ascertained. But if we consider that the Indian is tenacious of life,—that it is now conceded to be doubtful whether his people are any less numerous than a hundred years ago,—and that we find him ready and able to earn his own living according to the white manner, how can it be doubted that a patient perseverance in giving him a chance to do so will solve the whole problem, and solve it justly and honorably?

WHITTIER ON FARMING.

THE Bulletin No. 2, containing the Massachusetts crop report for June, gives a letter from John G. Whittier, heretofore unpublished, in response to the congratulations of the Essex County Agricultural Society tendered the poet at the occasion of their December meeting, when the subject for consideration was: "Whittier, the Poet of Our New England Homes" and his influence upon the homes of our farmers.

The receipt of the same was acknowledged by the poet by the following letter:

Oak Knoll, Danvers, 12th mo. 30, 1888.

David W. Low, Esq., Secretary Essex County Agricultural Society.

Dear Friend: Thy letter conveying the congratulations and kind wishes of the Essex County Agricultural Society at its meeting on the 28th inst., I have received with no common satisfaction. No birthday has ever given me more pleasure. My ancestors since 1640 have been farmers in Essex county. I was early initiated into the mysteries of farming as it was practised seventy years ago, and worked faithfully on the old Haverhill homestead, until, at the age of thirty years, I was impelled to leave it, greatly to my regret. Ever since, if I have envied anybody, it has been the hale, strong farmer, who could till his own acres and if he needed help could afford to hire it, because he was able to lead the work himself. I have lived to see a great and favorable change in the farming population of Essex county. The curse of intemperance is almost unknown among them; the rumrunner has no mortgage on their lands. As a rule they are intelligent, well informed, and healthily interested in public affairs; self-respectful and respected; independent land-holders, fully entitled, if any class is, to the name of gentlemen. It may be said they are not millionaires, and that their annual gains are small. But, on the other hand, the farmer rests secure, while other occupations and professions are in constant fear of disaster; his dealing directly and honestly with the Almighty is safer than speculation; his life is no game of chance, and his investments in the earth are better than in stock companies and syndicates. As to profits, if our farmers could care less for the comforts of themselves and their families, if they could consent to live as their ancestors once lived, and as the pioneers of new countries now live, they could, with their present facilities, no doubt double their incomes. But what a pitiful gain this would be, at the expense of the decencies and refinements which make life worth living. No better proof of real gains can be found than the creation of pleasant homes for the comfort of age and the happiness of youth. When the great English critic, Matthew Arnold, was in this country, on returning from a visit in Essex county, he remarked that, while the land looked to him rough and unproductive, the landlords' houses seemed neat and often elegant, with an air of prosperity about them. "But where," he asked, "do the tenants, the working people live?" He seemed surprised when I told him that the tenants were the landlords, and the workers the owners.

Let me return my sincere thanks to the Essex Agricultural Society for the kind message conveyed in thy letter, and with the best wishes for its continued prosperity and usefulness, I am truly thy friend,
JOHN G. WHITTIER.

NEWS AND OTHER GLEANINGS.

—The Superintendent of the Public Schools of Philadelphia, Prof. James McAlister, in his annual report to the Board of Education states the number of school buildings to be 258; schools, 459; teachers, 2,521; pupils, 113,065. The value of the real estate and furniture is \$1,761,421; amount of school expenses, \$2,357,432, and the cost per pupil, including night schools, \$20.74. Among his recommendations are that City Councils be supplied full and accurate information concerning the pressing need for school accommodations; that there be a stricter enforcement of the by-laws relating to the appointment of teachers, and that more men teachers be employed in boys' grammar schools.

—"In the capitol square," says the Tallahassee (Fla.) *Tallahassee*, "there are three or four yucca plants now in full and exquisite bloom, the tall bloom stalks capped by immense clusters of creamy-white bell-shaped flowers, with a fine stripe of purple on the outside of each segment of the perianth, making them the most beautiful among the many beautiful flowers of the Floral City. This plant, commonly called Spanish bayonet, is a valuable fiber plant, the fibre of the leaves being used in the manufacture of cordage and cloth. They grow wild in Florida, many of the islands of the gulf being covered with them. Some day capitalists will come to Florida and make millions out of the fiber of the yucca."

—The project of settling the captive Apaches on farms alongside the North Carolina Cherokees in the great Smoky Mountains seems to have points of decided merit. The soil in the valleys is fairly good, and there is plenty of excellent grazing for cattle in the mountain range.—*Hartford Courant*.

—Religion does not need to be insured, for it is not a perishable commodity. But some of the names and symbols which represent it are as fragile as glass. We must not fall into the error of identifying a church window with the light that falls through it.—*Christian Register*.

—An absurd paragraph has been going the rounds of the papers, stating that a mild winter always indicates an unusual number of thunder storms in the succeeding summer. Thunder storms, more than any other meteorological phenomena, are dependent upon local and temporary conditions, and the unseasonably warm weather of last winter will have no more effect upon the summer's electrical disturbances than it will upon the next Presidential election.—*Popular Science News*.

—Florida has \$12,000,000 invested in the orange business.

—The Swiss watchmakers have invented a watch for the blind. A small peg is set in the middle of each figure. When the hour hand is moving towards a given hour, the peg for that hour drops. The person finds the peg is down, and then counts back to twelve.

—The New York correspondent of the Philadelphia *Ledger* states "that forty physicians have been appointed to inspect all the tenement house districts, and to treat the sick, relieve suffering, and correct abuses wherever necessary. In view of the recent report of the Bureau of Vital Statistics, showing that of the population of New York city 1,100,000 persons live in tenement houses, this medi-

cal visitation of the crowded homes of the poor is a work of vast importance, not only to those directly benefited by the labors of the physicians, but also to the entire city, whose general sanitary condition must depend, in large measure, on the health conditions of the tenement house districts." He also says: "A gentleman, who withholds his name, but who cannot long conceal his identity, has made a splendid contribution to *Life's* Fresh Air Fund. This is the free use of seventeen cottages and a large club house, eight miles from Long Branch, in which 200 children at a time can be accommodated. Each cottage is two stories in height, with large piazzas, and contains five rooms. A matron will be in charge of every one, and the children who secure entrance to them will be more than usually fortunate."

CURRENT EVENTS.

PRESIDENT HARRISON and his family are now staying at Deer Park, Maryland, (on the Baltimore and Ohio railroad), he returning to Washington occasionally to attend to public affairs.

An extensive and serious strike of workmen at the Homestead steel-works of Carnegie, Phipps & Co., near Pittsburg, (against a proposed reduction of wages), was compromised on the 13th instant, and work proceeds.

CITIZENS of Seattle, Washington Territory, have issued an address, in which they return thanks for sympathy and material aid tendered them by the people of the country since the late conflagration there. The address states that the city is being rebuilt as fast as money and men can do it.

The State Department has sent out circulars explaining the purpose by the Congress of the Three Americas, to be held in Washington next autumn. These circulars state in substance that "it is proposed by a Congress of Representatives of all the American Governments to improve commercial relations between the different countries, to establish a system of arbitration in international disputes, and to adopt a uniform monetary system. These are the leading subjects of the Convention, and will also, doubtless, be those that will develop the greatest amount of discussion."

NOTICES.

* * Henry T. Child expects to attend Wilmington Meeting on First-day morning, the 21st inst., and a Temperance meeting at Stanton, Del., at 3 p. m., giving an illustrated lecture at the latter place.

* * Editors INTELLIGENCER AND JOURNAL: The members of the Circular Meeting Committee of Fairfax Quarterly Meeting who reside at Goose Creek, within the limits of which South Fork is located, have found it expedient to change the time of holding the Circular Meeting at the latter place from Eighth month 14th, as heretofore announced, to Seventh month 28th, at 10 a. m.

H. R. HOLMES.

* * A Conference on the subject of Temperance, under the care of Concord Quarterly Meeting's Committee, will be held at Friends' meeting-house, Stanton, Delaware, on First-day, Seventh month 21st, 1889, at 3 o'clock p. m.

Friends desiring to attend will leave B. & O. station, 21th and Chestnut streets, at 1 1/2 p. m., returning by P. W. & B., leaving Stanton at 5.00.

Friends and others interested and cordially invited.
MARY McALLISTER, Clerk.

* * *Friends' Almanac*, 1890. It is desirable to have this as nearly correct as possible, and in order to have it so NOW is the time to send word of any needed amendment, and not after it is issued. Address Friends' Book Association, 1500 Race street, Philadelphia.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

The use of the INTELLIGENCER AND JOURNAL as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement. When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.

UPWARD.

Oh, sometimes gleams upon our sight
Through present wrong, the eternal Right.
And stop by step, since time began,
We see the steady gain of man.

That all of good the past hath had
Remains to make our own time glad,
Our common daily life divine,
And every land a Palestine.

Through the harsh noises of our day,
A low, sweet prelude finds its way;
Through clouds of doubt and creeds of fear,
A light is breaking, calm and clear.

Henceforth my heart shall sigh no more
For olden time and hotter shore;
God's love and blessing then and there,
Are now and here and everywhere.

—J. G. Whitier.

GENESSEE YEARLY MEETING.¹

GENESSEE Yearly Meeting of 1889 was held, by adjournments, from the 10th to the 13th of Sixth month, at Farmington, New York. There were two sessions each day excepting the last, two of the afternoon ones being devoted to the First-day School work and one to Temperance. The meeting for ministers and elders was on Seventh-day. A young people's meeting was held on Fourth-day afternoon after the F. D. S. session. An appointed meeting was held by Isaac Wilson, on Fourth-day evening.

On First-day, after a season of preparative waiting, the silence was broken by Darlington Hoopes, who reminded us that God, and God alone, was the only object of divine worship; that he was, and ever remains to be, the teacher of his people himself, and that he does this through the medium of divine revelation, visiting each succeeding generation and each individual soul with his will by impressions upon the understanding. We were all created for some purpose; if we fail to do our part, God's work is not thwarted, only we lose the reward, and the reward may be eternal life. It was the *love* that dwelt in Christ which was the *Lamb* of God that taketh away the sin of the world, and this was the self-same power and influence that was shed abroad from Mt. Calvary, the blood of Christ, that cleanseth from all sin.

John J. Cornell followed, and discoursed on the text: "God is love, and in him is no darkness at all," showing that as the outward sun discovereth all

things to us and is the very source and life of all material things; so inwardly the Son of God is the light of the soul—by it all things are made clear, it is the very life of the soul, permeating all its avenues and enlightening its darkest recesses. In the soul wherein this light abounds and does its refining work, there is heaven—a heaven that, through faithfulness, we may enjoy here, even before the spirit shall have passed beyond the veil that bounds the mortal vision.

Samuel Dickenson entreated the young people to faithfulness. Upon your choice your happiness depends. Place your hand in the hand of your Saviour and he will become a living Saviour.

In the afternoon meeting Isaac Wilson spoke, taking the circumstance in Jesus' life where "he saw a man which was blind from his birth, and his disciples asked: who did sin, this man or his parents, that he was born blind?" Just as humanity queries to day—why is it? Trouble your minds less about the cause and the reasons and more about the remedy and results. God is able to open the blind mind. We need only to trust in him, and he will silence all doubts and questions and criticisms by the "whereas I was blind, now I see." We shall know that our Saviour was never crucified, but that he *liveth*, and because he liveth we shall live also.

On Second-day morning the yearly meeting proper began. Jonathan D. Noxon and Rebecca Wilson were at the table, to which office they were appointed for another year. Minutes were received and read as follows: one for Darlington Hoopes, a minister from Little Falls, Maryland, and belonging to Baltimore Yearly Meeting; one for Joshua Washburn and wife, elders from Chappaqua, New York, belonging to New York Yearly Meeting. Their company was very grateful. Their public testimonies and silent travel Zionward were encouraging to us.

Epistles from other yearly meetings were read at this time from men's and women's meeting of New York, Baltimore, and Philadelphia. They were full of inspiring thoughts, some of which may be profitably repeated here. The reiteration of "Mind the Light," calling Friends to the foundation of their belief by the simple yet comprehensive phrase of the founder of their Society, invites associations that are sacred to each member and to every child of the God of Light. May we not lose sight of the *spirituality* of our worship, remembering that "God is a spirit, and they that worship him must worship him in spirit." Let us hold fast our principles, for the world is gravitating towards Friends. There is less stress laid upon a blind acceptance of a faith. Practical righteousness

¹ From *Young Friends' Review*, for Seventh month.

as led by Friends is slowly yet surely advancing. It was said by one in the meeting that "the masses of the people cared little for the theology of the clergy. I once asked a stranger: 'Do you belong to a church?' 'Yes.' 'What is your idea of the mode of salvation?' 'If I do as well as I know how, and live as near right as I can, I will stand a good chance of getting to heaven.'" Be faithful to the conviction of your own soul. There is in that conviction a "force that can never be foiled." "Greater is he that is in you than he that is in the world." Trust and doubt not in the efficacy of the truth. It was said in one epistle, and it is a warning that ought to come home to each one for serious consideration: "The luxuriousness of this generation may undermine the character of the future generation." It was also urged vocally upon our sisters to be faithful. Would they might know and use their power and influence for good. They were active in the days of Jesus in their loving ministry. As the trainers of the youthful mind God has given unto you the opportunity, and consequently the commission, in the main, of keeping the world pure. Mothers and sisters and daughters, may you be faithful to the sacred trust.

In every Friend, old or young, there should be a dedication to principle. There should be a faithfulness equal to that which imbued the One who trod the wine-press alone. Yet we need not confine ourselves to sectarian walls in working for eternal truth and universal good. In working for our Society and for our own soul's salvation we should not forget the universality of God's love. "All the world over," said one, "who labor for good, have been represented in my mind as approaching the city of God by different avenues. When afar off the diverging roads are hardly in sight of each other and of ours, but as they approach the city, come closer and closer together, until we behold in the pilgrims who tread them, they who have come through tribulation and have their robes washed white and are ready to enter into the city whose gates are peace and streets are gold."

On Third-day morning the remaining epistle from men's and women's branches of Ohio, Illinois, and Indiana Yearly Meetings were read, after which the state of Society was entered into and a record prepared.

It was remarked concerning the character of the epistles, that they did not assume a preaching tone from one yearly meeting to another, as they used to, but were full of practical lessons and suggestions for the amelioration of the condition of humanity around us, realizing that he is our brother, wherever found, that needs our assistance; introducing us to a knowledge of the universality of the Father's love and the great brotherhood of man.

The review of the state of Society brought vividly to our minds the holy principles and practices that the earnest founders of our Society wrought out with their heart's thought and sealed with their heart's blood. We were exhorted to attend our little meetings. Though no vocal sound may be heard, the "still small voice" will not fail to the soul rightfully gathered there, which is "in His name."

On Fourth-day at the public meeting, Samuel

Dickenson and Darlington Hoopes spoke, the latter to some length, concerning the reclaiming of the wanderer. He directed us to Christ, or the love of God in the soul, as being the Lamb that takes away the sin of the world. This Son is not a person, but a principle that can reside in us and preside over us, directing our course aright; "for there is none other name under heaven given among men whereby we must be saved, neither is there salvation in any other."

At the temperance meeting on Third-day afternoon much interest was manifested. William Penn Sisson presided. The cause has had serious reverses in both nations during the last year. But the workers are not discouraged. They are becoming better acquainted with the nature and extent of the work, and finding out better the right methods in which to advance. Two or three things are being impressed deeper upon their minds. One is that license, high or low, besides being a wrong, is utterly a failure towards even checking the evil. If such laws do any good it is invariably from the restrictive clauses in them that the good comes. It is becoming more apparent that the right ground is *entire prohibition* of the manufacture, sale, importation, and transportation of all alcoholic spirits. It is also seen to be necessary that all classes of the community favoring prohibition must be joined in one united effort. To look at it from a human standpoint we cannot but have a feeling of hopelessness. Avarice on the part of the liquor dealers, and appetite on the part of the liquor drinkers,—the two strongest passions in human nature,—allied in unholy bonds, and unscrupulous as to the use of any means to perpetuate their nefarious trade, what power can overcome this mighty evil that seems to threaten civilization? We can, with our outward eyes and reasoning faculties, see none. Only with our spiritual vision do we discern the hosts of God that are round about and equal to the task.

The sessions of the First-day School were exceedingly interesting.

Samuel P. Zavitz and Annie L. Cutler presided at the table.

Reports from the First-day Schools testify of an increase in interest and attendance, and prove the great advantage to the Society wherever they have been started. There are many instances where the little child is leading the parent to the school and back to the meeting. Closer bonds of union are drawing together the old and the young, and a warmer fellowship is growing up among the young people of each yearly meeting; and all the yearly meetings are becoming more deeply interested in the Society and more anxious about its destiny. We might say, and say truly, there has not been for a long time so bright an outlook for the Society. And this is due, for the most part, to the First-day Schools. We are truly grateful to the General Conference and its committee for their labors and care in preparing the "lesson leaves." The epistles received from three yearly meeting First-day School Associations, read at this time, breathed out a freshness characteristic of the nature of the work

and its associations. Mingling with youthful minds tends to make fresh and pure.

Some thoughts in these epistles may be repeated. Let us beware lest absence of all form may not become in us a formality. God being the teacher of his people himself, the teacher of the class becomes, in the right arrangement, an instrument in God's hands—a medium through which is to flow truth and light from God. Therefore the highest dedication is needed.

The young people's meeting, at the close of the First-day School session on Fourth-day afternoon, was the pentecost of the Yearly Meeting. Many spoke, and the broken utterances and bedimmed eyes testified that the Spirit moved the heart. Truly Christ was in the midst, and all felt him there. It was a season that will be long remembered and cherished by those present, who felt that it was indeed good to them to have been there.

For Friends' Intelligencer and Journal.

NOTES ON THE MEETING.

In attending Genesee Yearly Meeting we bought tickets at Albany for Fischers, a station near the home of John J. Cornell, who met us.

A ride of a few miles took us to his beautiful home. Next day a delightful ride of fifteen miles was taken to attend the meeting of ministers and elders. We passed through a fine farming district. The fields of wheat and oats looked very promising.

We found quite a large company of members of this meeting. Darlington Hoopes was the only minister with a minute from another yearly meeting. His services through the different sessions of the Yearly Meeting were very acceptable.

The meeting-house is ancient and spacious, accommodating a very large company. Friends who were present remembered having seen it filled to overflowing on First-days. We were hospitably entertained in different Friends' homes. We spent one night with Sunderland P. Gardner and his interesting family in their comfortable new house. The old one, which stood near, was burned a few months ago. He is certainly a remarkable man for his years,—his memory is excellent. He is quite a geologist, and showed us two meteorites he had found on his farm.

The meeting is so much smaller than formerly, that, after First-day, one side of the closed partition is used for dining. Two long tables are arranged with provision brought in daily by the members. Loads of people come from various ways bringing baskets of refreshments. Hot coffee and tea is made in an adjoining room.

The morning session is for the ordinary business of the meeting. In the afternoons, the meetings of the different committees were held. When the subject of Temperance came up for discussion we found this meeting very strong on that question. J. J. Cornell and Isaac Wilson are both spending much time traveling and speaking in the cause. It does appear as though their efforts would not be lost, but would have their weight.

One afternoon a youths' meeting was held. The young people were invited to take an active part,

which they did. By their presence and expression they evinced a concern which argues well for the future of this Yearly Meeting. It was a baptizing time and the most interesting occasion remembered. Truly we were led to exclaim, "it was good for us to be there."

There was nothing lost in the life of the meetings by holding them in joint session, as these were held.

In mingling with Friends there we were drawn in sympathy together, as all, more or less, have to be dipped in deep waters of affliction.

At the close of the meeting we were kindly carried back to Mendon, to the beautiful home of Jonathan Noxon. We would have been pleased to tarry there longer, but could not feel at ease until our steps were turned homeward.

In reviewing our visit we shall remember the people and places where we mingled with that pleasure the dear All-Father grants to his children who are endeavoring to do his will.

From The Friend, (Philadelphia.)

EARLY MEETING-HOUSES OF FRIENDS.

(Continued from last week.)

We have seen that it was determined to take down the Centre Square Meeting-house and rebuild it upon the site of the former Bank Meeting-house, on the west side of Front Street, above Mulberry or Arch Street.

The minute of the Monthly Meeting of Third month, 1702, states that "Thomas Griffith and Abraham Bickley are desired to collect subscriptions towards building the meeting house which is to be set up at ye upper end of ye Town." In the Fifth month following, "John Redman sent a piper to the meeting to acquaint Friends that he thinks it is too late to go on with the meeting house this summer; and it (the meeting), being of the same mind, desires the persons appointed to oversee the work, to let said Redman have forty pounds in order to provide materials, that it may be done early in the spring, and they agree with carpenters to take down and secure the old timber, and carry off the mason work also, as the bricklayers shall want it."

The work was pushed rapidly forward in the succeeding year, so that it was ready for occupancy about midsummer.

Seventh month, 1703. "It is agreed that there be a meeting held at the new meeting house on the Front street every First-day in the afternoon, to begin the next First-day, at or near the 2nd hour." In the following month Nicholas Wain reported: "They have near finished the meeting house, and that the land whereon it stands is conveyed to him and John Goodson for a Publico Service. Therefore it is desired that Thomas Story and David Lloyd may draw conveyances to Edward Shippen, Anthony Morris, and others. It is also agreed that a meeting be held therein on First-day to begin at the 11th hour."

Ninth month. "There being several debts due from the Monthly Meeting to people that have done work for the meeting house on the Bank, and money falling short, Thomas Story is willing to lend the meeting 25 pounds on interest.

"It is agreed that Samuel Carpenter pay Ralph Jackson 1£ 6s. 4d. for glazing the meeting house windows.

"The Preparative Meeting having recommended the necessity of paling of the front of the Bank meeting house even with the street, John Parson is desired to get it done, and get it painted."

This house was built of brick, and of the same dimensions as the frame structure that preceded it upon the same ground, viz., 50 by 38 feet. It stood 14 feet back from the street, and that space was kept as a green yard.

The street and building were then upon the same level, but after the cutting down of the street, the building stood some 10 or 12 feet above it, giving it a singularly perched up appearance.

Originally, there was no wooden partition dividing the house, and a curtain was lowered when Preparative meetings were held; but in 1755 it was decided to put in a partition, as appears by the following minute of the Monthly Meetings:

"It is now agreed that a division be made in the Bank meeting house suitable for the purpose of holding Monthly and Quarterly Meeting."

As Friends became more numerous and more widely scattered over the city, and the business of the Monthly Meeting largely increased, it was deemed expedient to establish two other Monthly Meetings, to be known as the Monthly Meetings of Friends of Philadelphia for the Northern and Southern Districts respectively.

The opening minute of that held at the Bank meeting house being as follows:

"On the 24th day of Eleventh Month, being the third day of the week in the year of our Lord one thousand seven hundred and seventy-two, Men and Women Friends assembled in their meeting house on Front Street on the Bank of Delaware, being the first Monthly Meeting of Friends in Philadelphia for the Northern District," etc.

In course of time, Friends finding themselves greatly inconvenienced by the grading of Front Street, above alluded to, and other causes, decided to procure another location for a meeting place, as is shown by a minute of the Monthly Meeting of First Month, 1789.

"The Committee appointed to procure a suitable Lot of Ground, to build a meeting house upon for the better accommodation of Friends, report they have made a contract with our friend Samuel Emlen for his Lot on the square between Sasparaff and Vine Streets, and Front and Second Streets, contiguous to that held by our Society as the donation of our friend George Fox, on which the school house now stands.

"Friends were generally of the mind that the building would best answer the purpose intended of about 75 feet long east and west, and not less than 50 feet north and south, and that it would be necessary after disposing of the Bank meeting house Lot and the one adjoining it on the north, to raise by subscription the sum of 2,000 pounds."

In the Second month "A plan was agreed upon to lessen the size of the new meeting house to 68 by 50 feet, and instead of dividing the men and women's

apartment by a sliding partition of wood, to erect an additional apartment of brick 45 by 40 feet on the north side of the building," for a Monthly Meeting room.

The building was erected upon the plan proposed, on the north side of Key's Alley (New Street), finished and occupied in 1790, viz.:

"At a Monthly Meeting of Friends of Philadelphia, for the Northern District, held the 21st of Ninth Month, 1790, being the first for business held in the new meeting house," etc.

The old Bank Meeting-house and Lot 48 by 89 feet, was sold and conveyed Fifth Month 21st, 1791, to James C. and Samuel W. Fisher, for 1,000 pounds, specie, "reserving the stone steps, forms and other moveable property." Also the lot adjoining the same, on the north, for 500 pounds.

The house was taken down and the old oaken column that supported the gallery, which had been brought from the Centre meeting, was preserved by James C. Fisher.

Thus the premises which had for more than a century been devoted almost exclusively to religious purposes, passed into secular uses.

The meeting established in Key's Alley (New Street), was called regularly the North Meeting, and by some the "Up Town Meeting."

The population rapidly increasing in the Northern Liberties, and Friends moving westward and northward, it appeared desirable to have another meeting still farther up town. Consequently, a lot was procured at the southeast corner of Fourth and Green streets, and a substantial brick building erected thereon, which was completed in the spring of 1814, and meeting opened therein, as appears by the annexed minute of the Monthly Meeting, held Ninth month 27th, 1814. "The Committee agree to propose to the Monthly Meeting that a meeting for worship be established (at 4th and Green Streets) on First-days, morning and afternoon, and on Sixth-day mornings, and that Friends be allowed to hold a Preparative meeting," which was approved, and also concurred in by the Quarterly Meeting. The Preparative meeting was opened Twelfth Month 23d, 1814, and the first "Green Street Monthly Meeting" held Fifth Month 6th, 1816.

About 1834-5, Friends again felt the necessity of making a change in location, as follows, viz.: "The location of our present meeting-house (Key's Alley), being brought into consideration, and the minds of Friends fully expressed, it appeared to be the prevailing sense, that it is reasonable to appoint a committee to look out for a Lot, which may be procured, on which to erect a house that will better accommodate the members of this District."

Fifth month, 1835. "The Committee appointed to look out for a site whereon to erect a Meeting House, reported after considerable inquiry, they have had the offer of a lot bounded by Sixth Street, John Street, and Noble Street, which may be procured for about \$23,000. They also presented a plan for a meeting house. Upon consideration the report was approved. . . The meeting agrees that there be erected on the lot bounded by Sixth Street and

Noble Street, an edifice 121 feet long by 66 feet wide, the whole cost of which is estimated to be about \$30,000."

A very commodious and convenient building was put up and finished, so that meetings were held there in the Eighth month, 1838, and the first monthly meeting was held there Eighth month, 28th 1838.

The old meeting house property on Key's Alley being no longer needed as a place of worship, was sold in the same year to the "Controllers and Overseers of Public Schools," etc., for educational purposes, for the sum of \$20,000.

J. W. LIPPINCOTT.

(To be continued.)

THE CHRISTIAN DUTY OF SACRIFICE.¹

DURING the last few months the First day School lessons of the International Series have been upon the incidents of the last few days of the life of Jesus,—his entry into Jerusalem, his betrayal, trial, and condemnation, his crucifixion and resurrection. In studying these lessons one's mind is almost necessarily led to contemplate the greatness and nobility of the self-sacrifice made by him in order that the saving truths which he came to declare to men might be known by all. Viewing the incidents of those last days of his from the human standpoint, they seem so unjust and cruel that one turns away almost incredulous, doubting whether humanity could have been so debased. Betrayed by the special token of friendship by a professed disciple; his trial a mockery of justice; his death as cruel as the cruelest men could make it: from the merely human point of view, this tragical ending of such a life seems awful beyond description. But viewing it from the spiritual standpoint which he occupied, and trying to realize the spirit which actuated him in accepting such an ignominious death, his death assumes an entirely different character, and we can see it as the noblest act of self-sacrifice for the sake of the truth and the uplifting of mankind that the world has known: we then appreciate the greatness of soul which made such a sacrifice possible, and we begin to learn the lessons which it was designed to teach each soul capable of appreciating the truth.

What then is the chief lesson that we are to draw from this sublime act of sacrifice by the head of the Christian Church? Is it not this? the necessity, the value, and the service of sacrifice on our part for him and for God who sent him? The cross teaches chiefly this lesson,—the worth of sacrifice when done in the right spirit,—its worth to man and its value in the sight of God. As Jesus himself taught, his whole life was lived that we might have a sure and safe example to follow; surely the last sublime act of that life must have a special value in this direction. "If any man will be my disciple, let him deny himself, take up his daily cross and follow me;" in these words we read the plain command of our Lord himself as to what constitutes, in his view, a Christian life; it consists in simply following him.

In our day there is but slight danger that any

follower of his will be subjected to the treatment which he met at the hands of his enemies; and yet the necessity, the value, and the service of sacrifice remain as great to-day as they ever were. The necessity for it is as great because it means as much for individual growth as it ever did; the value of it is as great, because it still ennobles and uplifts the soul which makes the sacrifice; the service is as great, because it still effects as great good for others, and is as worthy in the sight of God as it ever has been.

What, then, are the sacrifices that are required of the followers of Christ in this day? Let us try to answer this question, not by enumerating special acts of sacrifice, but by discovering the principles which will apply to all the acts of life.

We may view this question in a threefold way: 1st, as related to ourselves; 2nd, as related to others; 3d, as related to God; and the principles which should govern all our thoughts and acts in these relations seem to be as follows:

In the first place, in regard to ourselves; it is our duty to sacrifice all those things which in any way retard or interfere with our spiritual growth. This is a duty we owe primarily to ourselves, and it is a work to which the Spirit of Christ within us, the "power that makes for righteousness," unerringly leads us. As the apostle Paul said in his letter to the Galatians: "They that are of Christ Jesus have crucified the flesh with the passions and the lusts thereof." If a man has an appetite or a desire whose tendency is to degrade him, it is his duty as a follower of Christ to make the effort to sacrifice it, and, if necessary, to make repeated and long continued efforts to do so, for growth and progress are impossible without it. Even practices which may seem harmless at first sight, should be sacrificed when a harmful tendency is discovered.

In the second place, it is the duty of a Christian to sacrifice those things in his life and conduct which exert or may exert a harmful influence upon others. "No man liveth to himself alone," and the duty of aiding others by our example is as much a Christian duty as is the other of not injuring ourselves. The second of the two great commandments given by Jesus was: "Thou shalt love thy neighbor as thyself," and a Christian cannot consistently say or do that which will be a stumbling-block in the way of one weaker than himself; it is duty to sacrifice those things in his life which may have such a tendency.

In the third place, as regards our relation towards God, it is our duty to sacrifice those things in our life which may bring dishonor upon our Christian profession, and so upon him; and also to sacrifice those habits of thought or of life which prevent us from knowing his will and entering upon his service. One who is a professed follower of Christ owes it to his Christian profession that he bring no reproach upon the church or the name of Christ, not only because he may by so doing injure a weaker soul seeking the truth, but also because by so doing he is directly injuring him whom he professes to follow. No conformity to custom will excuse a man for thus bringing reproach upon the head of the Christian

¹ Essay read at a meeting of the "Friends' Association," Norristown, Pa.

Church; and all those practices which do thus lower the standard of Christian action will be sacrificed and put aside by the earnest follower of Christ. And all such sacrifices, made in the spirit of obedience, will inevitably fit and prepare one for higher and better service in the Kingdom of God: and that is the highest outcome of the Christian religion itself.

In conclusion, the best and highest motive for making such sacrifices may be referred to; it is the motive of gratitude. If he whose life was pure, and true, and infinitely good, could make a daily sacrifice of it that we might know the truths which make our lives worth living, should not we, in his name, be willing, nay glad, to make the lesser sacrifices which his spirit within us summons us to make? Does not our gratitude to him for that last crowning act of sacrifice, (to say nothing of the innumerable lesser acts which had preceded it), lead us to gladly make such sacrifices as will make us more acceptable to him, more helpful to our fellows, more earnest and active in the service of God? To make such sacrifices will not be hard when made in this spirit, and with this motive; and though the way may be long, and the struggle seem hard, still every sincere soul desirous of doing God's will may some day attain that state of perfect devotion to the truth, to which Paul called the early Christians when he said: "I beseech you, therefore, brethren, by the mercies of God, that you present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service." I. R.

MILLENARISM.

EVER since the lesson leaf concerning "the coming of the Son of Man" was under consideration, I have been intending to write a short article upon the subject of Millenarism. To some it may seem strange for me to assert that the second coming of Jesus in the flesh was considered as a very essential part of the Christian religion in the first and second centuries, yet such is an unquestioned fact, as all authorities agree. Before our era the Jewish mind at different times was much excited upon this subject, and the belief was generally founded upon Psalms xc.: 4, according to which one thousand years before Jehovah are as one day, compared with the account of creation as rendered in Genesis, designating 6,000 years of toil, and the subsequent Sabbath, as representing 1,000 years of quietness and rest. This idea, like the whole eschatology of the primitive church, had its roots in the Jewish apocalyptic literature. At first it was assumed that the Messianic kingdom would last forever. (See the Prophets: Jeremiah xxiv.: 6; Ezekiel xxxvii.: 25; Joel iii.: 20; Daniel vi.: 26; Enoch xii.: 14¹), and this view is clearly alluded to in John xii.: 34. But subsequently a limited period was assigned to the Messianic kingdom, though in Matthew viii.: 2, Luke xxii.: 16, or in Matthew xix.: 28, no such limit is designated, neither is there in the apostolic epistles any trace of the

millennium view being held in them.² In the Revelation of John, however, (Chapter xx.) there is a tremendous portraiture of the feeling of the age in which it was written. After the Christ has appeared from heaven in the guise of a warrior, and vanquished the anti-Christian power, the wisdom of the world, and the devil, those who have been steadfast in the time of the last catastrophe, and have given up their lives for their faith, shall be raised up, and shall reign with Christ on this earth a 1,000 years as a royal priesthood. At the end of this time Satan is to be loosed again for a short season; he will then prepare a new onslaught, but God will miraculously destroy him and his hosts. Then there will be a general resurrection of the dead, the last judgment, and the creation of a new heaven and a new earth, etc., etc.

The history of the reception and of the non-reception of the Apocalypse of John is in itself quite a history of the millennium controversy in the early church. The apostolic fathers manifest no acquaintance with this work in their writings, but Justin, A. D. 160, speaks of it and of its chiliasm as the necessary part of a complete orthodoxy, although he knows Christians who do not accept it. In time the Greek church utterly discredited the chiliasm views of the Revelation, and through the efforts of Dionysius, Bishop of Alexandria, it was removed from the Greek canon in the 4th century, he insisting that the allegorical interpretation was the true exegesis. For many centuries the Greek church kept the Johannean Apocalypse out of its canon, and thus the spiritualizing eschatology of Origen and his school was preserved intact in the East.

The Western church however clung to the orthodox idea of the Millennium, together with the sensual view in the Apocalypse, and entertained no doubt as to its apostolic authorship; indeed an Apocalypse of Peter was retained in the canon in the 3d century, and the Apocalypse of Hermas was much read, and kept its place in some Bibles in the Middle Ages. The Millennium delusion continued to have powerful support in the West. In the 5th century, however, it began to die out, but towards the close of the 10th century there was a great revival, and the popular belief was that the end of the 1,000 years was approaching which had been foretold by John and that "the time was at hand."

The Western church was more conservative than the East—this was in part her reason for clinging to chiliasm; but the church had another reason in the fact that Marcion and the Gnostics would have nothing to do with it. The early fathers believed in chiliasm simply because it was part of the traditions of the church, and Irenæus, Hippolytus and Tertullian believed it as the Apostolic fathers did.

The mind of the West was modified by Greek theology which reached it through the labours of Jerome, Rufinus, and Ambrose. It was however, to Augustine on whom the great task devolved of giving a direction to Western theology which finally carried it clear of Millenarism. At one period of his life he

¹ The book of Enoch was brought from Abyssinia by Bruce the traveler, and appeared in an English version in 1826, and immediately produced great interest in Europe. The book was supposed to have been originally composed about the time of the Christian era.

² James v.: 3, 8; 11 Peter, iii.: 7, 8, 9, 10; 1 Thessalonians iv.: 16; 11 Thessalonians ii.: 1, 3; Revelations entire.

himself had believed in it; but the times were now more auspicious for the church, and a position of supremacy upon the earth seemed now to be her portion, and he was led to elaborate the idea of the Kingdom of Christ and the City of God.

DAVID NEWPORT.

SCRIPTURE LESSON No. 29.

EIGHTH MONTH 4TH, 1889.

SAUL CHOSEN OF THE LORD.

GOLDEN TEXT:—"Ye did not choose me, but I chose you, and appointed you."—John 15: 16.

READ I. Samuel 9: 15-27.

It was settled that the demand of the people for a king should be granted, and the elders returned to their homes, leaving the matter in the hands of Samuel, to whom was shortly after made known the one who should be set over Israel as king. The circumstance which brought this man, Saul, to the notice of Samuel is recorded in the preceding chapter, and is one of the innumerable instances in human experience through which, by most unlooked-for means, persons entirely ignorant of one another are brought together, and the purposes and prospects of the one or the other are changed for all future life. We dare not say it is chance, for as in the case before us, the consequences of that interview were too momentous to be committed to so uncertain a messenger. Our Heavenly Father has many ways by which his purposes towards his human children are made known, and if we call upon him in our time of extremity, as did this faithful prophet, he will show us the right, and enable us to carry out his intention, though it may not be what we most desire.

We have in this instance a beautiful example, worthy of imitation, in that Samuel could so cordially receive Saul and give him the place of honor among his guests, when he knew that the office of judge, which he then held, would be taken from him. It shows his exalted character, as well as his devotion to the people whose will he made his own.

Now the Lord hath revealed to Samuel. In the old version this is rendered "told in Samuel's ear," which implies "with great secrecy." The revised version is entirely in accordance with what has heretofore been said of the communication of the Divine Will,—that it is by revelation to the spiritual consciousness. If this is kept in mind, it will not be difficult to accept many of the statements respecting the commands of God, which, if taken as an audible utterance, are contrary to all our best conceptions of the great Ruler of the Universe.

As revelations they came through human channels, and under the social conditions then prevailing. The prophet or seer could rise no higher in his ideals of Jehovah than his own conviction of right and justice; and though the Lord spoke through him, the message bore the impress of his own standard and the level to which he had attained, yet that standard was mostly far in advance of the common level.

These are the elect—not those whom He has called, but those who have heard and obeyed. Our acceptance with our Heavenly Father is proportion-

ate to our obedience to His requirements; his requirements proportionate to our ability. He asks of us nothing beyond our attainment. In weakness of the flesh and disheartening consciousness of our own share of human frailty we may vain say, "Am I not a Benjaminite, of the smallest of the tribes of Israel? Wherefore speakest thou so to me?" But the Lord knoweth whom he chooseth and for what he hath called. He will require of us no service which we may not in his name render.

God's first call is universal—"Come unto me." The voice of the Spirit which speaketh in every heart striveth with us, urging us to be of the chosen. "My son, give me thine heart." "Even as I have loved you, love thou also me."

His second—"Go hence," or "Do thou this," is a personal or individual requirement. If this manifestation of his will concerning us be met with a living desire to fill to the utmost our measure of duty to God and our neighbor, ability and strength will be afforded us; and all will be done to the glory of him "by whom," or in whose strength alone "kings reign and princes decree justice."

To bring ourselves into a state of receptivity or readiness for Divine direction we must "stand still awhile" and be shown the will of God. For us the standing still seems the withdrawing of ourselves from the world, and divesting ourselves of all hindrances to spiritual communion. "The secret of the Lord is with them that fear him," and the King's messages to his chosen "no man knoweth saving him that receiveth" them. The whispering of the still small voice needeth not words whereby to communicate His will concerning us, but speaketh conviction to the soul.

Our appointment rests with God, but its fulfillment lies with us. He chooses, calls, or appoints, but never compels us to obedience. God loves the willing servant, accepts the tardy one, but forces no one to enter his service. Without altering the spirit of the Golden Text, it might be translated, "I have not only chosen you, but ye have chosen me."

NOTES ON THE LESSON.

We do not know either the place or the date of the first meeting of Samuel and Saul, nor how long a time had elapsed since the interview with the Elders at which the demand was made for a king. The books of Samuel, also of Kings and Chronicles, are biographical in character. In the two of Samuel the principal events are associated with the lives of Samuel, Saul, and David, and in the details there is a lack of chronological order. Only after a careful examination and comparison with other passages is the true place in the order of events found of many of the incidents narrated.

The "land of Zuph" in which was the city where Samuel was staying at the time, is an unknown district. It is evident that Samuel had a residence there, and that the "high place" was some eminence or natural elevation set apart for religious purposes, and having the sanction of the prophet. After the building of the Temple and the restoration of the ark to the Tabernacle, in the Temple, worship on

high places again became unlawful, and its practice was to a large extent idolatrous.

The present lesson gives us the earliest intimation of the choice of Saul for the first king of Israel. As we read the description of his personal appearance when he came into the presence of Samuel at the gate of the city, they never having met before, we can well imagine the impression he would make upon Samuel, and are prepared to hear him exclaim, as he responds to the query about the Seer "For whom is all that is desirable in Israel? Is it not for thee, and for thy father's house?" In the native dignity of pure young manhood, reared amid the flocks and fields away from the temptations that gather around the larger cities and centres of trade and traffic, the modest demeanor and respectful manner with which the young man conducted himself won the tender, sympathetic heart of the aged prophet, who saw the hand of Jehovah in it all, and was ready to accept the son of Kish of the little tribe of Benjamin as the Divine choice for the leader of the nation, and to consecrate him with the sacred anointing oil for that high office.

And may we not further add the fact, that the simple, homely ways in which he had grown to this beautiful and gifted young manhood, left him entirely unprepared to bear with the modesty of his youth, the blandishments and flatteries that are always in the path of the man whom the world delights to honor.

Before he had learned the hollowness of praise and the transient nature of earthly greatness, he had lost that "other spirit" with which Jehovah had endowed him, and found in its stead only disaster and ultimate ruin.

For Friends' Intelligencer and Journal.

THE PERFECT PEACE.

THE prophet Isaiah has said, addressing the Almighty, "Thou wilt keep him in perfect peace, whose mind is staid on thee because he trusteth in thee." O blessed peace; obtained by having the mind stayed upon God, amid the various trials of this probationary state.

Surely it is comforting, to every tired or afflicted one, to rely in humble trust on our Heavenly Father who so careth for the sparrows that not one of them is forgotten.

Then we have the precious promise that they who trust in the Lord, and whose hope the Lord is, shall be as a tree planted by the waters, whose leaf shall be green, and shall not be careful in the year of drought, neither shall cease from yielding fruit, for the work of righteousness is peace, and the effect of it quietness and assurance forever.

Then, dear Friends, let us not trust in the arm of flesh, but trust at all times in Him who leadeth the blind by a way they know not, and in paths they have not seen; and as we yield in childlike simplicity to be thus led, we shall experience His ways to be ways of pleasantness and His paths peace, and be prepared when called from this present life to inherit the Kingdom of rest and peace; "whose inhabitants never more say they are sick."

AN OLD PREJUDICE AND A BETTER SPIRIT.

SOME particulars given in the letter from the South, by our friend M. S., illustrate anew an old theme,—the prejudice shown by Southern white people against those who are endeavoring to teach and train the people of color. It seems amazing that this should survive in face of the evidence that missionaries like Martha Schofield are engaged in a work which tends to preserve the good order of society, and to aid alike both of the races; but that it does survive is occasionally shown, as in the instance described in the letter.

But there is evidence which is very encouraging that this prejudice is giving way. The children described did not show it, and among their elders several manifested a kindly spirit. The man who spoke most offensively was engaged in an occupation which made him resent the coming of any one whose exhortations would build up temperance and strike down indulgence; and his business encouraged, too, the growth of such a character as naturally exhibits the narrowest and meanest prejudice. It seems, therefore, that there is hope for a growth in better things among the Southern people; those of them who can best comprehend and appreciate works of love and kindness for the down-trodden will come first to the front to shake off the incubus of proscription and caste, and others will follow in time. Our friend, Abby Muoro, known to many readers of these columns as a devoted missionary worker in South Carolina, and who, we regret to say, has been very ill during the last three months,—though recently improving,—found in her days of sickness that there were about her kind and sympathising friends among the whites. For years she had lived in an atmosphere of isolation, with scarcely a single acquaintance except among the colored people, but now there were evidences of a better feeling. Perhaps it needed the occasion of her prostration to bring this out, but at any rate it was shown.

It is therefore due to justice and truth that we should turn to the brighter side of the picture. We must recognize the noble and earnest work of men like Dr. Haygood as representative of the strictly

Southern element. And there are others like him, men born amid slavery and brought up under its influences, who are faithfully endeavoring to help the colored people forward in their movement toward a self-respecting and self-supporting condition. It would not be fair to judge the South without fairly considering these conspicuous figures, any more than it would be right to judge the colored people upon the demerits of those among them who are idle, shiftless, and vicious. When a people, or a community, can present some good examples, we may hope to see these multiply, and when the missionaries among the freedmen find themselves helped and appreciated by a part of the Southern whites, we may take it as ground for a renewed hopefulness of realizing the better future.

We are desired to call attention to the notice elsewhere given of the arrangements made for trains, etc., for the convenience of Friends of Philadelphia who desire to attend their Quarterly Meeting at Valley on the 6th proximo. These arrangements vary in some details from those of previous years.

It is proper to remark that in the series of articles which we have been reprinting from our esteemed contemporary, *The Friend*, of this city, concerning the old meeting-houses of the city, the statements under date later than 1827, refer to the action of the "Orthodox" body.

MARRIAGES.

McDOWELL—SEYMOUR.—On Sixth month 26th, 1889, at the residence of David R. Underhill, in Brooklyn, N. Y., under the care of New York Monthly Meeting, Egbert G. McDowell, son of Joseph T. and the late Isabella M. McDowell, and Mary E. Seymour, daughter of Henry and Esther Seymour.

DEATHS.

CHAPMAN.—Seventh month 14th, 1889, Sarah P., wife of T. Ellwood Chapman, and daughter of the late Jacob Lafetra, of Baltimore, in the 82d year of her age; a member of the Monthly Meeting held at Green street, Phila.

HARVEY.—In Wilmington, Del., on the 26th of Sixth month, 1889, Hannah G. Harvey, in her 73d year; a member of Wilmington Monthly Meeting.

MATHER.—At Langhorne, Seventh month 15th, 1889, Mary Ann Mather, in her 7th year; a member of the Monthly Meeting of Friends held at Green street, Philadelphia. Interment at Abington.

RICHARDSON.—Near Wilmington, Del., Seventh mo. 16th, 1889, Josephino, daughter of Joseph P. and Sarah R. Richardson, aged 10 years.

ROBINS.—On the evening of First-day, Seventh month 21st, 1889, George Williams Robins, aged 77 years; an elder and for thirty years a valued overseer of the Monthly Meeting of Friends of Philadelphia.

THOMAS.—At Edgewater Park, Burlington county, N. J., Seventh month 1st, 1889, Joseph T., son of the late George and Rebecca Archer Thomas, of Philadelphia, aged 72 years, 4 months, 6 days; an interested attender of Rao street meeting.

WILSON.—At his summer residence, Mardon, Delaware county, Pa., on the afternoon of Seventh month 14th, 1889, Ellwood Wilson, M. D., son of the late Mardon Wilson, aged 67 years; a member of the Monthly Meeting held at Green street.

For Friends' Intelligencer and Journal LETTER FROM MARTHA SCHOFIELD.

FAITHFUL workers, during my absence North, brought all things ready for the closing of the term on the 16th of last month. There was no graduating class, but various exercises made an interesting day. John Phillips, the Baptist minister, made effective remarks, and illustrated the usefulness of trained manual labor by showing the iron rods out of which students had made a handsome double gate for entrance to the grounds. He also held up various little garments cut and made by the girls. A young man, H. Watson, made an excellent address to the Literary Society, which had exercises in the afternoon.

There was a sadness over our hearts, for death hovered close by in a little home, where lay Lizzie Smallwood, the only daughter of my faithful house-keeper. She was a former pupil, though for years she had lived with a Northern family out of town, coming home once a week for the night. She was taken suddenly with pneumonia, and we soon saw there was little hope of recovery. When I told her she was very ill, but the Lord was with us and she was not afraid, she immediately began: "Yea, though I walk through the valley and shadow of death, I will fear no evil, for Thou art with me." It was her last long sentence, as talking was a great effort with the shortening breath. Death had indeed seemed near that morning at 3 o'clock, when the self-controlled mother knelt by the bed and prayed, "If it be Thy will, speak to her, and let her live; if not Thy will, take her as one of the daughters of Thy kingdom, and make me able to bear it." She was an earnest School teacher and was loved and trusted where she lived as care-taker of the children.

Ignorance in this State is not confined to one race. Thirty miles down the railroad a new "short line" goes close by a colored church that had stood there in the woods seventeen years. A little town of thirty houses has built up within a year. The minister rides eighteen miles to preach once a month, and had been anxious for me to attend. I had heard of the "fine new hotel," and had asked him to secure me a room, as there was no train back that day, and not wanting to ride nineteen miles to Blackville. (We can go eight or ten miles and not see a human habitation.) Upon his making an effort to get the room, one man told him he "would do all he could to injure Mr. — if he kept me there all night," another they "could not have a woman coming there talking Mormon and politics." There was, however, a most attentive audience, morning and afternoon, two benches filled with white men, equally attentive and all perfectly orderly. Perhaps curiosity was used to stop curses, and the Prince of Peace seemed with us, as his messages were given to the hungry and thirsty souls. Afterwards it was said to

me; "The man who was so bitter on the street against you was there. He sat up mighty straight when you began, but his head hung low before you was done." He keeps the saloon. The "guard house" has been built within fifty feet of the church, and I said I wished the saloon was *between*, so a man could choose before he went in, whether he would get to the church or the guard house.

At the hotel, a planter's wife asked me several times for money to help the white churches; even fixed the sum, and insisted on a "few hundred dollars." I said, "I am not rich." "But you have money" "O yes; other people's, but I must spend that as they wish me to." The blessing of a meek and quiet spirit seemed meted out to me in full measure, even when eating supper and breakfast alone in my room, because "the other boarders did not want me at table." "Maum" Chloe told me this when she brought it up, and I knew behind that dark skin was a white soul that would have risked her life to save mine. While the empty dishes waited on the other vacant chair, (there was no table), the proprietor knocked and came in. Glancing at them seemed to stir up his manhood, and he assured me he "had told the sticklers, he would take me; it was his hotel. Besides he would do it on Christian grounds believing we were doing good," (he is a deacon), and then said his wife sent him up to invite me down to her room (an invalid); "we are all going to church." Eight or nine neighboring children had been in my room before dark. A child's heart knows no prejudice till it is *put* there. One asked me to go to ride; another invited me to "our house;" another said, "you go to our church to-night. Minnie and I will come home with you; we live near here. Won't you go there and preach? I saw you this morning. I told ma I was going with 'Maum' Charlotte and she said she didn't care." He who blessed little children seemed with us as we talked of ways we could be like Him, while up from the parlor came again music and voices singing hymns!

Many will be glad to know that the six thousand dollars needed to build "The Deborah F. Wharton Industrial Hall" has been assured us. For three years the name lay in my heart as that of one whose daily life could be searched into by coming generations, as an example of womanly dignity, integrity, frugality, and devotion to right doing. She represented the undying principles of our Religious Society, which without sectarianism can be built into every character for its own good, and are needed nowhere more than in the uplifting of a race long kept down by professing Christians. Other similar efforts had seemed such burdens to the physical that for three years my rebellious spirit shrank from the task before me. It took all my will-power to put aside mental reasoning against it; to hold my faith close to the All-Powerful; to have a "perfect love which would cast out fear," and doubt, and anxiety; to know, hourly, the Father required nothing but faithfulness to my part, and to trust him to do his. If this amount has come with seemingly little effort and in a short time, is it not because those who were to respond had been under the preparing hand of the

Father? Was he not making us all ready and willing to carry out his purposes?

I shall take a month's vacation in the North Carolina Mountains, to gather strength, and then the building will go on.

I cannot close this already long letter without a word of encouragement to the Prohibitionists of my native State. Would you could have heard the glowing eloquence of a colored man as he stood on my porch in the moonlight. "God's been with me in all my temperance work, and I feel as if he was just in front of me. Eighteen years ago we began a lodge, (you was there); then at times, they'd fall off, and move away. Why, two years I went every Monday night, winter and summer, and there would be often no one but me; me and God. He was always there. I lit up the hall; never 'lowed it to be darkened; some one might straggle by, and I wouldn't have 'em say there was no light. I wait till 10 o'clock, get down on my knees and say a prayer, blow out the light, and go home. Many a time when I was working away (he is a carpenter) I've rode fifteen miles here to my meeting and fifteen back to be at my work by 7 o'clock in the morning. But, if I can, by working twelve long months save some poor man's son from perdition, I think I've done *well*."

MARTHA SCHOFIELD.

Aiken, S. C., Seventh month 18.

For Friends' Intelligencer and Journal.

A DAY AT LAKE BLUFF.

MANY of the readers of the INTELLIGENCER AND JOURNAL know that Lake Bluff is a summer resort, about thirty miles due north of Chicago, on the Lake shore. I believe a little further description of the place may be acceptable. It was founded by the Methodists, and is kept under the auspices of that denomination. The Bluffs are about 100 feet high, and thickly covered with forest trees, mostly oak. One or two deep woody ravines run through it with rustic bridges thrown across; and a pretty little lake for boating.

There is a large, pleasant hotel, surrounded on all sides by a wide veranda, so that one can always find a shady side, with a pleasant view either through a leafy grove, or out upon the lake whose blue waters may be seen between the trees. A large tent or rather open wooden tabernacle, with earthen floor covered with straw, and wooden seats, stands near the hotel, and here meetings of various kinds are held during the warm weather, their regular camp-meeting taking up two weeks or more of the summer. A term of one week, sometimes more, is always given to temperance. This being the week for the consideration of that subject, I decided to run up for a day, and chanced upon License day. The day before was given to Prohibition, and the day following was Third Party day. Taking the train from the Northwestern station, I had a pleasant ride through several of our pretty suburban towns situated along the Lake shore, with green fields, woods, and market gardens sandwiched between them. It is about a mile from the Lake Bluff station to the Lake shore.

I chose to walk under the shady trees and along the clover-bordered walk, directly to the shore. Here are seats, at intervals, where one may sit and enjoy the wide expanse of water. The little waves rolled in upon the sandy beach a hundred feet below, and their purling sound, together with the balmy breezes and the songs of birds overhead in the gentle waving branches, all had a restful, soothing effect upon the dweller amid the city tumult scenes.

After a delightful season of quiet rest and nature's tonic, I went into the tabernacle where the "Y's" under their pleasant President, Mary McDonald, were discussing their work. A question came up in regard to the boys and young men being admitted as honorary members. Some objected to receiving young men who used tobacco; others thought if they could help them to abstain from intoxicants they had better not allow tobacco using to bar the young men out. One teacher of a Loyal Legion felt that she had brought her class up to the age when they might be admitted to partial membership with the "Y's." They had signed the triple pledge of abstinence from tobacco, liquor, and profanity, and they felt it a sort of injustice that the other young men should be admitted who indulged in tobacco practices. It was left to be decided by local Unions, I believe. In the question of amusements it was thought best to avoid, in their social meetings, all debatable amusements, such as dancing and card-playing, and endeavor to find such as would be acceptable generally, having entertainment rather than simple amusements.

Later in the day, sitting upon the hotel piazza with a group of the "Y's," and some of the older workers of the Women's Christian Temperance Union, Mrs. Buell, Esther Pugh, and others, we fell to discussing women's work. I said I believed that work done jointly by men and women produced the best results generally. Though I thought the Women's Christian Temperance Union and the Young Women's Christian Temperance Union were doing a pioneer work which was best as it had been, separate, yet I thought the time might come when the young people, boys and girls, who were now receiving temperance instruction, might possibly rightly combine their efforts in one organization, and do more effectual work in the fields of the future, though it was likely vigilance will always be needed. Others thought the same, but Esther Pugh, who is a member of the Orthodox branch of Friends, said she had been of that opinion, and when men and women Friends began to hold their business meetings jointly, she felt that it was a step in advance. After watching the workings for a few years, she was beginning to feel that there was a loss to the women. They seemed more and more inclined to drop back and leave the work and the responsibility to men, who were more dominant. The women were influenced by the pronounced views of the men, and found it harder to maintain their independent thought. Perhaps George Fox, in his far-sightedness, perceived this natural difference and provided against it. It remains to be seen whether Esther Pugh's observations are correct, but it nixle me think it would be well for us all, men and women, when our meetings

are thus held, to be very careful and endeavor to keep our right places. On the one hand, not to press points unduly, and on the other, not to be too ready to yield all responsibility, and feel that it is easier to "wash our hands" of matters. In either plan let all seek to preserve the right spirit, and to be ready "to do or not to do" as the Master directs, remembering that in his service "there is neither male or female, bond or free."

Helen M. Gougar lectured in the afternoon upon "The License System." Among other things she said, The first question should be, is it right? "License never restrained anything. No good ever comes from false principles." She felt that we had reason for encouragement in the fact that the question was now narrowed down to License or Prohibition. She had recently made a tour of the States of Nebraska and Kansas. In the former a uniform high license had obtained for nearly nine years. The president of the State Liquor League stated through their organ that "no less liquor had been consumed; high license had not injured their trade. It had rather been an advantage to it in the way of collections, as they were now more sure." She added that in order to pay the higher license, saloon keepers had added gambling and disreputable houses as attractions to their saloons, thus making a trinity of evils. If high license lessened their trade they would oppose it.

In Kansas she visited the county seats of twenty counties, and there was not a prisoner in one of the jails. The prison directors have stated they could not take contracts for prison labor for want of men to do the work.

The opponents of Prohibition in Iowa are agitating the resubmission of the question, believing the city vote can be made to overwhelm the country vote. In Kansas the women have municipal suffrage, which would save the cities in case of resubmission. The liquor men say "since those fanatical praying temperance women have a vote they have withdrawn their agents from that state." These things speak volumes and H. G. thinks it will come to be "men's blood or woman's ballot," and her hope is that the peaceable measure may obtain. She believes that morally and financially it would be better to go to the root of the matter. There would be no trouble about convict labor, or overcrowded insane asylums or poor houses. As an economic question alone it seems working at long range, and under a poor policy to quibble over the question in the face of obvious facts. It seems great unwisdom to license the business which produces the majority of "State burdens." She was listened to with great attention, and I felt that many readers of the INTELLIGENCER AND JOURNAL would be interested in her statements.

I have long believed that woman's vote would need to be utilized in this question, as I think so many have suffered from the business, they would be fearless in their efforts to destroy it, especially because it is a standing menace to the young.

LETTERS BY THE WAY.

A POEM by John G. Whittier, "The Exiles," describes the escape of Thomas Macy from the Massachusetts Colony to the island of Nantucket, his offense being that he had entertained,—"harbored,"—a Quaker. It is said that Thomas Macy was one of the first settlers on the island, and Friends were at an early date very numerous here, giving it as much of a distinctive character as they once did to Pennsylvania. At the close of the poem, (written in 1841), the poet eulogizes Nantucket:

"And yet that isle remaineth,
A refuge of the free,
As when true-hearted Macy
Beheld it from the sea.

"Free as the winds that winnow
Her shrubless hills of sand,
Free as the waves that batter
Along her yielding land.

"Than hers at duty's summons,
No loftier spirit stirs,
Nor falls o'er humus snuffering
A readier tear than hers.

"God bless the sea-girt island!
And grant forever more,
That Charity and Freedom dwell
As now upon her shore!"

* * *

But what makes Nantucket most remarkable is that the Friends upon this barren isle were nearly all sailors, and that a population of nearly ten thousand were supported almost entirely by hunting whales in near and far oceans. William H. Macy, now Recorder of Deeds, tells me that he went five voyages in eighteen years. Once he was away three and a-half years, and once nearly four. He says that he went into the Pacific Ocean,—nearly all over it indeed,—into the Atlantic and Indian oceans, and through Behring's Strait into the Polar basin. But the last Nantucket whaler was sold about eighteen years ago. The sperm whale, whose oil was burned, became very scarce; and gas, and the great cheap illuminator, coal oil, had come into use.

* * *

The population of the island was familiar to me in my early days; my mother, (as well as her cousin, Lucretia Mott), having been born here. My grandmother was a plain Friend: her husband, also a Friend, was captain of a ship sailing to China, and her three sons were all, at some time of their lives, sailors.

Before the separation of 1827 Friends were so numerous here that there were two large, well-filled meeting houses. New England Yearly Meeting did not divide at that time. Our Friends established a meeting on this island and one at the near town of New Bedford, but these two belonged to New York Yearly Meeting. The decline of the whale fishery made the island poor,—for it has no natural advantages,—and the population has decreased to about 3,500, calculated roughly at about four women to three men, adults. The young men have sought fortune near and far. It was when on the way to Apia, on the island of Samoa, that my aunt and uncle

were buried beneath the wave in the South Pacific. Conversation on Nantucket brings forth some very tragic incidents.

* * *

Josiah Macy, father of the late Wm. H. Macy of New York, was a Friend who commanded a packet-ship to Liverpool.

A humorous story has often been told of one Quaker skipper, whose granddaughter is now librarian at the Athenæum here. I heard it to-day, nearly thus: Cromwell Barnard, a Nantucket Friend, was in command of a coasting vessel, and coming into the vicinity of New York, the ships being crowded, the captain of one near him became very angry and profane. Captain Barnard called below to the mate of his vessel, Zebdiel Coffin: "Mate, come up here, here is a man who uses some of thy language." Zebdiel appeared and was quite able to repay the stranger in kind.

* * *

While the population of the island has so much declined, the number of Friends has become even smaller in proportion. There are only about a dozen members on the island and they are divided, there being both a Wilburite meeting-house and a Gurneyite.

Nantucket has now become a place of summer resort; which greatly aids the population peculiarly. Among those now here I may mention an English Friend, named Emmott, with her young children. She is the daughter of Jos. Bevan Braithwaite, a prominent Friend in London, and her husband is George Emmott, who studied at the University of Cambridge, England, and is now a professor in Johns Hopkins University, Baltimore. Caroline E. White of Philadelphia, has a house here, close upon the sea; and to her and her husband it furnishes much recreation.

* * *

In conclusion, I return to the settled population of the island, and to him with whom I began this letter, Wm. H. Macy. He is now blind, and was telling me this morning of his life, which seemed to illustrate the versatility of the Yankee character. By trade he was a cooper,—a common trade, when so many barrels were needed to bring home the oil of the whales. As I have said, eighteen years he went whaling himself. He carried a bullet in his leg, for he was wounded during the War of the Rebellion. Besides his other occupations, he has worked in a shoe factory and kept a grocery. He has for 18 years written editorial articles for a Nantucket paper, (and for twelve of these years he has been blind). He has also written a book "There She Blows!" the cry of the sailor when he sees the column of water which the whale spouts aloft, showing where the great animal can be found. While thus engaged, he has invented a machine to assist him to write. We can all write with our eyes shut; but we are in great danger of writing over the previous line, thus making both illegible. His invention carries the paper gently forward, at the end of one line, and leaves a space for the next while a board guides the pencil.

P. E. GIBBONS.

Nantucket, Mass., Seventh month 13.

NEWS OF FRIENDS.

At East Branch, Monmouth county, N. J., on First-day afternoon, the 21st inst., there was held in Friends' meeting-house, the second of a series of circular meetings, under the care of a committee appointed by Chesterfield Monthly Meeting. The house was well filled, almost every seat being occupied. Among those present were a large number of young men and young women, who were very attentive listeners to Samuel S. Ash and Rebecca Fravel of Philadelphia, who were favored to explain, according to their understanding, what is requisite to constitute a pure, Christian life and a true Friend. Although but a small portion of those who were present are members of our Society, quiet and good order was observed. We separated feeling that it had been good for us thus to have met together. The next meeting was appointed for Eighth month 18th, at 3 o'clock in the afternoon. The committee would take great pleasure in making a way for any concerned Friend desiring to attend at that time.

W. M. M.

SIXTY AND SIX; OR, A FOUNTAIN OF YOUTH.

Fons, delictum domus.—*Martial*.

LIGHT of the morning,

Darling of dawning,

Blithe little, lithe little daughter of mine,

While with thee ranging

Sure I'm exchanging

Sixty of my years for six years like thine.

Wings cannot vie with thee,

Lightly I fly with thee,

Gay as the thistle-down over the sea;

Life is all magic,

Comic or tragic,

Played as thou playest it daily with me.

Floating and ringing,

Thy merry singing

Comes when the light comes, like that of the birds.

List to the play of it!

That is the way of it!

All's in the music and not in the words—

Glad or grief-laden,

Schubert or Haydn,

Ballad of Erin or merry Scotch lay,

Like an evangel

Some baby-angel

Brought from sky nursery stealing away.

Surely I know it,

Artist nor poet

Guesses my treasures of jubilant hours.

Sorrows, what are they?

Nearer or far, they

Vanish in sunshine, like dews from the flowers.

Years, I am glad of them!

Would that I had of them!

More and yet more, while thus mingled with thine,

Age, I make light of it!

Fear not the sight of it!

Time's but our playmate, whose toys are divine.

—*Thomas Wentworth Higginson, in The Century.*

For Friends' Intelligencer and Journal.

FRET NOT.

O FAVORED Ours! To make demur,
If on thy way some cloudlets blur!
Dost think thy path must always lie
Where only sunshine fills the sky?

How couldst thou know the sun was bright?
How couldst thou know its warmth and light?
How couldst thou feel night's blackest night—
The gloom of glooms—upon thy sight,
If no grim shadows came to fright?

Now, if thy darkest cloud be rent,
Nothing but summer mist has veut:
So, ere thy brightest days be spent—
Though notes be through thy subbeams sent—
With flecks of shade, be thou content.

E. M. H.

From Forest Leaves, (Phild'a's)

CONCERNING OUR SASSAFRAS TREES.

Along the "State Road," a quarter of a mile north of Wawa Station, in Delaware county, Pennsylvania, stand four Sassafras trees (*Sassafras officinale*). The first tree on the northern end of the line, has, at three feet above the ground, a girth of ten feet and eight inches; the second one, eleven feet eight inches; the third one, ten feet and seven inches; the fourth one, at the southern end of the line, is ten feet and four inches around. Ordinarily, trees of this kind growing in the forest do not stand thus in rows. We do find, however, that the Sassafras tends to become a weed along certain fence rows. It appears, therefore, that large as these trees are, they are not part of the original forest, but have more likely started their growth along what was one of the early fences after the forest had been removed. So then, as compared with some of our largest oaks, these specimens of Sassafras are not of any very great age. A century and a half, it may be, will approximate their age.

It is probable that larger, isolated individuals than either of these trees can be found in this very region; though it is hardly likely that anywhere near here are there four specimens of this species so near each other. Some of these, especially the two northern ones, show signs of declining vigor. Even if they suffer no further harm from the heedless axeman, who mutilates without much thought or care any tree which threatens to interfere with the telegraph wires, we may readily see they will probably not live many years. There is one specimen of larger size than either of these, known to be still living at Horsham, in Montgomery county.

The following, quoted from Prof. Sargent's work will indicate the usual size and the possible size of the Sassafras tree: It is "12 to 15 metres in height, with a trunk 0.60 to 0.90 metres in diameter; exceptionally, 24 to 27 metres in height, with a trunk 1.80 to 2.25 metres in diameter; or towards its northern limits reduced to a small tree or shrub; rich sandy loam; reaching its greatest development in South-western Arkansas and the Indian Territory; at the South often taking possession, with the permission, of abandoned fields in the middle districts."

With us, as we have indicated, it tends to become

a fence-row nuisance. The wood is light, brittle when very old and dry, but elastic enough (as the country lad knows) for bows while it is young and when properly seasoned. In the water and soil it lasts fairly well, and hence is used for fences and in the construction of parts of small vessels. The aroma of the wood, it is said, makes it of special value in certain kinds of cooperage. Sassafras grows from Canada as far south as Florida, and reaches nearly to the meridian of Central Kansas.

Of one tree in West Cambridge, which was not more than three feet through at its base, Geo. B. Emerson writes: "A tree so beautiful and lofty, and of such rare dimensions, such an ornament to a bare hillside, sacrificed to the straightness of a wall!" We anticipate no such fate for those at Wawa.

It may be said that each kind of tree is likely to have certain characteristics which enable one to recognize the species, even at a distance. This is true of the Sassafras, especially as seen in the winter; the number and upward tendency of the young branchlets giving distinct character to the tree. In other respects the Sassafras is a perfect proteus. The leaves vary from lance-shaped to broadly wedge-shaped, and are, when widest, often distinctly three-lobed in outline. The younger branches are yellowish-green, and slightly warty, while the well-furrowed older bark is clean, ashen-gray, and almost devoid of the lichens which cover the older trunks of other trees. Even in odor, the bark of the roots, branches, and branchlets has each an individual and distinctive flavor.

It is remarkable to what an extent vegetable productions have determined great geographical and historical events. The doubling of the Cape of Good Hope by Vasco de Gama was quite as much induced by the spices as by the gold and pearls of India. As Emerson tersely states of the Sassafras, "its roots formed part of the first cargo exported from Massachusetts." He, of course, alludes to the voyage of Gosnold in 1602 and to his settlement on the Island of Cuttyhunk. Loading his "small vessel with sassafras, cedar, and fur, and other commodities, which he had obtained for the most part by traffic with the Indians," his settlement was abandoned and the party returned to England. The year following, Martin Pring reached the coast of Maine, near Penobscot Bay, and finding no Sassafras, he followed the coast south to either what is now Edgartown or Martha's Vineyard, or to Plymouth Harbor, where, to use his own words, he found a "sufficient quantity of sassafras." He, too, left as soon as he had freighted his vessels. In 1602 Samuel Mace, searching for the lost colony on Roanoke Island, reached a point about "forty leagues southwest of Cape Hatterask." "They returned laden with Sassafras, but with no tidings of the lost colony." It was one of the sources of complaint that there was not sufficient Sassafras returned to England by the Colonists in Virginia. Indeed the very name of Sassafras river, in the upper Chesapeake, probably indicates how early and to what a distance the accessible parts of the country were searched for this commodity.

The excessive demand for this bark grew from the

most extravagant estimate of its worth in medicine. Here, for example, are some quotations from those early explorers: Pring writes, "*Sassafras is a plant of sovereign virtue*, and some of late have learnedly written, good against the Plague and many other maladies." Archer, in his relation of Gosnold's Voyage, declares "The powder of Sassafras in twelve hours cured one of our company that had taken a great surfeit, by eating the bellies of dogfish, a very delicious meat." And rare old Josselyn quaintly says, "The Sassafras tree is no great tree. I have met with some as big as my middle; the rind is tawny, and upon that a thin color of ashes, the inner part is white, of an excellent smell like fennel, of a sweet taste with some bitterness." All this was two and a half centuries ago at least. Our more critical observers have robbed the tree of most of its repute as a remedy, though in some more remote regions the spring dosing of Sassafras tea has not yet been utterly abandoned.

Our early associations with plant life, would, if they could be collected and compared, form a singular series of contrasts. To the boys of the country the spring hunt for these roots would be associated with the pleasures of rambling along fence rows or rocky hillsides. The thousand remembrances of peeping into bird's nests, of listening to the hum of insects would come up. He would rejoice again in the warm sunshine, or feel the brush of the passing breeze against his cheek. The flavor of the root bark fresh from the earth, and made all the more delicious by the labor of digging it, the aroma of the spicy mucilaginous twigs which he chewed as he walked, would all be restored anew to memory. But to the lad of the city the only remembrance the plant would bring up would be that of the dried, odorous package purchased from the hawkers on the street. He who has never, in early life, dug Sassafras roots for himself has been defrauded of part of his youth and hurried prematurely into manhood. He has legitimate ground of complaint against the fates which left in his memory a desert where there should have been a green, fragrant oasis.

Out of 429 kinds of wood in the United States, Sassafras, in weight, is 314 on the list, its specific gravity being 0.5042. As a fuel it stands 312, out of a list of 430 kinds. In elasticity it is recorded as 281, out of 340 kinds. In order of strength, 242 on the list of 310 kinds of wood. The figures of this last paragraph are taken from that valuable little volume, "The Jessup Collection of the Woods of the United States," by Prof. C. S. Sargent.

YOUTHFUL extravagance—the untamed enthusiasm which is the source of all great thoughts and deeds,—a beautiful delirium which age commonly tames down, and for which the cold shower bath the world furnishes *gratis* proves a pretty certain cure.—*Longfellow.*

BE not simply good: be good for something.—*Thoreau.*

"Change and decay in all around I see,
O Thou who changest not, abide with me."

THE PRESIDENT'S HOUSE AT WASHINGTON.

THE wife of President Harrison is quite earnest in urging that better accommodation should be provided for the family of the Presidents. In a recent interview she is represented as saying:

"Very few people understand to what straits the President's family has been put at times for lack of accommodations. Even in President Buchanan's time, when entertaining the Prince of Wales as his guest, in return for social consideration shown himself and Miss Lane, while at London, by the Prince's mother, Queen Victoria, by the time the Prince, the Duke of Newcastle, and General Bruce, of his suite, were provided with apartments, the President, who gave up his room, was obliged to occupy the ante-room as a bed chamber, and the rest of the Prince's suite were compelled to find quarters at the British Legation. Really there are only five sleeping apartments. A few years ago the ladies of the family had a parlor upstairs, now they are compelled to sit out in the corridor upstairs; which is not only dark and gloomy, although brightened up a little by paintings and a lighter shade of coloring upon the walls, but even then there is no pleasure there, as the low, temporary partition thrown across does not exclude the confusion of sounds from persons entering the library by the private corridor just beyond the partition. There is really no feeling of privacy, and cannot be under the circumstances. The Red Parlor downstairs has been used for a family parlor, but that is inconvenient. It is properly an ante-room to the Blue Parlor, and we are often interrupted by persons who have permission to look through the parlors. This cannot be stopped entirely, as there may be occasions when the rule must be relaxed. So that really the ladies of the Executive Mansion have no suitable place to receive callers informally.

"Besides this, there are no conveniences for house-keeping. There is not a linen-closet in the whole house. I am now having one constructed in a portion of the building which will not trespass upon room available for other purposes. The basement is the only place for the kitchen offices, and that is damp and unhealthy. I have just been conferring with Colonel Wilson, in hopes of being able to remedy it. There are many things which must be done, and I intend to have them done, so that the President's family may be as comfortable as accommodations at hand will admit, and shall hope to secure sufficient interest by Congress in the subject of an extension of the President's mansion to begin that work at once. Congress can afford to be liberal. It has extended its own official place, the Capitol, by the addition of beautiful wings for the accommodation of the Senate and House of Representatives, which had outgrown the once ample accommodations of the original Capitol. Then the executive departments were given buildings adequate to their necessities.

"The idea of making an extension of the Executive Mansion to the west would not involve any loss on account of the removal of the present conservatories. They are old and decay is rapid. Quite enough

money is expended upon them in repair every year or two to rebuild them. Therefore their removal would be economy and reconstruction on a grander scale on the other side of the building would also be a matter of economy in the course of a few years.

"The extension on the west should, of course harmonize with the general style of architecture of the present building. It might be of marble to distinguish it from the granite building on either side. It should be spacious enough for all wants, not only of the President's family, but for entertaining guests. It should have entrances for the family apart from the public. Now it is impossible to get in or out of the mansion without encountering persons passing in and out on business with the President, or a great throng of persons waiting or sightseeing. The extension would be entirely private. There the wife of the President might hold her drawing rooms and receive her own friends. The corridors and parlors should be on a large scale and the chambers spacious and fitted with all the modern ideas of comfort. Possibly the lower floor might be arranged so as to be thrown into communication with the present parlors on special occasions, and arrangements might be made for the throng to circulate through the parlors without the usual jams.

"Just think of a reception now. Before the hour a great throng is packed in the narrow corridor, and people outside have difficulty in getting in. The Diplomatic Corps and members of the Cabinet and other privileged persons, are forced to go around to the south front and enter through a window into the Red Parlor, which is usually full. The departing throng is compelled to find an exit through another window and across a temporary bridge. There are no proper accommodations for ladies' wrappings nor gentlemen's hats or coats. The enlargement of the accommodations is, in fact, as much for the accommodation of the people who are entitled to attend these receptions as for the President's family.

"A combination of a gallery for historical paintings and a conservatory, would be a source of instruction and pleasure to those attending receptions or strangers visiting the building. Everything of interest might be concentrated here. The conservatory should have broad avenues among the ranges of plants, so that they may not only appear to best advantage, but so that the guests may enjoy themselves in a promenade surrounded by the luxuriance of rare varieties of plant life from every portion of the globe. The gallery of historic paintings would also afford instructive entertainment for promenading guests."

CONVERSATION AT TABLE.

ALL of the animal creation excepting man takes its food in eager, selfish silence. It would, perhaps, be uncharitable to conclude that the man who never engages in conversation while at the table, and who speaks only to supply his wants, is, in so far, brutish. For many causes—weariness, a troubled mind or conscience, bodily pain, or embarrassment—may prevent the expression of thought. But in too many households silence is the result of selfish concentration or of indifference to the pleasure of others.

"Can you come out again in five minutes?" asks Johnny Plunger of his skating companion. "I can get my supper in that time, any day." And one can easily form a mental picture of the Plungers' tea-table.

What a charm lingers about those households, of which we all know, where the exchange of cheerful thoughts, humorous anecdotes, and sprightly accounts of the experiences of the day, holds in abeyance the multitude of discomforts, big and little, which are tempted to assail us at the hour when the mind is not actively employed!

In many, indeed in most, families the larger part of the time available for general intercourse is that spent at the table; and she is a wise mother who seeks to prolong these happy hours and make them occasions to be anticipated with pleasure and to be recalled in after years with delight.

In many families of superior ability and liberal education, bright conversation is as natural as the breathing process. In many others, an ill-conditioned or unfortunate relative, a fretful mother, a gloomy father, a discontented son, or a selfish daughter, effectually destroys the pleasure and injures the digestion of the entire circle.

All distressing topics of conversation should be carefully avoided, such as accounts of terrible accidents, pestilences, crimes, diseases both general and personal, and family annoyances of every sort. Suppose that Tommy has broken a big light of glass, or thrashed his next-door neighbor, or the gas bill is doubled since last month, or the coal is poor, or the cook has given notice, or the water-pipes have burst, or the children in the next block have the scarlet fever. The housewife should, so far as possible, bear these cares alone, just as much as the head of the house should keep his business worries to himself. But especially should the dinner or tea hour be kept free from these harrowing recitals. Why bring a cloud over half a dozen innocent faces, when it can as well be kept for yourself? Let the family cares be discussed, if necessary, after the inner man has been refreshed. Life looks so different when one has been warmed and filled!

Emerson utters a trenchant warning to those who would deprive the morning hours of their beauty and sweetness by despondent or unrefreshing conversation. Muffins and coffee become tasteless and unsatisfying when discussed to the recitative accompaniment of symptoms of disease or the details of horrible dreams which have afflicted one over night. Put on a bright face at the breakfast table, in spite of a headache. Recall some pleasant story, even if you are forced to seek it in the funny column of a newspaper; and find some cheering word for each member of the household, especially for the grouchy one. It is astonishing how many incipient headaches and heartaches disappear under just such simple treatment as this.—*H. M. N., in Christian Union.*

As worldly care forms the greater part of the staple of every human life, there must be some mode of viewing and meeting it which converts it from an enemy of spirituality into a means of grace and spiritual advancement.—*H. B. Stowe.*

SINCERITY IN PRESIDENT WOOLSEY.

THE death of Theodore Dwight Woolsey, who for many years was President of Yale College, (preceeding President Noah Porter, and the present president, Timothy Dwight), occurred early in the present month. In a sermon relating to him, at Hartford, by Dr. G. L. Walker, the following passages are of special interest:

In Dr. Woolsey this trait of sincerity had a most eminent illustration. It penetrated whatever he did or said or thought. It controlled his manners, his utterances, his style of writing. It made him accurate and honest as a Greek scholar; accurate and honest as a theologian; accurate and honest as a man in all life's relationships. This sincerity of character—which is only another name for intellectual and moral honesty—is a great thing for any man to have in keeping up the ideal of his work and life purposes. It prevents contentment in slipshod and half-way acquaintances with matters, and accomplishment in matters, and demands accuracy and exactitude and fulfillment in what is inquired into or undertaken. Its possession in so large degree by the eminent Yale president was what achieved for him his deserved reputation as an authority in the things concerning which he wrote or spoke.

Men knew that what he alleged to be facts must be facts, for he was too careful and sincere a man to allege them without verifying them; and they knew that the deductions he drew from his facts were in all probability true also, from the fairness and integrity of the mind operating upon them.

I have heard this sincerity of mind in Dr. Woolsey spoken of, indeed, as, in one respect, almost an infirmity; as especially laying upon his style of writing a limitation which deprived it of a certain picturesque and popular element which it otherwise might have possessed. It is possible that his passion for exactitude, the carefulness rather than understate than to overstate the truth concerning anything of which he wrote, did rob his lucid and simple writing of some attractions which a more careless independence of the demands of uttermost truth might have lent to it. Certainly it bore the marks of honesty in every turn of its expression. It was never open to the criticism made on the style of Mr. Macaulay that however accurate his history might be, "it was written in a lying style." No. Whatever Dr. Woolsey wrote revealed the primary intention of integrity on every page.

And certainly as a permanent factor of character and mental habitude no possible quality of mind and heart is more fundamental than that intellectual and moral integrity which was so eminent a characteristic of this distinguished man. What increased safety, health, and soundness would be infused into all departments of life were there more of it! In business, in literature, in politics, in the conduct of the newspaper press, what purity and light would be imparted by the permeation through them all of an unswervable sincerity like his.

"TRUTH and reason constitute the intellectual gold that defies destruction."—*Dr. S. Johnson.*

ENGLISH WOMEN FOR SUFFRAGE.

THE protest of one hundred and four English ladies against woman suffrage in the *Nineteenth Century*, has led to an almost overwhelming pressure upon the *Fortnightly Review* which opened its columns to signatures on the other side. Within a few days more than fifteen hundred signatures of women of all ranks and classes were received, and it became necessary to restrain the issue of circulars.

From among the two thousand names received, about six hundred were selected for publication. These are classified. (1) The general list, including a number of countesses and other ladies of title. (2) Wives of clergymen and church dignitaries, including the wives of the Archbishop of Canterbury, and Archbishop of York. (3) Official list, including 31 ladies who are poor-law guardians, and 23 who are members of school boards. (4) Education, including the Principals of Girton and Newnham Colleges, more than 60 head-mistresses of high schools, university lecturers, and tutors, a large number of university graduates, and more than 100 teachers, while the names of 200 more teachers were crowded out. (5) Physicians, headed by Dr. Garrett Anderson, and Dr. Elizabeth Blackwell. (6) Social and philanthropic workers. (7) Literature, including Miss Amelia B. Edwards, Mrs. Richmond Ritchie (Miss Thackeray), Miss Olive Schreiner, Miss Emily Pfeiffer, and Miss Frances Power Cobbe. (8) Art and Music. (9) Land owners, women engaged in business, and working women, the latter represented by the secretaries of nine women's trade societies, and 184 individual women artisans.

The list of ladies in favor of woman suffrage is more representative than the list of those opposed, as well as much larger. The *Nineteenth Century* is now collecting a supplementary list of opponents.—*Woman's Journal*.

PROPOSED REMOVAL OF THE APACHES.

WASHINGTON, July 20.—For several months the War Department officials have had under consideration the proposed removal of about 400 Apaches, including the members of Geronimo's band. They are at present at Mt. Vernon Barracks, thirty miles north of Mobile, Ala. They were first taken to Florida, where the climate told severely upon them. It is conceded that their present location, although more suitable than Florida, is not conducive to the welfare of the Indians, who were born and brought up in the mountainous regions of New Mexico. The Indian Rights Association and the Massachusetts Indian Association have offered to purchase the land necessary to accommodate the Indians, if the Government will select the site and authorize the change. General Howard suggested that the hill country of Alabama, Georgia, or North Carolina would be better suited to the Apaches than any land on the seaboard. On June 21, Captain John G. Bourke, of the 3d Cavalry, and Professor C. C. Painter, of the Indian Rights Association, had a conference with the principal Indians at Mt. Vernon Barracks upon the subject of their removal to a more desirable location.

Captain Bourke, in his report, which is just made public, says the Indians expressed a preference for high, cooler lands, where they could farm and raise cattle. Captain Bourke names four places in his report which might be advantageously selected, but the one that meets with most favor is the Cherokee Reservation, on Smoky Mountains, on the line between North Carolina and Tennessee. It is understood that the Cherokees are willing to sell enough land to accommodate the Apaches, and it is probable the authorities will consent to move them there.

A HINT FOR VACATION.

THE *Popular Science Monthly* in referring to the leisure of the vacation hours says:

Another field open to all in spring and summer is that of collecting and pressing flowers. . . . A collection of leaves alone, not selected for color and beauty merely, but to exhibit all the varied shapes, veinings, edges, etc., would be pretty and instructive. We hope some day to see leaf-albums, similar to stamp-albums, with the names of all the principal trees of our State or section printed beneath the blank space where the leaf itself is to be pasted. What an incentive this would give the young collector to get all his blanks filled up, to know if this was really the leaf that belonged there, and to know something of the tree on which it grew! Exchanges would soon spring up, and those leaves not found near home could be obtained from other collectors at a distance. These are collections that can be made by every one and everywhere. On the seashore, seaweeds and salt-water plants and shells may be the objects sought. In many localities, the collection and classification of minerals is pleasant pastime, and to name and label them correctly is exceedingly instructive. We know a printer in New York City who has one of the largest and finest collections of Manhattan Island minerals extant; and nearly all of them were collected by himself in strolls about the city before breakfast, the balance of the day being occupied in his business.

UNITE THE FORCES.

THE *Christian Union* of a recent date says: "The overwhelming defeat of constitutional prohibition in four Eastern States is tolerably conclusive of Eastern sentiment. That defeat was not due to indifference; it does not mean an indorsement of the saloon or moral blindness to the evils of which it is the source. But the interests, pecuniary and political, which centre around the saloon were united; the interests, moral and personal, which centre around the home were divided. The best men in the community are not agreed that prohibition is a wise or even a legitimate method of dealing with the liquor traffic. This is absolutely certain; and it is equally certain that the best men in the community must find some common basis of agreement if they are to succeed. The forces of law and order divided are no match for the forces of appetite and covetousness united. The moral of these elections is writ large. It is the duty of all men and women who are more desirous to mitigate

the evils which the saloon inflicts upon the community than to have their own way in accomplishing this result, to find some common basis of action and to act together. Self-will is still self-will though it is labeled conscience; and indifference is still indifference though it calls itself conservatism. If the one wing will get rid of its self-will, and the other wing will get rid of its indifference, the two wings together can conquer the saloon. But so long as they fight each other, the saloon will go unrestrained.

The one basis on which all can unite is local option. On local option, then, let all temperance workers concentrate.

NEWS AND OTHER GLEANINGS.

—Bodman Barker, of Cheltenham, Montgomery county, Pa., reporting to *Forest Leaves* his observations of unusually large trees, reports a black walnut (*Juglans nigra*) on the estate of J. P. Hutchinson, in that township, which has a height of about 70 feet and a girth of 12 feet 4 inches, (at 3 feet above the ground.) This stands on the side of a hill, is very vigorous, and, as its growth has not been interfered with by other trees, most of the branches are horizontal and hence spread over a large area. In a woods on the bank of the Pennypack Creek, near Shelmire Mills, Montgomery county, is a clump of four Red Mulberry trees (*Morus rubra*.) There were five originally, but one of the smaller members of the group has been cut down. They are surrounded by numerous small suckers, but otherwise appear to be in good health. While of nearly equal height these trees vary considerably in girth. The largest tree, over sixty feet high, has a diameter of two feet and eleven inches. The next in size is two feet and one inch through. The others are about eighteen inches in diameter. On the same creek, one mile farther down, is a Red Maple (*Acer rubrum*) with a girth of eleven feet and eight inches. One side of this tree has become decayed and fallen away, several of the larger branches have been cut off, and the top has recently been carried away, so that it is in a very dilapidated condition; though in its prime it must have been a majestic tree.

—Sir William Moore, the surgeon-general of India, has an article in the *Asiatic Quarterly Review* recommending Englishmen resident in India to marry Hindoo women rather than English girls. The native women can stand the climate without having to take vacations in England; and Sir William probably thinks that education, civilization, and companionableness are points of minor importance in a wife. But the English ladies are said to be highly indignant over the article.

—A woman on the school board of a city near Boston has been trying for several years to have cooking taught in the schools. After finding that a majority of the girls were in favor of devoting a few hours on Saturday mornings to this useful branch, it was quite a surprise to have a bright little boy say that he would like to join the class. He said that he helped his mother, and therefore wanted to learn the best way. Eleven other boys have asked to be admitted also.

—The proposition to submit the Delagoa Bay question to arbitration involves the appointment of two arbitrators by England and two by Portugal. The four are to elect a fifth to act in the capacity of umpire, failing in which the High Court is to elect the umpire.

—The prevailing belief that the Civil Service examinations favor persons with a college education is refuted by the statistics given in the annual report of the Commissioners. The figures last year showed that of the appli-

cants who had only a common school education, a larger per centage successfully passed the examinations than of the applicants who were graduates of colleges. This year's figures show a very slight change in favor of the college educated. But the number of the latter who apply for places is very small compared with the former. These figures demonstrate that the examinations are practical, and not mere tests of education.—*Exchange*.

—The verdict of the Coroner's jury investigating the Johnstown disaster was rendered on the 6th inst., and is as follows:

"We, the undersigned, the jury empanelled to investigate the cause of the death of Ellen Hile on May 31, after hearing the testimony, find that Ellen Hile came to her death by drowning; that the drowning was caused by the breaking of the South Fork Dam. We further find, from the testimony and what we saw on the ground, that there was not sufficient waste weir, nor was the dam constructed sufficiently strong nor of the proper material to withstand the overflow; and hence we find that the owners of said dam were culpable in not making it as secure as it should have been, especially in view of the fact that a population of many thousands were in the valley below; and we hold that the owners are responsible for the fearful loss of life and property resulting from the breaking of the dam."

—John G. Whittier, in a note to the *Boston Journal*, with reference to the charges against the Hampton school, says: "I hope all papers that have given currency to a late attempt to weaken public confidence in the Hampton (Va.) Institute will copy General Armstrong's letter which appeared in your paper of the 19th inst. This is due to the noble institution which is doing so much for the country and humanity, and to its brave and self-denying principal, General Armstrong. The cruel misrepresentation should be followed promptly by his vindication. The world has too few of such men who combine human tenderness and Christian sympathy with the wisdom and firmness which the arduous and difficult work he is engaged in requires. In proof of my faith in him and his school, I have just doubled my annual subscription, and heartily wish I could make it fourfold."

—The Coast Survey steamer *Blake*, now engaged in making Atlantic current observations, is supplied with sub-surface floats which are so constructed that, when set adrift, they will be virtually exempt from the influence of winds and surface currents. Each float consists of a square, white-painted pine staff, about eight feet long, projecting from one to two feet above the water, surmounted by a simple tin wind-vane, with sheet-iron wings at the lower end to receive the impulse of the ocean currents. The staff carries five glass water-tight tubes, each enclosing an envelope. Any person finding a float is requested to open it, take out one of the tubes, re-launch the float, and forward a message in the enclosed envelope to the superintendent of the Coast and Geodetic Survey at Washington, giving the date and location of his meeting with it, and such other facts as may bear on the action of ocean currents.

—The Concord School of Philosophy is no more. This fact has not been formally announced, nor has there been a definite disbanding, but the leaders agree in stating, to all inquirers, that it is improbable that its sessions will ever be resumed. The reasons are various, chief among which may be mentioned the death of several eminent men, who were conspicuous in its foundation, and the difficulty which has been experienced in bringing together in Concord each summer persons who can fill the vacant places.—*Boston Advertiser*.

CURRENT EVENTS.

PRESIDENT HARRISON, who is now at Deer Park, Md., expects to leave there on the 5th proximo for a three weeks' trip, to include a visit to Secretary Blaine at Bar Harbor, on the coast of Maine, and also a visit to Indianapolis.

A CONTROVERSY between the German government and that of Switzerland over the question of the asylum to agitators which the latter country permits, threatened to become serious, but is now said to be in better shape. A dispatch from Berlin says that the repressive measures of the German authorities on the Swiss frontier have ceased.

A FIERCE campaign is in progress in upper Egypt between bodies of fanatical Arabs, "dervishes," and the English troops who occupy that region.

THE commissioners to negotiate with the Sioux for the surrender of the Dakota reservation are persevering with their work, and appear likely to succeed. They are stated to have secured (23d inst.), 2,900 of the needed 4,000 assents. At the Crow Creek Agency, it is stated, White Ghost, the head chief, and forty others signed on the 20th. White Ghost had been a leader of the opposition, and it was expected to make "a clean sweep" at Crow Creek.

NOTICES.

Philadelphia Quarterly Meeting will be held on Third-day, Eighth month 6th, 1889, at 10 o'clock a. m., at Valley meeting-house. Special arrangements have been made to convey Friends to Maple Station on Chester Valley Railroad, three-quarters of a mile from the meeting-house.

Members of the Select meeting can take the 1.40 p. m. train from 13th and Callowhill streets, on Second-day, for Port Kennedy Station, where Friends will meet them. Tickets good to those desiring to return to the city on Second-day afternoon, who will take the 7.31 train from Port Kennedy.

Trains will leave both the Reading Depot at 13th and Callowhill streets and Wayne Junction at 7.45 o'clock a. m. on Third-day.

Tickets good going on Second- and Third-days from 13th and Callowhill streets, also on Third-day morning from Wayne Junction, and returning on Third-day to Ninth and Green streets, also to Germantown by changing cars at 16th Street Station, will be issued at 60 cents the trip.

The return train will leave Maple Station at 4.38 p. m. Ask for Quarterly Meeting tickets.

The last nine Loans on the above list were not made by the Hamilton Loan & Trust Company, of New York City, or the Des Moines Loan & Trust Company.

The Eastern Mortgages appearing above are not guaranteed. On all those in the Western States the payment of Principal and Interest is guaranteed by the careful, well-managed Trust Companies which negotiated them. This guarantee gives a security to the Loans in addition to that of the property mortgaged, and each property was carefully examined by a conservative Inspector before any Loan was closed.

Having spent much time in the West during the past few years, I am personally acquainted with a number of the properties described.

We respectfully solicit your order for any of these Investments you may desire. If any selected should be sold at time of your order, we can doubtless offer you others of equal quality, as we have additional Securities on hand and are receiving them constantly.

Respectfully submitted,

EDWARD FORSYTHE, Gen'l Manager,

for Penna., N. J., Del. and Md.

National Bank Stocks and Municipal Bonds for sale.

"COME UNTO ME."

WEARY and sad with toil and sin,
Beset on every way, I flee,
With foes without and fears within,
How can I come to Thee?

Worn out with heavy weights of care,
Heartsick of earth's poor vanity,
Of friend and lover in despair,
Where is the way to Thee?

Wert Thou beside that lonely lake
Amid the hills of Galilee,
How soon my feet the way would take
That brought me unto Thee!

What weariness of night or day,
What tosstings over land and sea,
What ill or anguish could dismay,
If I might come to Thee!

Come unto me—how may I come?
Thy divine face I can not see,
Though as an exile thirsts for home,
I long to come to Thee!

Hark! Some sweet, tender voice I hear,
"My word is true for all—for thee.
Forget thy sorrows and thy fear,
There is a way to me!

"Speak from thy heart one fervent word,
'Take me, dear Lord, thy child to be,'
Thy prayer is answered as 'tis heard,
Thou hast come home to me?"

—Rose Terry Cooke, in *New York Tribune*.

LETTERS CONCERNING FRIENDS SOUTH- WARD, 1841.

WOMEN'S YEARLY MEETING IN BALTIMORE, TENTH MONTH
28th, 1844.

FIRST-DAY morning was a very large meeting, and most excellent. Jesse Kersey opened it with a very impressive text, "In the beginning was the Word," etc., upon which, he expatiated beautifully, his explanations were admirable, and his occasional flights sublime. He was followed by Saml. M. Janney his text was, "God is light." He was followed by Priscilla Townsend; and after her a Friend appeared in supplication; and the meeting closed by a sermon from Rhoda Osborne, upon "the Necessity of Faith."

In the afternoon meeting Jesse Kersey was excel-

lent, speaking for some time from St. Paul, "For the Spirit searcheth all things, yea the deep things of God." He sat down, and in a short time opened again (sitting) in a sweet exhortation. It seemed to remind of good old Jacob when near his close, when between two worlds, weary of living, and welcoming eternity, rejoicing in the hope of the glory of God, and saying, "I have waited for thy salvation, O Lord." After which the most sublime prayer.

Second-day morning it rained very hard, but the gathering was large. Priscilla Townsend opened the meeting with a short but very encouraging communication. Reports from the several quarters were read. Minutes of strangers from other yearly meetings, and the Epistles addressed to this were also read. Friends in Indiana appear to be strong in the faith, looking forward to the time when our "Zion shall arise and shine," showing forth to the world "that her Light is come, and the glory of the Lord is risen upon her." The epistle from Genesee was uncommonly interesting, and bespoke more settlement. They were, however, all good. There was not much expression, but a silence which is more expressive than words. Just before the adjournment, men Friends sent in the request from Centre Quarterly Meeting; for it and Fishing Creek Half-Year's Meeting to be constituted a yearly meeting. Men Friends having appointed a committee of five from each quarter, if way opened, requested women Friends to unite in the Committee; but it being late no action was taken.

In the afternoon it was considered, and a committee appointed. Susanna Jewitt expressed herself with much feeling as respects society being benefited by increasing our yearly meetings; she feared its tendency was to increase a diversity of opinion, weaken the Discipline, and to lessen the unity. Some Friends appeared favorable to the consideration. An excellent memorial from Gunpowder, for Mary D. Price was read. A committee to essay answers to the Epistles was appointed. Notice given that the Indian Committee met at 7 o'clock in the evening.

Third-day morning a large and excellent meeting. The report of the "Book Committee" was read, and proved very satisfactory. The answers to the First, Second, and Third Queries were read, and much of the excellent poured forth. The neglect of our meetings seemed to be weightily felt, and some sweet exhortations to greater faithfulness. Tale-bearing and detraction occupied much time. Susanna Jewitt was very beautiful in her advice to daughters and mothers; indeed a lively exercise prevailed through the meeting; and may it prove a living and abiding concern among us! So much interesting

[Old manuscript private letters, handed to the editors for examination. Written familiarly, and intended for private reading, they give interesting details relating to the Yearly Meeting at Baltimore in 1841, and the religious labors of Rachel Barker, William Stubler, Jesse Kersey, and others.—Etc.]

communication did not progress the business, but was productive of good.

In the afternoon, progressed as far as the answers to the Eighth Query. Much exercise on the subject of dress, plainness of speech, etc.; much said, and a good deal to the purpose; but rather too much preaching. It has been a highly-favored meeting, and the men's meeting progresses to much satisfaction, for all are in the unity.

Fourth-day morning was a meeting for worship, and it was an excellent meeting. The power of God, and his unbounded love seemed to flow forth as a river, and its abundance sufficient to satisfy every living member. Rhoda Osborne was uncommonly excellent, with several others. Jesse Kersey's text was "God is love," and beautifully showed forth this wonderful working power, bringing all things into subjection, producing love to our fellow-creatures, and clothing our spirits with that charity which breathes "peace on earth and good will to men." Profession only becomes a stumbling block to others, when the Divine harmony is lost sight of.

The Yearly Meeting had sittings on Fourth-day afternoon and Fifth-day morning, when it concluded. The application from Centre Quarter to hold a yearly meeting was declined, as not being calculated to benefit society. Friends are few, and scattered over much extent of country, both at Fishing Creek and Centre. One Epistle is prepared, which is sent to all the yearly meetings. The close was very comfortable. The love and unity which prevailed was evidence of the bond of peace. There was a time of sweet quiet, when the meeting adjourned.

On Sixth-day evening Jesse Kersey had an appointed meeting, which was largely attended, and much excellent Gospel advice was communicated.

THIRD-DAY, FIRST MONTH 16TH, 1844.

Rachel Barker, with Wm. Stabler, arrived in our city last evening, and passed on to New York to-day, in consequence of the illness of her husband.

After her meeting at Washington, with Wm. Stabler and wife as companions, they appointed and held satisfactory meetings at Norfolk, and other intermediate places, receiving a cordial welcome from all.

At Fredericksburg, Va., the Mayor met them with his carriage, on the arrival of the railroad cars, and took them to his house; his wife met them in the most friendly manner, and did everything to make the visit agreeable. He interested himself in the meeting, and had it appointed in the court-house, it being preferred to asking for the churches of other persuasions. It was a very large meeting; many persons called and accompanied them to it; and afterwards expressed much satisfaction with Rachel's service therein. They desired another meeting, but it was thought right to proceed on the journey; and they proceeded to Richmond, where they were met by Asa Janney and Henry Clark, and notice having been spread for a meeting in the evening, (Seventh-day) it was largely attended, and appeared to be owned by the Great Shepherd. At its close, notice was spread of a meeting to be held at the Lutheran church on First-day afternoon. Friends' meeting at

Richmond is connected with the Orthodox portion of Society; but some of the members gave them an invitation to attend it next morning, and upon objecting, as they did not wish to intrude themselves in any of their meetings, they were assured that it would not be considered an intrusion, as Friends would be glad of their company; it was concluded to attend, and both William and Rachel had service therein, which seemed to the satisfaction of all, except one Friend from Ohio, who showed forth an Orthodox spirit, and said it had been a trying meeting to him, and hoped Friends would be careful on what foundation they built. The afternoon meeting at the Lutheran church was a time of Divine favor, being a large meeting, and many states spoken to with great clearness. The people were attentive and respectful; many went up afterwards, appearing to evidence that the witness had been met in their hearts.

The next day, went to Charlottesville, information having been sent of a desire to hold two meetings, if agreeable. They were met on their arrival, with much courtesy, and private lodgings freely offered, but concluded to stay at a public house. Next morning were called on by one of the citizens and one of the professors, who accompanied them to the meeting at the University, where it was appointed, and afterwards dined with one of them named Jones. In the evening attended the meeting appointed at the Baptist meeting-house which had been offered. Great stillness and solemnity was manifested; an impressive season; indeed, it appeared to be a truly heart moving scene. Many minds seemed to be deeply penetrated, from its unusual close. After Rachel had bade them an affectionate farewell, the meeting was closed, but they sat in silence, and none arose for some time, or until Friends came around them, when they crowded around them, taking their hands, and pronouncing blessings on them. It appeared to be a heavenly season, as if the fountains of the great deeps of spiritual feeling were broken up, the windows of heaven opened, and as if all were watered by the same celestial shower.

Thus they continued appointing and holding meetings, being met everywhere with warm affection in this southern country; when Rachel received two letters from her husband which seemed such a loud call for her to return home, that she left all and made arrangements to return. He told her his health seemed to be declining fast, and he stood greatly in need to have her affectionate care, and that, could she feel easy to come home, and his life was spared, he would at a future time accompany her through the Carolinas and Georgia, or wherever Truth might point to. She is not yet released from the service, but feels that there is much for her to do in the South, for the people had an open ear to hear, and at all the meetings there was an evidence given that the witness was reached in many hearts, and that they were a very different people from what she had heard them represented to be.

OH! His goodness is unutterable, and His faithfulness hath never failed them that trust in Him.—
Thomas Ellwood.

For Friends' Intelligencer and Journal.

THOSE WHO ARE CALLED FRIENDS.

THE name of Friend, or Quaker, was formerly regarded as a reproachful epithet when applied by persons outside the Society to those who were its members. But public sentiment has undergone such a change toward a once persecuted people, that the appellation is now given as a title of respectability, and accepted as a passport to confidence. In fact it is so appreciated that many seem disposed to adopt it without any claim beyond that of birth-right membership, or admission into the Society by the request of a parent. A knowledge of the principles, and a conformity to the reasonable requirements of the Discipline, were formerly thought to be necessary to substitute the claim of being a Friend; but now it is merely a membership in the organization.

Such being the state of affairs at present existing, we find, in different parts of the world, a heterogeneous company calling themselves a religious denomination, and desiring to be known and designated as the Society of Friends. If this incongruous mass could be sufficiently concentrated to be treated as one body, and the members composing it could be catechised as to their opinions and preferences, they might probably be ranged in *four distinct lines*.

Such an arrangement could be made without reference to the separations that have occurred (from that of 1677 down to the present decade), by each individual deciding for himself in which of the lines he would prefer to be placed, or in which one his attitude towards the Society would be likely to place him. The name Friends, without any appendage or qualification, might be applied to one line; and, in the absence of any better nomenclature, the other three might be designated, respectively, as Nominalists, Revivalists, and Rationalists.

(1) Nominalists, or negative Friends, are those who happen to be members, but who take little or no interest in the Society, though they have no intention of joining any other. This class is, perhaps, the one that makes most trouble for the overseers. There may be no direct violation of the Discipline—save that of the non-attendance of our religious meetings—and yet the member is as a dead weight upon the body. Should he move beyond the limits of the meeting to which he belongs, he may not even inform the overseers of his whereabouts, or give them any clue by which they can communicate with him. But, should he remain under their local supervision, the case is still more trying; for he is so apathetic that it is difficult to determine whether or not he places any value upon his right of membership, beyond the negative one that it would be discreditable to be disowned. It is this element that constitutes the unknown quantity when making up the answers to our Queries. When a member contemplates joining some other religious denomination, the overseers are likely to be made acquainted with his intentions, and hence they have the opportunity to advise him accordingly; but those who are affected with mere indifference are more difficult subjects to deal with. The usage of the Society towards

this class has been to be lenient and patient, but not to cease from laboring.

(2) Revivalists, or evangelical Friends, are sometimes called "advanced Friends." They are advocates for great religious activity, and for the employment of outward means for reaching the "unconverted" and gathering them into the fold. They can readily affiliate with their neighbors of the different "evangelical churches," and some of them have even introduced the ordinances into their meetings; or, as they call them, "Friends' churches." They provide pecuniarily for their ministers, and are very extensively engaged in missionary work. This class has largely increased its numbers by proselyting, so that in many parts of the world all that is known of the Society of Friends has been learned from these earnest workers. They do not adhere to the teachings of the early Friends, but are eager to do the work of to-day; and, with Bible in hand, they conduct protracted services, which are interspersed with anecdotes, singing, and many vocal prayers.

(3) Rationalists, or ethical culturists. These might also be called philanthropists, as they lay much stress upon good works; or mutationists, as they are advocates for frequent changes. In this line may be found various grades of religious belief, shading into the dark background of an almost total unbelief. The right to a place among the rationalists seems to depend on an acknowledgment that religion is *not much* more than high-class morality supplemented by beneficence. The *inner light*, to these, is an ethico-intellectual light. A principle in religion is something that can be subjected to analysis, and proved by argument. Instead of passive obedience they recommend an active building up of character, claiming that our own will power can accomplish great things. "Waiting for way to open" they regard as a myth. The *feeling* upon which the early Friends set so high a value they call emotionalism. To arrive at the truth in our meetings for Discipline, they would present all the points verbally, and argue each one logically. An impression of duty amounts to little or nothing in their estimation, unless the brother who states that he has this impression can give a satisfactory reason for it. A discourse that advocates morality, is well delivered, and entertains the multitude, is a good sermon; while a gospel message from a more serious brother or sister is lightly spoken of because it does not fulfill the required ethical and rhetorical conditions. Bearing the cross is either a philosophical endurance of what cannot be averted, or else it is a strong-willed, heroic stand in advocacy of some politico-moral reform. The rationalist is thus accustomed to weigh and measure the truth by the standard of his own intellectual powers; so that he cannot quite agree with the poet who says:

"Reasoning at every step he treads,
Man yet mistakes his way."

(4) Friends, or Quakers. These are sometimes called conservative Friends, and the name is not inappropriate, as they desire to preserve the faith, the principles, and the practices of the early Friends. They are ready to mourn over the indifference, the

lukewarmness, of the Nominalists; and earnestly do they desire that these may feel how much they are drawing from the life of the Society, without receiving any benefit from the draught, or without giving anything in return.

The true Quaker, or Friend, cannot join with the Revivalists in their work, for he feels that they are going back to those practices and into those conditions from which George Fox called the people to come away; hence he is surprised and troubled to find that those who have departed so widely from the principles of early Quakerism, should claim the right or should even desire to retain the name of Friends. He can respect them as good neighbors, can appreciate their zeal, and acknowledge their sincerity; but as fellow-members he cannot recognize them.

The Rationalists he can esteem for the correctness of their outward lives, for the intelligence which many of them possess, and for their earnest desire to do good in the world. He may acknowledge them as co-workers in philanthropy, and as those who, in their way, are seekers after the truth. He cannot, however, draw near to them in religious fellowship, because they ignore some of his most cherished principles, and call them mere traditions. He believes in getting into the quiet, and waiting to feel after the truth; and that where there is a conflict of opinions, if all will centre down to a state of inward stillness, they can arrive at a true judgment which no force of argument would ever enable them to reach. When the Rationalist asks him why he is not ready and willing to move forward in some good work? he cannot tell *why*; but he must be faithful to the impression made upon his own mind. The Quakerism, promulgated by the early Friends is the kind that appeals to his inmost sense of right, and in it he most sincerely believes. He feels that he must cling to that, or else he must relinquish his claim to being called a Friend. He is firm in the faith that when a religious meeting is held in that power in which George Fox exhorted Friends to hold all their meetings, there will be experienced by the live members a feeling that will convince them that it is good to be there. He believes that worship can be performed in silence, and that where gospel ministry is brought forth it must come from those who are unworldly enough, and deep enough, to enter into the *state* of the meeting, or of some individual who is present.

He has no controversy with his brethren who have taken their places in the other lines, but he earnestly craves that, if they really desire to be Friends, they may come back to the ancient principle on which the Society was founded. If they would only gather to this, it would lead them out of the worldly mixtures, and into a state of serious quietness, in which they would be grateful for the opportunity to mingle with their brethren in religious fellowship. They would then be as faithful in the attendance of their mid-week meetings as of those held on First-days; and would also feel convinced that preparative and monthly meetings must be sustained if we would have any yearly meeting to attend. They would learn, from their own experience, the inter-

dependence of our First and Second Queries, and the priceless value of the testimonies embraced therein. The Third Query would claim more weighty attention than it now does, and the Fourth one would be found to embrace other matters than those referring to alcoholic drinks. In fact *all* the Queries would assume a new interest, and the reading and answering of them would be regarded as highly important and as among the most serious matters that claim the attention of a yearly meeting. In the opinion of the writer, if the *First* and *Second* Queries were regarded as their framers intended they should be, and if all who think they appreciate them would endeavor to live up to them according to the best ability afforded, there would soon cease to be four classes of Friends presenting their claims for verity, for all would tend to one line. There would, of course, be different degrees of religious experience, and many would feel their unworthiness to take even the lowest place in this solid body; but the stronger would sustain the weaker, the limping would be helped along, and all would constitute one fold, which, being composed of those drawn together by faith in the principle and united by the cementing influence of love, would be in truth, as well as in name, The Society of Friends.

Seventh month 27.

Editorial Correspondence.

A VISIT TO LONG ISLAND: WESTBURY QUARTERLY MEETING.

THE close observer, starting on a journey of many or of a very few miles, always finds some fresh object of interest, though he may have traveled the road frequently and become familiar with the "sights and sounds" that form its attractions. Our prospective visit of two weeks in southern New York and among "the plains,"—we might almost say the prairie lands of Long Island, so far as we have accomplished it, has been no exception to former experiences.

We had scarcely passed beyond the crowded thoroughfares of the city we were leaving, before we were attracted by rows upon rows of dainty little houses that are going up in the northern suburbs of Philadelphia, offering to the seeker after health and comfort all the conveniences that the home life of our own time make essential, within the four walls and the plot of ground which each family may call its own, though it be of the smallest proportions. The building up of so large a portion of this outlying area in single houses for the mechanic and artisan of small means, made accessible to the great business centres in and around our city by the extension of railway lines and "rapid transit," seems to indicate that the tenement-house system is not in favor with the great mass of its industrious home-loving people. Pretty cottages of every possible design, and mansions of architectural elegance having grounds and surroundings in keeping therewith, occupy the more eligible situations, and we seem to travel through miles of beautiful natural scenery made more beautiful by what art and wealth have added. Beyond all this are the grain fields; the harvesters are clicking away among the golden heads of the oats, displacing the scythe, as the locomotive, which hurries us along

at the rate of a mile in two minutes, has displaced the stage-coach of our earlier day. The snowy blossoms of daisy and wild-carrot, divide the honors of road-side and meadow,—the tasselled crowns of the cornfields bend gracefully to the flutter of the mid-summer breeze, and the trees of orchard and forest wear the fresh green livery of spring. In the moist meadows and the marshy tracts that become more numerous as we hurry along through northern New Jersey, the wild lily lifts its glowing chalice to the sun while the St. John's wort is decking itself out in the tiny golden fringe of its first blossoming. Asclepias, Iron-weed, and the evening Primrose with their congeners are giving hints of the pink and purple and yellow that they hold in store for the days to come.

The day is one to make the heart glad, and the air just cool enough to be enjoyable. We find the dust more annoying than we expected, and are led to believe that the Pennsylvania Railroad Company is quite able to abate this nuisance without any abatement of its half-yearly dividends.

In less time than our ancestors of a century ago could have made the journey from one of the suburban towns to the old State House of our city, we are at the terminus of the route and find the ferry boat waiting to convey us across to New York.

Our destination is further on, to spend a brief time at one of the delightful farm houses of Rockland county. We take a one-horse car at Jersey City, and passing along its business thoroughfare a mile or two, reach the Pomona Station, where, after a brief waiting, we take the train again. The route lies for several miles along a low, marshy district through which the broad, sluggish current of the Hackensack, with its numerous little tributaries, finds its outlet. How the mind goes back to the uncounted ages, when this broad stretch of meadow surged with the mighty sweep of waters bringing down ice and rock and debris of the glacial deluge which has left its traces in immense boulders and circular pools of water. The great marshy tracts are covered with wild grass, reed, and cat-tail, with here and there a solid plat of a few acres elevated above the rest, upon which the thrifty farmer has made himself a home. Many towns dot the roadside, at all of which the train stops. We run along quite rapidly the twenty-eight miles of our journey that bring us to the solid strata of the everlasting hills, long before we reach Narnet, the end of our railroad travel, beyond which, after a ride of a mile and a half behind a pair of spirited horses, we find a glad welcome in the home of our friends.

There has not been as much rain here as we have had in eastern Pennsylvania, yet they have had a fine growing season; the crops are abundant, and a luxuriance of verdure is every where seen.

One half-day of our visit is given to the attractions of the neighborhood, first of which in our course is Oak Hill cemetery, looking down upon the western banks of the Hudson, and a part of the town of Nyack which stretches along for perhaps three miles to Hook or Bald Mountain, said to rise almost perpendicular seven hundred feet above the level of the

river. The upper part of the town is made up of pretty summer residences, embowered in cool, refreshing shrubbery, the yards reaching down to the water. The hills come so near that there are but two streets running north and south, they are crossed at intervals by others which, starting at the river, end abruptly in green fields that creep up the steep summits to the wooded hills beyond; a long narrow pier runs out to the deep water of the channel,—a relic of the earlier days of the Erie railroad now used only as a storage for coal. The hours of the clear, cool morning with its health giving atmosphere, passed rapidly away, leaving a vivid picture upon our minds which will not fail to bring back recollections of the pleasure it afforded.

On the following morning we take the cars for New York in time to join our friends who are going to Westbury, Long Island, to attend the Quarterly Meeting which meets at that place in the Seventh month. The road runs through the plains of the Island. These in places are bare and uninviting. Beyond what one might expect to see so near a great city, having need for all that can be gathered in from the tillage of its soil, one queries why those in search of location so entirely overlook these spots that yet wait the hand of the cultivator at the very doors of a remunerative market, and travel hundreds of miles away from friends and early associations to settle down in a wilderness where only toil and privation await them.

But there is a love of adventure in us all, and the far beyond, of which we know nothing, has more attraction than that lying within easy reach. Doubtless some sturdy emigrant may find these waiting wastelands to his mind, and ere long the budding and blossoming wrought through his untiring energy will make them a garden spot of beauty. We soon pass into the more populous portions of the Island, and nothing can exceed the fertility of the land or the excellence of its cultivation, everything indicates a high degree of intelligence and a prosperity that leaves nothing to be asked for which is not within reach. We find open-handed hospitality and a welcome that makes us feel at home with our friends, who take us under their loving care, and convey us from place to place with no abatement of interest in our welfare. Truly the overflowing heart responds with thanksgiving to the Father of all our sure mercies for the blessed privilege of mingling together in Christian fellowship, and for that unity of spirit which is the bond of peace.

The Select meeting assembled at 3 p. m. on Sixth-day, the 26th inst., in the old Westbury meeting-house, where for a century or more Friends have met for worship and the transaction of the business of the Society. It is in a fine state of preservation; and the generations which have succeeded those whose earthly remains lie in the quiet resting-place of the dead, manifest an earnest zeal for the perpetuity of the meeting, the young coming up to the help of the old with an interest that is full of promise for the future.

The attendance of ministers and elders was fairly good; several who are accustomed to be present

from New York and Brooklyn were missed, but others were there who are sometimes absent when the meeting is held at other places, so that the number varied little from other similar occasions. The meeting gathered into a deep reverential silence, which prepared the way for the business that followed.

The queries differ considerably from ours, and are more in number. There is none in regard to the soundness in word and doctrine of the ministry, but they have one that inquires into the impartiality of administering the Discipline towards those of their own families who are amenable thereto. There was not very much expression, but the deep feeling under which the business was entered upon continued to overspread the meeting until the concluding minute was read, and it was felt to be a time of refreshment to all who were privileged to be there.

The fine weather of the few preceding days gave place to a cold rain which came in a fair deluge at times, and beginning on Sixth-day evening continued through the greater part of Seventh-day. Owing to the severity of the storm many were prevented from attending the Quarterly Meeting held on Seventh-day. The body of the house was well filled with attentive listeners to the various gospel messages handed forth; these were as the bounteous table spread for the sustenance of the body, where each guest might partake of his portion and be nourished and strengthened for the service required of him.

In the business meeting which followed, five of the Queries were answered. The replies showed a good degree of faithfulness to the requirements contained therein, and a state of Society that indicates growth in best things. The remaining Queries, also the advices, were then read, some routine business was transacted, and the meeting adjourned to be held three months hence at Flushing, the winter and spring quarters being held in New York and Brooklyn respectively. This is a very proper arrangement for a Quarterly Meeting that extends over so large a territory, as it gives opportunity for those more distantly situated to attend when it is held near them, and usually secures a large meeting.

We wanted to worship in the old Jericho meeting-house,—of historic interest as the place where that dedicated apostle of the old faith declared by Jesus—Elias Hicks—was favored to hand forth the simple truths of the Gospel as they were opened to his mind in the clearness of divine revelation. There was an inspiration in the place and it seemed holier for the holy truths respecting the relation of man to God and to the beloved Son, that he had so fearlessly and faithfully proclaimed. We gathered with the First-day School, which is held an hour before meeting, and were more than gratified at what we saw and heard. My own heart was tendered beyond expression at the loving welcome beaming from every eye, as I looked into the upturned faces before me, while the Superintendent introduced me as the "Aunt Karlie" of their little paper, the "Scattered Seeds."

But I must stop this rambling, and doubtless very imperfect summary of what has been more than a realization of all my anticipations in coming among

the Long Island Friends of Westbury Quarterly Meeting.

L. J. R.

Seventh Month 29.

From The Friend, (Philadelphia.)

EARLY MEETING-HOUSES OF FRIENDS.

(Continued from last week.)

PINE STREET MEETING.

THE Pine Street Meeting House, or the "Hill Meeting," as it was called in its early days, was located on the south side of Pine Street, below 2nd street.

It was built in 1753 largely for the accommodation of the Yearly Meeting, as appears by the following minutes:

"At a Monthly Meeting held the 31st of Seventh Month, 1752. The consideration of building a new meeting house being now revived, and Friends in general at this meeting being of opinion it is necessary to build one, Anthony Morris (and 21 other Friends), were appointed to view a piece of ground left by Samuel Powell, Jr., for the purpose, on Pine street. They reported the lot would be suitable if 40 feet more could be added to it (50 feet were added). The committee prepared an estimate for a house 60 feet long and 43 feet broad to cost £500, and think it may be of suitable dimensions to accommodate the Yearly Meeting."

In the Eleventh month the subject was again considered, and "The meeting agrees that a brick house of 60 feet front, and 43 feet deep shall be built on the said lot, as the principal inducement to this meeting to consent to the building of such a house is for the accommodation of Friends at our Yearly Meeting."

28th of Ninth month, 1753. "The meeting-house on "Society Hill" being now finished and meetings held there during our late annual solemnity," etc.

Evening meetings were opened the 27th of Twelfth month, 1754. But it does not appear that day meetings were regularly established there for some time, as we may observe by the annexed minutes.

"At a Monthly Meeting held in the Chamber of our Great Meeting House in Philadelphia (Market street), the 24th day of Sixth month, 1757—

"It is agreed that an afternoon meeting be held at the Pine Street Meeting-house, the first First-day of each month, during the summer season, no meeting at this house ('Great House') at that time."

30th Third month, 1759.—"It being proposed that a meeting be held at the Pine Street Meeting House on First-day mornings during the summer season, it is agreed to."

25th Fifth month. "It is agreed that while the work is being carried on at the Great Meeting-house (i. e. fitting pillars under the floors, and finishing the chamber, so as to accommodate the Quarterly, and other public meetings), the First-day meeting both morning and afternoon be held at Pine street, and the First-day evening meeting at the Bank meeting."

12th Third month, 1761. "The meeting agrees that meetings for public worship may be held at Pine Street Meeting-house on First-days, morning and evening."

During the prevalence of the yellow fever in 1798, the Men's Yearly Meeting assembled here Ninth month 24th, and after a time of solid deliberation concluded to adjourn to the Twelfth month. Several Friends, about 13 in number, of those who came to attend the Yearly Meeting contracted the fever and died; among them was Warner Millin.

Mary Prior, then visiting in this country, under date of Ninth month, 1798, thus alludes to the matter: "A number of Friends are to meet to-day to consider and feel after the pointings of truth respecting the Yearly Meeting, which falls in course next Second-day."

Ninth month 24th. "About 100 Friends met in the city in the Pine Street Meeting-house, and after a solid time of waiting came to the conclusion to adjourn the Yearly Meeting to the Twelfth month."

The Yearly Meeting was held continuously in this house, it is believed, until 1802, when it was removed to the North Meeting-house.

Thomas Scattergood, in his journal under date of Fourth month 19th, 1802, alludes thus to the change: "The meeting, on consideration, very unitedly agreed to adjourn to the North House, in hopes that it will accommodate the meeting better than the present place of meeting—the Pine Street House."

He again alludes to a change of place of holding the Yearly Meeting, as follows:

Fourth month, 1811. "The Yearly Meeting for business was large. The two first sittings were held in the North House, where it has been held for some years; the afternoon sitting adjourned to meet in the morning of the 16th in the East House on Mulberry street and Fourth street, and the women took possession of the new one just finished on the West."

FOURTH STREET MEETING-HOUSE.

The meeting-house on Fourth street near the corner of Chestnut, on the site now occupied by the William Forrest buildings was erected in 1763, and seems to have been designed largely to accommodate the "Youths' Meetings," which were organized in 1696, and held four times a year, on the second day after the Quarterly Meeting; also to afford a suitable place to hold monthly and other business meetings. Although the chambers of the Great Meeting-house had been fitted up for that and kindred uses, as before alluded to, Friends did not appear to be well suited in that respect, and after various plans had been proposed, among others the enlargement of the Pine street house, the following conclusion was reached:

Seventh month, 1763. "It being considered, and now agreed to, that a building should be erected on some part of the lot belonging to this meeting on which the Public School House stands, which may not only serve for this purpose, but for the accommodating the meeting held Quarterly with the scholars under the care of Friends, which has for some time past been much wanted."

A committee was appointed to prepare a plan and make an estimate of the cost, who proposed that the building be one story high, 76 feet front on Fourth street, 42 feet deep, and 12 feet high; and that it should not stand nearer the wall of the school-house than 25 feet; their plan was adopted and the work

commenced. But upon further consideration it was determined to raise the building another story.

Eleventh month. "The Friends who undertook to solicit subscriptions for carrying the meeting-house (now building) another story, report that they have obtained subscriptions to the amount of 550 pounds, etc., upon consideration whereof, and the report of the workmen that material may be readily procured, it is agreed to carry up the wall another story between 10 and 11 feet, and to get the house covered in," etc.

It was completed the following year, as appears by a minute of the monthly meeting, as well as in the answer to the general queries, viz.:

"At a Monthly Meeting held in our new meeting-house in Fourth street, Philadelphia, the 5th of Tenth month, 1764," and "A new meeting house on Fourth street in this city (has been built) for the accommodation of our meetings for discipline."

After the division of Philadelphia Monthly Meeting into three parts, or Districts, in 1772, the monthly meetings for the Southern District were held in this house, as is shown by their opening minute, viz.:

"On the 25th day of the Eleventh Month, being the fourth of the week, 1772, divers men and women Friends assembled in our meeting house on Fourth street, being the first Monthly Meeting of Friends of Philadelphia for the Southern District, appointed for the maintaining of the testimony of Truth and our Christian discipline within the limits prescribed for the said Monthly Meeting."

A select school for girls was held in the second story of this building for many years; later a primary school was opened on the first floor, after it ceased to be used as a meeting room.

The building was taken down in 1859, and the large block of business buildings erected on its site, and that of the old Academy building, which was removed in 1867.

J. W. LIPPINCOTT.

(To be concluded.)

Who serves his country best?

Not he who, for a brief and stormy space
Leads forth her armies to the fierce array.

Short is the time of turmoil and unrest,
Long years of peace succeed it and replace;

There is a better way.

He serves his country best

Who lives pure life, and doeth righteous deed,
And walks straight paths, however others stray;

And leaves his sons as uttermost bequest
A stainless record which all men may read;

That is the better way.

This is the specific gift that Christ conferred on mankind,—a human soul in which all spiritual attributes are so contained and reconciled that it is worthy to be a type of the Infinite Perfection.—*John Hamilton Thom.*

Pure words in unclean surroundings are like the beautiful lilies that grow up straight and tall beside a stagnant pond, with their beauty reflected in its sluggish depths.

 PHILADELPHIA, EIGHTH MONTH 3, 1889

 SILENT WAITING.

PERHAPS the most distinguishing feature of the worship of the Society of Friends is, and ever has been, its form—if it can be called a form—of silent waiting. A reverent attitude of the mind, when all assembled for a Divine purpose are expected to still the worldly thought and action and make room for the quiet impress of the Spirit. Not that this silence is never to be broken, when some weightily moved one is commanded to speak, but for a season no outward voice shall disturb any who may be thus silently waiting upon the Lord; and it is only those who know the true value of this waiting that can fully appreciate and love this form of worship.

A recent report of one of the many branches into which our once large and influential Religious Society is unfortunately divided, shows a departure from this essential quality in the mode of worship which is a source of regret to all true Friends, and not only Friends, but the thoughtful in other religious bodies, having come to realize the value of silence as an element in worship, share with us in feelings of sorrow for this change that so savors of unrest, if indeed it does not betoken distrust in the command "Be still; and know that I am God." The *Christian Union*, under the leadership of Lyman Abbott, in an editorial on an article in its columns referring to the late Yearly Meeting in New England, and which appeared also in the *INTELLIGENCER AND JOURNAL* of Seventh month 20th, says:

"If, as we fear is the case, the article correctly describes the present tendency in the denomination of Friends, it is high time either to call a new denomination into existence to emphasize the feature of spiritual life which the Friends did formerly but apparently do not now emphasize, or else it will be necessary—and this would be better, certainly—for other denominations to accept as a heritage the gift of silence which the Friends seem to be relinquishing. In no sphere of human experience is it more important to remember and act upon the aphorism that speech is silver and silence is golden than in the sphere of religious experience. . . . If the Friends who have borne such witness to the beauty of a silent attitude, to the worth of a quiet spirit, to the experience that communicates itself only to him who hears and heeds the counsel, "Be still; and know that I am God"—if the Friends are going to

abandon the listening attitude and be carried away by the passion to perpetual talking which is a sign not of a full but of a restless soul, we may well pause and consider whether the symptom is not a grave one. Where, then, will there be left in any Protestant service any element analogous to the opportunities which the nooks and corners of a great cathedral give to souls who wish to be alone with God in an intercourse unaccompanied by any interpreter?"

We rejoice in this tribute to silence in our mode of worship, and claiming no monopoly of the form, we will gladly share it with the multitudes that now assemble where the services are all pre-arranged, and where, as the same writer says, the "rituals leave small space for 'waiting on God,' which is the highest act of devotion." We do not, however, share in the fear that Friends are abandoning this feature of worship, for apart from the New England branch and many using the name in the West, there is no departure from it. Philadelphia Yearly Meetings, of both wings, are firm in their allegiance, cherishing it not alone as a valued inheritance, but realizing, especially in this restless age, its sustaining helpfulness.

With the concluding words of this editorial utterance we are in such hearty accord that we commend them to our own readers:

"There are voices that are quiet and must be listened for; and we are too busy with our own thoughts, and make too great a buzzing oftentimes, to listen. He that would follow Christ as a teacher must learn to follow him as a listener as well. Perhaps those nights he spent on the mountain top were partly spent in listening as well as in praying; or, to speak more truly, perhaps listening to God and waiting on God is the best and highest part of praying. Silence is golden. Listen!"

 MARRIAGES.

SCHAFFER—SHARPLESS.—At the residence of the bride's parents, on Seventh month 24th, 1889, by Friends' ceremony, Dr. Charles Schaffer of Philadelphia, and Mary T. Sharpless, daughter of Alfred Sharpless, of West Chester, Pa.

 DEATHS.

CLEMENT.—Seventh month 26th, 1889, Hannah C. Clement, of Camden, N. J., widow of William W. Clement; a member of Newton Preparative and Haddonfield Monthly Meetings.

FLOWERS.—At her home, near Friends' Yearly Meeting-house, Clear Creek, Putnam county, Ill., Sixth month 22d, 1889, Phebe C. Flowers, in her 75th year.

She was born in Adams county, Pa., Third month 13th, 1815, removed from there to Washington county, Pa., with her parents, Samuel and Susanna Comly, residing there five years, thence she removed to Illinois in 1842. She was united in marriage with Thomas Flowers in 1852. Thomas and his two daughters by a former wife became members of Clear Creek Monthly Meeting through her influence. She was a first cousin of Joseph Gibbons, of Lancaster county, the former editor of *THE JOURNAL*, and a niece of Joel Wireman. She was a diligent attender of meeting,

when health and strength would permit, and for years an elder and overseer of Clear Creek Monthly Meeting. For many years she felt it her duty to offer vocal testimony, and the last offering was that to "Mind the Light." Surely she has her reward. A. M.

FOULKE.—At Highland Cottage, near Stroudsburg, Pa., Seventh month 13th, 1889, Fannie A., daughter of Catharine P. and the late Charles Foulke. The funeral was largely attended at her late residence on the 17th instant.

FROST.—At Poughkeepsie, N. Y., Seventh month 15th, 1889, Amelia M. Frost, widow of the late Charles Frost, and daughter of the late Isaac Merritt, of Harts village, in the 67th year of her age; a member of Oswego Monthly Meeting.

To the death of this loved Friend her family and the large circle of friends in which she mingled will long miss her valued companionship. A beautiful life which ever seemed under the guidance of the Divine will in the fulfillment of many duties devolving upon her, cannot fail to leave a lasting impress and bright example wherever her presence was felt. In taking her seat in meeting, which she attended with remarkable faithfulness, the perfect repose of mind and body spoke of the sweet spiritual communion she held with her Heavenly Father, whom it ever seemed her highest pleasure to serve. She was deeply interested in the charitable institutions of which she was a manager many years. In her last illness, when informed that human aid was unavailing in overcoming her suffering, she accepted the summons with sweet resignation, magnifying the blessings she had enjoyed in life, and though keenly feeling the parting from her sorrowing family, was enabled with perfect submission to surrender all into the keeping of Him who had been her stay and comfort through life. C.

FURMAN.—In Philadelphia, Seventh month 27th, 1889, Catharine, wife of John K. Furman.

GAWTHROP.—At Avondale, Pa., Seventh month 23d, 1889, James T. Gawthrop, in his 70th year; a member of New Garden Monthly Meeting.

LEEDOM.—Seventh month 7th, 1889, Elvira M. Leedom, of Lansdowne, Pa., widow of Maris W. Leedom, aged 62 years; a member of the Monthly Meeting of Friends of Philadelphia. Interment at Haverford.

LEVIS.—Seventh month 21st, 1889, Solomon Levis, aged 61 years. Interment from Abington meeting-house, Pa.

LLOYD.—At Darby, Pa., Seventh month 25th, 1889, Hannah, widow of Franklin Lloyd, aged 75 years.

LONGSDORF.—At Flora Dale, Pa., Seventh month 27th, 1889, Hiram Starr, youngest child of Charles L. and Elizabeth W. Longsdorf, and grandson of Hiram S. and Alice G. Wright, aged 3 years, 3 months, and 17 days; a member of Menallen Monthly Meeting.

LONGSHORE.—At her late residence, Yardly, Pa., on the 21th of Seventh month, 1889, Harriet W., widow of Jolley Longshore, aged 76 years. Interment from Yardley meeting-house, Pa.

PASSMORE.—At his residence at Rising Sun, Cecil county, Md., of typhoid fever, Walter C. Passmore, son of Ellis P. and Mary E. Passmore, in his 29th year.

RATLIFF.—At his home near Richmond, Ind., Sixth month 21th, 1889, Cornelius Ratliff, Sen., in his 91st year; an esteemed elder of Whitewater Monthly Meeting.

SPENCER.—At his residence, Bridgeport, Clearfield county, Pa., on Sixth-day, Seventh month 26th, 1889, Joseph M. Spencer, in the 69th year of his age, a minister and valued member of West Branch Monthly Meeting.

STRATTAN.—At Allona, Pa., Seventh month 22d, 1889, Clement T. Stratton, son of George W. and M. Virginia Stratton, in his 23d year.

THOMAS.—Suddenly, at Mountain Lake Park, Md., Seventh month 24th, 1889, Rebecca M. Thomas, a valued minister of Sandy Spring Monthly Meeting, Maryland.

SCRIPTURE LESSON No. 30.

EIGHTH MONTH 11TH, 1889.

SAMUEL'S FAREWELL ADDRESS.

GOLDEN TEXT:—"Fear the Lord, and serve him in truth with all your hearts; for ~~nothing~~ how great things he hath done for you."—1 Samuel 12: 24.

READ 1. Samuel 12: 1-15.

SAUL having received the fulfilment of the promise made by Samuel, that *God would make him another man*, in the exaltation of his first conscious power spoke or prophesied in the name of the Lord, being endured, as were the Apostles later on, with power from on high. He then returned quietly to his father's house and resumed his occupation, content to wait the further unfolding of the Divine purpose.

It was now the time for Samuel to summon the people to Gilgal, one of the sacred cities, and inform them of what he had done, and retire from the office he had held for so many years, that the king whom they had in their own human will demanded might assume the full control of the nation, he having already given evidence of his valor, and established himself in popular favor by delivering them from the invading Ammonites. (See 11th chapter.)

From all that is recorded of the personal appearance of Saul,—his self-control, his modesty, and his prowess,—we may well believe that the vanity and ambition of the people could not fail to find him a man after their own heart. He was, as yet, untried in all the qualities essential to a great and good ruler. When he is tested—weighed in the balance of human experience—will he be found wanting? We shall see.

Nothing in ancient or modern history can exceed the simple dignity and candor of the prophet as he recites the various experiences of the nation, beginning with his own unsullied record and the unswerving fidelity with which he had administered justice among them. He is now prepared to give them his parting words, which he does in the same grave and earnest manner. They had made one of their pleas for a king to rest upon the peril they were in from surrounding nations. He reviewed their history from the Exodus,—how God had delivered them under Moses, and those who had succeeded him, and while they remained true to him as their ruler and heavenly king, they were always able to stand before their enemies. Only when they forsook God and turned from his counsels were they given over to their foes.

In the life of Samuel, which was almost in every respect one of peculiar interest, the child was a pattern of all that is lovely in the youthful mind and character, and in the man were realized the hopes of his childhood. Fidelity to Jehovah and zeal for the welfare of Israel marked all his actions. While he

was true to Israel he was at the same time true to his God. The days of the judges were over, and Israel wanted a king. Samuel reproved them for their desires, but did not allow his ambition to stand in the way of their choice. In his farewell address Samuel designed to reprove the people, and therefore he begins with a vindication of himself, "for he that will with confidence tell another his sin must see to it that he himself be clear." Men may recede from any, even the highest, station in life, with comfort, when they can obtain even from those who despise them a testimony to their integrity.

Those who have walked with God from childhood to old age can look back on their past lives with gratitude. Their lives are beautiful examples, and are powerful incentives to lead the young in the same paths. Our safe and happy state consists in a willing dependence on God and subjection to him; for the greatest outward prosperity contributes to our felicity only when it induces us to love the Lord and serve him in truth with all our heart, remembering what great things he hath done for us.

NOTES ON THE LESSON.

Again we are at a loss to know what period of time elapsed between the ceremony of anointing Saul to reign over Israel, and the threatened invasion which brought him prominently before the people as their leader and ultimate deliverer. We are told that he returned to his father's house and resumed his former occupation, keeping the knowledge of the future that was before him safely hidden in his own breast.

Samuel continued to administer the government, yet was preparing the way for placing Saul at the head of the nation, and when the proper time arrives he is fully equal to the occasion.

It is at Gilgal that he summons Saul (now thirty years old) to meet him, and the elders and chief men, that he may be installed into the office. Here they sacrificed the sacrifice of peace offerings. These were either of the flock or the herd or of both, and the animals must be perfect, without blemish. (Lev. 3: 1-12.) There were great rejoicings; Saul's valor in vanquishing their enemies, and his fine personal appearance won all hearts, and they received him as their king, with acclamation.

It was now Samuel's part to resign the office of Judge, which he had held since he was forty years old, and in his parting words of counsel and encouragement, he cites them to the record of his administration and challenges the assembled multitude gathered from the length and breadth of the nation, to bring any charge against him, in his office of Judge and how nobly he stands before them, with an unsullied name, and with what united feeling they respond to the truthfulness of his words. What an example worthy to be handed down to all future generations! We see what power there is in those who have, with the wisdom that is needed to govern, clean hands and purity of heart. There have been examples all along the world's history of men holding the highest offices in a nation who have had untarnished names, but they are rare.

LETTER FROM NEBRASKA.

EDITORS INTELLIGENCER AND JOURNAL.

WHILST reading the account of many of our meetings, and the ministers that attended from time to time, in your much-loved paper, the question oft arises, Why are not more of those favored ones sent by our loving Father to visit us, his scattered children, in the Far West, with words of love and encouragement? The most, if not all, that comprise Lincoln Executive Meeting, formerly belonged to meetings where there were fathers and mothers, faithful standard bearers that bore the burdens of the Society, we only bearing the same relation to it that children do to the home circle. We enjoyed what our parents worked for, merely lending a helping hand when asked, but never realizing the care and responsibility of the heads of our meetings. We live here eighteen miles from our meeting. When we heard there was a meeting held in Lincoln we drove out one First-day, and it was truly a great privilege to meet again in a Friends' meeting. I asked a friend how long they had held meetings: she replied, over two years. I thought it strange that we had not heard of it, but she said "We have felt so poor and weak, that we hardly wanted it known. We still feel very small, for we have no strong ones to lean on, but are all as children together." And Oh! that we may remain as obedient children, ready and willing to be taught by our Heavenly Father through his Son, which is the Christ spirit that dwells in the heart of each and every one of his obedient children. For this cause have I become willing to write these lines, knowing as I do that God works in and through us as his agents, and if we are unfaithful to the trust much of his work will be left undone.

As I read a sermon of Darlington Hoopes, delivered at Coldstream, one of the meetings belonging to our own monthly meeting in Canada, the question again came up, Why do not some of our ministers come West to visit us? The reply was, it costs too much to travel so far and our ministers have homes and families to support. I have read considerable in the INTELLIGENCER about a free ministry, and turned and overturned it in my mind and have come to the conclusion that whilst I am opposed to the hiring or one man ministry, I believe that the time has come when we must keep a fund to defray or help pay the expenses of our ministers that travel with minutes of unity from their meetings. I am firm in the belief that were our principles more widely known there would be a gathering in to us.

Our next executive meeting at Lincoln will be held the second Fifth-day in Eighth month, in Burr's building, W. C. T. U. rooms, (third floor.) We would feel very grateful for the company of any Friends who may feel willing to make sacrifices to meet with us.

M. A. DE PEALE.

Bennett, Neb., Seventh month 20.

I HAVE sometimes remembered the language of a tried servant . . . who was enabled to comfort a brother, in words like these; "If we be but clean vessels, no matter how empty,"—and I may add no matter how long on the shelf.—*John Barclay.*

COMMUNICATIONS.

THE U. S. SUPREME COURT'S DECISIONS ON PROHIBITION.

EDITORS INTELLIGENCER AND JOURNAL:

In your of issue Sixth month, 2nd, I noticed over the signature of John J. Janney, a criticism of the statement that "such a provision [as prohibition] has no place in a Constitution! has been considered and answered in our highest judicial tribunal—the Supreme Court of the United States," etc., in which he says: "I know of no such decision, and do not see how it could be had." . . . "There is no other way in which such a clause could get before a court except on a claim that it was in conflict with the Constitution of the United States, and this the Supreme Court of the United States alone could decide." Now this is just what I understand that this court has repeatedly decided, most notably in the cases of Peter Mugler vs. the State of Kansas, and the State of Kansas vs. Leibold & Hagelin, in a decision rendered a year ago last winter, in which seven of the eight justices concurred. These decisions were given on appeals from the decisions of the Supreme Court of the State of Kansas, claiming that the provisions of the law of Kansas by which the liquor traffic was proceeded against by injunction without trial by jury, and prohibiting the use of property for purposes of manufacturing intoxicating liquors without compensating the owner thereof, were in conflict with the Constitution of the United States. In this decision it must be apparent to every unprejudiced mind that there is so much of the general fundamental principles of government and property rights involved in the policy to be pursued toward the liquor traffic, that whatever this policy may be, it has a rightful place in the Constitution of the State, as this is the only means of securing any permanency. For the benefit of those who may wish to study the extent of this decision, and who, (like the writer), have not ready access to a law library, I will state that by sending twenty cents to Funk & Wagnall, 20 Astor Place, New York City, with an order for "The Prohibition Decision of the U. S., with comments by Judge Packard of Chicago, Illinois," they will get the full text of this decision.

EDUCATIONAL.

SWARTHMORE STUDENTS AT GRIMSBY PARK.

EDITORS INTELLIGENCER AND JOURNAL:

The increased care given to the teaching of Elocution at Swarthmore, and the aroused interest in the study, are expressed in the attendance of several Swarthmore students at the Summer school held under the direction of the National School of Elocution and Oratory, at Grimsby Park, Ontario. The summer session is under the direction of Professor Silas S. Neff, and the students are accompanied by their Professor of Elocution, Myrtle Furman. Professor Neff's system of teaching is original with him, and deserves some notice. He claims that expression results from impression. He thinks the reader must see so true a picture of the scene de-

pieted by the author and enter so emphatically into his thought, as to be able to reproduce them to his hearers accurately and naturally. Let him become so absorbed in his subject, aside from the mere words, that all self-consciousness shall be lost; then will gesture and inflection prove the spontaneous outward expression of the vivid mental impression. He holds that gesture should be taught as a mere gymnastic exercise, apart from sentiment. The body ought to be so cultivated as to render every portion of it flexible and graceful; then each muscle and limb will unconsciously respond to the movements of the mind.

The Summer school is located at Grimsby Park, on the southwestern shore of Lake Ontario, twenty-five miles from Niagara Falls. It is in session from 9 to 12 each day, and special classes in extemporaneous speech, memory training, etc., are held in the afternoon. The school numbers at present about fifty members, among whom are a number of professors and teachers. The Swarthmore students in attendance are: Mary Kirk, '89; Clara Haydock, '89; Louella Passmore, '89; J. Carroll Hayes, '89; and Albert H. Smith, '91. In this connection it is due Professor Furman to say that she has long endorsed President Neff's theory, and has been highly successful in her application of it at Swarthmore, but the limited amount of time which she is allowed with each class does not suffice to do her justice.

THE GOLDEN-WINGED WOODPECKER.

NEAR the edge of the grove stands a dead Lombardy poplar, its tall, straight trunk stretching many feet into the air, and its bare whitish branches outlined against the blue of a summer sky. Around it the maples are rustling in the warm breeze and a young robin, perched on a limb near by, is filling the air with short, sharp notes.

In the rapidly decaying trunk of the poplar, about ten feet from the base, may be seen an irregular oval hole, and the ground beneath the tree is covered with small chips which look as though they might have been made by an augur. Evidently the tree has been utilized as a domicile by some inhabitant of the outdoor world.

Suddenly, at the opening, which serves alike for door and window, appears the head of the architect and owner of the home—a member of the family *Picidae*, and commonly known as the Flicker, or Golden-winged Woodpecker. Scientifically speaking, it is *Colaptes auratus*.

"In most of our species," says Cones, speaking of the woodpecker, "the bill is perfectly straight, wide, and stout at the base, tapering regularly to a compressed and vertically truncate tip." The flicker, however, forms an exception to this rule and the strong, black bill which protrudes from the opening is slightly curved and pointed. A black patch just at each "corner" of the mouth denotes that this is the male bird, that mark being absent in the female. The front of the head and neck are of a soft, light brown color, shading into gray near the royal scarlet

crescent on the back of the head. A collar of jetty black sets off the breast, which is handsomely spotted with the same color.

The bird turns its head from side to side and its black, headlike eyes survey the intruder. Then it moves with rather heavy, lumbering flight to the branch of a maple near by, revealing, as it flies, the bright golden color of the under side of the wings and tail. The back and upper side of the wings are brownish, barred with black, the rump is white, and the tail black.

The cavity in the tree extends perhaps a foot below the opening, and the four white eggs with their hard, crystalline shell have no soft resting place of hair and moss and grass, but lie on a few chips at the bottom of the nest.

Birds differ widely as to the stage of development they attain before leaving the shell. The young of our domestic fowls, for instance, as well as those of many other birds of similar habits, are able at birth to take care of themselves without much assistance from the parent; others are completely helpless and require several weeks of care before they can maintain themselves. To the latter class belongs the woodpecker, which makes its appearance in the world with very little preparation for the battle of life. Its eyes are unopened, its body is entirely destitute of covering, and its wide-gaping mouth and feeble cry are its only provision for obtaining sustenance, as it is quite incapable of locomotion.

The flicker is said to be nearly resident in those regions of which it is a native. I have never seen it here during the winter, but its harsh cry is one of the first bird-notes heard in the spring. Living largely upon those insects which lie dormant in wood, it can readily maintain itself even when vegetation is scarce and the hum of insect life is stilled by cold.

The toes of the flicker, like those of other climbing birds, are paired, two in front and two behind, and it is also assisted in climbing by the stiff quills of the tail. Another characteristic which it shares with most of the other *Picidae*, is the peculiar formation of the tongue, which can sometimes be thrust out several inches.

ANNA L. NICHOLS.

ESSAY.

ANY one who will make a thorough examination of what is meant by strict morality will realize how important its teaching is to the children, and what a great influence it has upon their course in life for good or for evil. Without such teaching how can we reasonably expect children to lead a consistent religious life. Strict morality relates to their conduct as social beings in relation to each other, in reference to right or wrong. If they are not taught honesty, truthfulness, and the other cardinal virtues, it matters not how much of a profession to religion they may make, like a building without a substantial foundation, liable to be swayed by every passing

¹Read by Elizabeth A. Rogers at the F. D. S. Union held at Crosswicks, N. J., Sixth month 5th, in answer to the question, "Will the teaching of strict morality among children lead to a higher and more religious life?"

wind, so they, not being prepared for the duties of life, will, when they are assailed by temptation, be led astray; as we so frequently have to witness, not only of those who are in the ordinary walks of life, but many who are prominent in the churches, and in the community at large. We are told that we must judge a tree by its fruit; therefore is it not evident to all, that strict morality has not been thoroughly inculcated in our homes, our schools, or in our churches, or we would not be reaping such a large harvest of immorality throughout this nation. According to the United States Census, crime has more than doubled every ten years for half a century past, and is still increasing. Statistics show that it is the rule, and not the exception, that the criminals of our day are young men. What are we doing to stop this fearful tide of corruption and criminality, to prevent the young from becoming criminals?—for as we sow, so shall we reap. If we as a people and as a nation are ever elevated to a higher standard of morality it will have to be done by educating the children so that they will comprehend the great importance of their practicing strict morality in every relation of life. We have the highest authority for giving the children that kind of an education; it is in accord with the commandments of God and the teachings of Jesus. Without such teaching we cannot expect the children to escape the consequences of wrongdoing.

THE LIBRARY.

THE *Cosmopolitan* Magazine of New York is regularly sent us, and is entitled by this courtesy to a notice. It is, however, an interesting and attractive periodical, very liberally illustrated, and furnished for a lower price than some others, its subscription being \$2.40 a year; single copies 25 cents. The contents are of the general character of the *Century* and *Harper's*; among the contributors to the issue for Eighth month are "Gail Hamilton," Frederick Douglass, (who presents reminiscences of his anti-slavery experience), Cardinal Gibbons, the Catholic prelate, W. W. Thomas, Jr., the Minister of the United States to Denmark, and others. Edward Everett Hale edits a department, "Social Problems," in each issue. We copied from this magazine, some weeks ago, part of a sketch of Benjamin Lundy, and this week we extract the major portion of an article on the Apache Indians now confined at Mount Vernon Barracks, Alabama, and whose removal is now proposed (as mentioned in last week's paper), to the mountains of North Carolina, near the Cherokees.

The address of the *Cosmopolitan* is No. 363 Fifth Avenue, New York City.

NEWS OF FRIENDS.

WE are apprised that our friends Darlington Hoopes, and Allen Fliteraft and wife, have minutes to attend Ohio Yearly Meeting of Friends, which will assemble at Salem, Eighth month 26th.

—At Birmingham Monthly Meeting, at West Chester, on the 27th inst., our friend Lydia H. Price obtained a minute to visit Fairfax Quarterly Meeting,

to be held at Goose Creek, Eighth month 19th, and to appoint and attend some other meetings.

TRUE WORSHIP.

RELIGION is not bound—

Blest thought! To every humble soul 'tis free;
Free as the winds that circle earth around,
Or billows on the sea.

It is the holy breath
Of heaven, bliss-laden to this world below,
That soothes each bitter pang, that conquers death,
And every mortal woe.

'Tis in the heart alone
That true devotion hath her chosen shrine.
All other altars' offerings are unknown
To Him who is divine.

How blest the cheerful thought!
When life grows dark and hollow friends betray,
And gilded fanes cast out from every spot,
The loveliest heart can pray.

Lift up thy earnest cry—
Though poor and friendless in this world abroad;
Though scorned thou mayst be by human eye,
Thou hast a friend in God.

In aisles of forest dim,
Where leafy arches whisper in the air,
Instinctively we bow in awe to Him
Who hath His temple there.

We feel His presence near
On trackless plain, on rugged mountain side;
And by the cooling fount His steps appear
In burning desert wide.

Each flower's dewy cup
To Him breathes incense in the wilds unknown,
And ocean's stormy surges thunder up
An anthem to His throne.

If God in mercy hears
The ravens cry, and bids the seasons roll,
Much more will he regard the contrite tear
Of an immortal soul.

—Horace B. Durant.

THE STORY OF THE FLOWER.

A SPOTLESS thing enough, they said,
The drift, perchance, from foreign lands,
Washed in atop of mighty tides
And lightly left along the sands.

Was it the treasure of some shell?
Some islander's forgotten bead?
A wave-worn polyp from the reef?
The gardener said, "It is a seed."

"Bury it," said he, "in the soil.
The earth will quicken here, as there,
With vital force;—so fair the seed,
The blossom must be wondrous fair!"

Ah, woe, to lose the ample breath
Of the salt wastes! To see no more
The sacrifice of morning burn
And blot the stars from shore to shore.

Ah, woe, to go into the dark!
Was it for this, the buoyant slide

Up the steep surge, the flight of foam,
The great propulsion of the tide?

To lose the half-developed dream
Of unknown powers, the bursting throes
Of destinies to be fulfilled,
And go into the dark—ah, woe!

But the mold closed above the seed
Relentlessly; and still as well
All life went on; the warm winds blew:
The strong suns shone; the soft rains fell.

Whether he slept, or waited there
Unconscious, after that wild pang,—
Who knows? There came to him at last
A sense as if some sweet voice sang:

As if, throughout the universe,
Each atom were obeying law
In rhythmic order. In his heart
He felt the same deep music draw.

And one sharp thrill of tingling warmth
Divided him; as if the earth
Throbbed through him all her stellar might
With the swift pulse of some new birth.

Up the long spirals of his stems
What currents coming from afar,
What blessedness of being glows,—
Was he a blossom or a star?

Wings like their own the great moths thought
His pinions rippling on the breeze,—
Did ever a king's banner stream
With such resplendent stains as these?

Over what honey and what dew
His fragrant gossamers uncurled!
Forgotten be that seed's poor day,
Free, and a part of this high world!

A world of winds and showers aslant,
With gauzy rainbows everywhere,
Cradled in silken sunshine, rocked
In skies full of delicious air!

Ah, happy world, where all things live
Creature of one great law, indeed;
Bound by strong roots, the splendid flower,—
Swept by great seas, the drifting seed!

—Harriet Prescott Spofford, in *St. Nicholas*.

"The world is ever as we take it,
And life, dear child, is what we make it."
Thus spake a grandame, bent with care,
To little Mabel, dashed and fair.
But Mabel took no heed that day
Of what she heard her grandma say.
Years after, when no more a child,
Her path in life seemed dark and wild,
Back to her ears the memory came
Of the quaint utterance of the dame—
'The world is ever as we take it,
And life be sure is what we make it.'"

—Selected.

THE faithful endeavor to do right and to bear quietly and with resignation what must be borne, is of itself a fruitful source of happiness and serenity; but a murmuring and discontented spirit may poison the richest blessings and turn them into bitter evils.

THE CAPTIVE APACHES.

[An article in the *Cosmopolitan* Magazine (for Eighth month) by Richard Wheatley, describes the Apache Indians, of the Chiricahua band, who were captured in in New Mexico, and brought East, being confined first at Fort Pickens, Florida, and then at Mount Vernon Barracks, Alabama. The article is entitled "The Caged Tigers of Santa Rosa." General Crook having said that these Apaches were "tigers of the human race,"—though General Crook, it should be understood, is one of the most sincere and manly advocates of fair dealing with the Indians.

The article opens by saying that there are over fifty in the band, 19 men, 23 women, the remainder children. Natchez, a chief, is the son of Cochise, (who visited Washington, "loyally submitted" to the Government, and whose memory is perpetuated by the name of a county in Arizona.) R. Wheatley says Natchez is "a very gentlemanly 'tiger,' dignified, reticent,—sullen at times," and not desirous of figuring as an object of curiosity. Mangas, another chief, is more genial; he is a son of Mangas Colorado, who was killed in 1863, "on the war-path." Geronimo is "sly and silent as a mountain lion." The article then proceeds as below.—Ems.]

"Tigers" though they be, there is something wondrously human about them. Naiche and Geronimo are better husbands, though much-married, than some hod-carriers, and know more of their children than do some of the sporting fraternity. Mangas does not quarrel with Huera, his divorced Mexican wife, confined within the same precincts. The love-light is as bright in the eyes of these copper-hued squaws as in those of senatorial dames when they rest on the little ones. The babies snuggle to the bosoms of their mothers in highly civilized style, but heathenishly decline to whimper when the beetle-cradle is suspended on a convenient nail, or reared up against a wall. Centuries of warfare have organized the habit of silence in infants.

What deeds of blood have these caged "tigers" committed? Just what might have been expected from their nature, education, and experience. Though "tigers," they are wholly human in respect of sense, sensibility, intellect, and will. Good and evil war in them as in the best and worst of Caucasians. They don't comprehend the ethical ideas of the latter, nor do the Caucasians understand those of the Chiricahuas. For example, responsibility is tribal, not personal, with the Indian. His rule is, "An eye for an eye, and a tooth for a tooth." If some miscreant shoots his relative, the Indian's tribe exacts penalty by shooting the first white person met with. This is aboriginal but not civilized justice, and out of it has sprung many a fierce Indian war.

These Apaches, submissive and docile as Scotch collies, belong to the *Mongolids*, and are of the Athabaskan family, which extends from the Arctic circle to New Mexico. Their language is agglutinative. By adding syllable after syllable they express the greatest number of ideas in the fewest possible words. Flexible their speech may be, but not mellifluous. It is not tigerishly explosive, but guttural, indistinct, hissing, beginning in the mouth and dying away

down the throat. Strange as it may seem, these feline creatures are religious, believe in communion with the Supreme Being, pray to him, and also to the sun, the light, the darkness, and the listening Earth-Mother. Some remnants of Roman Catholic teaching, and more of primitive tradition, linger in their minds. Superstitious, too, they are, and reverence the eagle, owl, all perfectly white birds, and also the bear, whose flesh they refuse to eat. But they don't like to talk on these subjects.

The Apache is an Ishmaelite. His breech-clout is enough of raiment when pursued or pursuing. Repeating rifles, sold by conscienceless traders, are of infinitely more importance. His small feet leave a trail that certainly betrays his tribal character. His experience has been one of struggle for existence. Inimical as the white man is, his worst foes have been of his own household. Portions of Texas, New Mexico, and Arizona in the United States, and of Sonora, Chihuahua, and Durango in Mexico, have been his range from remote antiquity. Split up into sub-tribes, known as Jicarillas, Mescaleros, Coyoteros, Tontos, Chiricahuas, etc., the Apaches are ever integrating or consolidating under new designations. Their savage blood on fire, to the Spaniards they were a fearful scourge. Scorning conquest and conversion, by the year 1752 they had destroyed a hundred and seventy-four mining towns, stations, and missions. What provocation they had received is not so distinctly stated. That it was not small may be inferred from the crimes of hidalgos elsewhere. Nor have American citizens been less guilty of oppressive cruelty. In 1840-1, J. H. Lyman, of Northampton, Mass., was trapping on the head waters of the Gila, and testifies that for an ounce of gold per scalp, offered by the Governor of Sonora, a villain named Johnson, at the head of a company of seven-teen trappers, fired a howitzer charged with bullets into a friendly mass of Apache men, women, and children, and that nearly all who were not struck down by the discharge were killed by rifle shots. The speedy sequence was the annihilation of another band of thirty trappers by the hands of the injured survivors and their friends. Then the country re-vegetated with howls over their ferocity, but not a word was said of the infernal incitement.

People rarely forgive those whom they have injured. Mexicans and Americans alike opposed the location of Apaches on the San Carlos reservation. On April 29, 1871, no less than five hundred and ten members of different bands were peaceably residing there in custody of United States soldiers, under the command of Lieutenant Royal E. Whitman, of the Third Cavalry. Readily obedient, and singularly quick of apprehension, they were happy and contented, and took every opportunity of showing it. Many of the ignorant and naked men were ashamed to lie or steal, and many of the untaught women held their virtue above all price. A large party of whites left Tucson on the 28th, surprised the Apache camp at daybreak next morning, shot sleeping women, ravished and slew other victims, beat out the brains of the wounded, hacked children in pieces, and stripped the bodies of the slain. Of a hundred and

twenty-five killed and missing, only eight were men. Who were the tigers then?

Dr. C. B. Brierley, Surgeon United States army, who knew the sufferers well, said: "I have never seen any Indians who showed the intelligence, honesty, and desire to learn manifested by these Indians." He believed that "they were honest in their intentions, and really desired peace."

The real trouble had been that Ahab coveted Naboth's vineyard. The whites were dissatisfied because Camps Apache, Grant, and Verde were set apart for Apache occupancy by executive order, November 9, 1871. Was it any wonder, knowing this, that the Indians came and went defiantly, in large numbers and without permission; that depredations were often renewed before the stock of government rations was exhausted; that they were seemingly incorrigible, and would only submit to order under the application of military force? In 1876 the Chiricahua reserve was broken up, and our "caged tigers" obliged to shift for themselves. The fiendish outrages of Juh, Victorio, and other chiefs followed. In 1881 some of the Apaches were captured and held for trial, others escaped into Mexico, and the greater part were removed to the San Carlos reservation. There the coal deposits, discovered on their lands, were coveted by the whites. The poor Apaches were in despair, and said, "We might as well die now as at any time," but were willing to part with the coal-fields for the privilege of raising and selling garden truck to the miners.

When General Crook assumed command of the military department of Arizona in 1882, the Indians generally were sullen, distrustful of all white men and on the verge of war. In March, 1883, the raid of Chatto from the Sierra Madre Mountains brought on open hostilities. Savage and brutal by instinct, the Chiricahuas, when excited by passion, were quite as willing to take the lives of human beings as of rabbits. Yet Crook prudently disintegrated and divided their bands, repressed their disorders, and reduced them to agriculture. Two years of complete respite ensued. The truce might have been perpetual had his methods been conscientiously observed. The native police, as a rule, were faithful in arresting the manufacture and sale of fiery *mescal*, or whiskey, and also of *tiswin*, a kind of fermented corn-beer, for the swilling of which Apaches prepare themselves by three days of abstinence. Intoxication by this wretched stuff seems to be a condition precedent to warlike or other important operations. Effective prohibition is distasteful to them as to dipsomaniac whites. Natchez and Chihuahua gave impressive illustration of this fact on May 15, 1885, by indulging in "an extensive *tiswin* drunk." Geronimo and Mangas, at the instigation of the latter, represented themselves as being equally culpable, in the hope of shielding the offenders from punishment. So did Fele and Loco—under pressure. Fearing the worst, and before General Crook's decision could reach the spot, Geronimo and Mangas reported that the officers were killed, that the scouts had deserted, and the Indians were leaving the reservation. All then took to flight, and traveled

one hundred and twenty miles without stopping for rest or food. Murder smoked along their track. Then and subsequently fully seventy-five lives were sacrificed by their hands. Civilian, soldier, and loyal Indian were smitten with grim impartiality. Sneaking as coyotes, they stole food and transportation from every valley. When surprised, they scattered like a covey of partridges, to gather again at places known only to themselves, often leaving no more trail than a flock of birds in passing through the air. Water was carried in the entrails of animals. None could tell where they would reappear—in front, or flank, or rear.

Pursuit was eager and restless. Chihuahua's band was struck on the 23d of June, and fifteen women and children, including his entire family, captured. Geronimo received the next blow, and on the 7th of August suffered the loss of all of his camp equipage and of fifteen women and children. Still he was unconquerable.

On the 15th of January, 1886, the wives of Geronimo and Natchez, together with their children, and also five other persons, surrendered. This example would probably have been imitated by the entire body of hostiles but for the assassination of Captain Crawford by irresponsible Mexicans. On March 26 Chihuahua and his band gave themselves up, and on the 27th the remainder submitted without conditions, after Crook had threatened to follow and kill the last one, if it took fifty years. Though tired of the constant hounding of the campaign, they were in superb physical condition, armed to the teeth, abundantly supplied with ammunition, suspicious, independent, and self-reliant. General Crook promised life and farming homes on the White Mountain reservation during future good behavior, and the War and Interior Departments approved his pledge. All augured well. But the inevitable whiskey-fiend made his appearance on the scene in the shape of a scoundrel named Tribolet, who sold all the liquor he could to the hostiles, and then boasted of his large gains. Others, like him, scared them by predicting what would happen when General Crook had them wholly in his power. Geronimo and Natchez stampeded in alarm on the night of the 29th, accompanied by eighteen bucks, fourteen women, and two young boys. Two wives and three children of Geronimo, and the family of Natchez, remained behind, and were afterwards sent to Fort Marion, Florida. These were the magnets whose attractive force eventually drew the abscondent warriors out of their lairs, and lured them into the cage at Fort Pekens. Mangas, with three companions, had separated from them in the previous August, and had taken no part in their atrocities.

Negotiations with the renegades recommenced in August. In September, Lieutenant Gatewood, Interpreter Wratten, and the two scouts, Martinez and Kieta, entered their camp and stated that the Great Father wished them to surrender. Still doubtful, but hospitable to Wratten, they marched thence in line parallel to that of the soldiers as far as Fort Bowie, where the two chiefs affirm that General Nelson A. Miles promised that all the past should be wiped out, no harm befall them, reunion with families

follow, and that all the Chiricahuas should be collected at St. Augustine. Gerouimbo first, Natchez afterwards, accepted the terms, but were sent to Santa Rosa. There Mangas was also deposited, after breaking his arm by leaning out of the car window as the moving train neared Pensacola.

To Fort Marion, Chatto—who owned a house, fourteen acres of land, and several horses and mules—and his fourteen paid Indian scouts, together with nearly all the Chiricahuas, and some other Indians from the San Carlos reservation, were sent. Comparative innocence was subjected to the same detention as flagrant guilt. In October, Colonel Langdon reported four hundred and sixty-nine prisoners confined in Fort Marion, whose walls enclose a square measuring one hundred and eighty feet on each side. Thence thirty-two boys and twelve girls were forwarded to the Indian school at Carlisle in November. The remainder were housed in tents on the ramparts—orderly, but necessarily idle, and liable to sickness and death.

The remonstrances of the Indian Rights Association, however, availed in 1887 to the reunion of the Pickens captives—seventeen of them—with their families on Santa Rosa. The Fort Marion captives were also transferred to more desirable quarters, and are now comfortably lodged at Mount Vernon, Alabama, under the care of the second United States artillery.

What shall be done with the caged "tigers" and their kindred Chiricahuas? Their children at Carlisle evince uncommon aptitude for learning. All long for education, and some have made commendable progress. Yanosha is an artist in the rough. Geronimo has vanquished the intractable wheelbarrow which first defied his awkward attempts to trundle it. As willing and efficient laborers, his compatriots are promising; as herdsmen and farmers on inalienable lands allotted in severalty, they have demonstrated ability to subsist, and even to amass wealth; as traders, they are of the keenest and most acquisitive. Nothing can entice Geronimo from the prospect of a good bargain for his wives' productions, except the assurance of more money through a different channel.

Speaking of the squaws, their costumes are startling contrasts of color; their belts are studded with silver bullion, and their cheeks liberally besmeared with red paint. They are not beauties, but who is to decide this? The long, wavy, black hair receives the most uniquely artistic manipulation. When too populous, the whole head is encased in solid wet clay. This in due course is dried, cracked, and beaten out in dusty fragments, together with all dead occupants. They are desperate gamblers, and will risk all on the turn of a card or the hazard of a die. Difference between them and the *monde Parisienne* is not world-wide, after all. The elements of noblest humanity are in women and in men. Quick to apprehend, obedient to authority, and faithful to their friends, they are worthy of higher destiny than that of exhibition as caged "tigers."

THE VALUE OF SIMPLICITY.

In reading the biography of Emerson, or, indeed, of almost all the men of literary eminence who were associated with him, one is impressed by the simplicity of their habits of life. In many instances there was a kind of Spartan sincerity, not only in thought and speech, but in dress, manner, and equipage. These men were so conscious of the superiority of the soul that they were ready to accept the simplest fare and the most unpretentious surroundings as the price of their freedom from the anxieties of money-making and money-spending on any larger scale. But this simplicity of habit and equipage was something more than a compromise with fate, the surrender of a lesser for the sake of a greater good; it was temperamental; it was the expression of true refinement and genuine culture. Simplicity is the note of the most highly organized and cultivated, no less than of the most sincere, natures. One finds it always in homes where there has been a large inheritance of the best things, or a constant seeking for them. That simplicity is characteristic of the highest elegance is a secret which many people learn slowly, and only after many and humiliating mistakes.

With sudden and large increase of wealth there must come an educational period; a time, in other words, in which people are taught by experience how to use their money wisely and with good taste. Unfortunately, there is no school in which the art of adapting one's habits to changes in one's income is taught, each prosperous family must be self-taught. . . . Money is only one element in the problem of elegant living; knowledge of the world, social training, ease of habit, are quite as important. If these immaterial qualities are absent, the material quality inevitably becomes gross and offensive. It is the failure to understand the law of correspondence between the individual and his surroundings which has produced so much vulgarity of a certain kind in this country—the vulgarity of pretension and display. But the pessimists who regard this as the final state of a great number of Americans are oblivious of the native quickness and impressionability of the American nature; it has a fine educational aptitude, and it will learn eventually the law now so often disregarded. There is an immense deal of vulgarity in this country, and it is both unwise and unpatriotic to shut our eyes to the fact; but it is the vulgarity of ignorance, not of nature, and it will pass away with the other defects of our abounding and turbulent youth. Simplicity is not only the highest expression of elegance, but it is the only fit and natural habit of life for us; in so far as we depart from it we are unfaithful to our national ideal.—*Exchange*.

THE little dwarfed flower that springs into life in the crevice of some rock, shut in from sun and rain, grows struggling toward the light, and as it withers gives forth a perfect seed, which the winds bear to more favorable soil. So it is that the influence of a word may not be felt by the nature on which it falls, but its spell may be borne to a more yielding heart and there blossom in gladness.

TWILIGHT OR SUNSET?

It is a question if the Stoics learned to view old age, with all its limitations, in the spirit of their school. It is the period of life when pleasures depend on how far life has been lived as a preparation for it. It is not easy for the young man, whose blood leaps through his veins in ardent anticipation of what life has in store for him, to remember that the enjoyment of the treasures of life's storehouse can be exhausted, and leave hours when even the memory of them adds bitterness to present inactivity. If we stay in youth to question about old age, we give it for ourselves greater heat, greater interest, than we see in the old age that surrounds our own youth. That wrinkles, stiff joints, rheumatic muscles, inflexible minds, will be the inheritance of our old age we refuse to believe. Yet every boat-race is affecting those same muscles which must go with us through life; every opinion that refuses to measure its strength in accordance with the laws of reason and of men is affecting a mind that will be ours in old age. We are constantly talking of watching a child's development, because of its importance in shaping maturity. Do we realize the influence of childhood's environment on the far distant old age? As we study life, do we not see that there is no end to growth for the men and women who are alive to its issues? That some die before death, die to the questions that affect the mass of men, die physically because of powers abused, is but a warning. Life's opportunities should never end: death should be the open door into a freer atmosphere. To the wise men and women old age is not a mere chrysalis state; it holds possibilities as great as youth, though of far different order. To live so that physically we are not bankrupt is worthy of the thought and effort of the wisest, and that old age can be the supercharged storehouse of spiritual wealth, each year lived in the service of God and truth, proves to our innermost consciousness that such years add treasures.

How much the health of the body has to do with the health of the soul we are only beginning to learn. How much every exhausted muscle, every worn-out nerve, has to do with the spirit that dwells within is one of the facts that have influenced modern theological thought. Recognizing this, should we not give to the body the care, the training, that will leave the spirit unmarred?

Dr. Robson Roose, in a recent number of the *Fortnightly Review*, has a most valuable paper on "The Art of Prolonging Life," in which he says: "The whole term of life may be divided into the three main periods of growth and development, of maturity, and of decline. No hard and fast lines can be drawn between these two latter phases of existence; the one should pass gradually into the other until the whole picture is changed." The word picture is happily used, for it suggests beauty, and each phase of life has its own beauty, if lived naturally. The old phrase, "Whom the gods love die young" might be added to: Whom they wish to honor live to old age. Dr. Roose says that occupation is an absolute necessity to the prolonging life; that frequently mental power grows stronger as the bodily power de-

creases, and for this reason he urges that mental powers be exercised during the period of maturity. Persons in middle life, he says, should seek and find pleasure in definite ends. He points out the fact that life at the present time offers many more allurements to the mind than in the past. Science has become an open gateway to the most elementary seeker; the difficulty in literature is to keep to one line where there are so many pathways offering both pleasure and training. Hobbies, he tells us, are a great possession, keeping the mind fresh when the muscles have lost power.

The secret of a working old age, after all, lies in the power to adjust life to the changing conditions. Dr. Roose says that when a man finds that severe mental effort is necessary to accomplish that which was previously accomplished with ease, he must yield to the power that controls his faculties, and adjust effort to that power. The same rule should govern physical effort. Exercise is a necessity, inactivity a cause of physical degeneration; but the exercise must never be exhausting, as that which depletes physical power robs the mind. No law or rule can be made by which the machinery of life can be perfectly balanced. Each man must learn from experience how much exercise he is capable of, and then wisely refuse to exceed that limit. Dr. Roose says: "Above all things, sudden and rapid exertion should be scrupulously avoided by persons of advanced age." Many times a man who might have lived to accomplish his share of life's work for years longer has perished because of sudden exercise that used all reserved force. Old age cannot store up a fund of strength that can be used at once. Food has an important place in the preservation of mental and physical powers in old age. The man who has violated the laws of digestion during a period of thirty years or more cannot hope to redeem the error by a sudden revolution in his habits, any more than the spendthrift can accumulate a fortune by economy when he has lost his earning power.

Sleep is an important factor in the preservation of powers, and for many old people an afternoon nap is a tonic. Careful bathing, Dr. Roose insists, is another preservative, and should be a part of the daily routine; warm water is better than cold, and brisk rubbing very essential.

Then the secret of a healthy old age is a wisely lived life that began in the cradle. Habits of temperance in food, in exercise, in occupation; the cultivation of a philosophy or creed that distinguishes between essentials and non-essentials, and gives to every event, every incident, its proper place; the wisdom to keep a perspective in life, not bringing every possibility into the immediate foreground—this is the secret of an old age of usefulness. Happy the men and women who can say with Rawdon Brown, who, in old age, commenting on the death of a friend, wrote: "It seems to me to bode my own speedy departure hence, and always with gratitude to the Almighty for having been allowed to pass so great a portion of my life here." He found his work and his place and life was, from beginning to end, one great opportunity.—*The Christian Union*.

EXPEDITION TO OBSERVE THE ECLIPSE.

ARRANGEMENTS are making for an American expedition to the west coast of Africa to observe the total eclipse of the sun which will be visible there on the 22d of December. Congress, at the last session, appropriated \$5,000 to defray the expenses. The preliminary details were arranged last week at the Navy Department, at a conference ordered by Secretary Tracy and attended by Commodore John G. Walker, Chief of the Bureau of Navigation; Capt. R. L. Phythian, Superintendent of the Naval Observatory; Prof. Asaph Hall, of the Naval Observatory; and Prof. Simon Newcomb, Superintendent of the Nautical Almanac. It was decided by the conference to divide the expedition into two parties, one under the direction of Prof. Todd of Amherst College, and the other under Mr. Joseph Russell of Washington City, who is an expert in solar photography, and will be intrusted with the duty of obtaining photographs of the eclipse in its various phases. The expedition will leave the United States about October 1, in a Government vessel, probably the new steam cruiser *Baltimore*, and will proceed to St. Paul de Loanda, the capital of the Portuguese possessions on the west coast of Africa. In the meantime this Government will have obtained permission of the Portuguese government for them to land. They will leave the cruiser at St. Paul de Loanda and proceed inland until they get beyond the malarial belt on the coast. There is no danger from the natives of that section, but the expedition will be accompanied by a guard of marines to protect the instruments from being meddled with or stolen. The two parties will separate at or near Maxima, on the Quanza River, and will take up separate stations near that point. They expect to reach the ground some time in advance of the date for the eclipse, so as to have all three instruments erected and properly adjusted by that date. The line of the centre of totality will enter the coast at a point about one hundred miles south of St. Paul de Loanda and pass directly over the points where stations will be placed. It has not yet been definitely determined what vessel will carry the expedition out to the coast, but if nothing intervenes to delay the fitting out of the *Baltimore* she will be selected, as she is fitted as a flagship and has plenty of cabin and berth room to carry the members of the expedition, which will probably be quite numerous, as the head of each party will select his own subordinates.

—*The American*.

WOMEN PHYSICIANS APPRECIATED.

WHEREVER the claim of women for equal rights or privileges has been conceded, the result has shown the wisdom of the concession. The last instance was in the meeting of the Massachusetts Medical Society. It had not been easy for the Society to accept women as members, any more than it had been that they should be recognized as doctors. On both these points there is now only one opinion, and the press generously states it. Take this example from the *Boston Transcript*:

"It was an imposing sight—the great hall of the Mechanics' Building just fairly filled with 'regular'

doctors at dinner yesterday—considering what an amount of learning, brains, and character are guaranteed to the 'aggregation' by even the average qualities of the good doctor. But the most striking thing about it was the appearance of the lady members of the Massachusetts Medical Society dining among the gentlemen, and one lady sitting among the long row of eminent guests at the table of honor stretched along the front of the platform. Another noticeable thing was that the reception of this distinguished woman was as hearty and general as that of any of the distinguished men, if not indeed more marked than that given any of the gentlemen. And the best of it was that this proceeded, not from any gallantry or sentiment of any kind, but was simply felt to be a due recognition of merit and achievement. The doctors of our day pride themselves on lucidity and candor, and do not hesitate to say that women can be and are most excellent physicians."

Women who have worked and waited long for equal rights have only to be "not weary in well-doing," and success is as sure as that equal human rights are just.—*Lucy Stone, in The Woman's Journal*.

PHILADELPHIA JOURNALS AND PRIZE-FIGHTS.

It is greatly to the shame of the daily press of such a city as Philadelphia, that not one of its better class of papers closed its columns to the disgusting details of the recent brutal prize-fight. It is greatly to the credit of such papers in New York city as the *Evening Post*, and the *Mail and Express*, and the *Journal of Commerce*, that their pages were closed to these details. It matters little what was said on the subject in the editorial columns of those papers which gave large space to the details of the brutal encounter; for the real estimate of the whole affair was shown by the managers of every paper in the space awarded or denied to its more sickening and corrupting items. There has been a readiness to sneer at the Governors of certain States who made loud proclamations in advance against the brutal prize-fight, and then permitted those interested in its progress to go on unhindered with their preparations for its compassing; but there has been less comment on the equally inconsistent course of those editors who have written in denunciation of the fight in one column, and then have arranged to give from four to ten columns of their paper to the very details of the affair which the brutal combatants and their brutal admirers desired to have made public.—*Sunday School Times*.

NEWS AND OTHER GLEANINGS.

—An express train is now run from Aberdeen to London, a distance of nearly 600 miles, in twelve hours and forty-five minutes.

—The *Times* of India says that "a former Secretary of the American Legation at Pekin is now traveling through Thibet in native dress with a caravan of Thibetans. He is on capital terms with his escort, and, as he can speak the language fluently and thoroughly understands the customs of the people, he feels confident of penetrating to Lhasa."

—Among the bodies of scientific specialists which the

Paris Exposition has enabled to come together for conference, is the congress for the preparation of a photographic chart of the heavens. The particular aim of the congress will be to determine upon the methods to be used in celestial photography, and also upon the best means of publishing and preserving these records.—*Exchange.*

—During the month of June, the Children's Aid Society, 127 South 12th street, Philadelphia, found sixty-two places for mothers at service, each mother taking one child with her. There were also twenty-three children placed in private families to board; four were placed in private families on trial and two were adopted. Applications should be addressed to Mrs. Anna T. Wilson, General Agent, 127 South 12th street.

—One of a party who has just returned from a visit to Alaska says: "I know of no trip in the world that has more charms than the one to Alaska." Coming to Sitka the party had to accustom themselves to the Arctic habits of the sun. It is daylight there about 2 a. m., and sunset at 10 p. m. "We stayed one day in Sitka, and found it to be an interesting place. It is an old Russian town of 1,500 inhabitants, and there is still standing there an old Greek church. The people look like the Japanese, and are about as large. They manufacture totem poles, which are what we would call a 'family tree,' because they tell the family history. We went directly from this picturesque town to the land of the midnight sun, Chiletan Bay, the furthest navigable point, where the famous glacier is. There is no night out there, and therefore no heavens. It was a beautiful sail among the icebergs with their changing colors. It was a curious fact, too, that when we were surrounded by floating ice the thermometer registered only fifty degrees. Alaska will, I think, gain in popularity with the traveling public when its attractions are known. There is not enough arable land there, I think, to invite immigration. The part of Alaska which we visited is 1,500 miles from the seal fishing grounds."

—On the 24th of last month a large party of working men and women, representatives of twenty-seven States sailed from New York in the *City of Rome* to study the industries of the principal cities of Europe. They will visit Liverpool, Manchester, Birmingham, and London before going to Paris. Here fully two weeks will be devoted to the Exposition and the many sights of the French capital. After leaving Paris the expedition will visit other cities on the continent. Recrossing the channel, the party will go to Sheffield, where the cutlery, plated ware, and type factories will be inspected. After spending September 1st in Edinburgh, with a day added for the investigation of the city's workshops, the party will depart for the great shipbuilding yards of the Clyde, at Glasgow, the chief centre of the kind in the world since the *Comet*, the first boat propelled by steam in Europe, left its yards almost eighty years ago. The expedition will sail for New York on September 4th, having traveled almost 9,000 miles, and will arrive in this port on September 12th.—*N. Y. Tribune.*

CURRENT EVENTS.

The rainfall during Seventh month in the region of Philadelphia has been much above the average. In many parts of the country much damage has been done by rain and storm. In Chicago, on the night of the 27th, a terrific storm of rain and wind raged for two hours. The loss to property was large, and among other injuries an unfinished building fell on a frame cottage alongside, killing eight persons. The rainfall is reputed to have exceeded four inches in two and a quarter hours.

CROPS on the Delaware Peninsula are reported much

injured by storms and rainfall on the 29th inst. One report says that the peach yield in Sussex county will be reduced one-half.

In Cincinnati on First-day last (28th inst.) a large number of saloon-keepers defied the law requiring them to close up on that day, and were arrested and bound over for trial. The law officers appear in earnest, and it appears probable that the saloon-keepers will be compelled to obey the law.

NOTICES.

* * Quarterly Meetings in Eighth month will occur as follows:

6. Philadelphia, Valley, Pa.
7. Farmington, E. Hamburg, N. Y.
8. Salem, O.
9. Miami, Waynesville, O.
8. Abington, Gwynedd, Pa.
9. Stamford, Ghent, N. Y.
15. Shrewsbury and Rahway, Plainfield, N. J.
17. Short Creek near Mt. Pleasant, O.
19. Fairfax, Goose Creek, Va.
21. Stillwater, Plainfield, O.
26. Pelham H. Y. M., Yarmouth, Ont.
26. Ohio Y. M., Salem, O.
- Warrington Q. M., Menallen, Pa.
27. Burlington, Mt. Holly, N. J.
28. Southern, Easton, Md.
- Easton and Saratoga, Granville, N. Y.
29. Bucks, Falls, Pa.
30. Nottingham, E. Nottingham, Md.

* * Circular Meetings in Eighth month occur as follows:

4. Newtown Square, Pa., 3 p. m.
18. Roaring Creek, Pa., 2 p. m.
- East Branch, N. J., 3 p. m.
- Gunpowder, Md., Old House, 10 a. m.
25. Constantia, N. Y.

* * Acknowledgments.—The Friends' Book Association acknowledges receipt of the following additional contributions to the Children's Country Week Association:

B. L. W.,	\$10.00
Sarah F. Corlies,	10.00
Previously acknowledged,	67.00
Amount,	\$87.00

JOHN COMLY, Supt.

* * Philadelphia Quarterly Meeting will be held on Third-day, Eighth month 6th, 1889, at 10 o'clock a. m., at Valley meeting-house. Special arrangements have been made to convey Friends to Maple Station on Chester Valley Railroad, three-quarters of a mile from the meeting-house.

Members of the Select meeting can take the 1.10 p. m. train from 13th and Callowhill streets, on Second-day, for Port Kennedy Station, where Friends will meet them. Tickets good to those desiring to return to the city on Second-day afternoon, who will take the 7.31 train from Port Kennedy.

Trains will leave both the Reading Depot at 13th and Callowhill streets and Wayne Junction at 7.45 o'clock a. m. on Third day.

Tickets good going on Second- and Third-days from 13th and Callowhill streets, also on Third-day morning from Wayne Junction, and returning on Third-day to Ninth and Green streets, also to Germantown by changing cars at 19th Street Station, will be issued at 60 cents the trip.

The return train will leave Maple Station at 1.38 p. m. Ask for Quarterly Meeting tickets.

ROYAL

BAKING
POWDER
 Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

TEXAS LOAN AGENCY,
 CORSICANA, TEXAS.

Established 1872. Incorporated 1884.

Capital Stock, \$300,000. Surplus, \$67,297.32.
 (September 1, 1888).

- 7 PER CENT. MORTGAGE DEBENTURE BONDS.
 Atlantic Trust Co., Trustees, New York.
 7 PER CENT. GUARANTEED FARM MORTGAGES

All secured by first liens on improved farms of the famous Black Waxy Lands of Northeastern Texas, where the mild climate and fertile soil permit the growing of cotton as well as all the cereals of the Western States, making it one of the most desirable loaning fields of the West.

The TEXAS LOAN AGENCY guarantees the Prompt Payment of the Principal and Interest of all its securities, payable at the National Park Bank, New York.

The business of the Company has always been conducted by able, experienced, and prudent men, as is proven by the fact that the capital stock is now selling for \$175—par value \$100. A careful investigation will satisfy the most conservative that these are desirable investments for private means, or the funds of schools, colleges, or banking institutions.

CONARD & FORSYTHE, General Agents,
 412 DREXEL BUILDING, PHILA'DA.

Clement A. Woodnutt,
UNDERTAKER AND EMBALMER,

1226 NORTH FIFTEENTH STREET, PHILA.
 CARRIAGES TO HIRE.

The use of the INTELLIGENCER AND JOURNAL as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement. When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.

HAMILTON LOAN & TRUST
 COMPANY, OF NEW YORK CITY.

EDWARD FORSYTHE, MANAGER.

BE YE THEREFORE PERFECT.

O THOU who only perfect art,
My pattern without flaw,
Impress thine image on my soul,
Teach me thy perfect law.

The smallest pool reflects the sun
As clearly as the sea:
Oh, let thy light illumine my mind,
And it shall mirror thee!

I cannot keep a perfect course,
Though straight my bark I steer;
For wind and wave, strive how I may,
Will oft-times make it veer.

My will and judgment often err,
And make me blush for shame,
When humbly I would serve mankind,
And labor in thy name.

But, though in all things else I fail,
Sweet Spirit from above,
Brood o'er my heart, help me to grow
Perfect in faith and love.

EVIDENCES OF THE UNIVERSAL IN- DWELLING OF THE SPIRIT OF CHRIST.

"God made of one blood all men to dwell on the face of the earth." "He is no respecter of persons; in every nation, kindred, tongue, and people he that feareth him and worketh righteousness shall be accepted of him." His "grace that bringeth salvation hath appeared to all, teaching that denying ungodliness and worldliness, we must live soberly, righteously, and godly in this present world." This grace teaches, and it teaches every one, no exclusion, no heathen cut off. It is the Christ within "for know ye not that He is in you, except ye be reborn." He is God's gift for man's salvation to the very ends of the earth. "He teaches his people himself."

A poor daughter of Africa who had escaped from bondage in the South and made her way to New York, astonished those into whose company she was cast by the depth of her spiritual understanding. They closely questioned her. She must have read her Bible. "She could not;"—must have attended meetings and heard it expounded; "no, not at all." From whence, then, had she derived her heavenly knowledge? Her simple response, "It 'peers the Spirit teaches," might form a text for the better learned to dwell upon and profit by.

Conversing with one who had for years resided among the Indians, upon the immediate Divine revelation of the Father in the Spirit of the Son to the hearts of the children of men, she responded she was a firm believer in it; had seen too much of it among the poor wanderers of the forest to have a shadow of a doubt. There was a little boy in their school who was taken sick, and seemed to be declining. She had promised his mother in case of illness she would notify her. The distance to the mission, within about two miles of which the mother resided, was fourteen miles, but there was a river they could not cross, so had to go round, making a travel of forty miles to get there.

The messenger despatched arrived in the night. The matron at the mission had him retire to rest. At break of day she was surprised by the arrival of the poor mother with her hair disordered, in mourning style, hanging down over her face and shoulders.

She said "her boy was going to die; she knew it, for the Great Spirit had told her so in the night." In tender love he had made it known to her and sent her there to be prepared for an early journey.

The prudent matron had her eat her breakfast ere telling her "she apprehended it was so, as a messenger had come for her." When she arrived at the school the child was much worse. His mother said she would not interfere with their treatment, but she wanted to sit quietly by him 'till he was released from the body. This she did, and just ere the close she desired to have him in her arms. She held him until the vital spark fled, when she broke forth in a heart-rending wail of woe. "I never," said her friend, "pitied anyone so much in my life."

She gave me another interesting detail of a circumstance that occurred at the lava beds.

A white man, not a Christian, took pity upon some of the cruelly abused natives and offered to send them to a place of safety. He procured a large wagon and they loaded in. Ere they left one of the chiefs said, "The Great Spirit has told me I must not go in this way," so he alighted. Another chief with the same remark followed him.

All left the place and very soon every one in the wagon was shot down and killed, while the two chiefs who had heeded the inspeaking voice were unharmed. They escaped through the woods by some paths pointed out to them.

What are these if not instances of revelation to the daughter of Ethiopia and the sons of the Red man? while volumes are filled recording instances of it to the white.

Past, present, future, are all one with him, "with whom there is no variableness or shadow of turning," who willeth not the death of him that dieth, but would have all return, repent, and live. He never brought a human being into this world with out providing a way for its salvation. He is justice, and could not lose and would not.

He is mouth and wisdom, tongue and utterance to those he appoints, appoints, and sends forth as his ambassadors. He gives them words for utterance.

Daniel Wheeler when in Philadelphia was asked, "How it was he could go among the savages in the South Sea Islands, where the other missionaries did not dare to, and had cautioned him not to, and hold meetings and preach the gospel fearlessly and be treated with so much kindness and love?" He replied, "They spoke of that which they knew not themselves." He proclaimed that which he knew and his hands had handled of the Word of Life—salvation by the washing of regeneration and renewing of the Holy Spirit, that Grace which bringeth salvation and hath appeared to all, teaching the denial of all ungodliness and worldly lust.

The writer of this heard him say, "I have asked the poor islanders in the South Seas if before they had seen the face of a missionary they had not felt convicted for doing wrong and they have answered as Adam did of old, 'we did, and were afraid.'"

That fear was raised in their hearts by the Holy Spirit—the Teacher "the eye shall see, the ear hear, and that cannot be removed into a corner"—the Christ within. If all would heed the voice and turn from doing, saying, or thinking that which caused the fear, and follow the true Guide, they would be led out of all evil into all good and they would know it to be the hope of glory.

"The fear of the Lord, that is wisdom," the fear of doing wrong, and "to depart from evil is understanding." "If thou doest well shalt thou not be accepted, and if thou doest not well sin lieth at the door."

This bruiser of the serpent's head appears in very early life. I know a little boy who told his mother he went to a jar of cakes intending to take one, but a voice said to him, "Don't do it." To her inquiry if he did he replied emphatically, "No, the voice said 'don't.'"

This inspeaking word which was in the beginning with God and was God, by whom all things were made and without whom nothing was, is Life the Light of men, the true Light that enlighteneth every man that cometh into the world, no omission of heathen, no election in favor of professed Christians, but every man.

Conscience is not a sufficient guide, for it can be warped, "seared as with a red-hot iron." It requireth an enlightened conscience, one illuminated by the Light of Christ to walk by. Paul was not wronging his, for he acted with all good conscience when he was persecuting Christ and putting to death his brethren. A *Light from Heaven* shone round about him and he was instructed, scales fell from his eyes and he saw what the Lord required of him.

How derogatory to the character of our Heavenly Father to believe and advocate the belief that he

ever created and brought into existence any one without providing for him a way of entrance into the realms of everlasting rest. Would he give Light enough for condemnation and not enough for salvation? Would he consign to eternal punishment for not believing that they had never heard or had any way of hearing?

Cannot you who are natural parents convey to your children what you desire? can you not make them comprehend clearly your wishes or commands, and will you deem your power to be greater than his who made the universe, and doubt his ability to communicate his behests to the workmanship of his own hand?

What make ye your God to be? Mine is omnipotent, omnipresent, omnific, omniscient. He is goodness, mercy, love, light, even that Light that enlighteneth every man that cometh into the world, and will give him power if he will accept it, and cooperate with it to become a child of God, to "work out his soul's salvation with fear and trembling before him."

When our blessed Redeemer was in the prepared body in which he came to do the Father's will, as it is recorded; "Lo! I come, in the volume of the Book it is written of me to do thy will, Oh God! and a body hast thou prepared me," he said he came to bear witness to the truth. In that testimony he declared "flesh and blood profits nothing, the words that I speak unto you they are Spirit and they are Life." God is a spirit and they who worship him must worship him in Spirit and in Truth; so it is the inward spiritual worshipers, not the outward ceremonial formalists that are acceptable to him.

If people would cease from their own contrivances, give up their own self-will, and look to the Lord for guidance in his lights they would see light and have fellowship one with another; his manifestations to them would be clear and glorious.

"Cease from man whose breath is in his nostrils, for what is he to be accounted of." Turn from his planning and willing not only in the suggestions of others but from them in thine own heart, "cease Oh! man from man within thyself." Self—thy Agag—the great King of thy Amalekitish nature must be hewed in pieces before the Lord, and the best of the sheep and oxen, which in disobedience thou hast kept under a pretense of sacrifice just as if anything of thy own would be acceptable to him when he had condemned it to utter destruction, be slain. Know that "obedience is better than sacrifice, and hearkening than the fat of rams." Listen to the instruction of the Most High. He will show thee the way of salvation for thyself and those denominated *poor heathen* who, "not having an outward law are a law unto themselves. God teaches his people himself and he cannot be removed into a corner." "By grace ye are saved (and that appears to every one) through faith that works by love, to the purifying of the heart and that not of yourselves, it is the gift of God."

There need not be so much of man's continuing to consign our fellow probationers to eternal punishment. The gospel, the *power of God unto salvation is preached in every creature*. All are under the tender

care of him "who never errs in vision, or stumbles in judgments, who seeth not as man seeth, whose mercies endure forever, are renewed every morning, and are over all his works." *Let the poor heathen rest there.*

"Where much is given much is required," so you high professors look to it. "Not every one that saith unto me Lord! Lord! shall enter the kingdom, but he that doeth the will of my Father in Heaven."

Winona, Ohio.

E. S. LEEDS.

Editorial Correspondence.

AMONG FRIENDS IN WESTBURY AND PURCHASE QUARTERLY MEETINGS.

It remains with the scribe and the printer to settle the question why a name nowhere to be found among the towns on the line of the New York and New Jersey railroad should be given in last week's paper, as the stopping place for a visit that afforded your correspondent so much enjoyment. By counting the strokes (which not unfrequently has to be resorted to), Narmet is easily translated Nannet, which it should have been. The reader will excuse this interpellation, and follow us through the remainder of the visit among Friends of Long Island. The First-day School at Jericho, as has been stated, convenes an hour before the meeting for worship, and it is worthy a visit from those who are starting new schools. The plan of exercises differs somewhat from others with which we are familiar, but is excellent. After the usual quiet at the opening, the Scripture lesson for the day is read alternately, verse by verse, the superintendent reading the first, and all the school in concert following with the second, and so on to the end of the lesson. This holds the attention of the school, and impresses the subject of study more forcibly upon the minds of the scholars. Then they separate into classes, the adults remaining in the seats occupied. We did not go among the classes, as the time was brief, but had a short exercise with the adult class. At the re-assembling of the school, individual watchwords were recited, every one down to the smallest child in the school giving a text of scripture or an appropriate selection from one of our best writers. The interest manifested in this exercise was most encouraging.

The meeting held at 11 o'clock followed the adjournment of the school with little interval between. The body of the house, which is large, was well filled, and the meeting soon settled into a reverent silence.

John Onderdonk of New York sat in the seat occupied by that eminent apostle of our simple faith, Elias Hicks, in the early part of the present century. The testimony handed forth by him on this occasion was earnest and helpful, citing to faithfulness in little things as the first duty laid upon us. These are near at hand, and if well performed will prepare the way for more enlarged service. In the communication that followed, the same line of thought was presented, and all were exhorted to maintain in the integrity of its first unfolding the vital doctrine so fearlessly proclaimed from these galleries in the

earlier time that loving obedience to the revelation of the Divine will bring peace and salvation to the soul, making us one with the Father. In the afternoon a meeting of the New York branch of the Philanthropic Union was held at Westbury. The day continued dull and threatening, with sudden showers, which deterred many from attending both in the morning and the afternoon. Yet there was a fair representation of Friends interested in the work of the Union. Two papers were read. The first, on Intemperance, was prepared for the occasion by Joseph Bogardus, and the other, on Tobacco, by John L. Griffen. Both subjects were ably presented, and listened to with much interest; as all were on one side, there was little discussion, though some portions of the paper on Tobacco, were objected to by a few, who thought they were too personal. The general sentiment prevailed that both were evils which cannot be too strongly testified against.

These old meeting-houses of Jericho and Westbury are landmarks in the history of the Society of Friends in this country, every beam and board and panel is instinct with memories of the struggle between the letter and the Spirit—dogma and revelation,—and we who are living at a time when a clearer, calmer understanding of that controversy can be reached, may well agree to thank God and take courage. Since, through the faithfulness of the few, the many have been preserved, and the testimony to the freedom of the gospel and its power to save the earnest seeker after the truth is, as of old, reverently believed in and promulgated. On Second-day morning we return to New York by the same route that brought us to the pleasant homes of these friends among whom the days of our sojourn have been so delightfully, and we trust profitably spent. The rains of the past few days have left the meadows and low places pools of water, and prevented farm operations. The clouds are still threatening and we are glad to reach our destination without serious interruption from the elements.

On Third-day morning we take the cars for Rye, in West Chester county, and the nearest point to Purchase meeting. The day is close and sultry, and the distance 24 miles. We pass through the closely built portions of the city by a tunnel bridged over at the street crossings and open between. It is of massive masonry with two tracks; the constant flashes of light succeeded by darkness, is not pleasant to the eyes, and after perhaps three or more miles we emerge into the open country, to find ourselves steaming along among the suburban villages that overlap each other, in a continuous line of human habitations of every conceivable description including the squatter among the rocks in the yet ungraded parts of the outlying districts.

At Woodland Cemetery we pass the city limits and are among green meadows, groves, and orchards. Mt. Vernon, New Rochelle, Larchmont, are some of the towns at which the train stops, all pretty and offering quiet homes with nice country surroundings to the families of those engaged in business in the city, but the distance seems long for the more closely confined who have to make a full day at the desk or

counter. The road is only a short distance from the sound, we feel the cool breezes, without which the air would be sultry. Mamaroneck, at which we stop, is a place of importance. Some very wealthy men have their homes here, which gives it a more aristocratic reputation, well borne out by the fine liveries waiting at the station. Not much of the place lies in view of the railroad. We are met at the station and find a cordial welcome in the pleasant home of our friends.

The select meeting of Purchase Quarter is held in the afternoon. We attend and are surprised to see how large it is. All the representatives answered to their names except one. Frances J. Newlin was present with a minute from the Monthly Meeting of Friends held at Green Street, Philadelphia, setting her at liberty to visit in gospel love the Quarterly Meetings of Purchase and Duaneburg, and other meetings as way opens. The welcome given her was extended also to those present from other meetings without minutes. In this meeting we realized more fully than is often experienced, the value that such occasions may be to those composing them, who stand as the watchmen on the walls of our Zion, and who need the helpful word which if free expression is not withheld, will often strengthen and encourage the fainting ones, carrying out the injunction of the Apostle "Bear ye one another's burdens and so fulfill the law of Christ." We felt it a great privilege to share with the friends the good words of encouragement that were handed forth.

On Fourth-day, at 11 o'clock, the Quarterly Meeting assembled for worship; the rains that had been almost continuous with occasional thunder and lightning, poured down in increasing violence, yet the meeting was large, and the testimonies from first to last were heard with evident interest in which all present seemed to have a share. The vital principles which lie at the foundation of the Christian faith, the love with which our Heavenly Father welcomes the returning wanderer, the joy and peace there is to be found in the path of obedience, were all presented with earnest exhortations to faithfulness to every manifestation of duty.

The business meeting followed, and the order was much the same as that observed at Westbury, the same queries were answered, with much the same record. An interesting report of Chappaqua Institute was read, showing that the school is in a flourishing condition. Loving words of encouragement were spoken, and Friends were exhorted to be faithful in the maintenance of the discipline which in the several particulars queried after was intended to be a hedge and protection to the best life.

When the meeting closed, the rain and thunder were too violent for those who lived at a distance to venture out, but after a time there was a let-up and all started homeward, most of them to return again in the evening to attend a Temperance Conference, at which the papers presented at the Westbury Meeting were read and considered. It was a satisfactory meeting.

Fifth-day morning was the Youths' meeting. A continuance of the rain made no perceptible difference in the number present, though the roads were

dreadfully washed. The usual silence seemed on this occasion to fall upon the assembly as the Father's benediction and was as the bread testified of by the great Teacher which cometh from God and satisfyeth the hunger of the soul. There was much openness in the Gospel message. The young were cited to the life of the Blessed Jesus, beginning with his childhood and following through the various circumstances of his wonderful career. They were entreated to take him for their example and pattern, and through obedience to the divine voice find acceptance. All the testimonies were upon the same line of thought, and were listened to with the deepest interest. It was a favored season, and many could say "it was good to be there." After meeting we rode to Port Chester to spend a little time with our friends near that place.

The weather continued too damp and cloudy for outdoor enjoyment and we were obliged to forego the pleasure we had anticipated in going through the ravine near by along which are located busy industries that find an outlet for their products in the great marts of the world.

Back to New York in the afternoon of the next day, and to Philadelphia the day following, and we are at home having spent nearly two weeks among the Friends of Westbury and Purchase Quarterly Meetings, and enjoyed the hospitality of their homes and the privileges of their religious assemblies, to all of which we were welcomed with a cordiality very precious to our hearts.

Eighth month 4th, 1889.

L. J. R.

YEARLY MEETING ADVICES.

SOME advices given forth from time to time by the Yearly Meetings of Friends for New Jersey and Pennsylvania, held alternately at Burlington and Philadelphia.

1726. Dear Friends: We may understand that Eli had experience of Divine Knowledge, and a true sense of the Lord's call to Samuel. He also advised well, yet for want of restraining his sons, destruction came upon his house and it was said "The Glory is departed from Israel; therefore in the fear of the Lord do we admonish all parents and guardians to restrain your children and not indulge or maintain them in the vain modes or customs of the times, nor to suffer them to associate with evil company, and if they will not otherwise be reformed, then the overseers, or other Friends should deal with them. But if that does not prevail, the offenders are to have notice to be at the next succeeding Monthly Meeting, in order to be further dealt withal, according to our Discipline, as Friends in the Wisdom of Truth shall see proper, and in like manner, parents or such as shall have the tuition of children, ought to be cautioned, and dealt with if they neglect their duty and willingly indulge the youth in extravagancies or superfluities. But it is hoped that these repeated cautions will so strengthen their hands, and excite their authority, that they be more watchful, and the youth more observant than to require such dealings.

And it is further advised that all parents and

masters of families do use their utmost care and endeavors to keep their youth duly to meetings, and to prevent the indecent stragling abroad of their children and servants, especially on the First Days, and other times allowed them to attend meetings. And to keep them out of all tumultuous crowds, or gatherings of rude people, whether got together by beat of drum or otherwise.

1762. Apprehending it will be one means of discouraging mixed or clandestine marriages in future, and also conducive to the relief of the Society: It is agreed that the children of such who have married contrary to the Rules of our Discipline, and either of them remain out of membership with us, should not be esteemed strictly as members of our Religious Society until application made by themselves or their parent or parents and they be received as such; nevertheless as some tender regard appears due to them, it is desired that Friends have a watchful care over them to advise and caution in the Wisdom of Truth, when they see occasion, and should declare they are not of us, in case any scandalous conduct should bring a blemish on the Society, and justly called for censure.

1781. The exercise and weighty concern which has rested on this meeting for several years past for the religious education of our youth, hath been at this time lovingly revived, showing it to be a subject claiming the unremitting labor and care of Monthly and Quarterly meetings and all faithful Friends in their respective stations.

1694. Dear Friends: Whatsoever exercises we may meet withal, for the sake of our constant Testimony to the Truth in all manner of conversation, and to the end that we may not faint in our minds, let us consider Him who endured such contradiction of sinners against himself, who took up the cross, and despised the shame, and is now sat down at the right hand of the throne of God.

1706. Advised, that none professing Truth may keep company with women in an unseasonable and unseemly manner, which has not a tendency towards virtue, but rather as a snare of the enemy taking occasion thereby to beget hurtful lusts in the heart, which greatly war against the soul, and have brought many to ruin before they have been aware. And that none accustom themselves to vain and idle company, sipping and tipping of Drains and Strong Drink, in Inns or elsewhere: For though such as use that evil practice may not suddenly be so far prevailed upon, as to be Drunk to the greatest degree, yet they often inflame themselves thereby, so as to become like ground fitted for the seeds of the greatest transgressions, and some that have had the example of virtuous parents, have from such beginnings in corners, arrived to a shameless excess, to the ruin of themselves, their wives and families, and scandal of that Holy Name by which they have been called.

1719. Advised, That such be dealt with, who are given to excess of drinking, swearing, cursing, lying, unlawful or unseemly keeping company with women, or any other scandalous practices.

Where any professing Truth, are guilty of any

gross or notorious crimes, or such other disorderly and indecent practices as shall give or occasion public scandal, such after dealing with by the overseers, or other Friends, as above advised, and directed, if they are brought to a sense thereof, either by such dealing, or by compunction, or true light in themselves, (which is more commendable) ought to appear as soon as possible at the monthly meeting whereunto he or she belongs, and to the end that the scandal may be removed and our Holy Profession cleared, as much as in them lies, there to acknowledge the offence, and condemn the same in writing, under his or her hands to the satisfaction of the said meeting, and let such acknowledgement and condemnation be published by the said meeting, in such a manner as that it may probably reach as far and become as public as the offence hath been. But if the offence committed be only against the church, and not of public scandal, in that case acknowledgement and condemnation by the party under hand, and the same entered in the Monthly Meeting Book only, is sufficient, without further publication.

* From The Friend, (Philadelphia.)

EARLY MEETING-HOUSES OF FRIENDS.

(Conclusion from last week.)

FAIR HILL MEETING.

The first mention we find made of this meeting is by a minute of Philadelphia Monthly Meeting, in the Twelfth month, 1702, viz.:

"Some Friends living distant from the meeting, between this and Germantown and Frankfort, proposed the building of a meeting-house near the Half-Way Run. The meeting after considering the matter, thought fit to leave it to the neighborhood of Friends thereabouts, if they think themselves able to go on, without the assistance of Friends in the town, who are at present building a meeting-house, and cannot help them, unless they defer it to another year."

"A piece of ground containing four acres was purchased in 1703 by Nicholas Waln and John Goodson, for the sum of £8, current money, of Pennsylvania, by the direction and appointment of the members, or persons belonging to the Monthly Meeting of the people of God called Quakers, in Philadelphia, and by them held in trust 'For the benefit, use, and behoof of the poor people of the said Quakers belonging to ye said meeting forever, and for a place to erect a meeting-house and school-house on for ye use and service of ye said people, and for a place to bury their dead,' on which was afterward erected Fair Hill Meeting-house."

This land was bounded on the northwest by another tract of land of 20 acres, which came into the possession of Friends by the will of George Fox. "For a meeting-house and a school-house, and a burying place, and for a playground for the children," etc.

There was considerable difficulty in getting the land located, and the title does not appear to have been fully confirmed to the Monthly Meeting of Philadelphia until the year 1707, seventy-seven years after the death of George Fox.

The meeting-house was erected probably in 1706, as a minute of Second month, 1707, mentions it as being completed; also that a bill was presented "for fencing a little burying ground at Fair Hill, which was allowed and ordered to be paid; David Lloyd and Anthony Morris are desired to enquire into the conveyance of the said house and ground at Fair Hill."

Tenth month, 1759. "The meeting being informed that some convenience is wanting at Fair Hill Meeting-house the better to accommodate the holding of their meeting and school there, Isaac Zane (*et al.*) are desired to view the same, and after conferring with Friends of that meeting to get what is necessary done."

First month, 1761. "The Committee reported a bill for repairs, and building a partition in Fair Hill Meeting-house, which was approved."

This house does not appear to have been used as a meeting-house much after the beginning of the present century; for in the allotment of property to the different monthly meetings in 1817, there was assigned "to Green Street Monthly Meeting the four acres of land at Fair Hill, on which was the old graveyard, and all the buildings including the brick kitchen attached to the stone farm house, which was erected for Fair Hill Meeting-house."

This venerable structure, in which many of the ancient worthies delivered their gospel messages, was obliged to give way to the march of improvement, and was removed in 1888 to allow of the opening of Cambria street.

TWELFTH STREET MEETING (*Western District.*)

We can scarcely close the imperfect sketches of the early places of worship of Friends in Philadelphia without briefly alluding to the Twelfth Street meeting, which, although not one of the primitive meetings, holds a prominent place at the present day. A brief abstract of the title to the lot of ground upon which the house now stands may be of interest. It is as follows:

23rd of March, 1681. "William Penn, Esq., Proprietary and Governor, sold to George Rogers and Francis Rogers, of Ireland, each 2500 acres of land, to be laid out in the Province of Pennsylvania."

In 1683 George and Francis Rogers sold their respective interests to George Collett, who, by his last will and testament, bequeathed all his lands in Pennsylvania to his two grandsons, Nathaniel and Joseph Penock.

In 1787 a Deed of partition was executed to Joseph Penock, for "Lot of ground in Philadelphia, laid out and surveyed in the right of Francis and George Rogers, in the city of Philadelphia."

Sixth month 15th, 1794. "Deed of Joseph Penock to George and Isaac Penock for Lot on High and Chestnut Streets."

Fifth month 27th, 1809. "Deed of Isaac Penock and Wife to Samuel Bettle, Joseph Scattergood (*et al.*), Trustees, for 'all that Lot on the West side of Twelfth Street between High and Chestnut,'" &c.

In the Second month, 1809, a committee of Philadelphia Monthly Meeting was appointed "to take into consideration the present local situation and

general circumstances of Friends in this City," who recommended a conference of the three monthly meetings on the subject.

At the next monthly meeting the following minute was made: "The Philadelphia Monthly Meeting having for some time past held their Meetings for Worship and Discipline in the House on Mulberry Street, and the Market Street meeting-house being thereby of little use, we have agreed that the Lot on which it stands be laid off in suitable building lots, and disposed of nearly agreeable to the following terms, viz.: The present buildings on the ground to be reserved to Friends, and taken down as early as may be practicable.

"The proceeds of the sale might be properly vested as follows: One-third in the purchase of Ground so situated as may be most likely to be useful to Friends of the Meeting in each District. Twelve thousand dollars, or more if necessary, may, with the materials of the present Market Street Meeting House, or the proceeds of them, be appropriated to the erection of a Meeting House on some of the ground proposed, to be in the Middle District, so far Westward as to accommodate the families of Friends who may be resident in that Quarter," &c.

In the same year a lot of ground was purchased of Isaac Penock and wife on the west side of Twelfth Street, between High and Chestnut Streets; containing in front on said Twelfth Street, 112 feet, and in length or depth 132 feet.

In the Third month, 1811, the attention of Friends was directed towards the establishment of another meeting, etc., and a committee appointed to consider the matter, who reported in the Fifth month following, viz.: "It is desired that Friends of the three monthly meetings will promote the building of a Meeting-house on the lot on Twelfth Street, between Chestnut and High Streets, agreeable to our present conclusions."

Tenth month 29th, 1812. "A Meeting House having been erected agreeably to the conclusion of this Meeting in the Sixth Month of last year, on Twelfth Street, and nearly finished." A committee was appointed to consider the subject of opening a new meeting there, who reported viz.: "They agree to propose that meetings for worship be held there on the morning and afternoon of the First days of the week: to begin on the first First-day in the Fourth Month next," which was approved, and endorsed by a minute of the Quarterly Meeting.

Fourth month 29th. "The meeting in the Meeting House on Twelfth Street was opened and held at the time agreed upon."

The first monthly meeting of Friends of Philadelphia for the Western District was held there the 16th of Third month, 1814.

SCRIPTURE LESSON No. 31.

EIGHTH MONTH 18TH, 1889.

SAUL REJECTED OF THE LORD.

GOLDEN TEXT:—"Because thou hast rejected the word of the Lord, he hath also rejected thee from being king."—
1. Samuel 15: 23.

READ I. Samuel 15: 10-23.

In chapter 13 we have an account of the first violation of the Divine will by Saul. A considerable time must have elapsed between that occasion and the one which forms the subject of our present lesson.

The Amalekites had been hostile to the people of Israel during their journey from Egypt. They were a nomadic tribe occupying the peninsula of Sinai, and had continued to be the enemies of the Israelites after they had settled in Canaan. Our lesson today is a tale of bloodshed and cruelty committed by Israel, as was believed by the prophet Samuel, at the command of Jehovah. As has been before said of the time of which we are now studying, "Might made right," and the Heavenly Father was regarded as showing favor to one part of the human family, while he condemned another portion to utter destruction. These thoughts of God are fast giving way under the spread of the blessed gospel of Jesus, and the spirit of love and compassion that it inculcates.

It repenteth me, etc. This is often declared of God in the Old Testament. We must accept it as showing how important it was then, as it is still, for those whom our Heavenly Father designs to use as his instruments to be faithful in carrying out that which he gives them to do. It was the want of this faithfulness that brought Saul under condemnation, and gave occasion for Samuel to use the expression.

It grieved Samuel. They whom our Heavenly Father sends forth as messengers of his word to the people are grieved and very sorrowful when those to whom they go are careless and indifferent, and show an unwillingness to hear and accept the message.

Saul came to Carmel. This is a famous mountain of Palestine, forming the extremity of a range of hills which extend northwest from the plain of Esdraelon, and terminate in a steep promontory overlooking the Mediterranean Sea.

When thou wast little in thine own sight. It was only after Saul, proud of his royal position, and relying upon his own judgment and resources, set aside the counsel of the Lord, that he lost the Divine favor; and this shows us that no matter what place we may hold in the eyes of men we must "keep little in our own sight." We see, too, that though we may have been made new men and women by the Divine power, and prophesy in his name, yet all may be taken from us, and the last state be worse than the first, if we do not mind the light which has been bestowed upon us.

Hath the Lord as great delight, etc. The custom of offering burned sacrifices was a remnant of old pagan ceremonies, originating among tribes scarcely civilized and preserved in the ceremonial of the Israelites. To this hideous usage they attached great importance, but Samuel had already been led a long

way beyond this darkness when he declared to Saul, "Behold, to obey is better than sacrifice, and to hearken than the fat of rams."

Faithfulness is success, and yet we often find it difficult to face public opinion and live up to our convictions. It has been said that the fools of one generation are the wise men of the next, and history has proved that no reformer has escaped the sneers of his own time and his own people. We, plodding, every-day travelers along the road of life, who are not reformers, nor rulers, nor conspicuous persons in any way, find it difficult always to walk the path laid out for us, because of the scoffs and sneers of a few little people around us. We are turned aside from our way, and thereby fail of the sure reward that faithfulness, even in little things, will surely bring to us. This faithfulness seems such a little thing to talk about, and a man may think he is ready to yield it to his Father, until some hour comes when, like Saul, he stops, the warning voice rises in his ear, but he turns from it,—he makes idle promises to it of future atonement,—and he follows, with the people's voice, in the forbidden way. Let us earnestly strive after a willing heart to do our Father's commands, knowing of a surety that in that way only can we find peace.

NOTES ON THE LESSON.

We do well to consider the great significance of the lesson before us. We are shown how easy it is for one who is called from comparative obscurity to fill some important place in the nation, to become exalted above measure and turn his back upon those to whom he owes his advancement. History has been constantly repeating itself since that time, and it is well to note how Saul tries to flatter Samuel by the greeting he extends him, possibly hoping to be spared the rebuke which his own sense of the position in which he had placed himself by disobeying the instruction he had received might provoke. We see him coming to meet the prophet with the bold assertion on his lips "I have performed the commandment of the Lord. The people have spared the best of the sheep and the oxen to sacrifice to the Lord thy God in Gilgal," claiming no part or lot for himself or his subjects in the God of Israel to whom the sacrifice was to be offered. We are loathe to believe this is the same Saul who, when told that the Lord had chosen him to be the ruler of the nation, queried why one from the smallest tribe and the least in his father's house should have been selected; his modest demeanor, and close adherence to the instructions of Samuel, quietly returning to the care of flocks, until the time of his public presentation as the king who had been anointed to rule over Israel, gave hopeful promise of fitness for the trust.

We see, too, how necessary it is faithfully to observe and perform the duties and obligations connected with the office or position we are called to assume, and the need for us to be obedient to the law or rule of action that is required. Our Heavenly Father gives to every intelligent being a sense of what he requires, that in the life he lives he may by obedi-

ence thereto know of being accepted. And the great truth that stands for all time and for all conditions of men, is made the one foundation of Divine acceptance, "To obey is better than to sacrifice and to hearken than the fat of rams." If this could be held up as the higher truth concerning the relation of man to his Maker in an age when every favor from him was sought through outward sacrifice, and the acknowledgment of every blessing was through the same channel, how much should we value the lesson, coming down as it does from high antiquity as the best thought of prophet and teacher in the ancient time, and how worthless do all the rituals and set performances that are still observed appear when considered in the light of the revelation God is constantly making of himself to the human family, and of the worship which is acceptable in his sight. Let us heed the instruction; it can never cease to be man's highest duty.

PHILADELPHIA, EIGHTH MONTH 10, 1859.

THE "COUNTRY WEEK" WORK.

THE Children's Country Week Association, of this city, has sent its report of the year's work closing on the 8th of Fourth month last. Its total revenue was \$14,611.07, derived chiefly from contributions,—\$12,743 86. The expenditures were chiefly payments for boarding, \$8,705.18, for transportation, \$3,218.42, and for free excursions, \$1,841.15. The report says that the total number of persons sent out in the summer of 1858 was 4,512. By far the greater part of these were sent to the country, the number being 3,693 children, and 232 adults, and their average stay being 7½ days, while 51 adults and 41 children were sent to the sea-side, for an average stay of eight days. "On invitation," 411 children and 66 adults were sent out for average stays of twelve days. The large majority of the children have been entertained as usual at thirty or forty farm-houses within a radius of thirty-five miles around Philadelphia, the charge for board being from two to three dollars a week. The "day excursion" work was quite extensive, no less than 20,000 persons having had the advantage of this "outing" for a day. In some instances children's picnic parties, mission school bands, etc., were furnished with transportation to the park or the surrounding country; but tickets were mainly given to poor mothers, and furnished them an outing with their babies on the boats of the Delaware or Schuyl-

kill, at the Zoo, or amongst the greenery of the Dairy, or the playgrounds of Fairmount.

The "invitation" list for 1858 was larger than ever before. Through friends in Vineland and Ham-monton, N. J., a number were again invited there, while to Lewisburg, Pa., 145 went, and to Muncy, 94. The experience of those interested in these parties was so satisfactory that committees of coöperation have been formed both at Lewisburg and Muncy to make the work there permanent in its character.

The report says that the children "are often very troublesome, as children must be, but they are also appreciative of the kindness they receive, and the good deeds of those who entertain them are rehearsed over and over in the city homes." Often, the names of members of families in the country "are honored household words in families where they are only known through the little member who went out in a country week party for a brief summer holiday."

Of the practical good done by this excellent charity there can be no question. To children, whose physical strength builds up quickly, and whose recovery from disease is more quick than that of adults, the advantage to health is very great. A week in the country may help a child as no medicine could.

We have received the printed "Extracts" from the minutes of New York Yearly Meeting held Fifth month last. The record is quite full, including all the reports of committees, the epistles received from other yearly meetings, etc., and makes a pamphlet of 94 pages. The proceedings of the annual meeting of the First-day School Association are appended, making 43 pages.

Very careful statistics of membership are prepared and presented regularly to New York Yearly Meeting. The report of this year shows the whole number of members of the yearly meeting is 2,903. Of these the majority are in Westbury Quarterly Meeting, (which includes New York City and Brooklyn), the number being 1,609. The other five quarterly meetings are all small, varying in numbers from 141 (Duanesburgh), to 442, (Purchase). The changes of the year made a small loss, but this is wholly on account of deaths. The gains were: births 11, request 20, certificate 19, total 50; the losses were: deaths 56, resignations 6, removals 21, total 83. There are 24 First-day schools, with an attendance of 622.

At the Monthly Meeting held at Green street, Philadelphia, Seventh month 18th, Frances J. Newlin, a minister, was granted a minute to visit in gospel love the Quarterly Meetings of Purchase and Duanesburgh, in New York, and some other meetings, as way opens. The service will probably require about six weeks for its accomplishment.

DEATHS.

BORTON.—While on a visit at Toledo, on Sixth month 16th, 1889, Nathan Borton, Sen., from near Fayette, Ohio, in the 79th year of his age; a member of Battle Creek Monthly Meeting of Friends, and a minister for over 40 years.

He was born in Burlington county, N. J., in 1810, removing to Fulton county, Ohio, in the year 1835. He was possessed of many sterling qualities, mild and pleasant in disposition. In his convictions of right and wrong he was open and firm, and in the society and community in which he lived his loss will be greatly felt. His departure was sudden, yet peaceful, and he leaves a wife and five children to mourn the loss of a loving husband and father.

CHAMBERS.—Seventh month 29th, 1889, Mary Brosius, Jr., daughter of S. Barnard and Mary B. Chambers, members of the Monthly Meeting of Friends of Philadelphia aged 6 months, 24 days. Interment, Kennett Square, Pa.

CLEMENT.—At Sea Girt, N. J., on Sixth-day, Seventh month 26th, 1889, Hannah C., widow of the late William W. Clement.

After months of patient suffering our loved one has entered into the rest that remaineth for those that love Him. Her life has been one of unselfish devotion to others. In times of sickness or distress she was always ready to respond to the call, often overtaxing her strength. A birth-right member of our Society, she has for many years been connected with the Camden Monthly Meeting, at which she was a regular attendant so far as her failing strength would permit. Always quiet and retiring, such was the strength and firmness of her character that she influenced for good all with whom she came in contact.

The funeral took place on Third-day, the 30th. Interment at Springfield Meeting.

"And I heard a voice from Heaven saying unto me, Write, Blessed are the dead which die in the Lord from henceforth! Yea, saith the Spirit, that they may rest from their labors; and their works do follow them."—Rev. 11: 13.

H. R. S.

FUSSELL.—At her residence in Spiceland, Henry county, Ind., on the morning of Seventh month 19th, 1889, Susu, eldest daughter of Dr. Bartholomew and Lydia M. Fussell, and granddaughter of Bartholomew Fussell, Sen., a well-known minister of the Society of Friends.

The life of our departed sister was made rich by what she gave away. Amongst the wounded, the sick, the neglected, the poor, and the fatherless, her beneficent activities absorbed her life.

During our late Civil War she had charge of several hospitals in the South and West, becoming the Clara Barton of that region. Later, she took charge of soldier's orphans, caring for them as a mother, educating and establishing them in life, and finally adopting one as her own. She then turned her attention to the children of the Alms House of Henry county, Ind. These children were placed under her charge, and in good private homes she found places for as many as she could. The remainder she educated in the best manner possible, retaining them until declining health obliged her to resign them to a successor. In blessing others, she was herself blessed with sufficient means to carry out every object she undertook, and she also called to her aid the services of one of her nearest and dearest of kindred. A volume could not record her good deeds nor adequately portray the benign influence she exerted. For heroic devotion, and for nobility and elevation of character she was a rare example, and it will long be treasured as one of the most precious possessions of those who knew her consecrated life.

L.

HARVEY.—At Wilmington, Del., Sixth month 27th 1889, Hannah G., widow of the late Evans Harvey, in the 73d year of her age; an elder of Wilmington Monthly Meeting.

With sincere sympathy for all in affliction, and an ear ever open to the call of the needy, her right hand knew not what her left hand did. In the service of elder her clear sense of right gave value to her counsel.

The tender and loving wife of a devoted husband, their home, in his lifetime, was the centre of a generous hospitality, where by her genial manner and the loving kindness of her nature, she endeared herself to all, and became the sought out and beloved companion of young and old. Faithfully aiding her husband in the endeavor to train their children in the path of right, truly do they now "rise up and call her blessed."

Thus doing her work while it was day, she has left us for "her reward."

Life's blessings all enjoyed,

Life's labors done.

A. M. H.

HOOPES.—In West Philadelphia, Seventh month 28th, 1889, Ella Mershon, wife of William Passmore Hoopes.

LAFETRA.—In Baltimore, Md., Eighth month 1st, 1889, Jane B., daughter of the late Jacob Lafetra, of that city, in her 74th year; a member of the Monthly Meeting of Friends held at Green street, Philadelphia.

NEWBOLD.—In Langhorne, Pa., Seventh month 28th, 1889, Sarah, widow of Elisha Newbold, in her 90th year.

REID.—In Philadelphia, Seventh month 1st, 1889, Mary Rebecca, youngest daughter of Philip and Edith A. Reid, and grandchild of William P. Reid, of Reading Pa., aged 20 months.

VAIL.—On the 25th of Seventh month, 1889, Catharine S. Vail, widow of the late Stephen Vail, of Plainfield, N. J., in the 84th year of her age.

Truly it may be recorded of our beloved friend that her life-work was that of a humble Christian. Purity, gentleness, practical goodness, fullness of love and charity, with tender regard for the feelings of others, characterized her movements in every position which she occupied. In early life by yielding to the admonitions of conscience she was preserved in the pathway of innocence and peace and in maturer years she became a useful member in our Religious Society—an earnest advocate for the pure principles and testimonies which we profess to uphold. Under the guidance of the Father's hand and leaning upon him for strength, she was qualified to discharge the services devolving upon her as Overseer and Elder of the meeting to which she belonged. She was meek and modest yet fearless and faithful in the expression of her truest convictions. A tender sympathizer in the sorrows and a ready participator in the joys of her friends.

Gifted with discriminating powers of intellect, her judgment and views were often appealed to—these being based upon the experiences and serious thoughts of an active and chequered life, gave to her counsels a weight of influence, and even the reproofs of instruction administered in a kind and loving spirit could not offend. Patient under the proving seasons of affliction her faith and trust in the goodness and mercy of our Heavenly Father were strong and unwavering—and as the physical powers gradually declined she sweetly rested in the arms of Divine love, a reliance which had been her staff and stay through a long and eventful life, enabling her to meet the passing trials and bereavements allotted her with quiet resignation wherein she could adopt the language, "It is of the Lord, let him do as seemeth to him good."

The sustaining power of the great central thought of

Deity, "Thou art mine, and I am thine," was closely with her as she passed through the valley where rested the shadow of Death, and she could look upon the close of all sublimity things with an eye of faith that a mansion was prepared for her in the kingdom of our Father, where sorrow and sighing shall be no more. Thus in perfect peace her purified spirit passed to the enjoyment of eternal blessedness. C.

Eighth month 1st.

WILLETS.—At *Bayside, Long Island*, Third month 24th, 1889, Robert Willets, after a painful illness, which he bore with patience and resignation to the Divine will unto the end, in the 64th year of his age.

He was a life-long member of Flushing Monthly Meeting, holding a number of important trusts, for which he was very competent, and his loss is deeply felt by its members. When his health permitted he was generally in attendance.

Being possessed of a very large estate, he made very judicious bequests, not only to public institutions, but also to his relatives and friends.

His funeral was largely attended and suitable testimonies were given on the solemn occasion. E. H. B.

SOUTHERN FRIENDS.

In reading the interesting account of Baltimore Yearly Meeting, 1844, etc., it has occurred to me that it might be of some interest to give a list of meetings as they formerly existed in Virginia and North Carolina Yearly Meetings, both of which went with the other body of Friends, except some few like Asa M. Janney and Henry Clarke's family, who transferred their rights to more distant meetings. Henry, in 1833, and Mary Maule Clarke, in 1829, with their young son, in this way became members of the Monthly Meeting of Friends of Philadelphia, then held on Cherry Street, of which Mary's sister, Elizabeth Maule, was a member, and acknowledged as a minister. The latter afterwards married Thomas Peart, and later, Joseph Davis, a minister of the Valley Meeting. Another sister resided in Philadelphia, being the daughter-in-law of Samuel Bettle, Sr., and a member of that branch of Friends. In 1851, having removed to Baltimore, the Clarke family were certificated thither.

Among some pamphlets and papers formerly belonging to D. F. Wharton, I find a list of Friends' meetings printed in 1805, by which it appears that Virginia Yearly Meeting was held alternately at Wain Oak and Blackwater. It was composed of Cedar Creek and Blackwater Quarterly Meetings. The former had three monthly meetings, viz.: Henrico, held at White Oak Swamp, composed of Curles, Wain Oak, and Richmond Meetings; Cedar Creek, of Cedar Creek, Caroline, and Genets; South River, of South River, Seneca Hills Creek, Goose Creek, (but not the present one of that name), Upper Goose Creek, and Banister.

The two Monthly Meetings of Blackwater Quarter were Blackwater, which embraced Blackwater, Barleigh, Stanton, Gravelly Run, and Sea Conck; and Western Branch, which included Western Branch, Summerton, Black Creek, Bennet's Creek, Vick's, and Johnson's.

The Yearly Meeting for North and South Carolina and Georgia at that time alternated at Symon's Creek and New Garden, and had five quarterly meetings, as follows:

1. *Eastern Q. M.* Composed of five monthly meetings: Piney Woods, (including Piney Woods and Beach Spring); Sutton's Creek, (including Sutton's Creek, Old Neck, and Wells); Symond's Creek, (including Little River, Symond's Creek, Newbegun Creek, and Narrows); and Rich Square, and Jack Swamp Monthly Meetings.

2. *Contentney Q. M.* Composed of two monthly meetings: Contentney, (including Contentney, Tar River, Neuse, Bear Creek, Turner's Swamp, and Nauthuty); and Core Sound, (including Core Sound, Clubfoot Creek, Upper Trent, and Lower Trent.)

3. *Western Q. M.* Composed of four monthly meetings: Cane Creek, (including Cane Creek, Holly Spring, Rocky River, Tyson's, and Pee-Dee); Spring, (including Dixon's, Spring, and Eno); Centre, (including Centre, Marlborough, and Providence); and Back Creek, (including Back Creek and Euwary.)

4. *New Garden Q. M.* Composed of six monthly meetings: New Garden, (including New Garden, Reedy Fork or Hopewell, Upper Reedy Fork or Dover, and Bull Run or Sherborn); Deep River, (including Deep River, Muddy Creek, and Blue Creek); Deep Creek, (including Deep Creek and Hunting Creek); Springfield, (including Springfield, Piney Woods, and Burke's Fork); Westfield or Tom's Creek, (including Westfield, Chestnut Creek, and Reedy Island); New Hope, (including New Hope or Noll-chucky, Lost Creek, and Limestone.)

5. *Bush River Q. M.* This had three monthly meetings,—the first two in South Carolina, the third in Georgia, as follows: Bush River, (including Bush River, Mud Lick, Henderson's or Allwood, Rocky Spring, Raybourn's Creek, Charleston, and Ediston); Cane Creek, (including Cane Creek and Padgett's Creek); and Wrightsborough, (including Wrightsborough, and two meetings held by permission at William Farmer's and Williams Creek.)

At several of the places named above, in North Carolina, including Piney Woods, Rich Square, Neuse, Nauthuty, Cane Creek, Rocky River, Spring, Providence, Centre, New Garden, Dover, New Hope, and Lost Creek, meetings are still held, I believe, by the "Orthodox" body of Friends. But the pressure of Slavery broke up most of the old meetings named in the list, and the members moved West to the newly opened Northwestern Territory—Ohio, Indiana, and Illinois,—by scores and hundreds. T.

THE view which seems to be the sole fitting one for our estimate of Christ is that which regards him as the regenerator of humanity. *His coming was to the life of humanity what regeneration is to the life of the individual.* This is not a conclusion doubtfully deduced from questionable biographies, but a broad, plain inference from the universal history of our race.—*Frances Power Cobbe.*

HE that loses by getting, had better lose than get.—*Wm Penn.*

For Friends' Intelligencer and Journal.

DECORATIVE ART OF THE EARLY CHRISTIANS.

ONE of the most striking examples in all history of the influence of a great epoch is seen in the difference between the Roman art, which immediately preceded, and was contemporary with the Christian Era, and the Decorative Art which followed it.

I speak of the Decorative Art only; for at first there was neither architectural nor pictorial art, except the small chapels in the catacombs, with their decorations.

Did one doubt the Scriptures or the interesting and instructive writings of the early Christians, whose fragmentary writings are still preserved, these indelible records have left for themselves a history as convincing as language.

There was but little true Art in the debased Roman period referred to. Rome, with her wealth and power, had conquered Greece the home of Art. She had brought to her own cities the splendid genius of the Greek artists, but in a few generations her art reflected the sensuous and utterly corrupt life of the Empire. Very far from the truth and harmony of the Greeks seems much of the Roman Art at this time, overloaded with ornament, indelicate in conception, and faulty in construction. Its rich and magnificent appearance, the lavish display of precious marbles and gems, with platings and filagree of gold and silver affords but little real pleasure to those whose eyes are open to see the spirituality of Art, for the soul of the true artist is wanting.

It is but a step from this barbaric splendor to the narrow, stifling catacombs of the early Christians, that were at first only confused and narrow, blinding shafts and passages in the black tufa rock.

Here it was that in fear and trembling were brought the mangled remains of their beloved martyred dead, and deposited with prayerful hope and trust in the narrow openings which soon honey-combed all the walls.

As time went on and the city of the dead increased in size, wider passages were made, and before some tomb, whose silent occupant had been more heroic, or whose death had been more conspicuously cruel than others, a more open space made a chapel, where they could unite in prayer for strength to sustain them in their suffering lives. A modest inscription adorned the flat stone closing the opening, and sometimes a painting. Simple, and often insignificant as these were, they bear the clear stamp of a regenerated age.

Says a distinguished writer on Art: "The unadorned simplicity of the manners of the early Christians, the spirituality and purity of their conception of the Divine, their conviction of the utter worthlessness of all earthly things, could not be more clearly shown than by these burial places of the first Christian centuries." While many of the decorations of the catacombs are merely symbols of the faith, they are interesting as marking the advance to greater things, while some of them, as early as the third century, are very beautiful. The decorated atrium of the tombs of Nereus and Domitilla, and of Calpurnius

are among these. Very rarely the suffering death of the martyrs is represented; the tone of the decoration is cheerful, and the inscription full of love and peace.

At first there was but little pictorial art. "Thou shalt make unto thyself no graven image," and "Thou shalt worship the Lord thy God in spirit and in truth," was accepted in its literal meaning. Later, scenes from the life of Christ were depicted, Christ the good shepherd, and the miracles, giving bread to the hungry, and healing the sick, and raising the dead, all loving and tender events in His life, were treated with deep feeling. Sometimes the quality of the work is crude, but its refinement of sentiment gives it a touching interest.

The sarcophagi as early as the fourth century are beautifully decorated. Upon the decline of sculpture in the Roman Empire, the Christian art of ivory carving no doubt arose. Yet there was the same marked distinction as in all branches of art. While the Roman marbles were at the best reproductions of Greek art, the ivory carving had a fresh life. Scenes from the life of Christ were designed upon book covers of the scriptures, in the same manner as the consular *deptychs*, and exquisitely wrought.

After the recognition of the Christian religion by the State, and when the Christians were allowed to worship in the Basilica, the adaptation of these halls of justice gave the first impetus to Christian architecture. In these early basilica churches the mosaic which had been hitherto used only as pavement arose in new beauty on the walls, in pictorial art, with decorative borders.

In these, as in the wood carving, there is the same conscientious care, the same feeling of trustful repose, the same earnest purpose. Their work was now to them, not so much a memorial as a votive one, and the deeply religious sentiment which inspired it was "for the Glory of God."

Under the reign of Constantine and the Byzantium sway Christian art suffered a change in the East, from the simplicity of earlier times; again it reflected the character of the people. The dazzling array of gold and jewels with the gorgeous fabrics of the East, with the Pagan influences are not really Christian art any more than the ceremonies of the Pagan rites and Jewish ritual of to-day are a part of the Christian religion. Yet the decorative art in what was called the Western Empire, especially in France and Northern Italy, did not at first share this deadening influence. Beautiful illuminated missals and paintings on ivory are preserved in the Bibliothèque Nationale in Paris, made at this time, and also in the Vatican. The earliest are the best; many of them in motive and color seem to contain the rhythmic harmony of the antique.

And as the early Greek art with its changes culminated in the *Hermes* of Praxiteles, the *Zens* of Phidias, the frieze of the Parthenon, and the altar of Pergamon, so early Christian art led to the latter creative art, which is nearest akin to the Deity, in the Last Supper, the *Sistine Madonna*, the *Immaculate Conception*, the *Entombment of Christ*, the *Dome of St. Peter's*, the *Campanile at Florence*, and the

heavenward lines of the Gothic cathedrals. When we consider how many of these works of the earlier times were executed by those who often in bodily stress and pain, were "toiling while others slept," crushed under tyranny, and broken by continued persecutions, without hope of reward or recognition of fame, following only the Divinity that stirred within them "For the glory of God," as they comprehended it, we are fain to believe that something of the same votive spirit, earnest, self-sacrificing, and intense, shines through their work which afterward animated the great souls of Savonarola and Melancthon, Luther and Fenelon, George Fox and William Penn. These earlier workers were the advance guard for the age which could best comprehend pictorial representation, and through this be awakened to the Christian religion in its purity, its simplicity, and its beauty.

E. H. ATKINSON.

Seventh month 19, 1889.

ORTHODOX FRIENDS.

LAST week's issue of *Friends' Review* reprints from the *North American Review* the article "Why Am I A Quaker?" (which we copied nearly in full from the same periodical, Sixth month, 15), and gives the name of Dr. James E. Rhoads, (President of Bryn Mawr College), as its author. As printed in the *North American Review*, it was signed with the initials "J. A. R.," and this precluded us from assigning its authorship to Dr. Rhoads. Our readers doubtless read the article with satisfaction, and it may be agreeable to them to know from whose pen it comes.

—In announcing the opening of a new volume, *Friends' Review*, (edited by Dr. H. Hartshorne), says: "We have no love for traditional routine; and we believe in progressive and rightly aggressive, evangelizing, missionary Quakerism. But we believe that George Fox, William Penn, and their associates were essentially right in their doctrines and principles of action; the question of moment now being as to the application of those principles to the changed circumstances of our day. And we do not believe that the cause of Truth, the extension of the kingdom of Christ, will be advanced by the Society which was founded by George Fox reversing the substance and outcome of his testimonies, and, on the plea of 'proving all things,' going back to experiments the proof of whose practical failure of good has been over and over again obtained. On one subject especially, of late, it has been painful to differ from some whom we love and respect highly; namely, the pastoral question. But, with strong convictions, growing stronger as the debate and the practical trial of the new system have been going on, it would not have been honest to withhold our sympathy from those who believe that the innovation now urged and introduced in several quarters is radically opposed to the spirit of primitive Christianity, and threatens the very existence, with any measure of true unity, of the Society of Friends."

It is well to think well: it is divine to act well.—
Horace Mann.

THEIR ANGELS.

My heart is lonely as heart can be,
And the cry of Rachel goes up from me
For the tender faces unforget
Of the little children that are not;

Although I know
They are all in the land where I shall go.

I want them back in the dear, old way;
But life goes forward and will not stay;
And He who made it has made it right.
Yet I miss my darlings out of my sight.

Although I know
They are all in the land where I shall go.

Only one has died. There is one small mound,
Violet-heaped, in the sweet grave-ground.
Twenty-years they have bloomed and spread
Over the little baby-head:

And I know,—I know,
She is safe in the land where I shall go.

Not dead. Only grown up and gone away.
The head of my darling is turning gray,
That was golden once in the days so dear,
Over for many and many a year:

But lo! I know
She's a child in the land where I shall go.

My bright, brave boy is a grave-eyed man,
Facing the world as a worker can.
But I think of him now as I had him then,
And I press his cheek to my heart again;

For so, I know,
I shall have him there where we both shall go.

Out from the Father and into life:
Back to His breast from the ended strife,
And the finished labor. I hear the word
Of Him who at once was child and Lord;

And so, we know,
It will be in the land where we all shall go.

Given back, with the gain! The secret this
Of the blessed Kingdom of children is.
My mother's arms are waiting for me;
I shall lay my head on my father's knee:

For so, I know,
I'm a child myself where I shall go.

The world is troublous, and hard, and cold;
And men and women grow gray and old.
But hark of the world is an inner place
Where still *their angels* beheld God's face;

And lo, we know,
That only the children can see Him so.
—A. D. T. Whitney.

ACROSS THE WHEAT.

You ask me for the sweetest sound mine ears have ever heard?

A sweeter than the ripples' plash or trilling of a bird,
Than tapping of the raindrops upon the roof at night,
Than the sighing of the pine-trees on yonder mountain height;

And I tell you, these are tender, yet never quite so sweet
As the murmur and the cadence of the wind across the wheat.

Have you watched the golden billows in a sunlit sea of grain,
Ere yet the reaper bound the sheaves, to fill the creaking wain?

Have you thought how snow and tempest and the bitter
wintry cold

Were but the guardian angels, the next year's bread to hold,
A precious thing, unharmed by all the turmoil of the sky,
Just waiting, growing silently, until the storm went by?
Oh! have you lifted up your heart to Him who loves us all,
And listens, through the angel-songs, if but a sparrow fall,
And then, thus thinking of His hand, what symphony so
sweet

As the music in the long refrain, the wind across the
wheat?

It hath its dulcet echoes, from many a lullaby,
Where the cradled babe is hushed beneath the mother's
loving eye.

It hath its heaven-promise, as sure as heaven's throne,
That He who sent the manna will ever feed His own;
And, though an atom only, 'mid the countless hosts who
share

The Maker's never-ceasing watch, the Father's deathless
care,

That atom is as dear to Him as my dear child to me;
He cannot lose me from my place, through all eternity.
You wonder when it sings me this there's nothing half so
sweet

Beneath the circling planets, as the wind across the wheat!

—Margaret E. Sangster.

STRENGTH.

BE strong to-day; the world needs men
Of nerve and muscle, heart and brain,

To war for Truth and conquer Wrong.
The fight is on; the foes combine;
The order passes down the line,
"Quit you like men; be strong."

Be strong; the world hath also need
Of feet to ache and hearts to bleed,
Burdens there are to bear along,
But, though the end we may not see,
'Tis not the meanest destiny

To bear and to be strong.

Be strong, but not in self. Go whence
The breathings of Omnipotence
Shall sweep the nerve-strings full and long,
And from their impulse shall arise
Those deep, celestial harmonies
That comfort and make strong.

And Patience, too, must come, to rest
Within thy striving, throbbing breast
That thinks to-morrow all too long,
Thus filling out in breadth and length
The perfect character—for strength
Unbridled is not strong.

Yes, Right must win, since God is just;
Our hardest lesson is to trust,
But His great plan still moves along.

To-day is but the ebrysis
That holds to-morrow; feeling this,
Be patient and be strong.

Each hath his mission. If it be
My lot to toil, but not to see
The fruits which to my toil belong,
I know One whose all-seeing eye
My humblest task shall glorify,
And He shall make me strong.

—Walter Taylor Field, in *Union Signal*.

GAINING THE CONFIDENCE OF CHILDREN.

ONE of the first things necessary to gain the confidence of children is to show confidence in them, to believe in them—not to suspect them, but to take it for granted that they will do right. Nearly all children like to make confidants of some one, but they also like to do it voluntarily. A confidence cannot be forced, even in the case of a little child, any more than a flower can be caused to bloom by picking open its petals. In the right atmosphere of love and sympathy, a child's confidence will almost always unfold as naturally as a flower in the sunshine. But a child's nature resembles a flower in its sensitiveness, and its development and confidence must come from within outward. There is no surer way to prevent a child from giving its confidence than to seek to compel it to do so. Let children have their own little secrets, their own little plans, their own little possessions, and respect and defend them.

I once knew the mother of a large family of sons and daughters, who in a most unusual degree was made the confidant of her children. From the little one of six, who always wanted to hide his marbles in her best handkerchief-box, to the oldest son with his first love affair burdening his heart, every one confided his joy or his grief to "mother." One incident that I witnessed in her house gave me the key to the secret of this influence, and taught me a lasting lesson. Two of her boys came to her one day with a childish quarrel on hand. One complained, "Mother, Harry has kept the door of the big barn closet locked for ever so many days; he stays in there by himself, and will not let any of the rest of the boys see what he is about; he has been writing notes and putting them in the post-office, and we think you ought to make him tell what he is doing." The mother looked at Harry, who stood waiting to defend himself, and his little secret, if necessary. She saw no sign of guilt or embarrassment in his face, only a questioning as to whether she would suspect him as his brother had done. She asked, "Has Harry any of your playthings in there?" "Were any of you using the room before Harry took possession of it?" "No." "Well, then, let Harry alone; he has a right to it, and has a right to have a little secret all to himself if he wants to." After the boys had gone I said to her, "Are you really not afraid some mischief may be brewing in that big barn closet?" "No," she replied, "there was no guilt in Harry's face, and if there had been I should not have compelled him to divulge his secret just then. By and by, when he is ready, I know he will tell me all about it."

Speaking afterward with this mother on this subject, she said, "I never compel my children to tell me about their own little affairs. I am always ready to listen and sympathize with them, and they know I love to have them tell me of their thoughts and doings, but I never suspect them. I never open their letters nor ask to see those they write, nor look in their private drawers or boxes. I let them know that I regard their private affairs and possessions as sacred, though I show them that I appreciate any and every confidence they place in me. As a consequence, I feel that I am made the recipient of their

most sacred confidences whenever the time and their hearts are ripe to give them."

In these last words lies a profound suggestion—when the time and the heart are ripe. All who have observed the workings of their own hearts know that a confidence cannot be given except under certain conditions. There are thoughts and feelings, and experiences, conflicts, doubts, hopes, fears, temptations, which we cannot bear to share with any human being, no matter how closely bound to us by the ties of nature and affection. Any attempt on the part of any one to wrest a confidence from us only shuts our hearts and lips more tightly. Yet the time comes when we need and seek a loving heart into which to pour the sorrows and perplexities, or the joys and hopes, of our own. To whom do we naturally turn under such circumstances? To the critical, the censorious, the self-constituted adviser, the curious-minded? By no means, but to the unsuspecting, incurious one, whose love for us is constant and vivifying as the sunshine; to the one who will sorrow with us or rejoice with us, as the case may be, but who will not take advantage of our confidence to impose upon us his or her own decisions, opinions, or will-power, or in any way infringe upon that spiritual liberty which is as dear to the heart as physical liberty to the body.

One very common cause of the withholding of confidence on the part of children in regard to their doings or plans, is the habit on the part of parents of wishing to dictate or control in matters that are really of no importance except to the child. Every child likes to plan its own affairs, and where there is no question of wrong or right involved, he should not only be allowed, but encouraged to do so. Yet there are many parents—and we find the same obtrusive quality in many who are not parents—who cannot hear any plan proposed or discussed without at once wishing to suggest or dictate, and who attempt to impose their will or their ideas on their children and everyone else. To children of a sensitive nature, with, perhaps, weak will-power, it is really exasperating, and often has a most injurious effect upon their tempers, to be constantly taking their affairs out of their hands and directing them. Mary wants a new spring dress of a certain color, and made a certain way. There is really no reason why she should not be allowed to have it as she wishes; but the mother, fond of directing other people, objects to the color, and argues against, and finally vetoes, the pattern desired. The young girl's wishes are overborne in the matter, and she has a dress that she does not like and cannot enjoy wearing. The mother, perhaps, never thinks of the matter again; it really was of no moment to her in the first place; it was only her love of dictating and directing that caused her to interfere at all. But the young girl will long for the time to come when she need no longer consult her mother about her dress. Willy is fixing up his playroom, and has certain plans for putting up shelves and hooks for his tools and other possessions. In an unguarded moment he confides his plans to his mother or father, and is at once overwhelmed with advice to change the whole plan, and

arrange everything in an exactly different way. The result will be that his next plans he will keep to himself.

As a teacher I have often been called upon to study the characters of children or young girls who seem to wear an impenetrable mask, concealing their real feelings, wishes, and plans from every one. In nearly every case I have had reason to believe that the cause of this lay in the too constant surveillance and dictation of parents who, in their mistaken solicitude, wished to oversee and direct every trifling act and plan of the child's life. Shrinking from opposition and argument, the child finds refuge in concealment, and thus is destroyed the element of frankness which is such a safeguard and also such a beautiful trait in the young.—*Helen E. Starrett, in The Interior.*

THE NAZARENES OF THE DANUBE.

In Southern Hungary and Servia, a body of Christians under the name of Nazarenes, has sprung up during the last fifty years, recruited almost entirely from the poor and ignorant, but yet marked by much earnestness, spirituality, and simple adherence to scripture truth. The movement appears to have arisen in Switzerland, and to have spread to Hungary before the year 1848. The sect early came into conflict with the authorities, but persecution only increased its number. It has always been difficult to ascertain the true strength of the Nazarenes; but in 1875 there were between sixty and seventy congregations of them in Hungary, and the Hungarian Minister for Worship estimated their numbers at from 6,000 to 10,000.

They feel themselves to be an humble and unlearned people, and are afraid of being drawn away from the simple truth of the Gospel, by which, above all things, they desire to abide. This feeling restrains them from much intercourse with their fellow-Christians, and brings them into some narrowness of view; but on all hands they are allowed to be a sincerely devout people, maintaining a high degree of brotherly love and Christian conduct amongst themselves. The Scriptures—the New Testament in particular—form the one foundation of their Confession of Faith. They practice the two sacraments of Baptism and the Lord's Supper as "signs to remind true believers of the death of Christ, and to strengthen them in the faith," and attach great importance to them. The Nazarenes acknowledge Christ alone as the Head of the Church, and have no appointed ministers. Their simple meetings often take place in private houses. Times of silence, hymns, prayers uttered at the impulse of the Holy Spirit, and the reading and expounding of the New Testament, occupy the hour or so for which the meeting lasts.

But it is, perhaps, in their Christian practice, even more than in their doctrine and worship, that the Nazarenes, who seek to restore the original purity of Christianity, shed forth, amid the darkness of Europe the light of simple Gospel truth. In their friendliness to one another, they seem, to the outsider, to share all things in common, as did the early Christians; but they are careful never to encourage

laziness or shiftlessness. Their principles undeniably exercise an ennobling influence over their lives. Truthfulness is placed in the forefront of Christian virtues. They expect their yea and nay to be believed implicitly, and firmly refuse oaths. This prevents them serving as soldiers, and they also decline to serve, on the ground that the Christian faith forbids them to fight. Though in civil matters some of the most peaceable inhabitants of the Empire, paying taxes and taking little part in politics, as a matter of conscience, they have always preferred martyrdom to compliance. Their protests have been made with moderation and firmness, and many of their young people have endured inhuman tortures rather than swear or fight. The Austro-Hungarian Government, in 1869, while not exempting them from military service, allowed the term of service to be worked out in the military hospitals if the refusals were upon conscientious grounds. This order was withdrawn in 1875, and a new regulation compelled them to bear arms, if necessary, under legal constraint. When these means are exhausted, a special report is to be sent to the Minister of War, stating when the party in question joined the sect.

A few Nazarenes have crossed the Danube and become Servian subjects. Persecution has followed them. In 1877 three of their number were sentenced to death by a court-martial for refusing to serve as soldiers, and for nineteen days they were hourly expecting to be led forth to execution. At last the sentence was commuted to twenty years' solitary confinement, in heavy chains, in the fortress of Belgrade. A gentleman who was allowed by the kindness of the Governor to visit them, found them heavily chained among a thousand convicts—fine, tall, strong fellows, simply bearing their punishment without one word of complaint or the slightest token of retraction. Truly they were noble confessors of their faith! It was only in January, 1881, that the survivors were released by the personal order of the Prince, upon the intercession of the wife of a distinguished member of his Government.

In November last twelve men and seven women were committed for trial, on the charge of publicly professing and spreading the Nazarene faith, the profession of which was alleged to be forbidden in the kingdom of Servia. The prisoners, who had been already confined to the police cells for two months and a half, were sentenced to terms of imprisonment varying from three to six months, the latter term being given to three men previously convicted. On appeal, this sentence has been practically quashed, and the prisoners have now been set at liberty.—*The Messiah's Kingdom.*

Extraneous vanity in the mind, and you naturally retrench the little superfluities of garniture and equipage. The blossoms will fall of themselves when the root that nourished them is destroyed.

How wisely do they act, who taking no anxious thought for the morrow, are attentive, according to present ability, to the duties of the present day.—*John Thorp.*

THE BITE OF SERPENTS.

LET us observe what happens when the rattlesnake means mischief. He throws himself into a spiral, and about one-third of his length, carrying the head, rises from the coil and stands upright. The attitude is fine and warlike, and artists who attempt to portray it always fail. He does not pursue, he waits. Little animals he scorns unless he is hungry, so that the mouse or the toad he leaves for days unnoticed in his cage. Larger or noisier creatures alarm him. Then his head and neck are thrown far back, his mouth is opened very wide, the fang held firmly erect, and with an abrupt swiftness, for which his ordinary motions prepare one but little, he strikes once and is back on guard again, vigilant and brave. The blow is a stab, and is given by throwing the head forward while the half-coils below it are straightened out to lengthen the neck and give power to the motions which drive the fangs into the opponent's flesh; as they enter, the temporal muscle closes the lower jaw on the part struck, and thus forces the sharp fang deeper in. It is a thrust aided by a bite. At this moment the poison duct is opened by the relaxation of the muscle which surrounds it, and the same muscle which shuts the jaw squeezes the gland, and drives its venom through the duct and hollow fang into the bitten part.

In so complicated a series of acts there is often failure. The tooth strikes on tough skin and doubles back or fails to enter, or the serpent misjudges distance and falls short and may squirt the venom four or five feet in the air doing no harm. I had a curious experience of this kind in which a snake eight feet six inches long threw a teaspoonful or more of poison athwart my forehead. It missed my eyes by an inch or two. I have had many near escapes, but this was the grimmest of all. An inch lower would have cost me my sight and probably my life.

A snake will turn and strike from any posture, but the coil is the attitude always assumed when possible. The coil acts as an anchor and enables the animal to shake its fangs loose from the wound. A snake can rarely strike beyond half his length. If both fangs enter, the hurt is doubly dangerous, because the dose of venom is doubled. At times a fang is left in the flesh, but this does not trouble the serpent's powers as a poisoner, since numberless teeth lie ready to become firmly fixed in its place, and both fangs are never lost together. The nervous mechanism which controls the act of striking seems to be in the spinal cord, for if we cut off a snake's head and then pinch its tail, the stump of the neck returns and with some accuracy hits the hand of the experimenter—if he has the nerve to hold on. Few men have, I have not. A little Irishman who took care of my laboratory astonished me by coolly sustaining this test. He did it by closing his eyes and so shutting out for a moment the too suggestive view of the returning stump. Snakes have always seemed to me averse to striking, and they have been on the whole much maligned.

Any cool, quiet person moving slowly and steadily may pick up and handle gently most venomous serpents. I fancy, however, that the vipers and the

copperheads are uncertain pets. Mr. Thompson, the snake keeper at the Philadelphia Zoological, handles his serpents with impunity; but one day having dropped some little moccasins a few days old down his sleeve while he carried their mamma in his hand, one of the babies bit him and made an ugly wound. At present the snake staff is used to handle snakes.

I saw one October, in Tangiers, what I had long desired to observe—a snake charmer. Most of his snakes were harmless; but he refused, with well-acted horror, to permit me to take hold of them. He had also two large brown vipers; these he handled with care, but I saw at once that they were kept exhausted of their venom by having been daily teased into biting on a bundle of rags tied to a stick. They were too tired to be dangerous. I have often seen snakes in this state. After three or four fruitless acts of instinctive use of their venom they give up and seem to become indifferent to approaches, and even to rough handling.—*Dr. S. Weir Mitchell, in The Century.*

ALL GOOD WON THROUGH DIFFICULTY.

WHEN we look at the productions of man, we find that all their beauty and fitness have been won through difficulty. Whether it be a magnificent structure, or a stately ship, a speaking picture or a heartfelt poem, a beautiful room or garden, a tasteful costume, all speak of toil and care and difficulty that have been endured in their behalf. This it is which gives them their chief element of value and makes them lovely to our view. We only lose sight of it in our admiration, but it is there, enfolding and preserving all the bloom and brilliance which so greatly delight us.

So in humanity itself all that is finest and most beautiful is intertwined with difficulty. We look upon the face of the tender infant and think that there, at least, is the beauty of innocence, without struggle or strain. But we forget that the power and character of former generations lie stored up in that tiny frame—that their toil and strivings and conquered difficulties have all combined to trace the lineaments of the little one, and to form the germs of his future character. And, as he grows into youth and maturity, the beauty of his nature will largely depend upon the degree to which he stems the difficulties of life as they arise. Only by care and exercise and moderation, and some self-denial, can he attain the bloom of fine and perfect health. Only by the self-restraining discipline of eager desires and passions, can he obtain the blessing of a self-controlled and self-respecting nature. Only by regular, patient, and active mental labor can he acquire real knowledge and intellectual force and vigor. Only by continually regarding the happiness of others can he obtain the beauty of an unselfish disposition. Only by active labor of hand or head and heart, only by stemming the difficulties that must surround him, and exerting all his energies, can he gain that force and strength and vigor which make the beauty of manhood.—*Selected.*

METEOROLOGY IN SEVENTH MONTH.

THE statement of the U. S. Signal Service observer at Philadelphia for Seventh month is of much interest as covering a period of extraordinary rainfall. The fall recorded here, however, is less than at some other places in this region. The statement is as follows:

Mean barometer, 30.00.

Highest barometer, 30.26, date 6th.

Lowest barometer, 29.67, date 15th.

Mean temperature, 73.8.

Highest temperature, 94, date 10th.

Lowest temperature, 60, dates 6th and 16th.

Greatest daily range of temperature, 24.

Least daily range of temperature, 5.

Mean temperature for this month in

1871,	75.4	1881,	75.5
1872,	73.3	1882,	77.4
1873,	76.4	1883,	76.1
1874,	76.2	1884,	71.8
1875,	74.8	1885,	77.2
1876,	78.4	1886,	74.6
1877,	75.7	1887,	79.7
1878,	77.0	1888,	72.1
1879,	75.7	1889,	73.8
1880,	74.8		

Total deficiency in temperature during month, 26.

Total excess in temperature since January 1st, 350.

Prevailing direction of wind, northwest.

Total movement of wind, 7,220 miles.

Extreme velocity of wind, direction, and date, 34 miles, northwest, on 15th.

Monthly mean humidity, 76 degrees.

Total precipitation, 8.39 inches.

Number of days on which .01 inch or more of precipitation fell, 17.

Total precipitation (in inches and hundredths) for this month in

1871,	6.17	1880,	7.74
1872,	9.20	1881,	0.96
1873,	5.00	1882,	1.37
1874,	2.25	1883,	1.78
1875,	3.63	1884,	3.83
1876,	5.71	1885,	2.99
1877,	5.53	1886,	4.23
1878,	4.55	1887,	7.17
1879,	3.62	1888,	34.38

Total excess in precipitation during month, 4.09.

Total excess in precipitation since January 1st, 419.

Number of clear days, 6; fair days, 9; cloudy days, 16.

Dates of thunder storms, 1st, 11th, 16th.

L. M. DEY,
Observer Signal Corps.

OTHERS sometimes appear to us more wrong than they really are, because we ourselves are not right in judging them.—*Dillwyn's "Reflections."*

FOR, though death be a dark passage, it leads to immortality, and that is recompense enough for the suffering of it.—*William Penn.*

WOMEN'S POLITICAL SUPERIORS.

Our political superiors have just given another striking illustration of their superiority. It happened not in the Cannibal Islands, but in the city which calls itself the Athens of America, and in the Meionaon, the very hall where so many peaceful woman suffrage conventions and decorous caucuses of women voters have been held. The meeting of the Democratic ward and city committee of Boston waxed so uproarious, owing to the strife between the factions of Cunniff and Maguire, that the janitor turned off the gas, and the hall was cleared by the police.

Just suppose that one of the women suffrage conventions or caucuses of women voters had filled the Meionaon with "a bowling mob," had made the air "blue with tobacco smoke," had smashed glass and wood-work, and had finally been dispersed by the police! Would not the papers from the Atlantic to the Pacific have quoted it as a glaring proof that women were too excitable to be trusted with the right of self-government? But when such an incident occurs in one of the political meetings of "the less excitable sex," it is too common to excite even a nine days' wonder.

Doubtless it was not men of the best type who indulged in this astonishing fracas over the question who should be chairman. But even these men behave with comparative propriety when they go to church, to the theatre, to a lecture, or party, or to any other place where they take their wives and daughters with them. It is evident that some civilizing influence is badly needed in our politics. Can those who are unwilling that women should supply this civilizing influence suggest any other cure?—*Woman's Journal*.

THE GREAT PURPOSE OF CHRISTIANITY.

"I SEE everywhere in Christianity this great design of liberating and raising the human mind. I see in Christianity nothing narrowing or depressing, nothing of the littleness of the systems which human fear and craft and ambition have engendered. I meet there no minute legislation, no descending to precise details, no arbitrary injunctions, no yoke of ceremonies, no outward religion. Everything breathes freedom, liberality, encouragement. I meet there not a formal, rigid creed, binding on the intellect through all ages the mechanical, passive repetition of the same words and the same ideas; but I meet a few grand, all-comprehending truths, which are given to the soul to be developed and applied by itself; given to it as seed to the sower, to be cherished and expanded by its own thought, love, and obedience into more and more glorious fruits of wisdom and virtue. I see it everywhere inculcating an enlarged spirit of piety and philanthropy, leaving each of us to manifest this spirit according to the monitions of his individual conscience. I hear it everywhere calling the soul to freedom and power, by calling it to guard against the senses, the passions, the appetites, through which it is changed, enfeebled, destroyed. I see it everywhere aiming to give the mind power over the outward world, to make it

superior to events, to suffering, to material nature, to persecution, to death. I see it everywhere aiming to give the mind power over itself, to invest it with inward sovereignty, to call forth within us a mighty energy for our own elevation. I meet in Christianity only discoveries of a vast, bold, illimitable character, fitted and designed to give energy and expansion to the soul."—*Channing*.

THE BIBLE IN PUBLIC SCHOOLS.

MATTHEW ARNOLD was appointed one of her Majesty's inspectors of schools in 1851, and resigned in 1856, after a service of thirty-five years, in the course of which he paid three visits to the Continent for the purpose of studying the educational system there employed, of which he wrote three separate accounts. In what Mr. Arnold says in his report of 1868 concerning the Wesleyan Training College, he touches very thoroughly upon the place which the Bible should have in public school education. He says: "What I saw in Germany struck me the more because it exactly corresponds with the sort of use of the Bible in education which was approved and followed by my father. Even in the lowest classes, the children in a German Protestant school begin learning verses of the Psalms by heart; and by the time a scholar reaches the top of the school, he knows by heart a number of the finest passages from the Psalms and from the prophetic and historical books of the Old Testament, and nearly all the principal gospel discourses and parables from the New. These have become a part of the stock of his mind, and he has them for life. What a course of eloquence and poetry (to call it by that name alone) is this in a school which has and can have but little eloquence and poetry! And how much do our elementary schools lose by not having such a course as part of their programme! This at least, one would think, might be effected and inspected in all Protestant schools without occasioning any religious difficulty; and all who value the Bible may rest convinced that thus to know and possess the Bible is the most sure way to extend the power and efficacy of the Bible."

A SOCIAL REFORM IN THE KITCHEN.

It is a well ascertained fact that, with respect to about ninety per cent. of the community, the price paid for food comes to one-half the income or more. After this food is bought, how much of it is wasted in bad cooking? How much human force is wasted in consequence of bad cooking? How much does dyspepsia or indigestion, caused by bad cooking, impair the working capacity of the people of the United States, and diminish their product? Can five cents worth per day be saved? Is not that a very insufficient measure of the difference between a poor, wasteful cook, and a good, economical one? If five cents a day can be saved on food and fuel, while at the same time that which is bought and cooked may be converted into more nutritious and appetizing food, the difference in each community of 6,000 people would be \$109,500 a year, or about nine per cent. of the total product of the typical community, which we have assumed to be \$1,200,000 a year in gross. When the

attention of the labor reformer is brought down from grand schemes for altering the whole constitution of society, by act of Congress or of the State Legislature, to the simple question of how each person, each family, or each community, may better itself under existing conditions, great progress will have been made in solving all the problems which are now pending.—*Edward Atkinson, in the Forum.*

THOSE WHO SUFFER BY WAR.

You can hardly realize the horrors of war unless you have lived in a country like France, and have heard and known the village tales; the patient wretchedness of its women, its desolate homes, and its sons cast useless to the ground like fruit torn untimely off the parent tree. You see a happy home with a farm, all prosperous; the fine young son is content to labor and get in the crops, and is the delight of his mother, a widow. The time comes when he must be drawn for the army, and he goes. The farm falls to pieces; the mother can not work it alone. The son becomes reckless; he is only now "number 56;" he tries to drown thought in a city and gets dissipated, and the change of life throws him into a rapid decline. He gets leave. The mother, hearing a noise at her gate, looks up and sees the ghost of her son, she thinks—but no 'tis he! Come home to die in her arms.

I knew this woman. She lived in one room at my side—lived on the pence her neighbors gave. While I was there I gave her so much a week in pity. She goes out only to chapel, and often murmurs, "Ah! once I had my home, my farm, my beautiful son—but *la guerre, la guerre*; took all from me!"

This is but one; yet as a straw can show the force a river runs with, so this shows the desolation of French homes under, it may be, a sunny surface. When Florence Nightingale went forth who dreamed of "to-day" with all the world full of war notices? Yet so God works. Peace does not come in a day, but the utter absurdity of "war" now strikes our higher civilization. God calls us to work and suffer for all that is worth having; so you work for peace and the reign of woman comes. It is she who has suffered most.—*American Arbitrator.*

NEWS AND OTHER GLEANINGS.

—According to the Chicago *Inter-Ocean*, Benjamin Franklin was the first to discover that storms in this country travel from west to east. He was interested in observing an eclipse and found that while the observations were spoiled in Philadelphia by a rain storm that came on just at the beginning of the eclipse, the sky was clear at Boston until after the eclipse was over. By communicating with intervening towns he learned that the storm traveled eastward at a uniform rate. Simultaneous observations taken in all parts of the country show that nearly all great storms follow the same general direction—from the west to the east. The same is true of cold or hot waves. Therefore, to tell what the weather will be, in advance, we have only to find out the conditions prevailing west of us. This is practically the course pursued by the signal service.

—Prof. Holden of the Lick Observatory says the comet discovered by Barnard in Ninth month, 1888, is breaking

up and has lost all of its tail. It was subject to immense strain in passing the sun, and fragments are to be seen streaming behind in the form of a tail, directed not from but toward the sun. This mass of matter is at least 430,000 miles in length and its diameter 144,000 miles. The comet itself is still fairly bright, although it has lost an immense portion of its original substance.

—It is stated that since the introduction of natural gas five hundred shade-trees have been killed by natural gas leaks in the parks of Allegheny City.

—The British Foreign Office is negotiating a commercial treaty with Japan by which Great Britain surrenders the present judicial privileges of her subjects in Japan, in return for which concession the whole interior of Japan will be opened up to English trade.

—Dr. Gradenigo, Professor of Ophthalmic Surgery in the University of Padua, has just succeeded in transplanting the cornea from the eye of a barn fowl into the eye of a patient under his care. On the eighth day after the operation the transplanted cornea presented a quite pellucid and convex appearance. Such a result has not yet been recorded in the annals of continental surgery.—*Lancet.*

—Florence Nightingale is sixty-nine years of age and an invalid, but she has written a letter of sympathy for the Johnstown sufferers with her own hand. She seldom leaves her house nowadays; but she keeps up a lively interest in all that is going on, and she attends to an enormous correspondence from all parts of the world.

—All the great transcontinental railways have secured space at the Detroit Exposition and will exhibit the products of the regions through which their lines pass, with a view of attracting immigration. The Northern Pacific will exhibit the mineral, vegetable, and animal products of the States and Territories from Lake Superior to the Pacific Ocean. Another leading feature of the Exposition will be an exhibition of fruits and flowers.

—Anna B. Mitchell, a Nantucket woman, has received the appointment of notary public from the Governor of Illinois; in the city of Chicago she has succeeded to the position made vacant by the resignation of Prof. S. W. Burnham, after his appointment as astronomer at the Lick Observatory in California. She had been his assistant stenographer. Her position is that of official reporter to the judges of the Circuit and District Courts of the United States, for the northern districts of Illinois. The duties of her office are to be in attendance upon the judges, either in Court or Chambers, for the performance of stenographic work, and to be present in the court rooms to report the judicial opinions and charges to the jury which are given from the bench. It is also to prepare the opinions of the federal judges for publication in the leading law journals of the Northwest. Outside the regular duties of her position, she is sometimes called upon to report the entire evidence in the trial of causes in the United States Courts, as well as the arguments of counsel therein.—*Women's Journal.*

—Some difficulty may be expected in getting a competent president for Mount Holyoke College, to replace Mary A. Brigham, (who had been elected, but was killed in a railway accident). Mrs. Harding Woods, of Barre, Mass., who graduated from Mount Holyoke 28 years ago, and for ten years afterward was a teacher in the institution was offered and has declined the place.—*Exchange.*

—Ella Diefz Clymer, president of the New York "Sorosis," says: "Women in selecting their life-work should avoid those branches which are already over-crowded. Architecture is peculiarly suited as a work for women, although until recently it has not been chosen by them.

Women are the homemakers; they live in their houses more than the men. What more fitting than that they should design them?"

—Mrs. P. M. Keodall, of Cambridge, Mass., one of Maria Mitchell's sisters, will probably write her biography. Prof. Mitchell has left behind her a mass of most interesting correspondence from the Herschels, Humboldt, Hawthorne, and other eminent men and women.—*Woman's Journal*.

—Charles G. Ames said recently: "A friend of mine says that his pet aversion is a strong-minded woman. If I had any aversion of that sort it would be for a weak-minded woman. I have never yet discovered what degree of weak-mindedness is necessary to the making of a companionable woman for a man of my friend's opinions."—*Woman's Journal*.

CURRENT EVENTS.

DURING last month 24,716 immigrants landed at Castle Garden, against 28,690 in July, 1858. Every month this year has been marked by a gradual decrease in European immigration.

A VERY extensive strike of workmen in the coke region near Pittsburg is now on. On the 5th instant it was reported that out of 14,000 ovens in the region, 12,000 were idle.

PRESIDENT HARRISON left Washington on the 6th, for Bar Harbor, to visit Secretary Blaine. He was accompanied by Secretaries Windom and Proctor, and Private Secretary Halford. He expects to return to Washington by the 17th inst. for a few days' stay prior to his departure for Indianapolis.

THE business portion of the city of Spokane Falls, near the eastern border of Washington Territory, was completely destroyed by a fire which broke out on the night of the 4th inst. Twenty-five blocks, including all the public buildings and the Northern Pacific Railway freight warehouse and station, were burned, and the total loss is estimated at \$14,000,000, though this is probably an over-estimate. It was feared some lives had been lost.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

WILLIAM T. HARRIS, of Cambridge, Mass., a well-known educator, and prominent in the Concord School of Philosophy, has been appointed U. S. Commissioner of Education by President Harrison. He is now abroad.

THE constitution for the proposed new State of South Dakota has been completed by the convention at Sioux Falls, and was signed on the 15th inst. by 72 out of 75 members of that body.

JOHN L. SULLIVAN, and "Jake" Kilrain, the two prize-fighters who recently fought in Mississippi, have both been arrested in other States, upon a requisition from the Governor of Mississippi, and have been taken thither for trial.

THE young Emperor of Germany has been making a visit to England. He landed at Portsmouth, on the 2d inst., and was received with apparent cordiality, at Osborne Palace, by his grandmother, Queen Victoria.

THE extensive firm of Lewis Brothers & Co., dry-goods commission merchants of Philadelphia, with branch house in New York, made an assignment last week, causing some business disturbance and anxiety. Three mills which had been manufacturing goods for them have stopped work.

NOTICES.

* * Quarterly Meetings in Eighth month will occur as follows:

15. Shrewsbury and Rahway, Plainfield, N. J.
17. Short Creek near Mt. Pleasant, O.
19. Fairfax, Goose Creek, Va.
21. Stillwater, Plainfield, O.
26. Pelham H. Y. M., Yarmouth, Ont.
23. Ohio Y. M., Salem, O.
- Warrington Q. M., Menallen, Pa.
27. Burlington, Mt. Holly, N. J.
28. Southern, Easton, Md.
- Easton and Saratoga, Granville, N. Y.
29. Bucks, Falls, Pa.
30. Nottingham, E. Nottingham, Md.

* * Circular Meetings in Eighth month occur as follows:

18. Roaring Creek, Pa., 2 p. m.
- East Branch, N. J., 3 p. m.
- Gunpowder, Md., Old House, 10 a. m.
25. Constauntia, N. Y.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall Doylestown, Pa.; Estelle Hall, Swarthmore, Pa.; Clement M. Biddle, 815 Arch street, Phila.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly to raise funds. These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

NATURE.

As a fond mother, when the day is o'er,
Leads by the hand her little child to bed,
Half willing, half reluctant to be led
And to leave his broken playthings on the floor,
Still gazing at them through the open door,
Nor wholly reassured and comforted
By promises of others in their stead,
Which though more splendid may not please him more
So Nature deals with us and takes away
Our playthings, one by one, and by the hand
Leads us to rest so gently that we go,
Scarce knowing if we wish to go or stay,
Being too full of sleep to understand
How far the unknown transcends the what we know.

—Longfellow.

EPISTLES OF GEORGE FOX TO MINISTERS.

[A correspondent, in a note some months ago, called our attention to a letter of George Fox. He says: "Might I ask you at some suitable time to reprint George Fox's last epistle to ministers, from the second volume of his works near the close?" We do so at this time, and add to it the epistle which immediately follows, in his Works, "to the Friends in the ministry that were gone into America." The spirit of the two letters is essentially the same: both retain their vigor and pertinency, regardless of the lapse of time.—Eds. INTELLIGENCER AND JOURNAL.]

ALL friends in the ministry everywhere, to whom God hath given a gift of the ministry, and who use to travel up and down in the gift of the ministry, do not "hide your talent, nor put your light under a bushel; nor cumber yourselves, nor entangle yourselves with the affairs of this world." For the natural soldiers are not to cumber themselves with the world; much less the soldiers of Christ, who are not of this world; but are to mind the riches and glory of the world that is everlasting. Therefore stir up the gift of God in you, improve it, and do not sit down, Demas-like, and embrace this present world, that will have an end; lest ye become idolaters. Be valiant for God's truth upon the earth, and spread it abroad in the day-light of Christ, you who have sought the kingdom of God, and the righteousness thereof, and have received it and preached it: which "stands in righteousness and peace, and joy in the Holy Ghost." As able ministers of the Spirit sow to the Spirit, that of the Spirit ye may reap life everlasting. Go on in the Spirit, plowing with it in the purifying hope; and threshing, with the power and Spirit of God, the wheat out of the chaff of corruption, in the same hope. For he that looks back from the spiritual plow into the world, is not fit for the spiritual and everlasting kingdom of God; and is not

like to press into it, as the faithful do. Therefore you that are awakened to righteousness, and to the knowledge of the truth, keep yourselves awakened in it: then the enemy cannot sow his tares in your field; for truth and righteousness is over him, and before he was. My desires are, that all may fulfill their ministry, that the Lord Jesus Christ hath committed to them; and then by the blood (or life) and testimony of Jesus you will overcome the enemy that opposes it, within and without. All you that preach the truth, do it as it is in Jesus, in love; and all that are believers in Jesus, and receivers of him, he gives them power to become the Sons of God, and joint-heirs with Christ, whom he calleth brethren; and he gives them the water of life, which shall be a well in them, springing up to eternal life; that they may water the spiritual plants of the living God. So that all may be spiritual planters, and spiritual waterers; and may see with the spiritual eye the everlasting, eternal God over all to give the increase, who is the infinite fountain. My desires are, that you may be kept out of all the beggarly elements of the world, which is below the spiritual region, to Christ the head; and may hold him, who bruiseeth the head of enmity, and was before it was; that ye may all be united together in love, in your head, Christ, and be ordered by his heavenly, gentle, peaceable wisdom to the glory of God. For all that be in Christ are in love, peace, and unity. In him they are strong, and in a full persuasion; and in him, who is the first and last, they are in a heavenly resolution and confidence for God's everlasting honour and glory. Amen.

From him, who is translated into the kingdom of his dear Son, with all his saints, a heavenly salutation. And salute one another with a holy kiss of charity, that never faileth.

G. F.

Ford-Green, the 25th of the 9th month, 1690.

Another epistle I wrote soon after, more particularly to the friends in the ministry, that were gone into America, after this manner:

Dear friends and brethren, ministers, exhorters, and admonishers, that are gone into America and the islands thereaway. Stir up the gift of God in you, and the pure mind, and improve your talents; that ye may be the light of the world, a city set upon a hill, that cannot be hid. Let your light shine among the Indians, the Blacks, and the Whites: that ye may answer the truth in them, and bring them to the standard and ensign, that God hath set up, Christ Jesus. For from the rising of the sun to the going down of the same, God's name shall be great among

the Gentiles; and in every temple, or sanctified heart, "incense shall be offered up to God's name." And have salt in yourselves, that ye may be the salt of the earth, that ye may salt it; that it may be preserved from corruption and putrefaction: so that all sacrifices offered up to the Lord may be seasoned, and be a good savour to God. All grow in the faith and grace of Christ, that ye may not be like dwarfs; for a dwarf shall not come near to offer upon God's altar; though he may eat of God's bread, that he may grow by it. And friends, be not negligent, but keep up your Negroes' meetings and your family-meetings; and have meetings with the Indian kings, and their councils and subjects everywhere and with others. Bring them all to the baptizing and circumcising Spirit, by which they may know God, and serve and worship him. And all take heed of sitting down in the earth, and having your minds in the earthly things, coveting and striving for the earth: for to be carnally minded brings death, and covetousness is idolatry. There is too much strife and contention about that idol, which makes too many go out of the sense and fear of God; so that some have lost morality, humanity, and true Christian charity. O therefore, be awakened to righteousness, and keep awakened; for the enemy soweth his tares while men and women sleep in carelessness and security. Therefore so many slothful ones go in their filthy rags, and have not the fine linen, the righteousness of Christ; but are straggling, and plowing with their ox and their ass, in their woollen and linen garments, mixt stuff, feeding upon torn food, and that dieth of itself, and drinking of the dregs of their old bottle, and eating the sour, leavened bread, which makes their hearts burn one against another. But all are to keep the feast of Christ, our passover, with the unleavened bread of sincerity and truth. This unleavened bread of Life from heaven makes all hearts and souls glad and joyful, lightsome and cheerful, to serve and love God, and to love and serve one another in the peaceable truth, and to keep in the unity of God's Spirit, which is the bond of (the Lord of lords' and the King of kings') peace. In this love and peace God Almighty keep and preserve all his people, and make them valiant for his truth upon the earth, to spread it abroad in doctrine, good life, and conversation. Amen.

All the members of Christ have need one of another. For the foot hath need of the hand, and the hand hath need of the foot: the ear hath need of the eye, and the eye of the ear. So that all the members are serviceable in the body which Christ is the head of; and the head sees their service. Therefore let none despise the least member.

Have a care to keep down that greedy, earthly mind, that raveneth and coveteth after the riches and things of this world; lest ye fall into the low region, like the gentiles or heathen, and so lose the kingdom of God that is everlasting: but seek that first, and God knows what ye have need of; who takes care for all both in heaven and in the earth: thanks be unto God for his unspeakable gifts, both temporal and spiritual!

Tottenham, the 11th of the 10th month, 1690.

From the Sunday School Times.

FLAVIUS JOSEPHUS.

It may seem strange to class this person, whose real name was Joseph son of Matthias, among "lesser helpers;" but no other writer is so constantly appealed to for illustration, for confirmation, or for assistance in one way and another, as is this ancient Jewish historian. He occupies a unique place in the world's history as an author, as a historian, as a man of affairs, and as a representative of the Hebrew people. He was not a brilliant writer. He was not in every respect an accurate historian. The world has never paid him any homage on account of his goodness, nor honored him for greatness of mind or for power in any other direction. If with the best means at our command we try to analyze him, we shall find many interesting traits of character, some striking mental and moral peculiarities, also some glaring weaknesses which will cause us regret.

On the other hand, his writings contain many wise and profound principles, doctrines, and utterances of various kinds, which are worthy of the noblest mind. But whatever else we thus learn about him, one fact will become more and more prominent; namely, that his writings are not only necessary, but absolutely indispensable, to the proper understanding of the times and life of Christ. Every one who attempts to elucidate the Sunday-school lessons for the benefit of others, if he is studious in the use of authorities, has frequent occasion to examine the pages of Josephus.

He was born in Jerusalem in the latter part of A. D. 37, about three months after the death of Tiberius, in whose reign our Lord was crucified, and three months previous to the birth of Nero, under whom, as emperor, Josephus was destined to play such an important part. At the time of his birth, Caius Caligula was on the imperial throne, and Trajan enjoyed that honor at the time of his death; so that not the least interesting fact in his eventful career was this,—that he lived under eleven different Roman emperors, of whom no less than seven died a violent death. That a man of any prominence, and especially one related to the men and the times then existing as Josephus was, could have kept his head on his shoulders during those long years of war, massacre, and bloodshed, is a fact approaching the miraculous. Believing as I firmly do in an overruling Providence, and that God's hand in history is more certain than the date of any historical event, I am convinced that this strange character was raised up at that particular juncture in human affairs, and his life spared through many vicissitudes, that he might do for the world a definite and indispensable work.

Even in his childhood and early youth, Palestine itself, as well as the world at large, was agitated by events of the most stirring character, of which it would be impossible here to give the briefest catalogue. Herod Antipas with Herodias had gone to Rome asking for a kingdom, but had succeeded only in finding a place in exile. Herod Agrippa I., from being a prisoner at Rome, had been advanced to the dignity of a king in Judea. Paul was preaching the Gospel in Damascus, Peter and John in Samaria, and Philip on the road to Gaza had spoken the word of

life to the eager ears of a royal messenger, who on swift chariot wheels carried it to distant Ethiopia. The persecution of the Christians by the Jews, which then took place, is a further evidence of the excited nature of that period, which had no sluggish phases, but was characterized by intense thought, feeling, and action,—only foreshadowings, however, of greater movements that were to follow.

In those days of excitement and questioning, we are not surprised to find Josephus, who belonged to the priestly order, at the age of sixteen deeply engrossed in the study of philosophical systems, and even experimenting with the three leading religious sects as to which he should adopt for himself. In this self-imposed study he spent three years with the Essenes in the desert under their severe discipline, but, apparently not satisfied with the results, returned to Jerusalem, where at the age of nineteen he openly avowed himself a Pharisee. At the age of twenty-six he went to Rome, seeking, if possible, to release from prison certain Jewish priests who, it was thought, had been unjustly arrested. On this voyage he was shipwrecked, and only a few out of the six hundred souls on board the vessel were saved. It would seem that the way had been paved for his success; for (1) Nero about this time had developed a craze for the theatre, and had even appeared on the stage as an actor himself; (2) Josephus found a Jewish actor who was a friend of the emperor; (3) still further and better, Poppæa, Nero's wife, was a Jewish proselyte. Circumstances could not possibly have been more favorable than they were, and the plea of a Jew just then was certain to meet with favor.

At the age of twenty-eight or twenty-nine, in A. D. 66, Josephus was in Jerusalem trying to dissuade his countrymen from plunging into a war with Rome, which he foresaw would surely result in national disaster and ruin. The Jews at that time were in no mood to listen favorably to pacific counsels from any one, and Josephus was led to join his country's cause. Either ability or influence was present; for, to express it in modern language, he was at once made general and commander of the department of Galilee. He raised an army, provided weapons, drilled his men, fortified certain places, had several skirmishes with the enemy, and finally shut himself up in Jotapata, where his military career of less than twelve months' duration was ended by his being taken prisoner by the Romans in A. D. 67. Although the Romans triumphed, as was inevitable, we must not think of the fortifications in Galilee as egg-shells, nor of her army as made up of cowards; on the contrary, during the first year of that terrible war, which exhausted even the Roman army, Galilee bore the whole brunt of it, and on her fair hillsides a hundred and fifty thousand of her youth had fallen in the defense of their fatherland.

When the disaster at Jotapata occurred, a rumor flew to Jerusalem that Josephus had been captured and slain, and there was throughout the city great excitement and universal mourning; but when, a little later, it was learned that he was a prisoner well cared for in the hands of the enemy, all praise was turned to reproach, and he was branded as a traitor

and a coward. A dead general would serve the national cause, it must have been thought, better than a living prisoner. His treatment while a prisoner was mild and considerate, and after two years, in A. D. 69, he was set at liberty by Vespasian. Josephus accompanied his benefactor to Egypt, when the latter was on his way to receive the emperor's diadem at Rome, and later returned to Judea with Titus, who was commissioned to complete the conquest of that province. The name "Flavius," borne by Vespasian, was adopted by Josephus, who under command of Titus had several interviews with the rebellious Jews in the effort to persuade them to lay down their arms. To us this seems the most reasonable course that could have been advised; nevertheless, Josephus at the time suffered the most bitter reproaches for his conduct, and ever since the Jewish world as a body has cherished unkind, not to say harsh, feelings towards him for his, to them, apparent lack of patriotism.

When at last the legions had triumphed, and the walls of Jerusalem were prostrate, Titus, on his return to Rome, took with him, as a companion, Flavius Josephus, then in the forty-fourth year of his age. Our author was now in the prime of life, enjoying an experience that was more varied and rich than falls to the lot of ordinary men. He knew both Hebrew and Greek; he knew intimately the politics of his nation, and her relations to Rome; he enjoyed many favors from the imperial hand; he had saved from destruction, in the sack of the temple, the sacred books, and doubtless many other most precious documents which he held as his personal property; which circumstances, together with the leisure which he could command, fitted him peculiarly for the kind of literary work to which he seems to have devoted himself for the remainder of his life. His writings are known by exceedingly abbreviated titles, as 1. "Wars." 2. "Antiquities." 3. "Life." 4. "Apion." In fuller and more modern phrase we should name them: 1. History of the Jewish War with Rome, A. D. 66 to A. D. 70. 2. History of the Jewish People. 3. Autobiography. 4. A Defense of the Antiquity of the Jewish Nation. The date of the "Wars" is placed not far from A. D. 75; of the "Antiquities," about A. D. 93; and that of "Life" and "Apion" near the close of that century. The last glimpse we have of Josephus is at the age of sixty-three or sixty-four, about the year A. D. 101, and at that time he was in the full possession of all his intellectual vigor. Here the curtain falls, for of the exact time or circumstances of his death we know nothing.

It was no easy task to write a history of such an event as the Jewish War—and that not long after it occurred—which should be generally acceptable to the conquered nation for whom it was originally prepared, and approved also by the conquerors themselves. But Josephus's history was submitted to the inspection of many eminent persons, among whom were Vespasian, Titus, Agrippa II., and it enjoyed the honor of being received by both parties as a fair representation of the events described. In any estimate of the man this fact should be given special

weight. In "Antiquities" (18:3,3), there is a reference to Christ, the only such reference which his writings contain. The genuineness of this passage has been advocated by some scholars, and disputed by others, while a third class regard it as partly original and partly interpolated. In my judgment, if the thousands of pages that have been written on this question, and the paragraph itself, could be blotted out of existence, the real value of Josephus's works would not be affected thereby in the slightest degree. Genuine or otherwise, the world does not need this testimony to establish the claims of Christ. The correctness of many of Josephus's statements has been questioned, but at present there is neither time nor space to examine the grounds of such alleged inaccuracies. The work of exploration and excavation in recent years has done much to confirm certain statements of his which had previously been regarded as wildly exaggerated. Of this kind I could cite several pertinent and striking examples. No space is left to speak of his personal character, the peculiarities of his style, or of the contents of his various works.

The history of Josephus's writings among the different nations of Europe during the last four hundred years forms a curious study. Both France and Spain had them, in part, at least, in their respective vernaculars, one hundred and ten years before any copy appeared in English. This was in A. D. 1492. Italy had them in 1493, Germany in 1531, Holland in 1552, Bohemia in 1553, while England had its first copy in 1602. But England made rapid strides in this respect, and before the year 1800 no less than a dozen different translators and editors had each tried his hand at putting Josephus into a suitable dress for English readers. The movement to popularize this author started in Roman Catholic countries, but since 1700 they have done far less in this direction than Protestant countries have. The first edition of the Greek text was printed in 1544; but it was not till sixty-seven years subsequent to that date, in 1611, that another edition appeared. In the care of the Greek text, and in regard to editions of it, Germany stands at the head; but in regard to popularizing and circulating the works of this Jewish historian, English-speaking people have, since 1800, done more than all the other nations combined. If any one supposes that the works of Josephus are old-fashioned and obsolete, and that they have long since been shelved as such, I will for his benefit state a single fact; namely, that more use has been made of his writings during the decade from 1870 to 1880 than during any previous decade since the first edition of his works was printed, about the year 1470. It does not appear that the world is ready to drop him at present.

SELAH MERRILL.

Andover, Mass.

GREAT men stand like solitary towers in the city of God, and secret passages running deep beneath external nature give their thoughts intercourse with higher intelligences, which strengthens and controls them, and of which the laborers on the surface do not even dream!—*Kavanagh*.

For Friends' Intelligencer and Journal.

SARAH HUNT.

"DEAR SARAH HUNT!" The feeling which would give rise to this exclamation has probably welled up in many hearts since the demise of our beloved friend.

To the one who offers this little tribute she seemed like a connecting link between the older ones who are now living and those of a former generation. Fifty years ago she was an approved minister in high esteem, and her visits of gospel love were accepted as great favors by those among whom she was sent. How many of the readers of this paper can recall her visits to their neighborhood, their meetings, and the homes of their childhood! How vivid are the memories of those religious opportunities in the evening of the day, when the family, and the Friends who were with them as visitors, would gather into stillness;—conversation would cease to flow, and even the *knitting* would be laid aside! O, the impressiveness of that silence, which would at length be broken by the solemn utterances of our dear friend! On these occasions she seemed to be especially favored, and probably many were induced to take up the cross, or to attend to some little intimation of duty, from the encouragement which they received through her.

After one of these opportunities how still we would all feel; how willing to retire without much conversation; and, how peaceful would be the night that followed!

At our large quarterly meetings in eastern Pennsylvania, where she would be seen sitting at the head of the gallery, how the hearts of the young people rejoiced to find that she had been called to visit them. When she would arise to deliver her message how still would be the entire assembly, and how attentively would all listen to hear the gracious words as they fell from her lips!

Forty-eight years ago, this month, she attended Abington Quarter, and lodged at the house of the writer's parents. What a privilege they felt it to have her under their roof, and afterwards to receive some of her choice letters. (One of these, recently found, was written on a spring morning, in 1842. It begins thus: "I awoke this morning at early dawn, and beheld all nature smiling around me.")

In the autumn of 1842, she had an appointed meeting in Friends' meeting-house at Abington. It was on First-day afternoon, and was very large. After a season of silence, she arose, and in a firm but solemn manner, said: "I will go to the meeting this afternoon, not for any benefit that I expect to derive, but to hear, and to judge." She seemed to be deeply impressed with a concern for some one that had used that or similar language before coming to the meeting. The opportunity was one to be remembered, and it is probable that the individual for whom the message was intended was humbled, and—to that extent at least—benefited. I think it was on this occasion that she looked over the large assembly and said, with a power that seemed like inspired bravery, "I do not fear the face of man."

In the autumn of 1852, on a First-day morning, a large assembly was convened in Cherry street Meet-

ing-house, Philadelphia. John Hunt sat in the gallery on one side, and Sarah Hunt on the other. "There were giants in those days." Soon after the meeting had settled Sarah arose with the text: "Shall the ax boast itself against him that heweth therewith, or shall the saw magnify itself against him that shaketh it." Her communication was so powerful and so edifying that it seemed as if nothing more was needed at that time. But when John arose, instead of dissipating the impression that had been made, his testimony served only to *deepen* it.

In Tenth month, 1855, our friend had an appointed meeting at Plymouth, Penna. On this occasion she alluded to the close companionship that we have with our own thoughts, and that where these are not good, we are in bad company. Her presentation of the matter seemed to be as original as it was forcible.

About eighteen months later, she was again at Plymouth meeting-house, on the occasion of a very large funeral. In her communication she quoted one stanza from Montgomery's poem on "Prayer":—

"Prayer is the Christian's vital breath,
The Christian's native air;
His watchword at the gate of death,
He enters Heaven with prayer."

The melody of her voice seemed to be in consonance with the sentiment, and both to be so in accord with the occasion, that the impression made upon the company was such as no description can convey.

Not far from the same locality, and a few years later, she attended the funeral of a little child, and sat in the room with the afflicted family. Her words of consolation flowed so sweetly that they seemed as the oil of balm to apply to the heart-wounds of the stricken parents.

An aged elder, long since gone to his rest, related to the writer the following three incidents of her experience. A Friend who was laboring under deep discouragement, and who felt hardly worthy to speak to her, timidly approached her at the close of a meeting, and said, "Does thee remember me?" She affectionately took his hand, and with tears in her eyes said, "My dear friend, I shall never forget thee." It was just what he needed; and was to him as the cup of cold water.

At the close of one of her favored meetings a man of pleasing address stepped up to her, and said: "Madam, I have been greatly entertained by your discourse; it was one of the most eloquent that I have ever listened to." She seemed pained by his superficiality, as well as his flattery; and not having time or opportunity to convince him that the power under the influence of which she had spoken, was *not her own*,—she drew a deep sigh, and with great seriousness of manner said, "Well, if there was any good in it I hope thee may be benefited by it."

While she was living at Moorestown, N. J., she felt an intimation of duty to pay a religious visit to some distant places, but she tried, in her own mind, to plead excuse. At length, however, the burden became so great that she had to lay the concern before her friends; and as they gave her a certificate of unity and approval, she went and performed the

service required of her. On her return to her home she felt so peaceful that she thought the shrubbery on the lawn looked greener and prettier than ever before.

About the year 1851, she was prevented by sickness from attending her yearly meeting, and having a deep concern on her mind on the subject of music, "she embodied it in an epistle addressed to Philadelphia Yearly Meeting of Women Friends." It was received with great weight, directed to be printed, and copies of it are, I believe, still in existence.

Her communications to this paper have continued until quite recently, and to many of the readers have been among the most edifying articles found in its columns.

We shall no more behold her exercised countenance in our solemn assemblies, nor listen to the persuasive tones of her voice in exhortation; but may her weighty precepts be observed, and the power of her ministry continue to be felt, while the valuable lesson of her dedicated life is cherished in memory's choicest casket.

Eight month 10, 1880.

SCRIPTURE LESSON No. 32.

EIGHTH MONTH 25TH, 1880.

THE ANOINTING OF DAVID.

GOLDEN TEXT:—"Man looketh on the outward appearance, but the Lord looketh on the heart."—1. Samuel 16: 7.

READ 1. Samuel 16: 1-13.

It was a great grief to Samuel that Saul, so grand and noble in his personal appearance, and in the prime of his young manhood, being thirty years old, should be cast off and rejected of the Lord. The reason assigned seems one that to our judgment ought to have given him the favor rather than the displeasure of God, yet those were barbarous times, and not to be compared with our own, in which, with all the light we have, there are many cruel and inhuman practices still sanctioned by law.

Samuel was wise and discerning, and saw in the transactions of Saul a greed and an ambition unworthy the one who had been chosen to rule over the people of Israel. He had spared the best of the spoils and the treasures of the Amalekites, and saved their king alive that his triumph might be more complete, and with a craving doubtless for the treasures of the slain, that he might enrich himself.

Samuel, after showing Saul the greatness of his sin, in that he obeyed not God, left him, never again to return, yet he continued to mourn for him, and while bowed with his sorrow he hears again the word of the Lord, and is sent to Bethlehem to find the future king of Israel.

The elders of the town trembled, etc. They were not expecting Samuel, and were fearful that his visit boded no good to their people; peace and even life itself was uncertain. Not only were they constantly exposed to incursions from the hostile tribes around them, but on any trifling pretext one tribe was ready to take up arms against another. The consolidation of the tribes into one nation was very incomplete, although the policy of Samuel had been directed to cementing the fraternal bond and bringing them

into closer union among themselves and against the common enemies of the nation.

Sanctified Jesse and his sons. Set them apart by special religious rites, having been made sensible that it was from the family of Jesse that the successor of Saul was to come. Jesse, we must remember, was the grandson of Ruth, the beautiful story of whose life is told in the book which bears her name. There were eight sons in all.

The Lord hath not chosen these, was the word of Samuel, as the last one of seven sons had passed before him. When the first came into his presence he was ready to acknowledge him as "the Lord's anointed," but in his disappointment gives expression to a truth that has become universal in every nation which recognizes the sovereignty of God (verse 7.) This method of choice was patriarchal, and common in the times of the prophets. Similar to this was the choice by lot, resorted to by the Apostles when they would set apart one to take the place of Judas the traitor.

There remaineth yet the youngest. He was the shepherd boy, and was not thought to be of sufficient importance to be called in from the flock.

We will not sit down until he is called. Here we have a hint of the circumstances connected with the choice. They must have remained standing as in the presence of the Lord, waiting for the divine manifestation, until the weighty object for which Samuel had made the visit and the sacrifice was accomplished.

Anointed him. This was a very sacred ceremony, and we find that after David had thus been set apart, the Spirit of the Lord was given him as it had been given Saul, of whom it was said, The Lord made him a new man.

As we follow the beautiful and intensely interesting history of Samuel, we find that he was a servant of God as well as a Judge in Israel. After many years of faithfulness, after he had grown to be old, it was not strange that he should desire a release from some of the burdens of public affairs, and that he should place the reins of government in the hands of his sons; but these sons, alas! did not walk in the godly ways of their father, and soon the people became dissatisfied; they went to Samuel and besought him to appoint over them a king, such as other nations had. Poor humanity! they were ceasing to appreciate the blessings of peace and prosperity that had been secured to them through the wise and dedicated management of Samuel. How these restless, ungrateful Israelites must have grieved the great-heartedness of their magnanimous judge, yet in straitened pathways he knew where to turn for wisdom, and he "prayed unto the Lord," and the answer to this petition was that he should permit the people to have their way. So in accordance with this we find in the book of Samuel the remarkable choosing of Saul, who in stature and physical appearance seemed indeed a king! While this king mingled with prophets all went well with him and the people, but when he ceased to trust in the Supreme Ruler of the universe, and began to "fear the people, and listen to their voice," then came wars and dis-

tractions, and "his kingdom could not continue." Therefore it became expedient (for the preservation of Israel) that there be raised up for them some one greater than Saul—even one divinely fitted for the throne. But where should this unknown future king be found? In human judgment Saul had seemed preëminently the one for the place, and yet proved a failure! It was evident that there was needed in so august a selection a *light* clearer than the wisdom of this world, and for the right guidance the prophet Samuel turned to God, and under this baptizing power was directed to the house of Jesse. In reading the account we can in a measure understand the great responsibility—the weal or woe of all Israel,—that rested upon his decision; in what humility and dedication of soul he bowed to the divine voice, even though in his own eyes young Eliab's appearance so pleased him that he thought "surely the Lord's anointed is before him," but a spiritual influence upon his dedicated mind bade him "Look not on his countenance, or the height of his stature, because I have refused him."

But at last, when David was brought into his presence, the prophet Samuel seemed to see clearly as in the light of day that "the Lord's anointed was indeed before him," and through the Power that had called him when a little child to a consecrated mission, he was here directed to "Arise, anoint him: for this is he."

In human judgment, David was only a shepherd boy; but being a divinely anointed king, he was enabled to disperse the bitter enemies of the Israelites. Is there not a lesson here? Is not every soul that comes under the baptisms or anointings of the Holy Spirit made a king over the "enemies of our own household," and enabled to destroy the Goliaths of besetting sins?

NOTES ON THE LESSON.

The great thought of our lesson is found in the declaration, "The Lord seeth not as man seeth: for man looketh on the outward appearance, but the Lord looketh on the heart." Choosing wisely, we choose not because of a beautiful exterior: we must look deeper,—must go beneath the surface and seek after the essential qualities of heart and mind; if these are wanting, no outward good, be it ever so attractive, can make up the deficiency. Our companions, those with whom we come into intimate relations, have vastly more influence in the development of our characters than we are willing to acknowledge. Few of us in the formative period of our lives have the courage to be true to our convictions when our associates are indifferent to what is esteemed right for us, or treat with ridicule some cherished thought or principle of action that has been our safeguard in the hour of temptation.

Samuel is very loath to believe that Saul,—the man of fine stature and of great prowess,—is lacking in the qualities essential to a true statesman, and he is grieved and in great despondency at the indications of his failure. He had wrought such deliverance for Israel, had shown himself so valiant in battle, and so self-reliant in every emergency, that the

good old prophet was ready to condone his faults, and excuse the evident disregard of himself and of the divine messages that were given him to deliver. And he goes to Bethlehem with the same thought that impressed him in the choice of Saul,—a fine personal appearance and a noble bearing he considers as essential in the ruler of Israel, and he finds these in the first born of Jesse. It is only when the revelation is made to his spiritual ears, that more than outward excellence is needed in him who is to be the nation's king, that he puts aside this thought, and seeks for other qualities that lie beneath the surface. How he discovers these in the stripling who is brought from the sheep-fold and stands before him the accepted of Jehovah, we are left to conjecture.

The story is told in the briefest manner; we must read between the lines to find all it contains, and so reading we will be at no loss to see the chosen of the Lord in the youthful David—the lad who had shown himself ready to risk his own life to save his flock from the marauding beasts; who with his harp could charm them into docility and in his love of nature could trace a divine hand in the smallest blossom that lifted its tiny cup to the sunshine, as truly as in the stars that looked down upon his path from the immensity of space. In this choice we are shown the folly of rejecting any because of their youth when a service is required that they are capable of performing. It is a fact established by the record of the race that when an important work is to be undertaken some youthful David is called into service, and the work is accomplished. This is as true of the world's leaders in the secular as in the spiritual affairs of men. "Let no man despise thy youth; but be thou an ensample to them that believe, in word, in manner of life, in love, in faith, in purity,"—was the exhortation of Paul to Timothy, the youthful elder and his beloved son in Christ.

We need the old for counsel and the young for action; both working harmoniously together for the best welfare of the whole. And in the choice of our associates, the true-hearted who accept with a cheerful courage the vicissitudes that our human lives must encounter, and have that reliance upon Divine direction which brings contentment,—these are the ones who will be helpful, and we shall find our own lives fuller and more hopeful for their companionship.

"I'm bound to have sunshine in my house," said a bright-faced, cheery-voiced West Philadelphia matron. "I mean the sunshine that comes from a happy disposition. Many a child goes astray, not because there is a want of prayers or virtue at home, but simply because home lacks sunshine. A child needs smiles as much as flowers need sunbeams.

"Children look beyond the present moment, though many of us think they don't. If a thing pleases they are apt to see it. If home is the place where faces are sour and voices harsh, and fault-finding in the ascendant, they will spend as many hours as possible elsewhere. The great study of my life is to make my husband and children happy."—*Christian Register*.

PICTURES OF HEROIC DEEDS.

THE designs illustrative of deeds of heroism which Walter Crane has made for the decoration of the Red-cross Street Hall, London, are to be carried out on panels eleven feet by six, which occupy the main spaces of the wall. There are also, in narrower spaces, to be figures representing the virtues of courage and fortitude, and two female figures holding crowns of laurel leaves.

The centre design coming between these two groups represents Alice Ayres saving three children from the fire which took place in Gravel Lane three years ago. It may be remembered that she rushed three times back from the window to fetch each child, though entreated by the crowd below to save herself before it was too late.

On the same side of the wall is a design of a man rescuing a child from a well under circumstances which endangered his life; another design is of two workmen mending a railway line which they saw was unsafe, just before an express train was due. Though warned of the danger, they finished their work and saved the train, but lost their own lives.

On the other side of the hall are to be the stories, first of two miners who were down the shaft of a mine when they saw something had happened which made an explosion inevitable. Both rushed to the basket and got in, but finding the rope was not strong enough to pull them both up together, one jumped out into what he thought would be certain death. After the explosion had taken place, his companion returned and found him safe, the explosion having passed over him.

Another is of some sailors who were wrecked and got on a rock. There was only one who could swim, and he prepared to swim to the shore, when all his companions begged him to remain with them. He remained and prayed with them till a basket was let down from a cliff, which took them up one by one, the older one refusing to go before the rest were safe.

The third design is a man who held a ladder at a fire while some people were escaping from a window. Melted lead dropped down on his arm, burning a hole in it. He never flinched, but held the ladder till the people were rescued.

The fourth represents a boy saving the life of a man from drowning. This boy saved four lives before he was fourteen years old. The incident Mr. Crane has taken was the one in which there was the most peril. A ship was coming into the harbor, and a man fell overboard so close to the ship and the quay, that the sailors looking on said it was a useless risk of life to attempt to save him. The boy, then only thirteen, threw off his cap, plunged in without any other preparation, and saved the man.

The last design is of a man seizing by the horns a mad bull which was running after two children. The stories are to be written in clear, large letters on tablets under each design, and the spaces between the panels Mr. Crane has ornamented with beautiful arabesque work.—*Exchange*.

GODLINESS WITH CONTENTMENT.

There are multitudes of people both within and outside the various religious societies to whom contentment, in the sense in which the Apostle used it when he wrote "Godliness with contentment is great gain," is a stranger. They are pure in their lives, upright in all their dealings, and above suspicion, yet have never found the true secret of a happy life, its finest flavor and most enduring peace, the peace that passeth all human understanding,—a contented mind.

This condition can only be attained when we are willing to give up every fret and worry,—the little besetting things that so easily vex and annoy us, and unfit us for calm and dispassionate judgment in the smaller matters of our every day life; for it is in these we find our greatest temptation to lose our balance, and before we know we are in a tangle of doubt and distrust that seems inextricable. But when the sober second thought gets control the trouble is generally found to have been unworthy of our attention. This true contentment cannot be fully realized until we are willing to accept the dispensations that come to us as the result of causes oftentimes beyond our control but essential to the perfection of character and the development of that element in our character by which we learn forbearance and a generous regard for the feelings and the failings of others. It was the God-likeness so wonderfully displayed in the character of Jesus, and his willingness to do and to suffer, not regarding his own personal comfort in the larger duty of comforting others, that made him the example and pattern for all mankind of what is possible to humanity.

This contentment comes into the soul willing to receive it as the refiner and purifier, consuming the corroding elements that cover and hide the pure gold of the divine life,—the alloy that mars its beauty,—leaving the pure metal ready for the impress of the great Artificer. The results are the same in all, but the baser materials that must be eliminated differ in quality and degree, and so the process that brings the true results must be different. Some by nature are easily discouraged and given to despondency, seeing a "lion in the way" whenever some unlooked-

for trial or disturbing element comes to the front, and fears of what may happen often bring about results which, by patience, and a seeking after, with a firm reliance upon, Divine wisdom, might be averted. These things are daily witnessed, and their frequency and the sorrow and trouble they bring to the life should lead every intelligent mind to seek for that state and condition which will be as a wall of defense in the hour of trial. This is found only by committing our ways unto God, in earnest endeavor to be true to the revelations of right and duty which will give us Godliness with contentment.

There are many exhortations to trust in the Lord, many calls to be reconciled to God, many inducements offered to be on the side of God, yet none of these conditions can be reached until we are willing to make the best of our environments; where they are not to our mind and the way seems hedged about, learn to be patient, contented with our lot doing our best and thus developing a character worthy of the confidence of our associates, which will be our best recommendation for whatever duty or responsibility may be laid upon us in the order of the Divine economy. It was Thomas à Kempis who wrote, "If thou hast learned to hold thy peace, and be patient doubt not but God will aid thee from above." What a blessed attainment! Surely we may, with such a hope, respond in the words of inspiration "Godliness with contentment is great gain."

ATTENTION is called to the notice in our advertising columns of the arrangements for Illinois Yearly Meeting, and the names of the committee to provide accommodations for visitors from a distance. It is to be hoped that some Friends in other yearly meetings may feel it right to be present with the little company of Illinois.

IN last number, on page 480, second column, last paragraph, read Woodlawn for Woodland. On page 491, the institute mentioned is Chappaqua Mountain Institute.

MARRIAGES.

GAGE—FRITTS.—At the residence of the bride's mother, Macedon, N. Y., on Eighth month 6th, 1889, by Friends' ceremony, Frank Gage, of Rochester, N. Y., and Elizabeth Fritts, daughter of Maria B. and the late George O. Fritts.

DEATHS.

COLSON.—Of malignant diphtheria, Eighth month 5th, 1889, Jonathan, son of William M. and Margaret H. Colson, of Mullica Hill, N. J., in his 19th year.

HARRY.—At her home near Fawn Grove, York county, Pa., Eighth month 1st, 1889, Lydia T. Harry, a member of Fawn Particular and Deer Creek Monthly Meeting, aged 55 years.

HENSZEY.—At St. Paul, Minn., Lilly G. Handy, late of Philadelphia, wife of Samuel Henszey (4th), son of

Ether and the late Samuel C. Henszey, of Philadelphia, Pa.

PAINTER.—At Lincoln, Nebraska, on Eighth month 8th, 1889, Hettie Kersey Painter, M. D., formerly of Chester county, in the 69th year of her age.

She was the daughter of Joseph and Charity (Cope) Kersey, and granddaughter of Jesse Kersey. The announcement of the death of this earnest worker will be read with sorrow in multitudes of homes where her name has been a household word ever since the sad days of war's fearful carnage filled the hospitals of our land with sufferers needing the tender sympathy and helpful services which it was hers as physician, nurse, and Christian adviser to extend. So long as the need existed she remained at her post, and when the hospitals were closed, she removed with her husband to Nebraska. Their beautiful home in Lincoln was ever open to receive members of the Society of Friends traveling in that section of country. It was largely through her exertions that the Friends' meeting, held at Lincoln, was started, and for a long time the sittings were held in her house.

PENNOCK.—Fifth month 1st, 1889, of paralysis, John Pennock in his 89th year; and Fifth month 10th, 1889, Sydney Pennock, in her 86th year. The above formerly lived in Chester county, Pa., and had lived together as companions for 65 years; they were members of Salem Monthly Meeting, Ohio. E. G.

PETERS.—Seventh month 30th, 1889, Jacob Peters, of Unionville, Centre county, Pa., in the 80th year of his age; an elder and member of Centre Monthly Meeting.

PUGH.—At his residence, Conshohocken, Pa., on Third-day, Eighth month 6th, 1889, Samuel Pugh, in his 61st year. Interment at Radnor Friends' ground.

STOKES.—At Woodbury, N. J., Eighth month 8th, 1889, Martha C., wife of Edwin Stokes, aged 58 years.

SHAW.—Eighth month 2d, 1889, at Abington village, Pa., John Shaw, in his 85th year.

WOODNUTT.—At his residence in Philadelphia, Pa., Eighth month 9th, 1889, Thomas Woodnutt, in his 73d year; a member of the Monthly Meeting of Friends of Philadelphia.

OLD MEETINGS IN MARYLAND: THE PRESERVATION OF QUAKERISM.

ELLIOTS INTELLIGENCER AND JOURNAL:

THERE have appeared recently in your paper some interesting notices of ancient meetings, but one has been omitted which I should like to aid in keeping in remembrance. It is that at West River, Maryland, which was visited by George Fox in February, 1672. He relates in his journal that he took ship at Jamaica, Twelfth month 8th, 1671, and after a voyage of six or seven weeks entered the Bay of Patuxent River. After some perils and privations in the bay from which he was rescued by the Friends of West River, he landed just in time to attend a meeting which had been appointed there by John Barney at for all Friends in the province of Maryland. "A very large meeting this was and held four days, to which besides Friends came many other people, divers of whom were of considerable quality in the world's account: for [says he] there were five or six justices of the peace," and other notables present. "After this we went to the Cliffs, where another general meeting was appointed."

The old meeting-house, or a part of it, was stand-

ing at West River in the year 1831, as I am informed to-day by a female relation who remembers it, but it had disappeared when I first visited the place in 1847, though the grave yard which was attached to it was surrounded by a neat enclosure and kept in good order. It was many years ago surrendered to the public as a place of sepulture because, as was said, the people of the vicinity were nearly all descendants of Friends. When the meeting was laid down I do not know, but it must have been early in this century or perhaps late in the last. Its beneficent influence was very manifest when I knew the place, in the sobriety and quiet refinement of the people, in which respect it excelled every rural neighborhood I have ever known and was in conspicuous contrast with most parts of lower Maryland, which was distinguished for reckless dissipation. The last professing Friend there, named Richardson, was baptized in his old age about the year 1848, into the Episcopal Church, which Church indeed had received nearly all the descendants of Friends there, as it has gained a great majority of all who in this part of the country have left the meeting. A more respectable church congregation than that which succeeded the West River meeting will not be found in any city.

"The Cliffs," which George Fox next visited, is, or was sixty years ago, the name of a place on the west shore of the Chesapeake, thirty miles below West River. My informant, who then knew the place, remembers not even the tradition of a Friends' meeting there. But many flourishing meetings once existing in Maryland have utterly perished. I remember two which were occasionally held as late as thirty years ago, but are now wholly extinct. There was, however, another Friends' meeting in Anne Arundel county, at Friendship, about ten miles from that at West River, and it was flourishing in 1698.

Quakerism seems to have considerable power of growth, but none of self-preservation. In this respect it curiously resembles the coral reefs of the Pacific. They grow in rough water but perish in still water. They are formed along the coasts and grow seaward, but as they produce still water in the rear, between themselves and the mainland, in which the coral insect cannot live, they disintegrate as fast on one side as they grow on the other; and so in time the whole reef, not at all enlarging its dimensions, travels far away from its original location. And so it seems Quakerism, wherever established, produces a condition of things fatal to its own existence. Some have said that Quakerism produces sobriety and prudence, these two produce wealth, and wealth strangles Quakerism. But I think this theory is not borne out by the facts, and I have a better explanation. Quakerism requires a considerable amount of religious education. To enable one to dispense with scripture readings, singing, sermons, and prayers,—all the accessories which in other denominations exist and satisfy the religious feeling,—he should be thoroughly supplied with ideas of that order from some other source. The early Friends were mostly brought up in the Church of England, which before all others provides for the religious education of its members. In its daily service the Scriptures are

methodically read, so that in the course of a year the regular attendant has heard all the material parts. Creeds are repeated, too, so that he knows the dogmas of his church, and litanies and prayers direct his attention to the trials and temptations and suffering which are most commonly encountered in life. In nothing perhaps was the eminent good sense of the English race more manifest than in their transforming at the Reformation the senseless spectacle of the Catholic mass into the instructive liturgy.

The parents of George Fox, says Janney, "were members of the established church and endeavored to educate their children in conformity with its doctrines and mode of worship." We may be sure that the son of "Righteous Christ" was not behind any in his attendance on the catechisings which in addition to the lessons at worship, were intended to instruct the people in religious things.

It is singular, then, that Fox in establishing the discipline of his sect, made absolutely no provision for the instruction of the people. And Sunday schools, which in all other denominations supplement the defective teachings in meetings for worship, were until very recently wholly unknown among Friends, and were thirty years ago distinctly discouraged. Thus in my judgment is produced the stagnation in which Quakerism first ceases to grow and then disintegrates. In his review of "Robert Elsmere" W. E. Gladstone well observes that one who has been educated a Christian may perhaps without danger to his morals repudiate the faith in after life; the fruits of infidelity are to be looked for only in those who have never held the faith. By parity of reasoning the fruits of Quakerism are not to be looked for in Fox and Penn but in those who have grown up under the system which they established, and still more in the succeeding generations who are still further removed from the church influences.

Friends, it seems, in some places are sensible of a want of instruction and are seeking to supply it by a return to a hireling ministry; thus repudiating one of the chief testimonies of early Friends. If instead of this they would restore the liturgy, modified so as to teach only Friends' doctrines, they would, I am confident attain their object, and that by an exercise in which Christ himself participated, not only once, but "as his custom was." Sacerdotalism has been the bane of Christianity, and a paid and therefore exclusive Ministry must partake of its dangerous qualities. J. D. McPHERSON.

August 10, 1889.

Who are so rich as the poet and the man of science? "The meanest flower that blows" is an unfathomable mine of thought to the one, and "the poor beetle that we tread upon" holds a whole museum of nature's miracles for the other.

Whether it be true or not that the world knows not its greatest men, it certainly knows very little of many of its best men; nothing at all of most of its best women. The bolts and pins that fasten the walls of our dwellings are mostly buried out of sight, and so it is with the virtues that hold society together.—*Selected.*

NEWS OF FRIENDS.

PHILADELPHIA QUARTERLY MEETING, which in the summer is held at the Valley meeting-house, took place on the 6th of this month. The clear, cool morning after a succession of stormy days gave an opportunity for many to attend, and the house was well filled. There were some Friends present from other meetings but none with minutes. A feeling of sweet solemnity seemed to settle over the meeting, and the spoken word testified of that inner life where the real dwelling place of the Most High is to be found, and where the soul's peace must be made. But little business appearing to claim the attention of the meeting it was decided that the Extracts of our late Yearly Meeting should be read, in order that some of the valuable exercises of that body might be revived. Near the close the women's meeting was favored with a visit of love from our friend Robert Hatton, who tenderly advised the young to choose the Lord for their portion, assuring them that this world's possessions would be vain and unsatisfying without our Heavenly Father's blessing.

The meeting for ministers and elders, held on Second-day afternoon, (5th instant), was an occasion of close and searching inquiry. The absence of a large proportion of the representatives appointed by the several preparative meetings was cause of some discouragement, yet on the whole it was felt to be a favored time. The advanced age of most of the members of this body was alluded to, and the desire was expressed that in the appointing of elders our meetings look to those who are younger, that these may be called into service while the aged are yet with us to counsel and advise them in the important work to which they are appointed.

—Abington Quarterly Meeting was held at Gwynedd on the 8th. The weather was very pleasant, and the attendance was fully as large as has been usual of late years. Joseph B. Livezey was present with a minute from Medford Monthly Meeting; and David B. Bullock, accompanied by John Zorns, with a minute from Salem Monthly Meeting. In the meeting for worship there was vocal testimony by Joel Lare, Samuel S. Ash, David B. Bullock, Joseph B. Livezey, and others, and in the meeting for business earnest exhortations were presented to faith in the doctrine of Friends, "Mind the Light." All the representatives appointed answered to their names. A large committee was appointed, including members from all the different monthly meetings, to take into consideration the subject of holding circular meetings, and to appoint some if way should open for it.

—At Concord Quarterly Meeting, held Seventh month 30th, the attendance was smaller than usual, owing most likely to the continuous and heavy showers of rain. But the meeting was a favored one, and the presence of several members of the Yearly Meeting's Visiting Committee added much of interest. Feeling communications were given forth by Ezra Fell, Watson Tomlinson, Henry T. Child, and others. In the meeting for discipline Lydia H. Price expressed a concern to visit the brethren, and this being united with, she did so, counselling them to hold fast to their integrity in all their busi-

ness transactions, not yielding to discouragement if unable to meet all the demands of a luxurious age in providing for their families; citing them to the more enduring riches of the heavenly kingdom. The Temperance Committee presented an interesting report, and were encouraged to continue their labors.

—The Kennett, (Pa.) *Advance*, of the 10th inst., says: "Kennett Monthly Meeting of Friends was held on the Sixth inst. at Unionville. Annie S. Clothier, a minister with a minute from the Monthly Meeting of Friends of Philadelphia, was in attendance and addressed the meeting. A notable event worthy of record was the presence of Cyrus Chambers, of Kennett Square, now in his ninetieth year, who rode the entire distance to and from the place on horseback, a distance of eight miles. Surely the promise has been fulfilled: 'My Son forget not my law, but let thy heart keep my commandments. For length of days and long life and peace shall they add to thee.'"

—The First-day School Union of the Western Quarter, Chester county, held a picnic on the 3rd instant, near West Grove. A portion of the morning was devoted to literary exercises, consisting of Bible readings, recitations by Eva Hayes, Josephine Hallowell, Rebecca Fell, and others, after which class exercises were given by the schools of Doe Run, New Garden, and Mill Creek. An address was made by Henry S. Kent.

—Salem Quarterly Meeting, Ohio, was held on Seventh-day the 10th inst., and was believed to be a favored opportunity. Several edifying communications were delivered. The attendance was fully as large as usual. The Queries were all read with very appropriate answers. E. G.

THE SOCIETY OF FRIENDS IN ENGLAND.

[The following letter appears in the *London Globe*. William Talack, the writer, is a prominent member of the Society of Friends in England, well known also as an active worker in the cause of prison reform, etc. The statements are interesting, as describing the present situation of Friends in England, and as showing the individual views of the writer.—EDS. INTELLIGENCER AND JOURNAL.]

THERE has just appeared in your columns, under the heading of "Quakers of To-day," one of those pleasant, graphic articles which help to render *The Globe* so interesting to many readers. But may I be permitted as a "Friend," to observe that the writer of the paper in question appears to have regarded the formerly prevalent "peculiarities" of our Society's dress, speech, and other usages, as being far more essential to Quakerism than they ever were in reality. Real essential Quakerism is one of the simplest systems imaginable, and was originally and radically opposed, in its very spirit, to "forms" and to any of those outward peculiarities which are as easily accessible to a hypocrite as to a sincerely religious person. It was precisely these unquakerly Puritan "fads" which, unfortunately, were allowed at an early period to fasten upon Quakerism as excrescences, that ultimately cramped and grievously injured the influence of the spirituality and independence of the Society as a special exponent of religious freedom. For gen-

uine Quakerism consists in an almost unexampled deliverance from undue restraints, either of creed or religious practice, or, I may add, of political party.

A recent convert to Quakerism (and we have more than a few of this class) remarked to me, "What I prize in the Society of Friends is its rare freedom. It is so different to what I have been accustomed to in another denomination." The Friends have no creed to which their subscription is required. They are left to their own interpretation of the Bible as the supreme and only essential body of religious truth, and in regard to which we trust that earnest seekers after the Divine spirit's help towards its interpretation will not in general be permitted to go far wrong in their conclusions. When a year or two ago some timid and ultra sectarian American "Friends" tried to drag their English brethren into a virtual acceptance of a creed, the latter, as a body and officially, most decidedly refused to be so overruled from their habitual freedom. We have in our ranks wide varieties of religious opinion, ranging almost from "Plymouth Brethrenism" to Unitarianism in the extreme wings of the society. But, in general and on the whole, the Friends are characterized by a reverent acceptance of at least most of what is currently deemed "orthodox Christianity," especially including faith in the historic Christ, as the only Saviour of the world, and as the supreme expression and manifestation of the love of the universal Father to his human family. American Quakerism is, and has been, on the whole, rather less free and therefore less "friendly" in essence, than its British ancestor and kindred society. For example, private interpretations as to dogma or eccentric "fads," are more thrust forward among Friends in the United States than here. We English Friends maintain our freedom more generally. Of late years we have increased it by shaking off those external "forms" which, however picturesque and quaint in the eyes of the antiquarian or novelist, were yet mischievous to us, as excrescences, and as sources both of some hypocrisy and of considerable uncharitable judgment. But modern British Quakerism has reverted increasingly to the essential principle of the society, which is this—the effort to come, and to bring others to the Divine presence, with as few hindrances as possible, and with a strong inculcation of inalienable individual responsibility to the Highest, a responsibility of which no priest, nor even monarch, may divest us. It was preeminently that individuality of priesthood and of spiritual independence (save of the Bible and of its inspiring spirit) which characterized such well-known modern "Friends," as John Bright, Joseph Sturge, Joseph Pease, and William Edward Forster.

But, further, the spirit of Quakerism is as needful an ingredient, at least, for the present and the future, as in the past. For it cherishes freedom not only from aristocracies, but from democracies. Genuine Quakerism tends to become a Theocracy, which, while delivering its sincere followers from the assumption of individual interference, is equally likely to render them jealous of collective and popular tyranny. And that is the sort of tyranny that is looming up in many places, especially in America. The

blessed stubbornness of spiritually independent individualism, of course, within the limits of common-sense, and of consideration for due collective rights, is an element of characteristic and genuine Quakerism which, in the coming years, will be very needful and very precious, both in the interests of popular and of religious freedom. In conclusion, I believe Quakerism will never be the religion of the many. It is best adapted for a few; but, as such, it is, we may trust, a useful ingredient in the great and varied sum of churches and parties, which, like the harmonious variety of a garden or a forest, constitute the totality of the Creator's human family.—Yours, etc.

WILLIAM TALLACK.

Stoke Newington, N., July 30.

EDUCATIONAL NOTES.

WE have received the (thirteenth annual) circular and catalogue of Friends' Academy, located near Locust Valley, L. I., and founded by Gideon Frost. The institution is in charge of a Board of Trustees, of which Isaac H. Cocks is Vice President, Samuel J. Underhill Treasurer, and Frederick E. Willits Secretary. Franklin P. Wilson, A. B., is Principal, and teacher of mathematics; Annie M. Adams is Assistant Principal, and teacher of grammar, elocution, and history; Horace L. Dilworth is teacher of sciences, Mary B. Weed, B. L., of languages, and Anna W. Croft of the primary department. James C. Stringham is Superintendent, and Gertrude Stringham Matron. For 1888-9, the catalogue of pupils shows 82 names, of which 61 were in the Academic, and 21 in the Primary department.

We make the following extracts from the Catalogue:

"This school was established by the late Gideon Frost, in the year 1876, for the purpose of giving to children of Friends and others an opportunity to gain a thorough education in connection with a guarded moral training. It has been incorporated, and is under the management of a Board of Trustees, who will conduct it according to the principles of the Society of Friends.

"The design of this institution is: first, to develop a spirit of *independent, original* thought, and, under a guarded care in their education, to lead pupils into the acquirement of good habits, and to lay a foundation for future usefulness; second, to give a practical, yet liberal education to all who cannot take a collegiate course; third, to prepare students for college.

"It is located near Friends' Matinecock Meeting House, and about half a mile from Locust Valley, a station thirty miles east of New York, on the Locust Valley Branch of the Long Island Railroad.

"The school is not surrounded by influences tending to lead pupils astray, as it is situated in the midst of a purely farming community. The grounds are ample, shady, and pleasant.

"In the discipline of the school, great reliance is placed upon moral means. The erring are duly admonished, and every proper effort made to win them back to duty and obedience. If, after these admonitions, they continue insubordinate, and their influence prove pernicious to the school, they will be dis-

missed. As our object is to teach subjects rather than books, to cultivate and strengthen the pupil's faculties, and to teach him to make the best use of these faculties, we shall urge upon each pupil the necessity of self-dependence rather than reliance upon text-books. To test the student's knowledge and to develop the power of original research, questions and problems not contained in the text-books will frequently be given."

HENRY STANLEY NEWMAN AT SWARTHMORE.

[THE visit of an English Friend, H. S. Newman, to Swarthmore College, several weeks ago, was mentioned at the time. *British Friend*, (London and Glasgow), for Eighth month, now prints the following extract from a letter from him, giving his impressions of the visit.—Eds.]

Swarthmore is the largest and most beautifully constructed college in connection with the Society of Friends anywhere in the world. It stands in a most commanding situation on the top of a hill, surrounded with 100 acres of lawn, and garden, and trees, and farm. It belongs to the body which English Friends usually speak of as Hicksites. I had received a most cordial invitation from President Edward H. Magill, and I also had a kind note of introduction from Joseph Wharton. The President at once gave me a hearty welcome. Punctually at 11 the bells sounded, and the students, some 250 in number, mustered in the large assembly hall. They had desks for taking notes, and a large number of them occupied the upper gallery. E. H. Magill introduced me, and I spoke exactly for the hour that had been allotted me. At 12.30 we all dined together, including all the students, professors, and president. It was a very pretty sight. The young men and ladies range themselves together according to their relationships and friendships—sisters and brothers and cousins sitting side by side, and talking freely as the meal runs on. Colored servants wait at table,¹ and all the appointments are excellent. It looked more like some of our English Friends' schools, such as York, than any I have hitherto seen in America, the young people being dressed simply, without peculiarity.

After dinner we were taken round the buildings, which are all new, having been erected during the last few years. The class-rooms are delightful, and the museum and library well furnished. There is also a good news-room, where the students sit and read current periodical literature. There are chemical laboratory and demonstrative rooms, and a high-class Greek professor (who has often traveled in Europe), and a good elocution professor. But no room in the college interested me more than the "repository," in which there are a large number of old Friends' books and Friendly relics. George Fox's walking stick in a glass case! his clothes' brush with his name carved on it, and above all, the original oil painting of George Fox, by Sir Peter Lely. This is,

¹ This is an error. Waiting at table is entirely done by the young men students, who take their "turns," week at a time, one for each table of about twelve.—Eds.]

I suppose, without doubt, the most valuable and best authenticated portrait of George Fox in existence.¹ It is from this portrait that so many photographs have been taken of late years, and I was very glad to see the original in Swarthmore College. There is also the original MS. (dated 1784) of Samuel R. Fisher's works, with delightful letters and autographs of John Woolman. One of these, written in clear style, is John Woolman's well-known protest against silver spoons, commencing with the words, "The customary use of silver vessels about houses hath deeply affected my mind."

Nothing could exceed the kind and cordial welcome given me by the officers of Swarthmore College. They are very glad to welcome English Friends, and although I spoke clearly to them about Christ there was not one jarring note, and some of the teachers came to me afterwards and expressed their cordial approval. The welcome we received from the students themselves was enthusiastic, and I feel very thankful to have made the effort to visit this great and wealthy Hicksite college. I felt some timidity before going, but rejoice to believe that my Heavenly Father made the way for me, and that His Spirit was with me, as I followed in the path He had opened for me.

H. S. NEWMAN.

CORNELIUS RATLIFF, SEN.

[CORNELIUS RATLIFF, Sen., departed this life on the 18th of Sixth month, 1889, in the 91st year of his age. He was an earnest worker in Richmond, Ind., Monthly Meeting, and was its first assistant clerk after the separation. When the First-day school was opened he was appointed the superintendent. In forty successive years he was only absent from meeting three times. The last eight years of his life he was blind.]

It will be remembered that his wife Mary Ratliff, passed away on the 23d of Fourth month last, aged 87 years.

The following lines were written by a young friend on returning from the funeral of Cornelius:]

Call not death "The King of Terrors"
When he comes in angel guise,
When he lifts the veil of darkness
From the weary, sightless eyes.

Many years an earnest worker
Dwelt among us,—faithful, strong,
Deep of thought, and prompt of action,
Foe of tyranny and wrong.

Many years he toiled among us,
And when dawned his days of pain,
Sat in sweetest patience, waiting
Till the light should come again.

Not for him the golden sunrise;
Not for him the summer's glow;
Nor the play of light and shadow
'Mid the wheat-fields—ebb and flow.

Saw he not the smiling faces
Of the friends he loved the best,

Nor his own beloved companion
When they laid her down to rest.

Yet his spirit, calm and gentle,
Ever ripened for the skies;
And upon his inner vision,
Shone the light of Paradise.

And in dreams he saw the splendor
Of the golden heavenward way,
Shining "brighter yet and brighter
Even to the perfect day."

Then at length the pale death angel
Came to lead his faltering feet,
To the land his visions pictured:
To the Home where loved ones meet.

Call not Death "The King of Terrors,"
When he comes in angel guise,
When he bears the ripened spirit
To its garner in the skies.

"WE SHALL BE LIKE HIM."

"We shall be like him"—strange the story!
Will wonders never cease?
We shall be like the King of Glory!
Like him, the Prince of Peace!

It must be true, for carefully
I've read this passage o'er;
It plainly says that "we shall be
Like him," whom I adore.

O, tell me does it really mean
'Tis possible on earth
To be all glorious within,
Like him, of lowly birth?

Or does it mean that we must wait
To lay this earth-robe by?
I grow impatient with the thought
And long to mount the sky.

I'll read it o'er again. It says
That "when he doth appear
We shall be like him;" it must mean
"We shall be like him" here!

For O, last night, while bowing low
Before my Father's throne,
I saw his face, and O! I felt
His strong hand clasp my own.

You smile and tell me 'tis by faith,
And not by sight, I see;
If such the fact, makes it the sight
A whit less real to me?

Would'st have me think that fate is but
Some ignis fatuus light?
No, no, 'tis all the same to me
Whether 'tis faith or sight.

And this I know, for 'twas his voice
Which spoke thus in my ear:
"If we would dwell with him above,
We must be like him here!"

—Harriet Chase, in the Open Window.

"New occasions teach new duties;
Time makes ancient good uncouth
They must upward still, and onward,
Who would keep abreast of Truth."

¹ It is believed that this is a portrait of George Fox, and that the artist was Sir Peter Leely. But the evidence to this effect is probable, not conclusive.—E.S.]

IN SCHOOL.

I USED to go to a bright school,
 Where youth and frolic taught in turn;
 But idle scholar that I was,
 I liked to play, I would not learn;
 So the Great Teacher did ordain
 That I should try the school of pain.

There are two teachers in the school,
 One has a gentle voice and low,
 And smiles upon her scholars as
 She softly passes to and fro.
 Her name is Love, 'tis very plain,
 She shuns the sharper teacher, Pain.

They tell me if I study well,
 And learn my lessons, I shall be
 Moved upward to that higher class
 Where dear Love teaches constantly;
 And I work hard, in hopes to gain
 Reward, and get away from Pain.

Yet Pain is sometimes kind and helps
 Me on when I am very dull;
 I thank him often in my heart;
 But Love is far more beautiful;
 Under her tender, gentle reign
 I must learn faster than of Pain.

So will I do my very best,
 Nor chide the clock, nor call it slow;
 That when the Teacher calls me up
 To see if I am fit to go,
 I may to Love's high class attain,
 And bid a sweet good-by to Pain.

—Susan Coolidge, in "What Katy Did."

PROGRESS AND WAR.

[We take the following extracts from an article in *Macmillan's Magazine*, (London), for Seventh Month, by Professor Goldwin Smith, an English writer well known in America, and who has resided for several years at Toronto, Canada. Much of his article is disfigured by his political prejudices and economic extremes, and he is by no means a sound and earnest friend of Peace, but what he says on the subject of the survival of the spirit of war, and the prospect or otherwise of its decrease, is interesting as the comment of an intelligent observer, generally friendly to peaceful principles.—EDS INTELLIGENCER AND JOURNAL.]

WAR estimates increase and even in sea-girt England conscription, or something like it, is proposed. With all our enlightenment, philanthropy, and democracy, after William Penn, Cowper, and Wilberforce, after Voltaire and Rousseau, after Jeremy Bentham, the Manchester School, and John Bright, and alas! after nearly nineteen centuries of Christianity, we have war, still war, apparently on a larger scale than ever, taking away millions from the plough, devouring the harvests of industry, threatening again to fill the world with blood and havoc. The only question is through which of several craters, the Franco-German, the Panslavic, the Anglo-Russian, or the Austrian, the eruption will break out and the lava-torrent flow.

To the despairing secretaries of peace societies, by an address from one of whom the present paper has been suggested, it seems as if, in the substitution of reason for the sword, no advance had been made. This is not so. In the first place war instead of being normal has among civilized nations become occasional. The Assyrian or the Persian conqueror made war as a matter of course, and spent his summers in

campaigning with his mighty men of valor as regularly as the servile portion of his population spent it in gathering in the harvest. So did Timour and Genghis Khan. So did the heirs of Mahomet while their vigor lasted. So did the feudal lords, in whose lives the excitement of war was varied only by the excitement of the chase. So, it may almost be said, did the little city-republics of Italy, though these learned in time to do their fighting with mercenaries. But now war is an extraordinary occurrence; there must be a *casus belli*, and diplomacy must have been tried and failed. We have had long spells of peace. Between the Napoleonic War and the Crimean War there was so long a spell of peace that the world began to think that the hounds of war would never slip the leash again.

In the second place the sentiment for peace grows. Charles the Fifth told a soldier impatient for war that he liked peace as little as the soldier himself, though policy forced him to keep the sword in the sheath at that time. Even in Chatham's day a minister could avow that he was a "lover of honorable war." Palmerston, though he felt like Chatham, would hardly have dared to use the same language. Burke was as philanthropic as any statesman of his day, yet he seemed to regard as an unmixed blessing national success in war.

In the third place fighting, whereas it used to be every man's duty and half of every man's character, at least among freemen, is now a special trade. The Servian constitution was a polity combined with a muster-roll. The political upper class in Greece and Rome was the cavalry. The ridiculous ceremony of touching a turtle-feet mayor or an old professor of science with a sword and bidding him rise up a knight reminds us that all honor was once military, and that saving in the Church there was no other high career. Conscription may be said to be a relapse into the old state of things. A relapse it is; but it is felt to be exceptional and the offspring of the present tension, while England still holds out against it, and America, even in the desperate crisis of the Civil War, resorted to it only in the qualified form of a draft with liberty of buying a substitute.

Some causes of war, so far as the civilized world is concerned, are numbered with the past. We shall have no more wars for sheer plunder or rapine, like those of primeval tribes. We shall have no more migratory invasions, like those of the Goths and Vandals, the Tartars and the Avars. Setting aside Napoleon, we can hardly be said to have had of late wars of mere territorial aggrandizement.

Why has not Christianity put an end to war? Why has it not put an end to government and police? If the words of Christ were fully kept there would be no longer need of any of these, and in proportion as the words of Christ are kept the need of all three decreases. But all three, like the institutions of an imperfect world and an imperfect society generally, are provisionally recognized by the Gospel. Soldiers are told not to give up their calling but only to give up extortion. Two religious soldiers are introduced, the centurion, whose servant Christ heals, and Cornelius. Military imagery is employed which

would have been incongruous if all war had been sin. "Warring a good warfare" is a synonym for zeal in the ministry. The Christians under the Empire, though they were growing Quakerish as well as ascetic, objected not so much to bearing arms as to the religion of the standards. The religious consecration of war, by prayers for a victory, singing *Te Deum*, blessing colors, hanging them in the churches, and so forth, is certainly a curious mode of worshiping Jesus of Nazareth; but it goes with separate nationality, which is a partial denial or postponement of the brotherhood of man. State Churches have naturally carried these practices furthest; yet the free Churches of the United States prayed for victory and gave thanks for victory in the Civil War as lustily as any State Church. Of Quakerism let us always speak with respect; it made Voltaire pay homage to Christianity; but as an attempt to forestall the advent of the Kingdom of Peace it has failed, though not without doing something to hasten it. On one occasion perhaps it even, by misleading a Czar as to the temper of Great Britain, helped to bring on a war. Still more hopelessly unpractical as an attempt to set the world right is Count Tolstoi's Christian Nihilism, which would sweep away at once army, government, law-courts, and police, all safeguards for nations and men against lawless violence, all restraints upon evil men. Count Tolstoi apparently would give up civilization to barbarous conquest; he would let any brigand or savage who chose kill him, lay waste his home and abuse his wife and daughters, rather than "resist the evil;" and much his brother the brigand or savage would be morally improved by his meekness! His picture of war is thoroughly Russian, and applies only to a conscription of serfs. The best of "My Religion" is the proof it gives that something besides military barbarism is at work, in however chimerical a form and on however small a scale, in the mind of Russia. In speculating on the immediate future such reveries may safely be laid aside. They are in truth recoils from Russian despotism and militarism rather than deliberate views of life.

Between the ecclesiasticism which is a false growth of Christianity and militarism there is a more sinister connection. Fraud prefers force to reason and a reign of force to a reign of reason. The fighter the priest can fascinate and use; the thinker is his irreclaimable enemy. Every one knows to what an appalling height this ecclesiastical militarism is carried by De Maistre, who paints the Christian God as an angry deity requiring to be constantly propitiated by the steam of blood from fields of carnage, and the soldier as the appointed minister of this vast human sacrifice. The passage might have been penned by a Mexican hierophant in defense of the human sacrifices which he offered to Huitzilopochtli. People were somewhat startled by a sermon of the High Church Professor Mozley on War. There is nothing in it which approaches the hideous paradox of De Maistre, but it certainly speaks of war with an acquiescence bordering on complacency. It is not a reproduction of the Sermon on the Mount.

So long as mankind is divided into nations there

will be national rights to assert and defend, and the cannon must be the last resort. But recourse will be had to it more unwillingly, and no longer for secondary objects. We shall at least have no more wars for epigrams. Communities and their governments will become more industrial, and therefore in the main more inclined to peace. The material unification of humanity, which Mr. Cyrus Field with his cable has done so much to further, will increase the sensibility of the whole frame. By the reporter's art the horrors of war are brought more vividly before us all, and if they could be brought before us in the reality, such of us as had hearts and were not moral savages like Napoleon, or steeled by fanaticism like De Maistre, would join the Peace Society. No man who has seen a field-hospital after a battle is likely to talk or think lightly of war. Thus the process of gradual extinction is pretty sure, though the time may be long and the relapses many. We speak of war between nations. There remains behind the possibility of widespread war between classes, traversing national lines, as did the religious wars of the sixteenth century. This cloud just now is growing darker. After all it may disperse, or even fall in a beneficial shower of industrial reform.

THE CONFERENCE OF AMERICAN NATIONS.

It was announced a few days ago that the Empire of Brazil had accepted the invitation of the United States to take part in the international conference of the independent nations and States of the American continent (South, Central, and North), to be held in Washington in October of this year. This was followed since by the further announcement that the Republic of Venezuela and the United States of Colombia had also accepted. These acceptances leave outstanding now only the Republics of Paraguay and the eruptive States of Hayti and San Domingo. It is expected that Paraguay's acceptance will be forthcoming in sufficient season to permit of the arrival here of her representative in October, but Hayti and San Domingo, especially the former, are so disturbed, and the existence of any government there so precarious, that not much expectation of their participation in the Conference is indulged in.

For the sake of those who do not keep close watch upon national and international affairs, we may repeat that the conference in question has been invited under authority of an Act of Congress approved May 24, 1858, which authorized and requested the President of the United States to invite the several Governments of the Republic of Mexico, Central and South America, Hayti, San Domingo, and the Empire of Brazil, to join the United States in a conference to be held in Washington, at such time as he may deem proper, in the year 1859, for the purpose of discussing and recommending for adoption to their respective governments some plan of arbitration for the settlement of disagreements and disputes that may hereafter arise between them, and for considering questions relating to the improvement of business intercourse, and means of direct communication between said countries, and to

encourage such reciprocal commercial relations as will be beneficial to all, and secure more extended markets for the products of each of said countries.

The act of Congress referred to specifies particular subjects of inquiry to be gone into, but they are all classed in the general description above presented and need not be reproduced in detail here. Chili, Peru, Bolivia, and Ecuador are to take part in addition to those already enumerated, and there is room for belief as well as hope that the conference will be productive of great good. Seventy-five thousand dollars have been appropriated for the expenses of the conference and the entertainment of the foreign conferees. Washington is the place, and October the time.—*Phila. Ledger.*

TEACHER OR TYRANT?

CARE sits heavily on most mature men and women; no provision can avoid it and no prosperity escape it. One may say of care as Schiller said of death, it must be good because it is universal. It is the constant endeavor of devoted and capable parents to shield their children from the anxieties and uncertainties to which they themselves have been exposed; to this end they deny themselves luxuries, take up heavy burdens, and resign a host of comforts and pleasures that might otherwise be theirs. Their constant endeavor is to build a wall around their children which shall shield them from the tempests to which most lives are exposed. It is a loving but a most unwise and futile endeavor; the whole movement of life is against it, and against it because, if successful, it would rob the child of that which is his highest good fortune. To free a human life from all perplexity, anxiety, and care would be to defeat that education which is the highest end of living. The father cannot run the race for the son; the highest service he can render the son is to train him to strength and endurance that he shall rejoice to run a race the winning of which means no glittering reward, but inward peace and nobleness.

Care is a stern but wise teacher; one whose lessons are hard to learn, but of immense value to him who is willing to get the most of them. Care steadies, matures, develops men; it fastens the sense of responsibility, brings out the latent forces, and makes one master of situations for which at the start he was entirely unequal. There are few stories more interesting or instructive than the records of the careers that have expanded to greatness under the pressure of great cares—cares that have fairly wrung out the very highest energy of the soul. Again and again men who have given small evidence of the possession of unusual gifts or force have, under the stress of heavy responsibilities, disclosed unsuspected capacities and moved with even step into the front ranks of the noblest workers and victors. The same noble development of strength is constantly seen in obscure lives; it is an educative influence to which all men are subject and from which none ought to be exempt.

But there is a vast difference between the attitudes of men toward the cares which press on them; care may be a tyrant as well as a teacher, and there

are multitudes of men who rebel despairingly against the tyrant and never discover behind the hard, forbidding mask the face of the wise and patient teacher. The world is full of those who make themselves the slaves of care; who fall asleep every night weary with the burden of their slavery and awake every morning heart sick and hopeless. It is idle to counsel such to lay down their cares; they cannot detach themselves from burdens which have come to seem part of their lives—something from which nothing but death can set them free. There are those, however, who have not passed into this final stage of slavery; who are still struggling to keep that freedom and joyousness of life which are essential to the highest living. To all such it is of immense importance to see clearly that care is a teacher sent from God to instruct men in patience, courage, cheerfulness, and strength, and that they who turn this teaching into a tyranny defeat the purpose of the infinite wisdom. If the cares of life were the accidents and hardships of our condition, mere dead weights upon us, they might dishearten and paralyze us: but if there is some heart of love, some secret source of strength, in them, we may bear them with good courage and find our hope and faith purified and deepened. A man will bear with entire cheerfulness, and with joy, a training of the utmost severity if at the end of it he is to reach liberty and the command of a new skill or force; there is no labor from which men shrink if in the doing of it they can secure some higher good for themselves. With like cheerfulness care may be borne, if we see in it an education which shall fit us for high and sacred duties. It will not cease to be hard and at times exhausting, but it will cease to depress and crush us, to rob us of spontaneity and joy. Receive care as a teacher, and you shall gain that character which Emerson says is the only definition we have of freedom and power; receive care as a master, and you shall become the slaves of a merciless tyrant.—*Christian Union.*

THE soul will not know either deformity or pain. If, in the hours of clear reason, we should speak the severest truth, we should say that we had never made a sacrifice. In these hours the mind seems so great, that nothing can be taken from us that seems much. All loss, all pain, is particular; the universe remains to the heart un hurt. Neither vexations nor calamities abate our trust. No man ever stated his griefs as lightly as he might. Allow for exaggeration in the most patient and sorely ridden back that ever was driven. For it is only finite that has wrought and suffered; the infinite lies stretched in smiling repose.—*Emerson.*

THE imputation of inconsistency is one to which every sound politician and every honest thinker must sooner or later subject himself. The foolish and the dead alone never change their opinion.—*Abraham Lincoln.*

No word ever fails which is spoken by the universal voice of all men, for in this universal voice there speaks a certain God.—*Hesiod.*

PHOTOGRAPHY IN SCIENCE.

The uses to which science has put photography are very numerous, from records of the infinitely little to the infinitely great, from microscopy, which deals with the invisible, to the vastness of astronomical wonders. The latest contributions to our knowledge of the sun, moon, and stars made by photographs taken by the aid of the powerful telescope at the Lick Observatory strongly contrast with the researches into the invisible world of nature revealed through the microscope. Dr. Draper made the first daguerreotype of the moon in 1840; Foucault of Paris first succeeded in making a picture of the sun in 1845; and it was 1850 before Professor Bond, of Harvard College, made the first daguerreotype of a star. In 1851 Dr. Busch, of Koenigsberg, photographed a solar eclipse. Two scientists, Professor Schuster and Mr. Lockyer, in 1852 obtained a photograph of the spectrum of the eclipsed sun. In 1881 Dr. Henry Draper had successfully photographed a nebula, and later the spectrum of a star. Even the *aurora borealis* has been photographed this year.

In connection with the study of a spectrum analysis, photography has played a most important part, for it has recorded lines not visible to the naked eye—lines revealed only by the photograph in that part of the spectrum in the violet and lavender regions, and even beyond, where all is dark to us.

In the study of stars by this procedure we learn how some are like our sun, others glowing masses of matter just beginning to burn, and still others nearly burnt out, like Arcturus and Aldebaran. We marvel when we think how feeble seems the light of the stars to learn that only as much light as can come through a slit 1-350 of an inch is permitted to affect the sensitive plate. Again, the movement of the earth would in the two hours required to form an image soon carry the light off the plate were there not ingenious mechanical apparatus by which the image is always kept at the same place on the plate.

And now photography is not only used for mapping out the known heavens, but the camera reveals to us the presence of stars which the human eye has not seen. For many years Miss Maria Mitchell and her assistants have photographed the ever-changing sun spots. Astronomers from all over the world have met in Paris and arranged a plan for using photography to obtain a picture of the entire heavens. Cameras will be set up in numbers of observatories in many countries, and many negatives made of the entire contents of the universe. It is proposed to catalogue two millions of the brightest stars and note their position with great precision, as until such maps exist many other astronomical problems cannot be solved. We know, for instance, that our sun with its planetary system is voyaging through space. These charts will help determine the route and circumstances of the journey.—*J. Wells Champney, in Harper's Magazine.*

"The true life is that which adds something to the wealth accumulated by past generations, which increases this inheritance in the present and bequeaths it to future generations."—*Tolstoi.*

CHRISTIANITY A RATIONAL RELIGION.

"When I examine the doctrines, precepts, and spirit of Christianity, I discover, in them all, this character of universality. I discover nothing narrow, temporary, local. The gospel bears the stamp of no particular age or country. It does not concern itself with the perishable interests of communities or individuals; but appeals to the spiritual, immortal, unbounded principle in human nature. Its aim is to direct the mind to the Infinite Being, and to an infinite good. It is not made up, like other religions, of precise forms and details; but it inculcates immutable and all comprehending principles of duty, leaving every man to apply them for himself to the endless variety of human conditions. It separates from God the partial, limited views of Judaism and heathenism, and holds him forth in the sublime attributes of the universal Father. In like manner it inculcates philanthropy without exceptions or bounds; a love to man as man, a love founded on that immortal nature of which all men partake and which binds us to recognize in each a child of God and a brother. The spirit of bigotry, which confines its charity to a sect, and the spirit of aristocracy, which looks on the multitude as an inferior race, are alike rebuked by Christianity, which eighteen hundred years ago, in a narrow and superstitious age, taught what the present age is beginning to understand, that all men are essentially equal, and that all are to be honored, because made for immortality and ended with capacities of ceaseless improvement."—*Channing.*

A PAIR OF ORIOLES.

Nor all the time of the beautiful orioles was passed in contentions; once having placed themselves on what they considered their proper footing in the family, they had leisure for other things. No more entertaining birds ever lived in the room; full of intelligent curiosity as they were, and industriously studying out the idiosyncrasies of human surroundings in ways peculiarly their own, they pried into and under everything,—opened the match-safe and threw out the contents, tore the paper off the wall in great patches, pecked the backs of books, and probed every hole and crack with their sharp beaks. They ate very daintily, and, as mentioned above, were exceedingly fond of dried currants. For this little treat the male soon learned to tease, alighting on the desk, looking wistfully at the little china box whence he knew they came, wiping his bill, and, in language plain enough to a bird-student, asking for some. He even went so far, when I did not at once take the hint, as to address me in low, coaxing talk of very sweet and varied tones. Still I was deaf, and he came within two feet of me, uttering the half-singing talk, and later burst into song as his supreme effort at pleasing or propitiating the dispenser of dainties. I need not say that he had his fill after that.—*Olive Thorne Miller, in Atlantic Monthly.*

CHARACTER is the diamond that scratches every other stone.—*Bartol.*

A BRIEF ON WEEDS.

JOSIAH HOOPES, of West Chester, writes to the *New York Tribune* as follows: It seems a curious fact that every one of all the more pernicious weeds known in the United States is a naturalized foreigner. Of the less objectionable class, which may be styled objectionable weeds, at least two-thirds are likewise of foreign ancestry. The few American plants that may be arranged under the general term of weeds are for the most part annuals, and therefore easily eradicated. Take, for instance, the common ragweed, or as it is sometimes known, bitterweed; the long-leg daisies (*Erigeron*); fireweed, heggar-ticks, etc.; one cutting before the seeds ripen is generally sufficient to destroy them, as well as prevent a succeeding crop. Carelessness on the part of the owner will often procure for him a fine sumach and other plants that increase by means of underground stems, but all such are easily eradicated. The vile class of plants represented by the Canada thistle, *Convolvulus arvensis*, couchgrass, etc., which are comparatively harmless at home, but find on our shores just the conditions needed to increase and multiply in a wonderful degree, are difficult to fight, but as the late eminent botanist, Dr. Darlington, once advised, "Be continually cutting off the tops; they represent the lungs of the plant."

OUR GUESTS.

Our guests are surely as important a part of the household furniture as the chairs we buy for them to sit on. The house that merely holds its inmates, and to the rest of the town is a kind of prison—a barred place, good to keep out of—can hardly be a home to those who live inside it. There are those, it is true, so completely furnished with love among the four or five that love from the forty or fifty is of little account. But now and then there come in life times when kind thoughts from the forty or fifty are pleasant too. And it must be pleasant to a woman to know the children like to look up at her windows as they pass to school, hoping for her smile; it must be good to any man to know the neighbors look forward to an evening around his fireside or a chat and laugh over his tea-table. If people remember that the truest hospitality is shown not in the effort to entertain but in the welcome, in the tone and eyes that greet you, and still more that what a guest loves to come for is not the meal, but those who sit at the meal, more homes would be habitually thrown open wide to win the benedictions upon hospitality. It is our ceremony, not our poverty, our self-consciousness oftener than our actual inability to be agreeable, that makes us willing to live close. The real compliment is *not* to apologize for the simple fare. That means trust, and trust is better than oysters. One of my dearest visiting haunts used to be a home where we had bread and butter for our fare, and the guest toasted the bread and wiped the dishes after supper; the welcome, and the children and the wit, and the songs, and the good, quiet talk after the children went to bed, made it a rare privilege to be admitted there. It is seldom that the pleasantest homes to visit are the richest. If the dinner be a loaf of bread

and a pitcher of water, invite your friend rather than deserve that opposite reputation, that it is "a kind of burglary to ring your door-bell before dinner." Count guests who are glad to come as part of your best household furniture.—*W. C. G. in Unity*

NEWS AND OTHER GLEANINGS.

—Ramabai now has nine pupils in her school. Her assistant, Miss Demmon, has established a sewing school. This would mean very little here; in India it means a revolution in the customs of centuries. Ramabai lately accepted an invitation to lecture before a conference at Poonah, another innovation, as no woman had ever been invited to address such a body. Her subject was "American and American women."—*Woman's Journal*.

—It is announced that Gopal Joshee, husband of Anandibai Joshee, the Hindu lady of high caste who came from India to Philadelphia for the study of medicine, and on her return to India died quite suddenly, has become converted to Christianity. When in this country both he and his wife made many addresses, declaring their adherence to the Brahman and their hostility to the Christian faith, but he has now written to friends in Boston announcing his purpose to "confess Christ publicly."

—The floods of this summer have shown how great a protection against the inroads of water a row of willow trees may be. The engineer in charge of the Potomac river improvements says that where willow trees were planted the land was protected from washing, and practically no damage was done, while in the improved land not so protected there was great loss.

—An earnest circular has been sent out by the Union Prohibitory League of Pennsylvania urging a renewed effort to build up public opinion in favor of Prohibition, and calling a State Convention to meet at Harrisburg on the 26th of Ninth month, to take action in that direction. It is not proposed to nominate any candidates for office. The President of this League is A. J. Kynett, and the Secretary Wellington E. Loucks, and the "headquarters" are at 1026 Arch street, Philadelphia.

—Spare the lady bug! The State Board of Horticulture of California have imported Australian lady bugs to fight the cottony scale which is now doing so much damage in the orange gardens of that State. The scale is the bug's chief article of diet, and this method of saving the orange trees has succeeded where all others have failed.

—A revival of the old spirit of Arctic adventure may be expected to result from Dr. Nansen's expedition next year, for which he has succeeded in securing subscriptions amounting to \$100,000. The ship will be used to carry the party as far north as practicable, and will then be either sent home or abandoned. The explorers will push on with boats and sledges, without depots of provisions and without a base for retreat, persevering in their northward course so long as there is any chance of approaching the Pole.

CURRENT EVENTS.

THE Commissioners to negotiate with the Sioux for the surrender and sale of about one-half (11,000,000 acres) of their land in South Dakota, have accomplished their errand, three-fourths of the adult members of the tribe having agreed to it. The result was reached at Standing Rock Agency, last week, when Gall, the leading chief who had opposed it, came in. The action of the Commissioners must be ratified by Congress before the lands can be opened for settlement.

THE strike of the workmen in the coke regions was settled last week, by an agreement with the employers, and most of the men resumed work without delay. There has been, however, some disorder at works where an agreement was not reached.

ACCORDING to a Minneapolis despatch, the editor of the *Market Record* says the wheat crop of Minnesota and the Dakotas will reach \$5,000,000 to 90,000,000 bushels, and will be the best crop harvested in six years.

AT Warsaw, Illinois, there has been a serious epidemic of dysentery, with 230 cases and 19 deaths, since Seventh Month 15. It is ascertained to have been caused by the contamination of the water supply, resulting from the heavy rains.

PRESIDENT HARRISON went to Bar Harbor, on the coast of Maine, last week, on a visit to Secretary Blaine, who is spending his vacation there.

THE Annual Peace Convention by the Universal Peace Union will be held at Mystic, Connecticut, on the 28th, 29th, and 30th of this month. Ten thousand people are expected to attend.

THE savage civil war in Hayti continues, but there is likely to be some cessation during the heated season. General Legitime, who claims to be President, is shut up in the capital city, Port-au-Prince, while his rival, General Hippolyte, holds in the north-western section of the island. It is announced that Frederick Douglass, who has been appointed U. S. Minister to Hayti, will sail early next month.

THE Montana Constitutional Convention, on the 12th decided to submit the question of the capital to a vote of the people in 1892, Helena, in the meantime, being the temporary capital. Woman suffrage was defeated by a tie vote.

SCHOOL elections were held in Kansas on the 12th, and the returns that night showed that about 50,000 women voted. Many women were elected to office.

BRUSSELS, Aug. 5.—Lieutenant Dhanis has just returned here after a sojourn of three years in the Upper Congo country. He reports that commerce is growing rapidly in that region, and that the trading stations are prosperous. Nineteen steamers ply on the river. The natives are eager for traffic. During a journey of 18 days on foot, between Leopoldville and Matahdi, Lieutenant Dhanis met 30 white travelers. A trading population along the river banks is fast developing.

NOTICES.

. Acknowledgments.—The Friends' Book Association acknowledges receipt of the following additional contributions to the Children's Country Week Association:

E. P.,	\$1.00
J. H. S.,	2.00
Sarah A. Sinn,	2.00
E. F. Williams,	5.00
Homer,	10.00

Previously acknowledged, \$20.00
 87.00

Amount, \$107.00

JOHN COMLY, Sup't.

Eight month 10, 1889.

. The Sub-Committee of the Yearly Meeting's Visiting Committee expect to attend Southern Quarterly Meeting at Easton, Md., on Fourth-day, the 29th inst., at 10 a. m., and a meeting for worship on Fifth-day, the 29th, at 10 a. m.

Sub-Committee: Henry T. Child, Robert L. Pyle, Mary H. Barnard, and Martha Dodgson.

. A portion of the Philadelphia Quarterly Meeting's Committee to visit the smaller branches will attend Exeter Monthly Meeting, to be held at Maiden Creek, on Seventh-day, Eighth month 24th, 1889.

The Committee will also attend the First-day morning meeting held at Reading, Eighth month 25th 1889, at 10 o'clock. Train leaves Reading depot, Broad and Callowhill streets on Sixth-day afternoon, at 6 o'clock, arriving at Reading at 7.57 o'clock. Returning, leaves Reading on First-day afternoon at 3.55 and 5.48 o'clock.

Return-trip tickets to Reading good for six days, can be procured at depot for \$2.34

CHARLES E. THOMAS, Clerk of Committee.

. Quarterly Meetings in Eighth month will occur as follows:

19. Fairfax, Goose Creek, Va.
21. Stillwater, Plainfield, O.
26. Pelham H. Y. M., Yarmouth, Ont.
23. Ohio Y. M., Salem, O.
- Warrington Q. M., Menallen, Pa
27. Burlington, Mt. Holly, N. J.
28. Southern, Easton, Md.
- Easton and Saratoga, Granville, N. Y.
29. Bucks, Falls, Pa.
30. Nottingham, E. Nottingham, Md.

. Circular Meetings in Eighth month occur as follows:

18. Roaring Creek, Pa., 2 p. m.
- East Branch, N. J., 3 p. m.
- Gunpowder, Md., Old House, 10 a. m.
25. Constantia, N. Y.

. *Friends' Almanac*, 1890. It is desirable to have this as nearly correct as possible, and in order to have it so now is the time to send word of any needed amendment, and not after it is issued. Address Friends' Book Association, 1500 Race street, Philadelphia.

PUBLISHERS' NOTICES.

*.*As a definite number of copies of the INTELLIGENCE AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

This powder never varies. A marvel of purity, strength, and wholeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cases. ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

MY OWN SHALL COME TO ME.

SERENE, I fold my hands and wait,

Nor care for wind, or tide, or sea;

I rave no more 'gainst time or fate,

Far, lo! my own shall come to me.

I stay my haste, I make delays,

For what avails this eager pace?

I stand amid the eternal ways,

And what is mine shall know my face.

Asleep, awake, by night or day,

The friends I seek are seeking me;

No wind can drive my bark astray,

Nor change the tide of destiny.

What matter if I stand alone?

I wait with joy the coming years;

My heart shall reap where it has sown,

And garner up its fruit of tears.

The waters know their own, and draw

The brook that springs in yonder height;

So flows the good with equal law

Upon the soul of pure delight.

The stars come nightly to the sky;

The tidal wave unto the sea;

Nor time, nor space, nor deep, nor high,

Can keep my own away from me.

—John Burroughs.

MARY GRIFFIN.

Extract from an unpublished letter written previous to the year 1848.

At the time of our late Yearly Meeting we received a visit from a couple of Friends from Chester county to whom I related a circumstance connected with the memory of our aged friend, Mary Griffin, of Nine Partners. My visitors desired I would furnish them the account in writing, which I herewith append. Mary Griffin was twice married. The incident refers to the period of her first marriage, near the time that she and her husband embraced the religious views of Friends, they having been educated in the Presbyterian faith. It is the record of a joint covenant evincing great simplicity, earnestness, and integrity of heart,—as also an interesting record of older times. It is as follows:

"Be it forever recorded in Heaven that we, William and Mary Moore, do with great concern of mind, yet with alacrity of soul, devote and dedicate, you, we do absolutely and actually give and deliver our whole selves, souls, and bodies, unto the Almighty God Jehovah, and thereby through his grace, do covenant and promise to serve him in newness of life; and that we will keep as nigh to his light as we possibly can in all intents and purposes of soul,

every minute, hour, day, week, month, year, or years of our mortal lives,—always depending on a measure of thy strength, O, God, to assist and abrogate us. And now, firmly believing and that from the word internal and external, that thou, Father of Mercy and Love! doth accept and receive us, we beseech to set our hands and seals, this 15th day of Third month, in the year since Christ Jesus came in the flesh, 1740.

"Signed,

WILLIAM MOORE,
MARY MOORE."

Appended to the above, in her own hand writing, was the following:

"This was written almost in the first of our conviction, and it was signed I believe in the simplicity of our hearts, I thought best to leave it behind me, hoping that wherein we failed in performing it, mercy hath been and will be extended to us.

MARY GRIFFIN.

"First month 3, 17-2."

SKETCH OF MARY GRIFFIN.

Mary Griffin, of Nine Partners, New York, was the daughter of a zealous Presbyterian. Her quickness of perception was apparent about her sixth year, when, being present while her parents were conversing about their minister's salary, the mother remarked, "We must not starve the Gospel;" Mary replied, "That is impossible, mother, for it is the power of God unto salvation, to every one that believeth." Being allowed by her parents to frequent balls, she was once engaged in dancing, when her mind was solemnly impressed with the sin of thus mispending her time, and she immediately took her seat. On being asked the cause, she honestly told it, and refused ever again to partake in like amusements, thus bearing a testimony to the principles of a society of which she had never heard.

When quite young she married among her own people, and continued a member with them, till hearing that one called a Quaker had appointed a meeting in the neighborhood, her mind was drawn to attend it; but her husband being away, and only two little children in the family, she was at a loss how to manage, as the meeting was to be in the evening. But she put her children to bed, and when they were asleep, set out for the meeting, secretly saying, "I have faith to believe that kind Providence will care for them." She had to travel on foot four miles, and cross a stream from which the bridge had been carried away; but she waded through the strong current, and arrived at the meeting; during which the following passage was so frequently presented, that she believed it right to express it: "Though thou exalt thyself as the eagle, and though thou set thy nest among the stars, thence will I bring thee down,

saith the Lord." After sitting down she felt great peace; returned home rejoicing, and found her children safe. At that time she wore a scarlet cloak, edged with fur.

It afterward appeared there was a man in that meeting about to engage in conduct injurious to his friends, who was so overcome by her communication, that he made a public acknowledgment thereof, and afterward became a member.

She soon after joined herself to Friends, and became an approved minister in her 20th year. It appeared she had not reflected on the inconsistency of her dress until a Friend remarked to her, "Laces proceed from pride, pride from sin, and sin leads down lower than the grave." She immediately laid aside all superfluities.

When about ninety-five years of age, she paid a satisfactory visit to some of the meetings in Nine Partners and Stamford Quarters, and in her one hundredth year visited the families of Nine Partners Meeting, and had several public meetings, in which she was greatly favored. Her natural faculties were reduced to a state of second childhood, while the spiritual part grew brighter and brighter. At one of these public meetings, a Baptist preacher was present, who afterwards called at her lodgings to converse with her on the subject of inspiration, in which he did not believe. Being shown into her room, he found her sitting upon the floor, amused with playthings. He immediately withdrew, saying all his inquiries were answered, as she was herself a memorable proof of Divine Inspiration.

Near the close of her life she thus addressed her children and grandchildren, "Fear the Lord above all things, and keep to your religious meetings." She died 20th of Twelfth month, 1810, aged upward of one hundred years, a minister four-score.

OLD YEARLY MEETING ADVICES.

SOME advices given forth from time to time by the Yearly Meetings of Friends for New Jersey and Pennsylvania held alternately at Burlington and Philadelphia.

1721. Inasmuch as Peoples being hurt and disguised by Strong Drink seems to be a prevailing evil, therefore where any amongst us are overtaken therewith they should be early admonished, and dealt with as disorderly persons. And it becomes the concern of this meeting to advise and caution all of our profession carefully to watch against this evil, when it begins to prevail upon them, in a general manner, or more particularly at occasional times of taking it, the frequent use whereof especially Drams, being a dangerous inlet, the repetition, increase of them insensibly stealing upon the unwary by wantonness in the Young, and the false and deceitful heat it seems to supply the aged with, so that by long habit, when the true warmth of nature becomes thereby weakened and supplanted, the stomach seems to crave those Strong Spirits, even to supply what they have destroyed. Therefore it is hoped that a due care and watchfulness against the intemperate use of Drams, and other Strong Liquors will in a good measure prevent the depravity, as also an

imprudent, noisy, and indecent behavior in markets and other public places, which we earnestly advise and caution Friends to beware of, for it is degrading to us as men of civility, and greatly unbecoming the professors of Christianity, the awful, prudent, and watchful conduct of our early Friends did, and such always will preach loudly, and extend silently to the notice of many.

1726. It having been observed that a pernicious custom has prevailed upon people, of giving Rum and other Strong Liquors to excite such as bid at Vendues and provoke them at every bidding to advance the price, which besides the injustice of the artifice is very scandalous, and leads to great intemperance and disorder. Therefore it is the unanimous sense of this Meeting to caution Friends against the same, and if any under our profession do fall into this evil practice, or do by any means encourage the same (by giving or taking Drams or Strong Liquors at Vendues, or other noisy revelling gatherings) they should be speedily dealt withal as disorderly persons.

And we find a pressing concern earnestly to excite all our Dear Friends, Brethren, and Sisters, seriously to consider the state of things in this land, so lately a wilderness, when on the one hand, we look back to the many blessings we have received, and the protection and peace we have enjoyed, how greatly doth it concern us, to be humbled before the Almighty, and with grateful hearts take due heed to our walking before Him. And on the other hand when we take in view the great increase of people, and consider how many among them do appear regardless of religious probity and virtue, who seem to combine in an uncommon manner, to rush into immoralities, and tumultuous practices, using many artful ways to draw others to fall in with them.

1735. This meeting cautions against the too frequent use of Drams, and other Strong Drink in families, or elsewhere.

1736. This meeting repeats the caution of last year against the frequent use of Drams, or other Strong Drink in families or elsewhere, and particularly to be cautious of giving them to children, and thereby accustoming them to the habit of drinking such Strong Liquors.

1737. We tenderly caution all Friends, constantly to watch against the indecent and pernicious use of Strong Drink, which sometimes prevails unexpectedly, and we cannot but observe with grief and sorrow the frequent instances of its destructive effects, not only to men's persons and estates, but also to the ruin of their children and families. We fervently pray that all Friends may be careful not to give way to the gratifying and inordinate appetite for any kind of Drams, or other Spirituous Liquors.

1738. It was moved to this meeting and accordingly recommended to the several Quarterly and Monthly Meetings, to caution Friends that they be exceedingly careful against the too frequent use of Spirituous Liquors, it being remarked to be a pernicious and growing evil, and to direct the overseers to deal with such as may drink to excess, though they may not drink to such a degree as to disguise themselves.

1739. The advice of last year against excess in the use of Spirituous Liquors is repeated.

1749. This Meeting repeats the caution and advice against drinking Strong Liquors to excess, and the overseers are desired to be diligent and timely in dealing with such as offend against this or any other branches of our Discipline.

1750. That part of our Discipline relating to the practice of giving Drams and other Strong Liquors at Vendues, being now considered, and spoken to pretty fully, it is the sense of this meeting that the minute on the subject contained in the General Epistle from the Yearly Meeting 1726 should be revived and enforced by the respective Monthly Meetings, and that such persons who transgress the same should be dealt with as disorderly persons, and if they persist in justifying their conduct, and refuse to give satisfaction for the same, they ought to be testified against.

1777. An increasing concern and exercise having prevailed amongst Friends in several of our Quarterly Meetings respecting the unnecessary use of Spirituous Liquor which hath greatly tended to the corruption and depravity of the morals of mankind, thereby increasing guilt on our country, under which consideration this meeting is engaged to exhort and admonish Friends to use great caution in that of distilling or encouraging the distilling or using of distilled or Spirituous Liquors of any kind. And in regard to the practice of destroying grain by distilling spirits out of it, it is the sense and judgment of this meeting that that practice should be wholly discouraged and disused among Friends; and that Friends ought not to sell their grain for this purpose, nor to use or partake of liquors made out of grain; which this meeting directs the Quarterly and Monthly Meetings to take proper notice of, and make report of their care to next Yearly Meeting, when this matter may be further considered. 1778. The same advice repeated. 1780. Again repeated.

1781. The care of Friends is enjoined to be continued to discourage the distillation of spirits from grain, or using spirits so distilled, also the unnecessary use of other spirituous liquors, or the distillation of them; likewise the keeping of houses for public entertainment where such liquors are sold by any of our members; the concern and labor of Friends in these respects having been useful, the late minutes relating thereto are again recommended to the notice of Friends, in order to fulfill the advices therein contained, particularly that in the minutes of this meeting in the year 1777; it being the judgment of the meeting that no member of our Religious Society should be found in these practices, and Monthly and Quarterly Meetings are requested to send accounts to the meeting next year how they are circumstanced in these matters.

Good, kind words dropped in conversation may be little thought of; but they are seeds of flowers or fruitful trees falling by the wayside, borne by some birds afar, happily thereafter to fringe with beauty some barren mountain side or to make glad some lonely wilderness.—*Selected.*

SCRIPTURE LESSON No. 33.

NINTH MONTH 1ST, 1889.

DAVID AND GOLIATH.

GOLDEN TEXT "For God is for us, who is against us?"—Romans 8: 31.

READ I. Samuel 17: 32-51.

ALTHOUGH David was anointed with the oil of consecration, and set apart to succeed Saul in the government, he does not come into power until the death of the king. The people of Israel meanwhile remained ignorant of the transactions recorded in our last lesson. Saul was conscious of his rejection, but did not know who was to be his successor. The interval between the anointing of David and his victory over Goliath is not given. Saul appears to have grown morose and unhappy, and to have lost the modesty and genial flow of spirit that so attracted Samuel to him in the beginning of his reign. Like many another, his honors were more than he could bear, and finding himself rejected by God, and deserted by the prophet, who continued long to bemoan his downfall, he seems to have allowed himself to fall into melancholy, and is said to have been possessed of an evil spirit from the Lord. This shows us another of the peculiar beliefs that prevailed in those far-off times. Diseases that were not understood were charged to evil spirits, whom the Lord permitted to take possession of those that were sinners or disobedient to his laws.

David was chosen to play the harp before Saul, and it produced a very wonderful effect upon his malady. This brought David into close intimacy with Saul, who became much attached to the young musician.

Again war was imminent, the Philistines had become strong, and were ready to attack Israel. Saul, the courageous leader on former occasions, has lost his spirit and cowers before the threatened invasion. Goliath, the giant champion of the Philistines, offers to decide the battle by single combat, and day after day challenges the Israelites to select one of their number to fight with him. David is aroused, and offers to accept the challenge, but the king objects. At last in the extremity of their distress the king consents. The result of the combat forms the subject of our study.

Saul's Armor. David tries to array himself in the heavy armor of Saul, but being only a shepherd, and unused to war he could not wear it. He knew perfectly well how to defend his flock from the prowling wolf and fierce lion, and with the same simple weapons he used for their destruction he would go forth against this vaunting, defiant enemy of Israel.

Taking his sling and a few smooth stones from the brook, with undaunted faith that the God whom Goliath had defied would give him the victory, "In the name of the Lord of hosts" for his watchword, he ran to meet his combatant, and with a sling and a stone smote the Philistine.

The lesson to us in this thrilling narrative is spiritual. Foes are all about us; great and formidable as Goliath are some of these, but as we put our trust and confidence in our Heavenly Father, following the leading of his Holy Spirit, we will be strength-

ened to overcome them all. Faith in the living God is the true source of power; every battle waged for his honor and glory is sure to result in victory.

We are apt to think that power lies in numbers, and so it does to a certain extent, but if we study the history of the Hebrews we shall find that when they trusted in God, listened to his voice, and were faithful, that there was a power that scattered numerous hosts from before them as easily and as surely as the waves toss the sands of the sea.

As the Heavenly Father opened the way for the children of Israel when they were apparently entirely within the power of Pharaoh and his army, so we may be assured he will ever protect those of his children now who *obey his voice*.

In this world the giant "Evil" is ever warring against "truth and righteousness," (the chosen of God), and the question is, "Who shall go out against him?" Shall one mighty in war and valor, armed with helmet and shield and the wisdom of the world? Not so; but he who has put on the whole armor of God; having his loins girt about with truth, and having on the breastplate of righteousness, and his feet shod with the preparation of the gospel of peace; and above all he shall take the shield of faith; and the helmet of salvation, and the sword of the Spirit, which is the word of God; and pray always with all prayer and supplication in the spirit. (See Ephesians 6: 10-18). We must go forth trusting in that higher power for wisdom and strength, and it will not fail us in the hour of trial when it is most needed.

David knew nothing of the art of war, neither was he skilled in the use of arms, but with an eye single to his duty to God he freely offered the best skill which he possessed to the service of his Maker, confident that if the work were of God it would not fail.

History abounds with examples of right prevailing against fearful odds and mighty oppression, and while the struggle may sometimes be long, the result is certain. It may not come in just the way we expect it, but it *will* come in God's own time and way.

NOTES ON THE LESSON.

The interval of time that elapsed between Samuel's visit to the family of Jesse at Bethlehem and this war with the Philistines is not given. The people seem not to have known that David had been chosen to succeed Saul in the kingdom, nor had Saul been made acquainted with the step that Samuel had taken. It is a question whether David himself knew the full significance of the anointing he had received. The chain of events that brings David to the notice of Saul and to a place in his service is necessary to prepare him for the position he must occupy in the future of the nation. He had led a simple, pastoral life, and needed to be brought into this wider contact with the great world of thought and action.

There is perhaps no finer illustration in all history of what confidence in God and faith in his own ability will do for an individual than is found in the example of David confronting the great, boastful Go-

liath whose huge proportions, encased in massive armor covering his whole body, leaving only his forehead visible and vulnerable, had struck such terror into the hearts of the Israelites that no one was found willing to accept his challenge, though made day after day for forty days.

David the shepherd youth is, in appearance, no match for this giant Philistine, but he has the confidence that comes of faith in the power of Jehovah; he believes that with divine help he can be made the instrument to deliver his nation out of the hands of its foes, and he accepts the challenge to single combat, which was often resorted to in those early times to settle differences between tribes and nations. His reason for refusing to go against Goliath in the armor of Saul, is worth remembering as a lesson for us all, "I have not proved them." He must do the work in his own way and with his own weapons; he cannot risk the use of the armor of the king, but he knows he has nothing to fear if he confronts the enemy with hissing and the smooth stone from the brook, yet he did not claim that the deliverance would be wrought through his own unaided strength or ability. "The Lord delivered me out of the paw of the lion and out of the paw of the bear, and he will deliver me out of the hand of the Philistine." This faith in the living God was the source of his power, and must be the true source of power to the soul in its conflict with the enemies of its peace. It is important that we know how to use the implements upon which our success depends,—that they be tested before they are relied upon; failure in many of our undertakings in life results from our not knowing how to work with the tools of another; we must choose those that we can handle with skill and precision if we hope to succeed.

The sling was a formidable weapon in the hand of the ancient warrior. The stunning effect of the blow upon the forehead, followed quickly by the spear thrust, left the victim no chance to recover himself and the wonderful skill acquired by constant practice made the stroke certain and fatal.

THE LIBRARY.

ELI AND SYBIL JONES. Their Life and Work. By Rufus M. Jones. Pp. 316. Philadelphia: Porter & Coates. (For sale by Friends' Book Association, 15th and Race streets.)

It is an enjoyable privilege to follow this interesting couple through the varied experiences of a long and eventful life dedicated to Christian work for the uplifting of humanity. Beginning with the first decade of the present century, we are introduced to a settlement of Friends in the forests of Maine, where as early as 1774 the first trees were felled, and the survey of the land for homes made. Meetings were then established, both monthly and quarterly, and "frequently Friends traveled on foot a distance of forty miles through an almost pathless woods to be in attendance." The privations and hardships endured by these worthy pioneers were cheerfully borne, although they were at times reduced to the direst extremity for the simple necessities of life.

It was under such conditions that Eli Jones first

saw the light in the year 1807. Sybil was born in 1808, and her early years were spent at Azuleta. Her first awakening to a religious life was through the instrumentality of a Methodist minister. These impressions were deepened under the ministry of Lindley M Hoag, then a young man. A little incident is related of one of the visits of Eli to his future wife, made with the purpose of asking her to become his life-companion. Not suspecting the object of his mission, Sybil took down the Bible to read a chapter, as was always customary in those days before visitors returned home. On this occasion she opened at the twentieth psalm, beginning, "The Lord hear thee in the day of trouble; the name of the Lord of Jacob defend thee, and thee out of the sanctuary, and strengthen thee out of Zion; remember all thy offerings, and accept all thy burnt sacrifices; grant thee according to thine own heart, and fulfil all thy counsel." The mission was successfully accomplished, and at the age of twenty-five she became his wife. They settled upon a farm, three miles away from Dirigo meeting, of which they were regular attenders on First and Fifth days, and here in due time the gift in the midday of both was acknowledged. The story of their wedded life at this time is a full and profitable instruction to the young people of our own day who are entering upon the duties and responsibilities that marriage involves.

Seven years after their union Sybil Jones was called to the work to which most of her after life was devoted. She was then the mother of two children, and in delicate health, but she felt that the service was laid upon her, and must be undertaken. Three other children were born to them. There may be a question in some minds, as to the call to a work which made necessary the leaving of helpless little children by their mother, who in the divine ordering—given charge and control during their infantile years. But we cannot feel for another; the great Judge becomes the only arbiter, and we must leave it to his abounding wisdom. Such sacrifices have been made in all the ages of the world's history, often from far less exalted motives, and we follow Sybil Jones in this her first experience as a minister traveling with a minute liberating her and her husband for the service, with an interest that deepens as the difficulties they encounter increase. They traveled by carriage through the provinces of Nova Scotia and New Brunswick, and afterward through the Western and Southern States. In 1850 they crossed the ocean in a sailing packet to Liberia, where they labored for some time with marked success. From there their work called them to Ireland, England, Norway, and Central Europe. Returning home Sybil Jones found work among the wonderful soldiers of the civil war.

From 1857 to '90 they were engaged in visits in work in Western Europe, Greece, and Palestine. It is most remarkable that a woman so frail and weak in body, should have been able to accomplish so much. But her heart was in the work, she believed she had been divinely called to enter upon it, and her faith and trust never failed her in the darkest and most trying circumstances. They returned home

after this mission was accomplished, which was Sybil's last work in a distant field. Her health continued to fail, and near the close of 1873, "she left the life of toil and struggle for the life of reward."

Her husband still survives. "The works of his old age have been not less respectable and effective than those of his early manhood. . . . The liberality he has shown in non-conformity and the rounded completeness of his life have given him a wide influence, and have made him justly loved, but his strength has always been his calm faith in Jesus Christ."

In 1852 Eliza (Sybil) Jones were in London and attended the Yearly Meeting there. At the public meeting on February, Eliza Barrett was present. From his Diary, Jan. 20th 1852, we copy the following graphic description of the meeting, and of the service of Eliza Barrett, concluding this our brief notice of the very interesting scene:

"This has been a day of deep interest. In the morning I went to the meeting of public worship in the Devonshire House, which was filled to the utmost capacity by Friends from every part of the Kingdom. As a spectacle of human organization can surpass it in picturesque physiognomy. The immaculate purity of the women's dresses as they sat a mountain and its tops of standing ones, arising in long quiet ranks from the front to the gallery on one side of the house, the grave countenance of sedate and thoughtful men on the other, presented an aspect more suggestive of the assemblages of the New Jerusalem than any earthly congregation I had ever seen. In a brief time the ladies began to fall forward on standing places, and then a deep devotion fell since settled down upon the great assembly like an ever-shadowing presence from heaven. The still, unbreathing prayer of a hundred hearts seemed to ascend like incense, and the communion of the Holy Spirit to descend like dew, whispering its benediction and touching its sweetly listening brethren thro' faces so calm with the breath of its wing; and out of the deep silence of this unbroken devotion arose, with trembling tongues, to embellish the heart of a few brief message words to which it feared to withhold utterance, lest it should be against the inspiration that made it earn what them. From another part of the house rose a reverberating voice of prayer, short, but full of the earnest emotion of supplication and humble utterance of faith and thanksgiving. Then moments of deep silence followed, as if all the faculties of the mind and all the senses of the physical being had been withdrawn to the soul's inner temple to listen to a still waiting voice of the Spirit of God. His impressing was the heart worship of those silent moments. There was something solemn beyond description in the spectacle of a thousand persons of all ages so immovable that they seemed scarcely to breathe.

"The Minister's address" was occupied by a long rank of the text—his father, and the mothers of the Society from all parts of the country, who seemed to press over the communion like shepherds—tongues even before them quieted by the still waters of salvation. In the centre sat a man

and a woman a little past the meridian of life, and apparently strangers in the great congregation. The former had an American look, which was perceptible even to the opposite extremity of the building, and when he slowly arose out of the deep silence his words confirmed that impression. They were words fitly spoken and solemn, but uttered with such a nasal intonation as I never heard before, even in New England. At first and for a few minutes I felt it doubtful whether the unpleasant influence of this aggravated peculiarity would not prevent his words of exhortation from having salutary effect upon the minds of the listening assembly. But as his words seemed to flow and warm with increasing unction little by little they cleared up from that nasal cadence and rounded into more oral enunciation. Little by little they strengthened with the power of truth, and the truth made them free and flowing. His whole person, so impassive and unsympathetic at first, entered into the enunciation of these truths with constantly increasing animation, and his address grew more and more impressive to the last. He spoke nearly an hour, and when he sat down and buried his fingers under his broad-brimmed hat, and the congregation settled down into the profound quiet of serene meditation, I doubted whether it would be broken again by the voice of another exhortation. But in the course of a few minutes the form of the woman who sat by his side—and it was his wife—might be perceived in a state of half-suppressed emotion, as if demurring to the inward monitor of the Spirit that bade her arise and speak to such an assembly. It might well have seemed formidable to the nature of a meek and delicate woman. She seemed to struggle involuntarily with the conviction of duty, and to incline her person slightly toward her husband, as if the tried attributes of her heart leaned for strength on the sympathy of his, as well as on the wisdom she waited from above. Then she arose calm, meek, and graceful. Her first words dropped with the sweetest enunciation upon the still congregation, and were heard in every part of the house, though they were uttered in a tone seemingly but little above a whisper. Each succeeding sentence warbled into new beauty and fullness of silvery cadence. The burden of her spirit was the life of religion in the heart as contrasted with its mere language on the tongue, or what it was to be really and truly a disciple of Jesus Christ. Having meekly stated the subject which had occupied her meditations and which she had felt constrained to revive in the hearing of the congregation before her, she said: 'And now, in my simple way and in the brief words which may be given me, let me enter with you into the examination of this question.' At the first word of this sentence she loosed the fastenings of her bonnet, and at the last bound it down to her husband with a grace indescribable. There was something very impressive in the act as well as in the manner in which it was performed, as if she uncovered her head involuntarily in reverence to that vision of divine truth unsealed to her waiting eyes. And in her eyes it seemed to beam with a heavenly light serene, and in her heart to burn with the holy inspiration

and meekness, and to touch her lips and every gentle movement of her person with an expression eloquent, solemn, beautiful as the words fell upon the rapt assembly from the heaven of tremulous flute-like music with which her voice filled the building.

"Like a stream welling from Mount Hermon and winding its way to the sea, so flowed the melodious current of her message, now meandering among the unopened flowers of rhymeless poetry, now through green pastures of salvation, where the Good Shepherd was bearing in his bosom the tender lambs of his flock; next it took the force of lofty diction, and fell, as it were, in cascades of silvery eloquence, but solemn, slow, and searching, adown the rocks and ravines of Sinai; then out like a sweet-rolling river of music into the wilderness, where the Prodigal Son, with the husks of his poverty clutched in his lean hands, sat in tearful meditation upon his father's home and his father's love. More than a thousand persons seemed to hold their breath as they listened to that meek, delicate woman, whose lips appeared to be touched to an utterance almost divine. I never saw an assembly so moved, and so subdued into motionless meditation. And the serene and solemn silence deepened to stillness more profound when she ceased speaking. In the midst of these still moments she knelt in prayer. As the first word of her supplication arose the men, who had worn their hats while she spoke to them, reverently uncovered their heads as she kneeled to speak to God. Long and fervent was her supplication. Her clear, sweet voice trembled with the burden of the petition with which her soul seemed to ascend into the Holy of holies, and to plead there with Jacob's Father for a blessing upon all encircled within that immediate presence. She arose from her knees, and the great congregation sat down, as it were under the shadow of that prayer to silence more deep and devotional. This lasted a few minutes, when two elders of the Society, seated in the centre of the 'Ministers' Gallery,' shook hands with each other, and were followed by other couples in each direction as a kind of mutual benediction as well as a signal that meeting was terminated. At this simple sign the whole congregation arose and quietly left the house. Such was the experience of a couple of hours in a Quaker meeting."

To love God is to love his character. For instance, God is Purity. And to be pure in thought and look, to turn away from unhallowed books and conversation, to abhor the moments in which we have not been pure, is to love God. God is Love; and to love men till private attachments have expanded into a philanthropy which embraces all,—at last even the evil and enemies with compassion,—that is to love God. God is Truth. To be true, to hate every form of falsehood, to live a brave, true, real life,—that is to love God. God is Infinite; and to love the boundless, reaching on from grace to grace, adding charity to faith, and rising upwards ever to see the Ideal still above us, and to die with it unattained, aiming insatiably to be perfect even as the Father is perfect,—that is to love God.—Emerson.

For Friends' Intelligencer and Journal.

AN ONLOOK.

Two brothers, both between seventy-five and eighty years old, met recently, and in one of their colloquies the subject was the future life. The older brother, having through a long term of years been engaged in active business which so engrossed his time and attention as to exclude meditative moods, seemed to see no glimmer of light or hope beyond the grave. He spoke of physical death as the terminus of existence. A man of blameless life, in a moral sense he was under a cloud of doubt. He maintained that we know nothing of the future state. The other brother, in reply, cited the witness of history through all recorded time, in which so many examples are given and accredited as revelations from the after state. This is continually being supplemented by the actual sight and experience of persons now living. We may know enough of this evidence to remove all doubt by and through a pure receptive motive in our own souls. We are invited to seek and to see. In the pure process of regeneration, which is the birth of divine sight in the soul of man, we pass from doubt and darkness to an eternal day of rest, hope, and serenity. At the close of this interview the older brother said to the younger, "If you know this why do you not write it out?"

In this connection I remember the parting words of Newton: "I seem as a little boy who has spent his time picking pebbles on the shore, when the whole ocean of Truth lay all open before me." The unending round of platitudes in the stale and stagnant current of religious thought seems so like this similitude that to look up and on the ocean of universal truth is a venture and almost a crime. Yesterday is not our day. To-day is ours. The sunlight of pure, present revelation is ours. To decree reforms and hunt for duties is to confess an eclipse of the soul. We are to arise and shine for the light is come. The fields are white to the harvest—not from seed we have sown but the Great Husbandman's acreage is pressing the call for labor. His bidding is a condition in His works. Many of us claim that it is a great and good work to teach; so it is, but who is to be the teacher, God or man? We cannot see the truth until our eyes are opened to the light of it no more than we see the outer light of day with banded eyes. There is but one reason why men and women love darkness rather than light. It is because their deeds are evil. There is only one way for Friends as a Society to arise and shine, and grow and prosper, and that is by an honest, earnest minding of the divine light, by each of us living and walking in it. We do not deny that early Friends so arose and came up out of the world. We confess that so long as they kept in that life and practice they increased in power and numbers. Our return to the same sublime trust will be a prophecy of our promise and our perpetuity, and that return will be made. SIDNEY AVERILL.

Wyandot, Ill.

VIRTUE does not dwell upon the tip of the tongue, but in the temple of the purified heart.—Seneca.

THE DOCTRINE OF REPROBATION.

The proposed revision of their "Confession of Faith," by the Presbyterians, occasions comment in many directions. The *Examiner*, of New York, one of the leading newspapers of the Baptist denomination, and "Evangelical" in its faith, remarks as follows:

The Presbyterians, in the preliminary discussions regarding the necessity and advisability of revising the Westminster Confession of Faith, have much to say of the statement made in Chapter III. of that document regarding reprobation. Many have declared their special repugnance to such statements as these, which form sections 3 and 4 of that chapter: "By the decree of God, for the manifestation of his glory, some men and angels are predestinated unto everlasting life, and others foreordained to everlasting death. These angels and men, thus predestinated and foreordained, are particularly and unchangeably designed; and their number is so certain and definite that it cannot be either increased or diminished."

It is no wonder that loyal Presbyterians object to statements like these in the creed of their church. Certainly very few, if any, ministers or laymen of that or any other church now believe the monstrous doctrine implied in these words. To represent God as foreordaining from all eternity the everlasting death of a large part of the human race, and so fixing their destiny that no efforts on their part could possibly alter or increase the number of the saved a single unit, and all this for the manifestation of his glory, is nothing short of blasphemy. It is not to describe God a being of holiness and love, but an omnipotent devil. It is to read the gospel declaration, "God so loved the world that he gave his only begotten Son, that whosoever believeth in him shall not perish, but have everlasting life," in exactly an opposite sense,—God so hated the world that he foreordained a large part of it to everlasting misery.

And in saying this we do not for a moment lose sight of the fact that many men of pure and even saintly character have honestly held and strenuously taught this doctrine. It is, indeed, marvelous that such should be the case. It is almost incomprehensible that one whose own heart is full of love toward humanity, and who would spend his life freely for others, should suppose that his God could have a heart such as the doctrine of reprobation implies. It only shows the bondage to which a theological system can sometimes reduce the heart and mind of the best and most learned men. The fact that such theology has been taught by good men does not make the theology itself a whit more respectable. It has long ceased to be held by representative teachers of the church, by preachers who have the ear of the people, by the people who are foremost in Christian service and all good works, and it ought without delay to be expunged from the creeds.

Such is the way in which the subject presents itself to many Presbyterians, who are declaring their belief in public and private with refreshing freedom of speech. In their efforts to revise their creed so as to bring it into harmony with the Scriptures and with modern evangelical theology, Presbyterians will certainly have the sympathy of Baptists.

WILLING SERVICE.

There was a good text for a sermon in the reply of a caretaker of a religious Institution when a visitor queried as to how they could secure such immaculate cleanliness. "We have no hirelings here," was the response, "the service is one of love for the Master." When love is at the root and right reason directs the work, no matter if it be but menial service, the result will be a thing of beauty. It was no poet's fancy, but a grand and everlasting truth that Longfellow embodied in his beautiful poem "The Building of the Ship" where he says:

"He that followeth love's behest,
 Far exceedeth all the rest."

There is no other foundation for perfection than that which rests upon love, and even when that love is only for the work itself, that it be the best of its kind, it enobles the worker and benefits the world. It is true we cannot always give to our work a genuine love for it, when the details are often hard and even repulsive, but here comes in the office of duty, and this is so near akin to love that it stimulates us to do willingly that which is disagreeable, and mastering this we will grow to love even that which seemed so unlovely; and if in the doing of this we are also bringing comfort and cheer to those who love us, we are doubly blessed. Let us only serve willingly and somehow, somewhere, good will come of it. Too often we fancy if we only had different work or were situated differently we could more willingly perform the service required of us.

One who was wise with an unworldly wisdom has said that, "It is not by change of circumstances, but by fitting our spirits to the circumstances in which God has placed us, that we can be reconciled to life and duty. . . . The world proposes rest by the removal of a burden. The Redeemer gives rest by giving us the spirit and power to bear the burden. Christ does not promise us a rest of inaction, nor that the trials of life shall be removed. The curse on the world is labor, but to him who labors earnestly and truly it turns to blessedness."

In the later revelations made to many of us we cannot recognize that labor is ever a curse to any, other than when its results work evil to the bodies

or souls of men. It is when we are only "hirelings," selfishly working for that which will alone benefit us, that we fail to see the blessedness of labor. Not that we are called to give all service free of earthly reward, but in seeking to earn our reward in the material compensation received, we put so much of love and willingness into the work as will also reward those for whom the service has been rendered. Mutual obligation is the ideal that should exist amid all the varied avenues of trade, and it does largely abound in the world notwithstanding the general outcry that wrong-doing predominates. Good is never so quickly heralded as evil, for the masses are constantly craving that which is sensational, but there is a little leaven of love and duty underneath, that is working in silence, and some day, if we be but in earnest, the whole lump will be leavened. Or as F. W. Robertson expresses it: "Let a man begin in earnest with—I ought—he will end, by God's grace if he persevere, with the free blessedness of—I will. Let him force himself to abound in small offices of kindness, affectionateness, by and by he will feel them become the habit of his soul. . . . Do right, and God's recompense to you will be the power of doing more right. Give, and God's reward to you will be the spirit of giving more; a blessed spirit, for it is the spirit of God himself, whose Life is the blessedness of giving. Love, and God will pay you with the capacity of more love; for love is heaven—love is God within you."

MARRIAGES.

MASON—SCOTT.—In Philadelphia, by Friends' ceremony, in the presence of the Mayor of that city, Eighth month 14th, 1889, George H. Mason, son of Benjamin and Ruthanna Mason, of Chrome, Chester county, Pa., and Rachel J. Scott, daughter of Samuel and Elizabeth Scott, of Sandy Spring, Montgomery county, Md.

DEATHS.

HOFFMAN.—At her residence, Buraside, Gray's Lane, Philadelphia, on the morning of Third-day, Eighth month 13th, 1889, Catherine A., daughter of the late Jacob and Hannah Hoffman.

JONES.—In Woodstown, N. J., Eighth month 11th, 1889, at the residence of his daughter, Allen Jones, aged 87 years.

MICHENER.—At her residence, Emerson, O., Seventh month 13th, 1889, Mary A. Michener, in her 46th year; a member of Short Creek Monthly Meeting. Her long and painful illness included a period of several years, which was borne with marked fortitude and resignation to the Divine will.

SHOEMAKER.—At the residence of his brother, Isaac Shoemaker, in Norristown, Pa., Fourth-day morning, Eighth month 14th, 1889, Jarrett Shoemaker. Interment at Plymouth Meeting.

TROUT.—At Spring Lake, N. J., on Eighth month 16th, 1889, Irene C., wife of Dr. Win. Wesley Trout, and daughter of Chalkley and Mary Ann Coates, of Philadel-

phia; a member of the Monthly Meeting of Friends of Philadelphia.

EDUCATIONAL.

SWARTHMORE AND ITS CO-EDUCATIONAL ASPECTS.

RALPH STONE, of Wilmington, Del., recently circulated at Swarthmore College, has an article in the *Christian Register* of Boston, in the course of which he says:

"Ex-President White of Cornell University, in an article in a recent number of the *Forum*, said, 'The colleges carried on by the Society of Friends at Swarthmore, Haverford, and Bryn Mawr, near Philadelphia, are, of all within my knowledge, the best and most flourishing, because conducted with the most thoroughness, cleanliness, and intellectual honesty.' This is high praise. Swarthmore has been particularly fortunate in securing within the past few years several liberal endowments, which have enabled the managers of the institution to raise the standard until the instruction offered is second only to that of the great universities of Harvard, Yale, and Princeton.

"Co-education of the sexes can be called an experiment no longer. The history of Swarthmore for twenty years is a history of its complete triumph. It needs to be said that young men and young women could not be educated together and the best results be obtained. But such an assertion can now be disproved by the most convincing kind of evidence,—that of an example of its success.

"In a recent issue of the *Register*, there appeared an account of Barnard College for women, an annex to Columbia College, the writer of which deprecates the tendency exhibited by several of the leading educational institutions to deny to women 'the same teachers, teaching, and honors that is given to men.' The writer glories in the fact that Columbia College, by means of its annex Barnard, now 'confers degrees on women exactly the same in kind and importance as those conferred on men.' Swarthmore College also offers the same instruction, from the same corps of professors, to both sexes; and the same degree is conferred upon the young women as upon the young men. The former are privileged to take as many honors as the latter, and, in fact, generally take more. No distinction is made between the sexes, whether in class-room, study-hall, dining-hall, or parlors. Perfect freedom of social intercourse is permitted, and the results have been found to be far from injurious. As a rule, the college youth, recently graduated is awkward and ill at ease when in polite and refined society. He has been unused to association with the gentler sex during his college career, and feels the need of polishing his blunt and rough college manners. But a young man, a graduate of a co-educational institution like Swarthmore, is fully equipped to enter polite and refined society; and he will never feel the lack of polished manners. This is one of the principal benefits of co-education, and the twenty years of Swarthmore's history proves its usefulness and its success.

"In a list which has been going the rounds of the

press of the present day, one of the country which have received the most commendations during the past year, SWARTHMORE is figured with the name of a university. This is wrong. Swarthmore can never aspire to the rank of a university. She is content to fill the position of a college, and perform the ordinary functions of a college—thoroughly and honestly. Ex-President Magie has well said; I would encourage the colleges to continue their attention to their own line of work, in the manner which they have marked out, and to refrain that work by an ambitious attempt to meet a work that will almost belong to the university.

—The annual report of the Trustees of Friends' Academy, Leona, Va., to the Association of Friends in the South, held at Leona, H. C., was read by the President, James R. Williams, Vice-President, Samuel J. Underhill, Treasurer, and Secretary, L. Williams, Secretary.

—A correspondent at York, Pa., asks us how to obtain the "Gleaner for Service—Teaching" issued by the Boston Society of New-England History and Antiquaries, to which paper, "New-England and Other Gleanings," Sixth month 1861. We have no other information than that given in the paragraph at that time, but a postal card addressed to the Society, at Boston might bring an answer, or, perhaps, some of our readers can give the desired information.

COMMUNICATIONS.

PROHIBITION, CONSISTENCY OF STATE LAWS, &c.
 Editors INTELLIGENCER AND JOURNAL.
 WILL the editors allow me space to respond to the criticism of Jesse H. Coffey in the INTELLIGENCER AND JOURNAL of the 10th inst.?

Those of your readers who read carefully what I wrote will remember, as they do not wish—by reference to the article, that what I undertook to argue was, that 'such a provision as prohibition had no proper place in a free Republic.' I wrote nothing about the right, the legal right, of the people to adopt such a clause; or to enact laws for that same purpose. There can be no reasonable doubt about that right. I presume no one but a high priest, or his paid attorney, ever doubted it; and I was very glad indeed when the Supreme Court of the United States settled it, finally and definitely. We should not be troubled here with that quibble.

But I am now referred to the Kansas case, as showing that I was, and am, mistaken. It will be found by any person who will take the trouble to read those cases as reported in the reports of cases in the Supreme Court, or in either in the syllabus of the cases, or in the proceedings of the attorneys, or in the decision of the court, is the point I make even referred to. The point decided, as stated by the court in its opinion in the Magie case, is: that 'the Supreme Court of Kansas has not denied Magie any right, privilege, or immunity secured to him by the Constitution of the United States;' that is, the provision in the constitution of Kansas was not, and is not, in conflict with the Constitution of the United States.

There would seem to be no room for dispute about the right, the legal right, of the people of a State to adopt any form of constitution they may deem fit, with this only proviso, that it shall not be in conflict with the Constitution of the United States.

It would seem that the readers of the INTELLIGENCER AND JOURNAL ought to be able to see the distinction, but some of them seem not to. Let us see if it can be made plain. I apprehend it will not be denied, that the people of the State of Ohio have the right, the legal right, to so amend their constitution as to prohibit the members of the Society of Friends from holding any office of trust or profit in the State, or that the people of the State of New York have an equally indisputable legal right to provide in their constitution that the members of said society shall not be allowed to vote at any election in said State; but it may be safely assumed that at this age of the world no one would claim that such a provision would be just, or wise, or statesmanlike.

I repeat, that the question as to whether or not constitutional prohibition is right, is wise or statesmanlike, has not been decided by any court, either State or national; and I do not see how it could be brought before them.

I have no wish, no intention, to discuss the propriety or wisdom of Constitutional Prohibition at present, but let me suggest in answer to J. H. G.'s claim, that it is "the only means of securing any permanency" in prohibition legislation, that the people of Kansas adopted a prohibitory amendment in 1880, and in 1881 the legislature enacted a very stringent law, covering ten pages of the statutes; in 1885, after four years experience, that law was superseded by another of equal length, and again in 1887 this also was displaced by another, covering twelve and a-half pages, thus showing that the constitutional provision did not give the legislation "any permanency." "But it was all in the right direction." Certainly, but it could have been had without any specific constitutional authority as well as with.

And further, with the aid of the constitutional prohibition, and the laws enacted, it took seven years to close all the breweries in Kansas, four of them being in active operation in 1887; and were not closed until after the Supreme Court decision. It is the legislature and the courts upon which we must depend. Liquor sellers have no fear of nor respect for constitutional provisions. They respect only the constable and the sheriff.

I am sorry to differ so widely from many earnest friends of temperance, but my conscience and my judgment both tell me I am right, and I am gratified to know that public sentiment seems to have reached the same conviction.

JOHN J. JANNEY.

Columbus, Ohio, Eighth month 14th.

WHEN I bring calm and philosophic thought to bear on the question of social progress, I look to the wisdom of all to take care of every one. Weiss said that not one drop of the attar of roses will you get from a hundred petals; distil them by acres, and the subtle, delicious perfume is obtained. So it is with wisdom.—*J. V. Blake.*

THE "COUNTRY WEEK" IN BALTIMORE.

EDITORS INTELLIGENCER AND JOURNAL:

I was much pleased and interested in reading the report of the Country Week Work mentioned in the INTELLIGENCER AND JOURNAL of Eighth month 10th. We of Baltimore City have an association called the "Free Summer Excursion Society." T. P. Perine, who has been a subscriber for your paper a number of years, is a director of long standing, and his wife and daughter are also connected with the work. If it is not too much trouble, we would like to have the report of the Country Week Work, so as to compare the two. Both societies have the same interest, are working for a similar result, but each having its own method; perhaps by a comparison both may be benefited.

M. A. P.

Baltimore, Eighth month 17.

[A copy of the Baltimore report has reached us, as suggested above. The work in that city is directed by the "Free Excursion Society," incorporated in 1875. The officers for 1889 include John K. Shaw, President; Robert Read, Vice-President; Wiley E. Cushing, Secretary; Treasurer, Alexander Brown & Sons, (bankers.) A large committee on the selection and care of children is divided up by locality, each member having a definite neighborhood to take charge of. The excursions, usually ten in number each season, are given in steamboats to a place owned by the Society, "Chesterwood," and the report says "the whole city is benefited without distinction of race or religion."—Eds.]

NEWS OF FRIENDS.

ROBERT HATTON attended Friends' meeting at Trenton on First-day morning the 18th instant. In the afternoon he and Dr. Franklin T. Haines were in attendance at the Circular meeting held in the old meeting-house at East Branch, New Jersey. The people in the neighborhood continue to be interested, and would like to have the meetings held more frequently. The next one is appointed for First-day afternoon, 15th of Ninth month, at 3 o'clock.

—The Friends residing at Swarthmore have been holding a meeting regularly on First-day morning, in the College meeting-house. The hour is 10, but those attending are desired to gather punctually. After a due period of silence, (except when there is a minister present), the Scripture Lesson is read and remarks are offered thereon. The attendance has been about twenty-five to thirty.

PERSONAL NOTES.

PRESIDENT MAGILL, of Swarthmore College, intends to sail on Seventh-day of this week, the 24th instant, for Europe, accompanied by his wife and their daughter Eudora. They take the steamship *Circassia*, from New York for Glasgow, and expect to spend a short time in Scotland and the Lake Region of England then to proceed to London, and then, stopping for a time perhaps at Rouen, to reach Paris shortly before the close of the Exposition. President Magill's purpose is to attend during the coming school year, the lectures of the Sorbonne and College of

France, with the object of increasing his familiarity with French history and literature.

THE MINUTES.

ONE at a time the equal minutes fall
Into our waiting hands, succession fair
Of costliest pearls, alike in valuemant,
Dropped by a kind Eternity of love.
Is it not strange we should so blinded be
By self and ignorance that to our sight
Some of them seem but worthless? Some, 'tis
true,

We grasp too eagerly, and some we fear,—
Tremulous stand we oft in hope or dread
Of that which passing time shall next disclose;
Some that are gone we fain would greet again,
And O, how gladly we would some forget!
Some that are yet to come impatiently
We still await, and slight the one at hand.
Never one worthless minute hath God given!
They are our share of his own heavenly
wealth.

"What hast thou done, my child, with those rare
gems
I gave into thy keeping?"

"Some I used
To beautify the lives of those I loved;
Some were so fair I could not part with them
But lingeringly turned them o'er and o'er
And selfishly kept them for mine own delight.
Some I have hurried deep as possible
Far out of sight and memory; some have slipped
Unheeded through my fingers and are gone,—
I know not whither they have rolled away.
And some, O Father! rashly, hastily,
Wilfully, scornfully, I flung aside!
O, anything, any, to be rid of them!
Thus have I done with what thou gavest me,
Nor can I plead 'Indeed, I did not know,'
For something told me they were priceless all."

A. L. D.

MIGHT HAVE BEEN.

I MIGHT have been more patient—
Ah! would the angry word
Upon my lips had perished
Unuttered and unheard!
Some heart would now be lighter
To wend its toilsome way;
Some life would be more cheerful,
More sunshiny to-day.

I might have been more kindly—
How trifling is the cost
Of simple deeds of goodness,
Whose power is never lost!
The golden moment vanished,
And never to return;
The glory of bestowing,
Too late, too late I learn!

I might have been more loving
To those who hold me dear;
What little deeds, neglected,
Had soothed their pathway here!

The hasty word or action
That pained a gentle heart,
Ah! will its mournful memory
From out our life depart?

"I might have been!"—sad hurdeo
Of life's remorseful song,
Within the heart forever
Its haunting echoes throng.
Oh, youth, upon the threshold
To this sweet lesson bow:
For deeds of love and kindness,
Life has one season—now!

—George Cooper, in *Boston Peace Advocate*.

A REMINISCENCE OF A COAST STORM.

WHAT is that sound, sad, yet sweet, distant, yet so
distinct? Not a leaf is stirring, not a ripple moves
upon the face of these waters. Yet onward and up-
ward, full-toned as the diapason of an organ touched
by a master-hand, comes that far-away sound to me,
sitting here, upon this grassy bluff. I am trying to
perform a set task to write an article. Hard work I
find it, for what between these depths beneath, blue,
swift-running, yet seeming so motionless; the deeper
blue overhead tempting a wandering eye; the scented
breath of morning and the nameless beauties of
this new-born day; and above all that sweet solemn
voice flowing outward and upward, my pen is idle,
my thoughts keep roving.

Familiar and well-loved sound! It is the sea, my
readers, hymning its Maker's praise.

It lies unseen, far away down yonder below this
stream on the banks of which I am sitting; still far-
ther away beyond that headland washed by a bolder
stream; and yet farther away, where those palmet-
toes wave their plumes over great sand-hills, Nature's
outmost barriers of this south land; unseen, yet
thrilling the ear with its resonant voice.

Would you like to go down to it with me? Here
is a boat, and though it looks like a mere cockle-
shell it is staunchly built, "to walk the waters like a
thing of life." Take first the oars so we may the
more quickly get out from between these banks on
either hand. Now, out upon the broad bosom of the
river we can set our sail to the first breath on the
rising tide, and sit at ease bounding from wave to
wave until we find ourselves close down upon an
ocean beach.

The Sea! Feast your eyes now upon its glories,
from the water so gently curling upward to the feet
of these myrtle-crowned hills, to where they blend
in the sun-lit air with the concave sky. Bathed in
the summer sunshine it smiles back in the face of
heaven in perfect peace, and still from its unseen
depths comes its murmuring voice in praise.

But it has another aspect, and another voice, when
the winds break loose from their sleeping-place and
pile up the water in foaming masses upon the shore;

* This account of a *hurricane* that occurs I upon our
Southern Atlantic. Nearly seventy years ago, when the at-
most millions possess a consciousness of one family, his been with us
one to whom the *hurricanes* were given by a survivor of the *hurricane*
living on a *hurricane* island was blind and so-called *Myra S.*, who
was a girl at the time, retained a vivid im-
pression of it, and was the first of its grandeur and her awe.

then, who can tell of its terrors, or find words to measure the havoc in its wild progress against the land? Look across to that shining shore. Just there, where those hills are heaped, white as the driven snow, about seventy years ago there lived a happy household. A fine dwelling-house, backed by a group of noble oaks, stood conspicuous upon a grassy plat many feet above the beach. This lawn sloped so gently down to the hard-packed, moist sand of the seashore, that the little children of the family often ventured to roll themselves over its face to frolic in the rising tide.

It was the summer home of Myra S—— and her sisters; and as there were other households all along those golden sands, the children used to count the days from the coming of the swallows in spring to the time when they should leave their more scattered winter homes for the merry days they had together on the seashore. It was then the high holiday, and their games mending; for when the sun waxed hot and glaring down upon the beach, were there not inviting shades under the wide-spreading branches of the live oaks behind Myra's house? This was the favorite playground of Myra herself. Great, therefore, the outcry when on going out of doors one morning the S—— children found the finest of these trees had been injured by a thunder-bolt during the night. They had not heard the storm. "Father," however, came forward, and with saw and hammer and a piece of sail-cloth, so deftly doctored the stricken limbs that they felt comforted, especially as he assured them that its sap would soon renew its evergreen foliage, and its shapeliness would be as before. So it did. All except upon that side next the house, where a bough, lopped off near to its trunk, stood out with jagged ends "like a giant arm with skeleton finger pointed at us." So said Myra to her sisters, over and over again, when tired with scampering on rainy days under the cross-beams of the attic roofing, they would lean to rest against the window, looking down upon this tree.

One September afternoon they were all up there, not at play, but looking out at the storm upon the beach. The ocean seemed swallowing it up, so that at last there was not a slip of sand in sight, and as the billows heaved and leaped up-shore the wind scourged them, and tearing off their crests drove them in clouds of spray far overhead until the air was darkened. Used as the children were to these Atlantic gales they felt lashed this afternoon by a sense of uncommon peril. "Sea and land seem all one to me," whispered Myra to her sisters. "Perhaps all is not so blurred behind us. Let us go and look out of the back window to see how the trees are braving it." They were yet whispering together there when the supper-bell called them down stairs. Then they went quietly to bed—all but Myra. As eldest she was allowed a half-hour longer. She had just risen for her "good night kiss," when a servant came in to say that his quarters were under water. This meant that the back waters were meeting those of the ocean from the front. Myra was hanging back to hear more when her mother asked if she was afraid to go up to bed alone. "O, no!" so she went off,

and finding the sister who was her bedfellow yet awake, gave in her report. "I'll tell you what, Myra, we may as well sit up together for there'll not be a wink of sleep so long as the wind rages so. It comes like a clap of thunder and tries to tear us to pieces, then lets us go with such a screech as makes the lull more awful than the thunder was. I'm too sore afraid to sleep." But Myra coaxed the child to lie still; and by and-by both girls fell fast asleep in spite of the awful voice of the hurricane. They thought it a dream when their mother's hand gently lifted them out of bed and signed to them to dress themselves. They could scarcely make out what she was saying so continuous and deafening now was the roar.

The first floor was under water, and the sea yet coming in. Presently, with a crash the upper windows were burst in, and a great billow leapt through and set the nursery afloat. In the darkness, parents and servants groped around and bore their helpless burdens up to the last refuge left to their flying feet, the attic. A strange motion directly afterwards sent a fresh thrill through even the least child. They all began calling wildly upon their father. The servants too broke into wailing. "Come close to me, darlings!" shouted their father; "and with arms about each other we will pray to our Father in Heaven. He is Almighty to save, even though all the billows sweep over us."

So they knelt down in one corner of that garret, enircled by their parents' arms, and prayed to Him who

"Plants His footsteps in the sea,
And rides upon the storm."

And thus they waited, feeling the depths beneath them heaving, and all the winds of Heaven left loose about them. They well knew that they were torn away from their foundation upon the solid land, and were at the mercy of the devouring sea. Therefore when another crash came, throwing them all prostrate, these little girls gave a weak cry as of a dying creature, the last hope gone. But another shout in their ears from "father" made them pluck up heart again.

"Praise God, my darlings! our deliverance is at hand." So it was. The waves ceased to buffet and the winds to whirl them round. In some way they were delivered.

"The storm is laid—the winds retire
Obedient to thy Will.
The sea that roars at thy command,
At thy command is still."

By degrees those little ones fell off one by one into slumber upon the bare floor of that garret as peacefully as if in their little cots. All but Myra. She being older, had entered more fully into the peril threatening them, and from snatches of troubled sleep woke up perpetually to wish for the light of day. When at last it came, the awful destruction it revealed all around them made an impression never to be forgotten.

Hills had melted before the waves, and sands had been heaped by the winds over the wreck of all that once seemed so solid. Houses had been swept out to

sea, and household is swallowed up. Trees had been uprooted, and only one of their own fine oaks had been left to mark the playground of the children, the maimed old "giant;" round whose trunk the sands were now high heaped, and whose "skeleton fingers" had I caught and held them back from the raging sea. Swept in upon the crest of the mightiest wave, the house had been brought in contact with the oak, which being sucked back in the vortex of that destroyer, the snaked-off arm had gone crashing through the window and upwards through the roof, and while the waves whirled them round and round in its course back to its ocean beds, the sturdy arm of the oak was wedged across so that the house and its living freight escaped to bear witness of the power of prayer, and the goodness of Him who is ever "Inspirer and Healer!"

FIFTY YEARS OF PHOTOGRAPHY.

A FEW weeks since I noticed a newspaper item calling attention to the fact that half a century had passed since the discovery of the art of photography, and announcing that preparations were being made to celebrate the anniversary. Now it is about fifteen years since the *first* centennials began, and from the centennial of the Boston Tea Party to that of the inauguration of the Father of this century-old nation, we have steadily kept up the process of poem-writing, banner-waving, and gathering in large crowds to hear of the wonderful progress of the past hundred years. Indeed, the whole matter has become a trifle wearisome, and one is tempted to remark with Mr. Bevan in Martin Chuzzlewit that perhaps our progress is not after all so remarkable since we began our national life with two great advantages: "One that our history commenced at so late a period as to escape the ages of bloodshed and cruelty through which other nations have passed; and so had all the light of their probation and none of its darkness. The other that we have a vast territory, and not—as yet—too many people in it."

However, in spite of the self-glorification which these occasions are apt to call forth it is perhaps well to glance back occasionally, and since no centennials seem to offer itself at present we must content ourselves with the opportunity which a semi-centennial offers for reviewing the progress of the art of photography.

Probably there are few readers of the INTELLIGENCER who could not find hidden away in bureau drawer or on closet shelf some of the daguerreotypes taken when the art first became known. Rather expensive luxuries these portraits must have been with their heavy gilt borders and satin lined, leather covered cases. Probably our grandfathers and grandmothers did not order them by the dozen when it first became fashionable to be photographed. It is rather difficult to obtain a fair view of the picture since it is only when the rays of light fall upon it at a certain angle that it appears as anything but a blur. The ambrotypes, which are more recent, and which are taken on glass instead of a copper plate, do not possess this inconvenient property.

It is so long that a discovery or an invention is due to any one man. We find the beginnings of improvements centuries ago. Photography forms no exception to this rule; the idea had long been imbedded in the man of good knowledge and slow worked itself to the surface and stood out clear and plain, ready to be shared and polished by the thinkers of the industrial world.

The fact that certain substances are affected by light had long been familiar through the fading of dyed stuffs. The alchemist, as early as the twelfth century, knew that salts of silver blacken on exposure to light. Dr. Priestley, the discoverer of oxygen, applied this knowledge by causing chloride of silver to be deposited on the side of a glass bottle, covering the bottle with dark paper from which letters had been cut, and exposing the whole to the rays of the sun, thus producing dark letters on a white ground.

Wedgwood, in the early part of the present century, made the first attempt to photograph external forms. Sir Humphrey Davy followed on the same line. In France, Niepce began experimenting but did not live to see the fruits of his work. His associate Daguerre, however, perfected his process and announced his secret to the world. It was in the days when Louis Philippe, who had come in on a wave of revolution, was endeavoring to bind together the turbulent elements of his empire and the "Citizen King," when Daguerre made known his process, granted him a yearly pension of £1000 francs.

But Daguerre's method, requiring an exposure of twenty or thirty minutes, could only be applied to stationary objects, such as buildings, etc. He vainly attempted to obtain an impression of a human face. The result was a blur, and it was declared that the art could not be applied to portraiture.

So it was reserved for America to crown the art with success. John W. Draper, of New York, who had for some time been making experiments, conceived the idea of using more sensitive chemicals and thus securing a quicker impression. In 1839, the same year in which Daguerre made known his process, Draper took the first photographic portrait, and from that time forward photography became an assured success.

The steps by which photography has reached its present status are interesting only to the special student of that branch of industry. He who does not care to delve deeply into the properties of silver, iodine, and bromine, the relative value of "developers," and the construction of the camera, may glance at the faded portrait of forty or fifty years ago and then beholding the clear, well-finished cabinets, the amateur outfits, and the various photographic wonders, composite, instantaneous, microscopic, and astronomical, may gain some idea of the strides that have been taken since the era of photography dawned just half a century ago.

ANNA L. NICHOLS.

State Centre, Iowa.

Whoever is satisfied with what he does has reached his concluding point—he will progress no more. Man's destiny is to be not dissatisfied, but forever unsatisfied.—E. W. Robertson.

THE CAPTIVE APACHES.

It may be remembered by your readers that not quite two years ago a band of Arizona Apaches, about 370 in number, were transferred as prisoners of war, from Fort Marion, Florida, to Mount Vernon Barracks, Alabama. They were chiefly old men, women, and children, over a hundred of their best youths having been sent to Carlisle Indian School; and of late a good deal of interest has been aroused in regard to them by Mr. Herbert Welsh's investigations, the result of which has been to show that few of these Indians have been guilty of recent atrocities, that at least fifty of them have been employed as United States scouts, doing good and loyal service, and that, while some, like Geronimo and his followers, have many crimes to answer for, and are rightfully held as prisoners of war, others, who are sharing their fate, are, by comparison, innocent and deserve different treatment.

Experience has shown that Indians, those at least who belong to the wilder tribes, can be managed more easily while held as prisoners of war than in any other way. No such record of Indian progress has ever been made as that made by the men captured in the Minnesota massacre of 1862. The Modocs who killed Gen. Canby and were exiled to Indian Territory are the most progressive of all the tribes around them, and Captain Pratt's great work was begun in Florida with red-handed, desperate warriors, who in chains attempted suicide rather than submit to the results of their defeat.

The Apaches now at Mount Vernon have shown during their two years' imprisonment that they need only fair chances to prove that they are equally ready to accept civilization, and that this chance can be given them while they are still under army control has been demonstrated by the work done for them by Maj. Wm. Sinclair of the Second Artillery, United States Army, under whose command they have been until lately, when he was transferred to Fort Warren, Boston.

Enforced idleness was hateful to these people; they begged for work and for land. Their food supply was insufficient, their quarters were unfit, the conditions were all of retrogression rather than of progress. Under Maj. Sinclair's administration, for which he modestly disclaims all credit, the change has been very great. Their food is now good and sufficient, they are quartered in log houses built partly by their own labor, the able bodied among them have been organized into working squads, order and cleanliness prevail throughout the camp, and everything that careful personal attention can do has been done for the improvement of their general condition. It is a striking instance of the devotion of an army officer to a body of wretched captives, whose claim upon him he has met in a truly humane spirit, recognizing that his duty in such a case lay beyond the reach of any military code.

The scene of this strange little drama, for such in effect it is, lies in a remote region in lower Alabama, about thirty miles from Mobile, a healthy locality, but no place for the permanent homes of these Apaches, since farming there is an impossibility, and

without farm work, idleness is a necessity. The great need for them is that they should be settled somewhere at a safe distance from their own country, where they can all, men, women, and children, be trained to work and to become, if possible, self-supporting. This matter, which was inexcusably neglected under the last Administration, is being actively pushed forward by the present Secretary of War, and it is hoped that the right place may ere long be found.

The mission work at Mt. Vernon Barracks is in the hands of women teachers, Miss Booth from Carlisle and Miss Stevens from Hampton, who, supported chiefly by Boston friends, have been there five months. Mr. Endicott, ex-Secretary of War, made liberal provisions for their personal comforts and in every way encouraged their educational work; and, in spite of some serious disadvantages, they have had most encouraging success. They feel that they owe much to Maj. Sinclair's consideration, and I take the liberty of quoting from a letter just received from Miss Booth, who says: "Not a day passes that Maj. Sinclair is not seen walking about the camp and more than once a day. Not a change escapes his eye. The women find him ready and willing to help their Indian wants, and know his heart is big enough to love little children, who readily turn to him for a pleasant word. He does not denounce all Indian customs, but by degrees he draws them away by the supply of something better. When Indians would sell their clothes to people of the surrounding country, the purchasers were made to give them up. Drunkenness and wife-beating are punished with guard-house, but undue severity is unknown. The Indian dance is prohibited, and they understand that the camp must be quiet at night, while as yet the custom of wailing for the dead is not rebuked. He has been humane and patient, and has laid the foundation for others to build upon."

These Apaches are neither angelic nor plastic, but they are brainy, and capable of improvement, if taken in hand in the right way. Mission work among them has been well begun. The wife of one of the resident officers writes: "I must tell you that the ladies are succeeding very well indeed with their friends, Miss Booth with the children and Miss Stevens with the men. The women are hard to reach. They have doubtless told you of their school out of doors, and to-day I was delighted with the progress the little ones had made. The Indians certainly have improved immensely since you saw them. To-day when they were all seated for the talk with Gen. Howard, I could not help feeling proud of Maj. Sinclair's work among them. Gen. Howard gave permission to use one of the hospital tents for a school-room for the present, so the more picturesque teaching under the trees will give place to this more comfortable and private work under cover."

But the most striking picture which these letters give us is of Geronimo, whose energies seem to have been diverted into an entirely new channel. Evidently horn to be a leader, the fact that he can no longer be the first on the war-path has suggested to

him the alternative of being the first in Sunday-school, and accordingly he may be seen ringing the bell, seating the pupils, and keeping order generally, with all the determination which characterized him when his occupations were of a somewhat more exciting nature. Both in the day-school and in the Sunday school he is reputed as being the teachers' right hand man, and we receive amusing descriptions of the confidence with which he is called upon in case of emergencies requiring decisive action. One of the teachers writes: "We have moved the organ to his (Geronimo's) house, and every evening we go out there to sing. Not only the Indians come, but some of the soldiers, and after we are through, Geronimo sits down and plays a tune, to the delight of the Indians, who fairly roar their appreciation."

Whatever the past of these men and women may have been, there is certainly some responsibility connected with their future, which is, at the moment, entirely in the hands of the Government. If they are wisely and carefully settled in permanent homes, under proper supervision, they will be easily civilized. The experiment ought to be fairly carried out, and it is a case in which the pressure of public sentiment should be brought to bear upon those who have the power to see that this is done.—*S. C. Armstrong*, (Hampton, Va.), in *N. Y. Evening Post*.

CIVILIZING THE INDIANS.

It is very encouraging to all friends of the Indians to know that slowly but surely it is being recognized that the only true way to deal with him is to treat him "as a man and a brother."

G. L. Curtis, whose experience of Indians at Hampton and elsewhere gives him authority so to speak, in a recent paper in the *Chicago Interior* says:

"Little progress in civilization can be made by the Indian until tribal tenure is exchanged for individual ownership of land. By the treaty of 1868 this was made possible in the case of the Sioux who were parties to that agreement; but few profited by it. The General Land in Severalty Bill (from its originator more commonly known as the Dawes Bill), signed by President Cleveland February 8, 1887, embraces in its provisions the Indians throughout the United States; a few tribes in Indian Territory and New York State alone being excepted. To this act, the most important piece of legislation in the history of our dealings with the original occupants of the continent, the title of the Magna Charta of the Indians has been not inaptly applied, as it is the first to provide for the general abolition of tribal tenure, the location of the individual Indian upon land in severalty of which he becomes the sole owner, his full recognition and protection by the law, and his eventual admission into all the rights and privileges of citizenship. The initial step must be taken by the Indian—in the selection of an allotment of land (a quarter section of arable land in the case of an adult) for which he receives a patent from the government, and which is absolutely non-transferable for twenty-five years. The full endowment of complete citizenship is only to follow this practical re-

nunciation of savagery and acceptance of the conditions and duties of civilized society.

"The ration system is a curse sufficient to paralyze any effort of philanthropy or legislation to elevate the Indian. It saps his independence of character and removes all incentive to earnest effort in his own behalf. His logic cannot distinguish between dole and due, between payment for past purchase of land and the alms of charity; and from this position he naturally sinks into the condition of a beggar. Any effort to effect his moral or material improvement will fail which does not awaken in him the needs of a higher plane of life, and, by the substitution of stock and implements for the old issue of food, raise him to a condition of self-dependence and self-support. The issue of brood mares and farm wagons is gradually supplementing that of provisions, and the Indians have already commenced the purchase of mowing machines and sulky-rakes. The distribution of wagons to those whose industry and improvement recommended them to favor was the exciting event of Issue Day at Standing Rock; and the dense and eager crowd that surged around the agent as, standing high upon a wagon-box, he read from the official record the names of those who merited reward was a scene that would have astounded a believer in the doctrine of extermination."

A HEROIC WOMAN.

MANY stories are told of the courage of the women of that early generation who first broke ground in the forests of Pennsylvania and Virginia. They were in constant peril from wild beasts and from hostile Indians, but with heroic patience endured hardships, labor, and disease. An example of another kind of courage is preserved by the descendants of Christiana Dickson, the wife of one of the first settlers of Erie county, Pennsylvania.

She was a small, low-voiced woman, extremely timid by nature; but upon one subject she was resolute—she had a horror of drunkenness. She lived in the days when the use of liquor was universal. Whiskey was as common a drink as water, among these hardy, hard-working pioneers. A temperance or abstinence society was unheard of. But when her sons were born, she resolved, so far as she could, to put a stop to whiskey-drinking in her home.

Her husband being absent from home, her brothers called for the help of the neighbors, according to the custom of the time, to put up a barn needed on her farm. They all assembled and went to work, while she prepared a great dinner. After an hour or two, whiskey was asked for. One of her brothers came to the house for it; she refused to provide it, to make her friends drunk. Her other brothers, and at last an elder in the church, came to reason with her; to tell her she would be accused of meanness. Without a word the little woman went out to the barn, and baring her head, stepped upon a log, and spoke to them in a faltering voice. "My neighbors," said she, "this is a strange thing. Three of you are my brothers, three of you are elders in the church,

all of you are my friends. I have prepared for you the best dinner in my power. If you refuse to raise the barn without liquor, so be it. But before I will provide whiskey to give you, these timbers shall rot where they lie." The men angrily left the work and went home, the little woman returned to the house, and for hours cried as though her heart would break. But the next day every man came back, went heartily to work, enjoyed her good dinner, and said not a word about whiskey.

Afterwards whiskey at barn-raising was discontinued in the country. Her sons grew up strong, vigorous men, who did good work in helping to civilise and Christianise the world; their descendants are all of high type of intellectual and moral men and women. If she had yielded this little point, they might have degenerated, like many of their neighbors, into drunkards and spendthrifts. There are still vices and malignant customs to be conquered, and for the work we need women of high souls and gentle spirits, like Christiana Dickson.—*Friends' Review*.

A DEVOTED MISSIONARY DEAD.

A WASHINGTON dispatch says that the Department of State has received from the Legation at Peking, China, under date of July 3, an account of the death and extraordinary life-work of J. Crossett, an independent American missionary, in China. His career has been a very remarkable one, characterized by absolute self-devotion. He died on the steamer *El Dorado*, en route from Shanghai to Tientsin, on the 21st of June last. He leaves a widow living at Schnylersville, New York. In speaking of Mr. Crossett, Minister Denby couples his name with that of Father Damien, the Belgian missionary who lately died on the island of Molokai, and says:

Mr. Crossett's life was devoted to doing good to the poorest classes of Chinese. He had charge of a winter refuge for the poor at Peking during several winters. He would go out on the streets the coldest nights and pick up destitute beggars and convey them to the refuge, where he provided them with food. He also buried them at his own expense. He visited all the prisons, and often procured the privilege of removing the sick to his refuge. The officials had implicit confidence in him and allowed him to visit at pleasure all the prisons and charitable institutions. He was known by the Chinese as the "Christian Buddha." He was attached to no organization of men. He was a missionary pure and simple, devoted rather to charity than proselytism. He literally took Christ as his exemplar. He traveled all over China and the East. He took no care for his expenses. Food and lodging were voluntarily furnished him. Inn-keepers would take no pay from him and private persons were glad to entertain him. It must be said that his wants were few. He wore the Chinese dress, had no regular meals, drank only water, and lived on fruit, with a little rice or millet.

He aimed at translating his ideal, Christ, into reality. He wore long auburn hair, parted in the middle, so as to resemble the pictures of Christ. Charitable people furnished him money for his Refuge and

he never seemed to want for funds. He slept on a board or on the floor. Even in his last hours, being a deck passenger on the *El Dorado* he refused to be transferred to the cabin, but the kindly captain, some hours before he died, removed him to a berth, where he died, still speaking of going to heaven and entreating the bystanders to love the Lord.

As an instance of the character of the man I will state that when on one occasion I gave my annual dinner on Thanksgiving Day to the Americans, Mr. Crossett wrote to me beseeching that I would have no dinner, but would give the cost to the poor. He attended the dinner, but touched nothing but water and rice.

In his theology he can hardly be said to have been orthodox. He found good in all religions. After a long conversation with him one day I told him he was not a Christian, but a Buddhist. He answered that there were many good things in Buddhism. The last important work of Mr. Crossett was an effort to provide for the deaf and dumb. To further this project he traveled to Hankow and thence to Canton, establishing everywhere schools for these unfortunates. He was successful wherever he went.

This man taught the pure love of God and of goodness. He completely sacrificed himself for the good of the poorest of the poor. He acted out his principles to the letter. He was as poor and lived as plainly as the poorest of his patients. On charitable subjects he wrote well. The ideal to him was practical. Let this American, then, be eulogized along with the devoted Frenchman in the annals of men who loved their fellow men.

PLANTS PROTECTED BY THEIR JUICES.

WHEN a drop of the juice of sorrel, garlic, saxifrage, or nasturtium is put upon the tegument of a snail, the animal manifests pain and exudes abundance of its mucous secretion; yet it is not thus affected by a drop of water. When snails avoid plants marked by such juices, we have a right to regard the plants as defended by a chemical armor. The offensive substance may also be important to the nutrition of the plant, but that is not the question we are dealing with here. Many plants are evidently lacking in this means of defense; for, of some plants, all the animals experimented upon have been found to prefer fresh to dead parts. Others are never touched by them, whether living or dead. Hence we may conceive that an infinite variety may exist in the degrees of chemical armoring between total absence of protection and complete protection.

Plants containing perceptible tannin are disagreeable to nearly all animals. Only swine will eat acorns as they regarded them as food. Other animals reject them, except when they can not get anything else. Leguminous plants containing tannin in weak proportions are eaten by horses and cattle, but snails are not fond of them. But the garden snail, which eats fresh clover alone, will eat it freely after the tannin has been extracted with alcohol.—*Popular Science Monthly*.

THE OLD APPLE-TREE BLOSSOMS.

I HAVE always felt that one of the sweetest and best influences in a home was that of a grandmother. It was so in our house, and now, when I look at the straight-back, cherry-framed old rocking chair, in which through all my youth "the grandmother" sat, I am strengthened and comforted by the memories that crowd my thought. I see her quiet dignity of bearing amid all the tumults of nursery upron and childhood grievances. I see her gracious smile and wait to hear her calm pacifications and adjustments of difficulties; and I recall the experiences of this loved one, who had learned from her long life to entertain hope amid all discomfures, and whose cheerfulness was but the continuous manifestation upon all about her of the peace of God which comforted and sustained her heart. And I am inspired by the recollections that "grandmother" was equal spiritually to every emergency. She never lost courage; she never faltered in the daily duty; she was never loud spoken; nor was she anything but "all things lovely." And I ask myself how could this have been?

All acknowledged the benign influence of grandmother's authority; all obeyed her; all preferred to be in her presence, if in joy or in sorrow, for we all loved her and all felt to be with his disciple was again to be with the Master; and it was good to be there, for grandmother was like him.

A few years since I learned a lesson from nature that explained to me its analogy, the reason why old age had left in our home memories such a sweet aroma.

Friends were gathering apple blossoms, and all the trees in the orchard were being robbed of a part of their beauty, to gratify our love of the fragrant flowers. One of the hunches of blossoms seemed far more fragrant than did the others; and yet the buds had been gathered from the same orchard, and the fruit tree was not different from that of the others in its vicinity. "Why are these apple blossoms so much sweeter than all the rest?" was asked of the friend who presented the bouquet.

"Oh, don't you know," she said, "these are the flowers from the old tree; there will be but few if any apples upon its branches this year or ever again; and the sweetness and ripeness and glory of the fruitage that it has in former years yielded, now are displayed in the beauty and loveliness of its flowers."

What a tribute to mature years! The days of our fruit bearing in active service may have waned; but our genial, blessed, concentrated influence may continue to adorn and gladden the earth.

"Three score and ten and then eternity!

A moment's space, and then, eternal years!

The soul's wealth safe; the work of life well done;

How small in contrast, earthly gain or loss."

—*The Open Window.*

THE true Christian is like the sun, which pursues his noiseless track, and everywhere leaves the effect of his beams in a blessing upon the world around him.—*Luther.*

RESTLESSNESS.

I KNOW of nothing in our day more painfully and surely indicative of the interior wrongness of our life than the inability everywhere manifest to rest and be quiet. No life was ever healthy and strong in which there was not a central rest, and something to support and feel that rest. But in our day the question, "What shall I do next?" is asked before we have well finished that which went before. And so much of our activity is blind and purposeless. It is merely wasting and consuming time. There is no virtue in it, and no intelligence in it; consequently no profit. Life does not become purified or strengthened or enriched or made happier thereby. It is simply squandered. Now, all this is not simply wrong; it is foolish. It is not simply harmless activity; it is the activity that comes from internal hollowness of nature. We congratulate ourselves on being the most "alive" people in the world, which means, in plain English, the most restless. But mere restlessness has no inherent virtue or goodness in it. It simply denotes the possession of vitality, which vitality may be altogether uneducated and untrained. In every useful life there must be internal rest. There must be something believed in so firmly and so continuously that it holds to itself the mind and the heart. Therefore it is that the apostle says, "Be ye steadfast, unmovable."—*Raven Thomas, D. D.*

CHRISTIANITY.

I was touched most of all by that portion of the doctrine of Jesus which inculcates love, humility, self-denial, and the duty of returning good for evil. This, to me, has always been the substance of Christianity; my heart recognized its truth in spite of skepticism and despair. . . . The doctrine of Jesus—judge not, be humble, forgive offenses, deny self, love—this doctrine was extolled by the church in words, but at the same time the church approved what was incompatible with the doctrine. . . . The passage upon which it based affirmation of its dogmas were those which were most obscure. On the other hand, the passages from which came the moral laws, were most clear and precise. And yet the dogmas and duties depending upon them were definitely formulated by the church, while the recommendation to obey the moral law was put in the most vague and mystical terms. Was this the intention of Jesus?—*Tolstoi.*

NEWS AND OTHER GLEANINGS.

—The remission of the question of revising the Westminster Confession to the local Presbyteries of the Presbyterian Church has led to a very vigorous discussion, in which three parties have been developed. The conservatives are opposed to any revision, chiefly on the ground that if once that be begun, there is no saying how far it may be carried. How far it is feared, may be inferred from the remark of Professor Greene of Princeton Seminary, that even if the Church should eliminate Calvinism from its Confession of Faith, that institution would remain faithful to that doctrine still. Another party opposed to revision is at the other extreme. It is represented by Professor Briggs of the Union Theological Seminary who ap-

prehends that the liberty of theological teaching would be much abridged by any confession that could be adopted at present. The Westminster divines, while successful enough in ruling all past heresies out of their communion, were not so happy in anticipating heresies yet to come. As the trial of Professor Robertson Smith by the Free Church Assembly in Scotland showed, they did not anticipate the new views as to the authenticity and inspiration of the various books of the Scriptures, in which Professor Briggs is supposed to share. But a new confession certainly would rule out all liberty of teaching on that subject. So Professor Briggs prefers a still more generous formula for the clerical subscription to the Confession as it stands, although even now nobody is compelled to give his assent to every statement it contains. The party of revision is led by Dr. Henry J. Van Dyke of Brooklyn, whom we should have expected to find on the other side of the controversy. They wish for a much briefer confession, and one in which Calvinism shall not be eliminated, but stated less drastically than in that of Westminster.—*The American.*

—Captain E. H. Pratt, the Superintendent of the Carlisle Indian School, accompanied the new Commissioner of Indian Affairs, J. T. Morgan, last week, in some visits to the families in Chester, Montgomery, and Bucks counties, in which the Indian girls and boys are employed. The new Commissioner, originally from Indiana, has been for several years at the head of the State Normal School of Rhode Island, and has resided at Providence. We have reason to regard him as a sound and trustworthy friend to the policy of just treatment of the Indians. He and Captain Pratt spent the night of the 16th at Downingtown, visited Gwynedd on the 17th, and intended to go to Newtown (Bucks Co.), on the following day.

—The *Daily Times*, of Victoria, British Columbia, Eighth month 8th, mentions the arrival in that city of Mahlon K. Paist and wife, (of Philadelphia), who came over the Canadian Pacific Railroad, and stopped off at different places of interest on the way. It adds: "They will go to Alaska on the next steamer, and on returning proceed to San Francisco to attend the convention of charities, a convention which meets there between the 11th and 18th of September. Mr. Paist is a man who may be said to be seventy-two years young, being still bright-witted and active, and enjoying life as well as ever he did. While at Glacier he ascended Mount Donald, and is said to be the only man of his age who has accomplished the feat."

—The wife of the Archduke Charles Theodore, of Austria, who has been assisting her husband since he became a medical practitioner, has determined, it is said, to pass the examination which will place her also on the list of qualified physicians.

—A use is at last to be made of the chalk like deposit on the bottom of the pond known as "Chalk Pond," near Beddington, Me. Massachusetts capitalists have formed a syndicate, and they intend soon to set to work draining the pond. The *Transcript*, of Boston, has an article on the enterprise, in which it is stated that "the deposit is known to the scientific world as silica, and is very valuable commercially. It is made up of the fossilized remains of millions of insects, and when taken from the water resembles clay. It dries quite rapidly, and when the water has fully evaporated the color of the substance changes to white, and it bears a marked resemblance to magnesia. It is a perfect non-conductor of heat and an excellent covering for steam-pipes and boilers. There is only one other deposit of the kind known in the world, and that is in Germany."

—Telegraph poles in India are made of iron, on account of the destruction of wooden ones by the white ants.

—A current newspaper paragraph says: "Since the death of her mother in May last the health of Miss Anna Dickinson, precarious for the past four years, has been still more seriously impaired. She is in Philadelphia and under the care of physicians. Her friends hope for her recovery, though she herself expresses no confidence in her return to health. Her home is with her sister in West Pittston, Pa., but she is likely to remain in Philadelphia for some time. She is unable to leave her room or to bear any fatigue whatever."

—Elizabeth Cady Stanton, the veteran head of the Woman Suffrage party in this country, is spending the summer at Hempstead, L. I., with her son, who has recently removed there from Nebraska. She is writing her autobiography, and she will remain in retirement until it is completed.

—The contagiousness of phthisis has been recognized in Germany by military command. An edict has gone forth from the War Minister that the chest of every soldier shall be examined once a month. If it does not measure enough and does not expand with drill and athletic exercises, he is dismissed from the army as being predisposed to phthisis and likely to infect his comrades.

—The Committee appointed by the British Parliament to consider the question of immigration recommends that an annual census be taken of aliens arriving and settling in Great Britain. The Committee thinks it not advisable at present to enforce laws similar to those enforced in America against destitute immigrants, but it says that the country ought to contemplate the early necessity for such legislation, in view of the extreme pressure for existence among the poor and the tendency of destitute foreigners to lower the conditions of living, especially in great towns.—*Exchange.*

—Count Teleki, a Hungarian explorer, who left Zanzibar on an expedition of discovery early in 1887, has found a lake hitherto unknown, 300 miles to the north-east of Victoria Nyanza. It is doubtless the same as that known to the natives as Lake Samburn, the situation of which has been already approximately given. It has a length of 162 miles, and is 20 miles in width. The country around is described as being bare and arid, and the banks of the lake to be inhabited by Gallas, who live by fishing. The new lake was re-named Lake Rudolph by its discoverer.—*The American.*

—The Commissioner of Indian Affairs, who has received a large number of applications for appointment as teachers in Indian schools, has replied to all applicants that it is the purpose of the office to appoint no person as a teacher in the Indian school service who would not be able to secure a similar position in the best schools for white children in the community in which he resides. Emphasis is laid upon the necessity of vigorous health, with some experience in teaching, and with special fitness for the work. Preference is expressed for those who have had a normal-school training.

—A dispatch from St. Helena, Nebraska, Eighth month 10, says: A find that will afford study for those interested has been made at St. James, Neb., by D. I. Brewer, proprietor of a flouring-mill at that place. While digging for the purpose of making repairs to his mill-dam, he unearthed the remains of a prehistoric animal that probably roamed the prairies hundreds if not thousands of years ago. About thirty-six feet of the spinal column and ribs, together with one shoulder-blade and a part of the fore-legs have thus far been brought to light. Sections of the

backbone measure fully six inches across. Some are in a fair state of preservation, while others crumbled when exposed to the air. It is estimated that the monster must have stood fully fifteen feet high.

—It is said that nearly five million persons in the United States depend for their living on the sale of liquor and tobacco.

—Miss Scollers, formerly a student of Girton College, and a graduate in the Classical Tripos, is about to start a Girls' Day School at Camden Hill, near London, on somewhat novel principles. She wishes to cultivate in her pupils the powers of observation, and intends to turn many of the principal sights of London to an educational purpose. In pursuit of this scheme English history and literature will be illustrated by lessons at Westminster Abbey, the Tower, etc., ancient history and art at the National Gallery and British Museum, natural science at the Natural History Museum, and so on. Among the names given in support of this scheme are those of Dr. Abbott, Dr. Jex-Blake, Mr. Henry Craik, of the Education Office; Professor Dacey, Miss Clough, of Nownham College; Miss Welsh, of Girton College; Sir Charles Newton, K. C. B., and others, and great interest is felt in the experiment.—*Exchange.*

CURRENT EVENTS.

The President and Mrs. Harrison went to Deer Park, Md., on the 17th, where the former remained until the evening of the 20th when he left for Cincinnati and Indianapolis, to be absent a few days. It is now generally thought Congress will be called for a special session in Tenth month.

The proceedings begun in the courts of Allegheny county by Nancy W. Little and other Johnstown sufferers against the South Fork Fishing Club, (owners of the dam that burst) have been replied to by the Club, with the effect of placing the case upon the issue docket, and the case will now come up on a jury trial in its turn. The filing of this plea was done voluntarily, and shows that the defendants are anxious to have the matter settled.

The forest fires in Montana have attained alarming proportions, hundreds of thousands of dollars' worth of timber having been destroyed according to a Helena despatch on the 17th instant. (Later dispatches report that rain has fallen, and the fires are out.)

The accounts of the Relief Commission at Johnstown were closed on the 17th inst., and, except in cases of absolute want, no more money will be paid out until the final distribution is made.

OCEAN steamers brought to New York last week 3,800 cabin and 5,511 steerage passengers, as against 2,273 cabin and 5,362 steerage during the corresponding week of last year.

The Washington Territory Constitutional Convention, at Olympia, on the 16th inst., adopted Woman Suffrage as a separate proposition, to be submitted to the people with the Constitution.

NOTICES.

* * * An All-day Meeting on the subject of Temperance, under the care of Concord Quarterly Meeting's Committee, will be held at Friends' meeting-house, Middletown, Delaware county, on Seventh-day, Eighth month 31st, 1889, commencing at 10 o'clock.

Friends and others interested are cordially invited.
MARY McALLISTER, Clerk.

* * * The Sub-Committee of the Yearly Meeting's Visiting Committee expect to attend Southern Quarterly Meet-

ing, at Eaton, Md., on Fourth-day, the 28th inst., at 10 a. m., and a meeting for worship on Fifth-day, the 29th, at 10 a. m.

Sub-Committee: Henry T. Child, Robert L. Pyle, Mary H. Barnard, and Martha Dodgson.

* * * Acknowledgments.—The Friends' Book Association acknowledges receipt of the following additional contributions to the Children's Country Week Association:

E. H. B.,	\$1.00
A Friend,	3.00
Annie B. Fernberg,	3.00
Jesse Cleaver,	2.00
E. W.—West Chester,	3.00

Previously acknowledged, \$12.00
107.00

Amount, \$119.00

JOHN COMLY, Supt.

Eighth month 19, 1889.

* * * A portion of the Philadelphia Quarterly Meeting's Committee to visit the smaller branches will attend Exeter Monthly Meeting, to be held at Maiden Creek, on Seventh-day, Eighth month 24th, 1889.

The Committee will also attend the First-day morning meeting held at Reading, Eighth month 25th, 1889, at 10 o'clock. Train leaves Reading depot, Broad and Callowhill streets on Sixth-day afternoon, at 6 o'clock, arriving at Reading at 7.57 o'clock. Returning, leaves Reading on First-day afternoon at 3.55 and 5.48 o'clock.

Return-trip tickets to Reading good for six days, can be procured at depot for \$2.34.

CHARLES E. THOMAS, Clerk of Committee.

* * * Quarterly Meetings in Eighth month will occur as follows:

- 26. Pelham H. F. M., Yarmouth, Ont.
- 27. Burlington, Mt. Holly, N. J.
- 28. Southern, Easton, Md.
- 29. Easton and Saratoga, Granville, N. Y.
- 30. Bucks, Falls, Pa.
- 30. Nottingham, E. Nottingham, Md.

* * * Circular Meetings in Eighth month occur as follows:

- 25. Constantia, N. Y.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 WALL-ST., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

TEXAS LOAN AGENCY,

CORSICANA, TEXAS.

Established 1872. Incorporated 1884.

Capital Stock, \$300,000. Surplus, \$67,297.32.
(September 1, 1888).

7 PER CENT. MORTGAGE DEBENTURE BONDS.

Atlantic Trust Co., Trustees, New York.

7 PER CENT. GUARANTEED FARM MORTGAGES

All secured by first liens on improved farms of the famous Black Waxy Lands of Northeastern Texas, where the mild climate and fertile soil permit the growing of cotton as well as all the cereals of the Western States, making it one of the most desirable loaning fields of the West.

The TEXAS LOAN AGENCY guarantees the Prompt Payment of the Principal and Interest of all its securities, payable at the National Park Bank, New York.

The business of the Company has always been conducted by able, experienced, and prudent men, as is proven by the fact that the capital stock is now selling for \$175—par value \$100. A careful investigation will satisfy the most conservative that these are desirable investments for private means, or the funds of schools, colleges, or banking institutions.

SONNET.

WHEN I behold the strifes and jealousies,
Within the fold of Christ on every side,
Which brethren, who in love once walked, divide
For reasons light as air in just men's eyes,
I think how high-souled worldlings must despise
Such questions vain, so vainly magnified,
And rather trust to virtues built on pride
Than drink at fountains where such fumes arise,
Wo to the factious ones, who cause the offence;
And wo to those who blindly misapply
Their measuring line; and, if they faults espy,
Straightway religion brand as sheer pretence,
Rather than upward turn to Christ the eye,
And draw the portrait of a Christian thence.

—T. D. Woolsey, in *Independent*.

For Friends' Intelligencer and Journal.

VISITS AMONG VIRGINIA FRIENDS.

We left Philadelphia on Third-day morning the 13th, for Waterford, Va., en route for Fairfax Quarterly Meeting at Goose Creek. We made a quick trip as far as Washington, but slower travel beyond, up to the Loudoun Valley, counterbalanced that. At Clark's Gap, I was glad to see William Williams and had a pleasant ride of 3 miles to their home in Waterford, finding a cordial welcome and grateful rest. The country is hilly, interspersed with streams, and we can see the Blue Ridge from many points.

Fourth-day morning attended their monthly meeting at Fairfax, an ancient meeting-house which has stood for more than a century,—at least part of the walls. It is quite commodious, with youth's gallery on every side, situated on a beautiful slope, a little distance from the town. The first building (of logs) was erected as early as 1740,—probably some years before. It was a great privilege to meet with these Friends in religious and social fellowship, having so long felt drawn to come among them. We used to feel so much sympathy with them in the trying ordeal through which they passed in "War time." They held all their meetings, notwithstanding the soldiers occupied the meeting-house, many of them sitting with them. Peace and hospitality now prevail and we trust the attitude of spirit will be such as to produce a lasting peace proceeding from the "pure in heart." The silence which prevailed as we were gathered was very grateful; it seemed did we listen attentively we should oftener hear the "still small voice" inspiring and instructing us. The word of invitation was extended to the young people to assume the responsibilities of membership and contribute their share toward the life and best welfare of

the body, also of encouragement to those sitting under the "shadows" to trust the guiding hand Divine. All the queries were read and answered in the business meeting held in joint session as all the branches of this Quarter now are. The "Advices" were excellent, perhaps not more so than our own, though different from them, yet they seemed to have fresh interest. We spent the afternoon in the delightful home of James and Eliza Walker. He is recovering from severe illness, the brightness of the spirit shining through every impediment of physical weakness.

Fifth-day morning was spent calling on Friends. This is a great privilege, even when we have never met before, and may never again in these earthly ways, enlarging our sympathies and broadening our knowledge of the great world of humanity. We dined with Elizabeth Phillips and her sisters, going in the afternoon to the home of James Williams and wife (the former the son of W. W.), where we had a lovely view of the Mountains, seeing through Hillsboro Gap in the "Short Hills" the Blue Ridge beyond. We caught the fresh breezes from the hills, and returning in the evening found it very cool.

Sixth-day morning was bright, the temperature reminding us of early frosts. Edward and Cornelia Walker came to take me to their home, making several calls by the way, one to where Miriam Gover used to live, now the home of her son Samuel. During the war this dear mother's ministry was very acceptable and reaching in its influence upon the soldiers who gathered with them. Many of us doubtless remember her visits of love among us. In the afternoon E. and C. W. accompanied me to Goose Creek, (Lincoln), a very enjoyable ride, the country and mountain scenery so fine. Looking backward we could see the Catoctin Range, and the gap where the Potomac passes, also to our right the gap at Harper's Ferry where the Potomac and Shenandoah pass the Blue Ridge. Made some calls in the village and came to Thomas R. and Ellen Smith's, feeling at home among strangers, one of the delightful features in our intercourse with Friends. The next morning my friend took me to call on Wm. and Martha J. Brown, coming afterward into Lincoln, enjoying the beautiful country around us—dining with Hugh and Mary Lupton at Dr. Isaac Stone's. In the afternoon attended the meeting for Ministers and Elders, finding a larger company than expected. Glad to meet with Joseph Powell who had arrived the day before, accompanied by his daughter. Several testimonies were borne to the saving efficacy of love and forbearance one toward another. The Queries were all read and answered, leading to a searching of hearts. The

different branches were all represented. The meeting-house is a large brick building, neat and comfortable, erected about 70 years ago; a stone one stands opposite occupied before that time, now a vine-clad dwelling-house. Went home with Elizabeth Janney and daughter near the meeting-house, where the husband and father, S. M. Janney, spent the last years of his active and useful life after retiring from the Springdale Home where he had a boarding-school for many years. This is now occupied as a Sanitarium under the care of Dr. Isaac Stone. It was quite a pleasant surprise to find a relative in Lincoln, Sarah Howell Birdsell, who had visited at my father's house fifty years ago, the only time I had ever met her, yet I had always remembered her with interest; her sister Rebecca and daughter Alice form part of the family. She is related through the Puseys of London Grove. I greatly enjoyed a visit with them.

First-day morning, cloudy and rain-like, but the sun shone out and a very large company assembled for meeting. It was late before we gathered into the stillness, and many were yet outside. After a season of silence, William Williams arose, emphasizing the power of love as immanent to unite and preserve, expressing thankfulness that we as a religious Society were not dependent upon the outward ordinances, while entertaining no feeling of condemnation for those who deem them important. Expression was given to the inspiring influence of such an assemblage, and the importance of each one contributing their share in rendering it fruitful for good, not depending upon the ministers to conduct the meeting, but seeking for that receptive condition of spirit—to be instructed by the inspeaking voice. Joseph Powell spoke of the importance of having a knowledge of ourselves, an acquaintance with God, and that *Me* spoken of which is the Son and sent of the Father to every one who receiveth.

The meetings here commence at 11 o'clock, and it was late before we reached William Henry and Martha Taylor's home, several miles distant, yet I desired not to complain of weariness, when these Friends travel over the ground to attend meetings twice a week. It was pleasant to meet with Martha's brother, Abraham Shoemaker, from Ohio, and other friends gathered there. In the evening went to the house of Eli and Lydia Nichols, enjoying a visit with relatives seldom met in this busy life. A very pleasant ride next morning to meeting, all the family going, reminding us of the good old times, as also often in the present. The mountain scenery was fine, always a cheering sight, seeming to indicate strength, figuratively speaking, like unto the "Everlasting Hills." It was a surprise to find so many assembled for the quarterly meeting, the house being well filled. The serious thoughtfulness which clothed many minds, and the interest evinced, notwithstanding trials and discouragements which have been experienced, seemed to lend a strong hope for future usefulness, that as these dwell low, preserved by the cementing power of divine love, their light shall shine and an influence of uplifting strength be imparted to the weary and the faltering.

After a season of refreshing silence Joseph Pow-

ell arose with the Scripture language: "The grace of God which bringeth salvation hath appeared unto all men—teaching that denying ungodliness and worldly lusts, they should live soberly, righteously, and godly in this present world," drawing a lesson of instruction from the universality of this love and inspiration of the Father. The attitude of so many waiting, hungering spirits was very impressive, and the call was extended that each one might be truly gathered to the quiet habitation, thus lending an influence of devotion and helpfulness to the body, that we might be in possession of a religion which would have no room for enmity toward any, no jealousy, no strife, rather remembering our own short-comings than sitting in judgment against others. Abraham Shoemaker expressed thankfulness for the privilege of thus mingling together, after which Nancy Branson appeared in supplication, and the meeting closed under a precious covering. Opportunity was afforded for refreshment, when we again assembled in joint session, as all the meetings I think in this Quarter are held, to transact the business of the Quarterly Meeting. All the queries with their answers were read, and the thought presented that touching the conduct of life so closely as they did, if each one would apply them individually, endeavoring to see how nearly our lives conformed to their requirements, they would not be worn threadbare or the consideration of them be formal and monotonous.

Counsel was extended to the young people that they might feel a share of responsibility in Society and that its life and beneficent influences depended upon their appreciation of its benefits and efforts to make it truly a religious home for all who come within its borders.

We separated with grateful hearts for the social and religious privileges enjoyed, touched by the tender greetings of friends and the farewells which may be final in these material environments. Dined with Thomas and Elizabeth T. Brown, near Lincoln. They kindly took me to call on Ruth Hannah Smith, a dear friend who is rendered helpless by a fall, yet patient and cheerful—grateful to be remembered by friends. Pleasant calls had been made during the short stay in Lincoln, on Lydia Janney and family, widow of Asa, Joseph and Tacy M. Jewett, the sister of S. M. Janney, and others. There was not time to accomplish all that was desirable. In these visits, there is a revealing sense of an embracing love which cannot always individualize. We lodged, with many other friends, at the home of A. B. and Susanna Davis, receiving a cordial welcome as indeed every where among the kind friends met, glad to find refreshment in rest and sleep.

CONTENTMENT produces in some measure, all those effects which the alchemist ascribes to what he calls the Philosopher's Stone; and if it does not bring riches, it does the same thing by banishing the desire of them.—*Addison.*

THERE never was a great man, unless through Divine inspiration.—*Cicero.*

From Young Friends' Review.

FRIENDS' MEETINGS IN CANADA.—IV.¹

On Fifth-day, the 21st of Sixth mo., 1801, a preparative meeting was established at Yonge Street by Philadelphia Yearly Meeting, under the care of Pelham Monthly Meeting, to be held by men and women in an united capacity, to report to Pelham Monthly Meeting every three months.

In First mo., 1806, by request of Pelham Monthly Meeting to Philadelphia Yearly Meeting, a monthly meeting was established to be called Yonge Street Monthly Meeting, to be held on the second Fifth-day after the first day in each month.

In First mo., 1807, committees from Adolphe's and Pelham Monthly Meetings met with Friends of Yonge Street Monthly Meeting. After taking the matter into solid consideration agreed to report as their united sense that it may be right for the three monthly meetings to lay before the Yearly Meetings of Philadelphia and New York, out of which we are descended, whether it might not be consistent with the openings of the truth for us to be united and placed in a capacity to meet together twice in a year, once in the manner of a quarterly and once in that of a yearly meeting, in order to decide on appeals and other matters of weight and importance in the church.

As we find no report of that committee the request could not have been granted.

The Friends at Whitechurch were granted an indulgent meeting about this time by Yonge Street Monthly Meeting under the care of a committee. The exact date is not given.

In Tenth mo., 1802, Friends in East Williamsburg were also granted an indulgent meeting.

In Second mo., 1809, Uxbridge Friends requested the privilege of holding a meeting of worship on the First-day of the week at the house of Charles Chapman, which was granted under the care of a committee.

In Eighth mo., 1809, Philadelphia and New York jointly agreed that Friends that constitute the three monthly meetings in this Province should constitute a meeting for discipline, vested with the powers of a quarterly meeting, to be called Canada Half-Yearly Meeting, to be held alternately at West Lake and Yonge Street, and that the monthly meetings here be placed under the care of New York Yearly Meeting, from whom they received one of the books of discipline.

In Eleventh mo., 1809, Friends at Uxbridge requested the privilege of holding a week-day meeting, which was granted.

In First mo., 1810, the committee having the care of the meeting at Queen Street reports that they think it reasonable that a meeting for worship be established there, to be held on the First and Third days of the week; likewise that a preparative meeting be established there, to be held jointly between men and women Friends, which was directed to the consideration of the Half-Yearly Meeting.

In Eighth mo., 1810, Whitechurch, also Uxbridge

Friends, were granted the establishment of preparative meetings under the care of committees.

In Second mo., 1811, by an extract from the Half-Yearly Meeting, the preparative meetings established under the care of a committee of the Monthly Meeting were discontinued, but meetings for worship were allowed to be held at Queen Street, Whitechurch, and Uxbridge.

In Ninth mo., 1811, by consent of the Half-Yearly Meeting, a meeting for worship, also a preparative meeting, was again established at Queen Street.

In Seventh mo., 1812, Pickering Friends were granted an indulgent meeting for worship, to be held in John Haight's house.

The 7th of Ninth mo., 1798, the first preparative meeting of Friends in Canada was held at the house of Philip Doring in Adolphustown, Upper Canada. Committees from New York Yearly Meeting and Nine Partners' Quarterly Meeting, acting conjointly, were present to assist in the establishment thereof. In consequence of its remote situation enlarged powers were allowed the meeting, viz: To accomplish marriage, to deal with offenders, to receive requests for membership and to report their judgment of the cases to the Monthly Meeting. The committee in attendance were: Fry Willis, Enoch Dorland, Gideon Seamon, Henry Hull, and Reuben Haight.

The 29th of First mo., 1801, the first Monthly Meeting was held in Friends, meeting-house in Adolphustown.

At the Monthly Meeting held in Adolphustown the 16th of Fourth mo., 1801, propositions were received and entertained for holding a preparative meeting at Kingston and a meeting for worship at West Lake. Those meetings were accordingly held under the care of a committee.

In the Eleventh mo., 1803, a preparative meeting was established at West Lake, near the present village of Bloomfield.

At the Monthly Meeting held in Fourth mo., 1804, a meeting for worship was allowed to be held at Green Point, in Sophiasburg, under the care of a committee.

In First mo., 1799, Pelham Monthly Meeting was established by Philadelphia Yearly Meeting.

In Twelfth mo., 1806, Adolphustown Monthly Meeting appointed a committee to confer with the Friends of Yonge Street in reference to being united in the transactions of church affairs, which concern finally resulted in the three monthly meetings in Canada laying the matter before the Yearly Meetings of New York and Philadelphia, and a committee of said meetings attended Adolphustown Monthly Meeting the 26th of Ninth mo., 1808.

At the Yearly Meetings of Philadelphia and New York in 1809, Canada Half-Year's Meeting was established, and directed to be held alternately at West Lake and Yonge Street. Other meetings were established in several places. Some alternated between thriving and declining, others grew to be what they now are.

[This ends the series of articles on the "Establishment of Meetings in Canada," which have been appearing in late issues of the Review. As they have

¹The last previous article of this series was published Sixth-month 22. The present one completes the series.—Etc.]

been compiled by different persons, some repetitions and disconnections have been the result ; but upon the whole we think them quite reliable, and a pretty general account of the establishment of our meetings here.—S. P. Z.]

MARY DYER.

[This poem, describing the execution of Mary Dyer, the Friend, on Boston Common, Sixth month 1, 1660, was originally published in the *Knickerbocker* magazine, New York, in Twelfth month, 1853. The author was Benjamin Rush Plumley, who died within a year or two, in Texas. It was one of three which were grouped in the *Knickerbocker* under the general designation of "Lays of Quakerdom."—EDS. INTELLIGENCER AND JOURNAL.]

WITH his household, quaint and simple,
In his manly prime,
By the fire-light sat a Quaker,
In the winter-time;
Moved in feeling by the pealing
Of the Christmas chime :
Little looked he to the outward ;
Feasts and holy days,
To his inward faith and worship,
Were as worldly ways ;
But he scoffed not at the symbols
Of the people's praise.
Little loved he art or music,
And his fire-light falls,
In fantastic shape and semblance,
O'er ungarlished walls :
But he loved the blessed teaching
Which the chime recalls.
All so still he sate, and solemn,
While his own high thought,
Throned upon his ample forehead,
Such a stillness wrought,
That the mystic spell of Silence
All around him caught.
Sweetly looked they in that circle,
Wife and children three ;
Two brave boys beside the mother
Hushed their boyish glee ;
And a fair young girl was kneeling
At her father's knee.
Outward, with its sweet evangel
On the ear of Time,
Upward far, to meet the star-light,
Swept the sounding chime,
As the centuries shall hear it
Ever more, sublime.
From the ages dim and distant,
Through the pealing bell,
Rolled anew the inspirations
From His lips that fell,
On the ancient Mount of Olives,
By Samaria's well,
While the echo star-ward dying,
Seemed each martyr's knell.
"Father, tell us of the Quakers,"
(Did the children say,)
"How the cruel Pilgrim rulers
Drove the Friends away ;
Tell us how they whipped and killed them
In that olden day,
When they hung poor Mary Dyer—
Cruel men were they."

Fearful was the inward conflict
Ere he made reply,
For his nature, brave and martial,
Broke so bold and high
Into flame along his forehead,
Lightning from his eye,
As the martyrs of his people
Passed in spirit by,
Looked he like a warrior waiting
For the battle cry.
So the fiery indignation
Through his pulses ran,
For a moment, ere the Christian
Triumphed o'er the Mau ;
And his tones were deep and thrilling
As the tale began :

Sate the Puritan rulers,
In a stately row,
Endicott, with scowl and scorning
On his lip and brow,
While a herd of vulgar bigots
Thronged the court below ;
Then came Michelson the Marshal,
Filled with savage ire,
Through the motley crowd of gazers,
Thrusting Mary Dyer,
With her quiet, grave demeanor,
In her quaint attire ;
As the people pressed asunder
Round her foot-steps close,
From the bar she gazed serenely
O'er a host of foes ;
Then, the clerk commanding silence,
Endicott arose :

"Are you that same Mary Dyer,
With blasphemous breath,
Whom our erring mercy saving
From the gulf beneath,
Banished from the jurisdiction
Under pain of death ?"

Calm and steadfast then she answered :
"Truly I am she,
Whom your General Court appointed
To the gallows-tree,
Where ye sent our faithful martyrs
When ye banished me.
Lo ! I come again to bid ye
Set God's servants free !"

"By the council that condemned you
You were fairly tried ;
And we reaffirm the sentence,"
Endicott replied :

"In the prison until morning
Safely you abide ;
Then, be hanged upon the gallows
Where your brethren died.
Look not for a second respite—
Hope for aid from none ;
Fixed the awful fate that waits you
With to-morrow's sun."

"Then," replied she, slow and solemn,
"Let God's will be done ;
To the power that kills the body
He hath bid us yield ;
Weapons of a carnal warfare
Are not ours to wield ;

He will clothe us in His armor—
Guard us with His shield."
Then she seemed to rise in stature,
And her look was high;
And there was a light of glory
Beaming from her eye,
As she were by angel-presence
Touched to prophesy.
Startled by the transformation
Sate the rulers proud;
Wondering at her awful beauty
Gazed the vulgar crowd;
While her words went through the still-
ness,
Ringing clear and loud.

"Now I feel prophetic visions
Filling all my soul:
In their light the mists and shadows
From the future roll.
Lo! I see a power arising
Ye shall not control;
Even the Lord of Hosts, in mercy,
Seeking all your land;
Judge and ruler, priest and people,
In His presence stand;
And your boasted power He holdeth
In his mighty hand.
Cease your cruel persecutions
Ere these days expire,
And He cometh in His judgments
With consuming fire,
As of old He came to Edom,
To Sidon and to Tyre,
And ye reap a bloody harvest,
Reap as ye have sown,
And the lofty spires ye builded
Reel and thunder down,
And the wo of desolation
Fills your ruined town;
In deserted habitations
Ouly Death may dwell,
When God leaveth no one living
Of His wrath to tell.
Cease, oh! cease your persecutions—
All may yet be well."
So she ended. Awe and silence
O'er the council fell.

"And did God," asked little Mary,
"All the town destroy?"

"Wait and hear the story ended,"
Said the elder boy:

"If they ceased their persecutions,
God would not destroy."
Morning o'er the Pilgrim city
Breaking still and sweet,
Heard the deep and mingled murmur
Of the hurrying feet,
And the voices of the people
Thronging to the street;
From afar the heavy rolling
Of the muffled drum,
With the measured tread of soldiers
And the general hum,
Warned the captive in the prison
That the hour had come.
All her simple garb arranging
With a decent care,

Kneel she in a holy silence,
Lost in secret prayer,
While her radiant face attested
God was with her there.
At the Marshal's brutal summons
Came she, firm and meek,
Saying: "All this show to escort
One so poor and weak?"
But they beat the drums the louder
When they heard her speak.

Arms were clashing, eyes were flashing,
In that thick array,
As the Puritan exulting
Rode along the way;
For he led the hated Quaker
To her death that day.
Were they men, brave men, and noble,
Chivalrous and high,
Marched thus against a Woman,
And no champion by?
Were they husbands, sons, and fathers,
And their households nigh,
When they led a wife and mother
For her faith to die?

On the scaffold Mary Dyer
Standeth silent now,
With the martyr's crown of glory
Kindling round her brow:
And her meek face bent in pity
On the crowd below:
Then Priest Wilson, full of scorn,
Cried: "Repent! repent!"
But she answered: "I have sought you,
By our Father sent;
Sought you, cruel persecutors,
That you might repent."

"Will you leave us, leave us ever,
Vex us never more,
If your vagrant life we give you,
As we gave before:
To your distant home and kindred
Once again restore?"

Moved the mighty deep within her
For a little space,
And a surge of human feeling
Broke across her face;
Then outshone the greater glory
Of the heavenly grace,
As all loves of earth descended
To their lower place,
Seemed she in transfiguration:
Such a light was shed,
Like a halo from her spirit
Round about her head,
That, o'er all the ghastly gibbet
The effulgence spread.

Then one Webb, the burly captain,
Rising, roughly said:
"Mary, be your blood upon you;
Falsely you are led;
By the Law, which you have broken,
Not by us, 'tis shed."
And he gave the fearful signal,
While she meekly bowed;
Fell the fatal drop beneath her;
Women shrieked aloud,

And a cold and dismal shudder
 Ran through all the crowd.
 For the people stood awe-stricken
 When the deed was done;
 Some who seemed to feel a shadow
 Stealing o'er the sun,
 Feared the dreaded day of vengeance
 Had that hour begun;
 Some believed they saw the spirit
 With their outward eyes,
 In its shining shape and semblance
 Glorified arise,
 With a slow, majestic motion
 Floating to the skies;
 Ever upward, upward ever,
 Star-like, out of view,
 Smiling as it joined the angels,
 Smiling still, adieu;
 And all these believed the martyr's
 Faith and Word were true.

Not in vain had Mary Dyer
 Lived and prophesied,
 For the noble Pilgrim people
 Curbed their ruler's pride.
 Though the scorned and hated Quakers
 Grew and multiplied,
 For their faith one other martyr
 Was the last who died.

SCRIPTURE LESSON No. 34.

NINTH MONTH STH, 1889.

DAVID AND JONATHAN.

GOLDEN TEXT:—"There is a friend that sticketh closer than a brother."—Proverbs 18 : 24.

READ I. Samuel 20 : 1-13.

AFTER David rose to such honor in the king's army and in his household, Saul grew very jealous of his popularity and sought to kill him. He might have succeeded in this if it had not been for his own son Jonathan, who had formed a strong friendship with young David, and who was so faithful to his friend that he saved him from his father's wrath.

And David fled. David had taken refuge with Samuel, but when Saul traced him there he turned back to his friend, the king's son, to ask of what he was accused. Among the Jews at that time the king's authority was so absolute that it was not infrequent for anyone having won great popularity by his bravery or some other quality, to incur the king's jealousy, as David had done, and be in danger of instant death by the king's command.

And David sware, moreover, etc. Here is an example of the frequent use of oaths among the Jews and other Eastern nations when they simply wished to assert a thing with emphasis. At the present day among the Eastern peoples we find the most profuse use of all kinds of oaths thrown into their speech without the slightest meaning. They use the name of the Creator in any connection, merely as an interjection, and yet taken together they are utterly unreliable in their word. Friends have always justly abhorred the use of such words, remembering the injunction of Jesus, "Let your yea be yea and your nay be nay, for whatsoever is more than this cometh of evil."

To-morrow is the new moon, etc. The Jews from the time of Moses had kept a great many feast days, so-called, and at such seasons often prolonged the celebration for several days. The feast here referred to was celebrated on the first day of the month, and seems to have lasted three days.

For thou hast brought thy servant, etc. This evidently relates to the solemn compact of friendship between David and Jonathan, and gives us a famous example of the sanctity of that bond. What is there in men's relations with each other more holy and divine and more in accordance with their Creator's will than to live together in such a secure and honorable friendship? It is most truly a sacred thing.

It is impossible for selfishness and true friendship to exist in one mind. "Thou shalt love thy neighbor as thyself," and no friendship worthy of the name can exist where the feeling of self-interest is a factor. Unfortunately very few of us have attained that height of self-denial where we know that we love even our dearest friends as we love ourselves. Think what that implies. It means that if great gain is to come to one of us then we should rejoice just as much to see it fall to our friend as to ourselves, that where praises and kind words are lavished upon our friends we should be as glad to hear them as if the welcome words were spoken of us, and beyond all this there is a greater test. If our friend is in danger or distress, and the relief that he needs we can only give him by an immense personal sacrifice, would we live out the divine command we must give up our own most cherished desire, and save our friend, our neighbor, from perishing. Rarely has the world seen such a friendship. David and Jonathan head the list of barely a score of names. There have, doubtless, been others that the world has never known, but whether famous or unknown, they have all surely found their exceeding great reward, for did not our blessed Master himself say, "Greater love has no man than this, that he lay down his life for his friend." We who claim for ourselves the name of Friends, let us see to it that we set up a standard of friendship that shall be holy and pure and worthy of our profession.

NOTES ON THE LESSON.

History presents no more striking and beautiful example of the love that one man is capable of cherishing for another, than that of Jonathan the son of Saul for David. It is not so much the love of David and Jonathan as friends, but of Jonathan as the friend who gave his love without stint and with a self-abnegation that has perhaps no parallel in the annals of the race. Jonathan has everything to lose, while David is the gainer by his loss. The depth of his affection is manifested in the earlier part of their intercourse, when Jonathan strips himself of his princely robes, placing them on David, then girds him with his royal girdle, and puts into his hands the sword and the bow that are his own implements of war. No greater honor could have been bestowed upon the young champion than thus to clothe him with a robe from his own person. In the East such

a gift of clothing "which the king useth to wear" has in all ages been held as a supreme sign of favor with the monarch. (Esther 6: 7-12.) And this love was none the less intense after Jonathan became aware that to David would be given the throne of his father, to which, by all the laws then known, he was the rightful heir. We hear him saying, "Thou shalt be king over Israel, and I shall be next unto thee," without a falter in his affection, or an emotion of jealousy or dissatisfaction.

While David's affection for Jonathan was strong, it was also selfish and used to further his own interests. There was not the frank and unreserved giving of himself to his friend which marked the love of Jonathan. One is ready to question the advantage that would come to the nation from the setting aside of so true and exalted a character and placing its crown upon the brow of the bold and courageous young Bethleheinite; but war and hate and avarice had the sway, and he that could be true to his friend to his own cost, was no match for him who could gather and discipline armies and lead them forth to battle. Our Heavenly Father,—Jehovah of the Israelites, was by them made responsible for many deeds of partisanship and injustice that are utterly unworthy of the Ruler of the whole earth. They who regard the Scriptures as "the only rule of faith and practice," open the way for a justification of war and all the hatreds that still blot and disfigure our Christian civilization, although its coming was heralded with the anthem, "Glory to God in the highest, and on earth peace among men."

David seems to have had no scruples in asking Jonathan to be false to his father that his own safety might be secured; this also was in keeping with the low moral standard of the people, and was resorted to by men who are accounted worthy of honor. That such lives should be cited as examples for the best manhood of our own times, and what they held as true concerning duty and accountability be regarded as "the rule of faith and practice" now, is one of the incongruous statements of modern theology. There are many evidences of trust and confidence in God, and of devotion to his service as then understood, to be found in these records of the lives of Israel's prophets and leaders, and these may be studied with profit by every earnest seeker after truth; but the sins and weaknesses so faithfully set forth mar and disfigure the record and take from it the chief value it has for us in this day of clearer light and purer morals. Here and there, from Enoch who "walked with God," to the close of the Old Testament canon, are to be found bright examples of purity and uprightness that stand for all time; but it is not until we find the culmination of all holiness, of all purity, of all self-sacrifice for others in the Man of Calvary, that the perfect example,—perfect for all the coming centuries,—stands out as embodying the true life of man,—as the light that enlighteneth every man who walks in the fullness of its glory. The sum of all is love,—the love that regards self as secondary. This was the love that Jonathan gave to David,—this is the Christ love that exalts and ennobles life and brings us into that condition of which it is declared,

"God is love, and he that dwelleth in love dwelleth in God, and God in him."

For Friends' Intelligencer and Journal.

NOT A POLITICAL PAPER.

In this country there are four organized political parties; in Canada there are two; and in England two. Now, since this paper has subscribers in all three of these countries, it is only reasonable to suppose that there may be eight political organizations, each having its champions among the readers of the INTELLIGENCER AND JOURNAL. Such being admitted to be the case, we must also admit that if one party and its opponents have the opportunity to express their sentiments through the columns of our only denominational organ, the other seven parties, and the opponents of each of these should be awarded the same privilege. Then after all these have been heard from, there will still remain to be settled the vexed questions of bi-metalism, woman suffrage, civil service reform, etc., etc. What is fair for one, is fair for all; and as honesty, intelligence, and the ability to write prevails to a certain extent in all the parties—and especially is this the case with members of the Society of Friends—we may infer that, should the gate be raised to its full height, the flood of political essays would sweep almost everything else from the columns of our paper.

Political topics are very properly called questions as they usually have two sides, and are, hence, argumentative. The usual way to settle such questions is to give both sides a fair hearing, and then take a vote. Where the matter has not reached the voting stage, it is often the cause of acrimonious controversy, as well as of much irrelevant talk. Then it is that, as in the bar room wrangle, or the juvenile debating club, each party is desirous to vanquish his opponent, or at least "to have the last word."

The impropriety of such discussions in a Friends' paper must be obvious to all who are able to appreciate the real object for which such a periodical should be conducted, viz.: to promote the interests of the Society as a religious body.

Let us, then, in all kindness, entreat our members to go to other *publications* when they desire to express their sentiments on political subjects; so that this one organ may be consistently maintained as a Friends' paper. 11 *

Eighth month 24

THERE is a vast variety, thou knowest, in the flowers of the field. How abundantly does the ornamentation on the rose excel the daisy; and yet every one of them possesses a distinctive beauty, and shines in the general increase, or the display of their Creator's praise.—*John T. exp.*

The great blessings of mankind are within us and within our reach, but we shut our eyes, as if like people in the dark, we fall fast upon the very thing we search for without finding it.—*Seneca.*

"Give me a great thought, that I may be refreshed."
